The treaty represented the objectives of the royal government rather than those of the colonists in Virginia. Although London ordered strict observance of the treaty, the governor quietly allowed the rights of the natives under the treaty to erode away in the quarter century following its enactment. Various laws brought native land into English hands and curtailed their civil rights. Most significant was a 1705 law, directed against all nonwhites, which took away the natives' right to vote; bear arms; testify in court; or hold civil, military, or religious office. Thus, the Virginia-Indian Treaty of 1677/1680 ultimately did little to protect the natives from colonists increasingly anxious over issues of race and power.

Von Graffenried's Fort (North Carolina)

Redoubt constructed sometime in late 1710 or early 1711 at the confluence of the Trent River and the Neuse River, not far from the central North Carolina coast. In 1710, Christoph von Graffenried led a group of Swiss-Palatine settlers to eastern North Carolina, where he founded the settlement of New Bern (named for the Swiss city). This latest encroachment rankled the Tuscaroras, who already had a long list of complaints regarding European colonists. North Carolina proprietors, however, had been anxious to settle the Swiss-Germans on their territory. To make the arrangement more attractive for von Graffenried, they offered him a grant of 5,000 acres, along with the title of baron.

Von Graffenried was motivated more by the hope of locating precious metals than he was with establishing a Swiss presence in the new world. Nevertheless, he took the offer and arrived at the place he would call New Bern in late 1710.

Little is known of what became of von Graffenried's Fort. It was probably a small post with little in the way of fortifications. On September 22, 1711, the lower towns of the Tuscaroras launched a major attack against both the English and Swiss settlements in eastern North Carolina. This sparked the Tuscarora War (1711–1713). Perhaps as many as 75 Swiss settlers died in the attack, and von Graffenried himself was taken prisoner. He struck a deal with the Tuscarora leader Hancock, however, who spared von Graffenried's life and released him in October. Whatever fort had been built was likely destroyed in the September assault. It was rebuilt thereafter, and the colonists there

were not again bothered by native attacks, as they adhered to their end of the agreement struck between Hancock and von Graffenried.

W

Waccamaws

Native American tribe who were Catawban speakers of the Pee Dee branch. In the 15th and 16th centuries, the Waccamaws lived in what is now southeastern North Carolina, south of the Cape Fear River. They originally lived in six villages. In the 1520s, the Spaniard Francisco de Chicora was the first European explorer to identify the Waccamaws.

The Waccamaws were skilled in the domestication of animals, including deer. They also kept poultry and raised crops such as corn, beans, squash, melons, pumpkins, and tobacco. European diseases wiped out much of the population, however.

By 1715, the Waccamaws were living about 100 miles northeast of Charles Town (present-day Charleston), South Carolina. At that time, they numbered some 610 people in four villages. For a short time, the Waccamaws fought on the side of the Yamasees in the Yamasee War (1715–1717), but they soon made peace with the English. In 1715, English traders helped the Waccamaws build a trading post. The tribe fought the Waccamaw War of 1720 against the settlers, in the process losing some 60 of their men, women, and children. Others were deported and sold into slavery. In 1755, Cherokee and Natchez war parties killed additional Waccamaws.

In the mid-1700s, the Waccamaws established a settlement near Doug Bluff, South Carolina. It is believed that they continued to exist as a separate tribe until well into the 1770s. In 1771, several Waccamaws were thought to be in John Austen's Company of Catawbas. Some of the Waccamaws incorporated with the Catawbas, and descendants of others remained in southeast North Carolina. Others live in Conway, South Carolina, where they are recognized as a native nation by the state government.

Waldron, Richard

Born: 1615 Died: 1689

New Hampshire trader and militia officer who oversaw military and diplomatic operations in northern New England during King Philip's War (1675–1676). Born in Alcester, Warwickshire, England, Richard Waldron (also spelled Walderne) immigrated to Boston in 1638, and by 1640 he had established himself at Dover, New Hampshire. There he began both a trade in furs and lumber and a career in public service. By the outbreak of King Philip's War in 1675, Waldron was among the wealthiest and most prominent citizens of New Hampshire.

Waldron's reputation, ability, and well-known friendship with his native trading partners, the Pennacooks, made him a natural choice to be Massachusetts' northern agent. As a major in command of the militia, Waldron led several military expeditions against the Pennacooks and the Abenakis, and he headed several diplomatic initiatives to them as well. Waldron used these enterprises to increase his own fortunes: On at least three occasions he imprisoned or murdered native diplomats who met with him to arrange a peace, plundering the goods of the dead, and selling the living into slavery. Enraged by his behavior, the Abenakis kept up a war they would otherwise have ended. In 1677, they informed authorities in Boston that Waldron's actions were solely responsible for the continuance of the conflict.

In the decade after the war, Waldron's fortunes reached their zenith: he became New Hampshire's ranking military officer and president of its provincial council. In 1683, having been ousted from these posts by rivals, he returned to his commercial interests, which included trade in furs with his Pennacook neighbors. Angered by his abuses, both old and recent, the Pennacooks chose to enter King William's War in 1689 with a surprise attack on Waldron's Dover estate. Some Pennacooks entered his home under pretense of friendship and then admitted a war party, which tortured Waldron to death. Indian anger at Waldron was so intense that in 1704, 15 years after his death, the natives who attacked Deerfield, Massachusetts, explained their actions as just retribution for Waldron's crimes.

Walker, Hovenden

Born: ca. 1660 Died: ca. 1726

English naval officer. Born about 1660 to Irish parents, Hovenden Walker attended Trinity College in Dublin in 1678. He did not graduate but joined the Royal Navy. Promoted to captain in February 1692, Walker participated effectively in several engagements.

In 1702, during the War of the Spanish Succession (Queen Anne's War in North America, 1702–1713), Walker commanded an expeditionary force of six ships of the line transporting four battalions of troops with orders to take part in an attack on French possessions in the West Indies. Walker's squadron inexplicably lingered for two months at Barbados before proceeding to a rendezvous with land forces at Antigua. After the failure of this Caribbean mission, Walker participated in a larger attack on the French in Newfoundland. In September 1703, the English decided, because of the approaching freeze-in, to abandon the mission and return to England.

After serving as a commodore in European waters, Walker received promotion to rear admiral in 1710. In 1711, he was awarded a knighthood and assumed command of some 70 British naval vessels and 6,000 seamen and marines for the planned campaign to capture Quebec. Accompanied by Brigadier General John Hill commanding some 5,000 British regulars, Walker's fleet arrived at Boston on June 25, 1711.

The expeditionary force of about 12,000 men, including New England militiamen and regular British forces, embarked for Canada on July 30. On August 22, Walker, befuddled by darkness, fog, and wind in the St. Lawrence River, relied on a captured French pilot for guidance. During the passage upriver eight transports and other vessels ran aground, drowning more than 900 men. Walker and Hill immediately convened a council of war and decided to abandon the operation. They considered moving against Newfoundland, but recalling the events of 1703, Walker again decided on a hasty return to England.

While Walker reported to his superiors in London, his flagship, the *Edgar*, blew up with great loss of life. Although Walker received a new command, the disaster eventually led to his dismissal from the service in 1715. Walker emigrated to the Carolinas, where he served as deputy governor of North Carolina and then as president of South Carolina's council. A few years later he returned to London, and there he published his attempt at self-vindication, *A Journal or Full Account of the Late Expedition to Canada*, in 1720. Walker died in Dublin about 1726.

Walking Purchase

Event Date: August 1737

Land agreement between the Delawares (Lenni Lenape) and colonial Pennsylvania. From the time of first European settlement of Pennsylvania in the 1680s, the Delawares enjoyed generally good relations with the colony. However, as the colony expanded the English began encroaching on more of the natives' land. In 1735, James Logan, the colony's chief justice and acting head of Native affairs, presented Delaware chiefs with a purported copy of a 1686 deed that granted Pennsylvania most of the Lehigh Valley. The deed also seemed to grant the colony as much land west of present-day Wrightstown as a man could walk in a day and a half. The Delaware

chiefs protested that they knew of no such document. Furthermore, they quickly pointed out that the colony's founder, William Penn, had guaranteed them their lands.

In 1737, despite Delaware protests, Logan persuaded them to have the boundaries paced off in accordance with the 1686 deed. To ensure that they would acquire as much land as possible, Pennsylvania officials arranged for trees and brush to be cut, clearing a path through the woods. They also designated three men who had trained specifically for the walk to carry out the task. They would be followed by mounted men carrying food and provisions for them. The walkers ended up running most of the course, traversing an area of approximately 60 miles.

The Delawares immediately complained that the walk was not conducted in accordance with the deed. Indeed, they pointed out that the wording on the document said "walk." The men who had paced off the land ran almost the entire way. The Delawares subsequently refused to vacate their lands. Unwilling to use force against the Delawares, Pennsylvania officials approached the Iroquois Confederation for assistance in removing the Delawares. The Iroquois agreed to act as the final arbiter of native land disputes in Pennsylvania.

Now outnumbered and potentially outgunned, the Delawares had little choice but to capitulate. In August 1737, Delaware leaders met with Logan and signed the so-called Walking Purchase. During a 1742 conference in Philadelphia, the Onondaga leader Canestego ordered the Delawares to leave for Shamokin or Wyoming, Pennsylvania, and to vacate eastern Pennsylvania. Although most Delawares did go there, many of them went farther west, settling in the Ohio Country.

Walley, John

Born: 1644

Died: January 11, 1712

Major in the New England militia and judge of the Superior Court of Massachusetts Bay. John Walley was born in England in 1644, the son of a London clergyman. Before moving to Bristol, Rhode Island, in 1680, he seems to have been a member and officer of the Ancient and Honorable Artillery Company of Boston. In June 1685,

Plymouth Colony was divided into three counties and its militia was accordingly divided into three regiments, one of which—the Bristol County Regiment—was under Walley's command.

In April 1690, an intercolonial convention met in New York City. There, delegates from Massachusetts, Connecticut, and Plymouth—including Walley—joined those from New York to organize an invasion of French Quebec. In June 1690, Walley, who had recently moved to Barnstable, Massachusetts, was appointed second-in-command and commander of the land forces in the expedition against Quebec led by Sir William Phips.

In planning his attack, Phips decided to land the main force, commanded by Walley, on the Beauport shore east of the St. Charles River and then use ships to attack Quebec itself. Walley and the main force of 1,200 men landed on the Beauport shore below Quebec on October 18, 1690. Canadian militia under Jacques Le Moyne de Sainte-Hélène harassed Walley's force almost immediately. Walley's situation grew worse when English ships landed their artillery on the wrong side of the St. Charles.

Phips decided not to land his remaining force; instead, he anchored before Quebec and began to bombard the town, which was defended by Governor-General Louis de Buade de Frontenac. The bombardment continued for two days and was broken off when the English ran short of ammunition and their ships had suffered considerable damage by return fire from the town batteries. As Walley's men were suffering from cold and smallpox, his force remained inactive during the bombardment. His men were withdrawn three and a half days later without accomplishing anything and leaving most of their cannon behind. Walley was criticized for the failure, but the absence of trained soldiers and adequate supplies had probably doomed the enterprise from the start.

In 1700, Walley became a judge of the Superior Court of Massachusetts Bay. He apparently held that office until his death in Boston on January 11, 1712.

Wampanoags

The Wampanoags, or "People of the Morning Light," once inhabited a region ranging from the eastern shore of Narragansett Bay to the tip of Cape Cod, including the islands of Martha's Vineyard and Nantucket. The Wampanoags were farmers, fishermen, hunters, and gatherers. At the time of European contact, there were approximately 12,000 Wampanoags divided among 40 villages. The term

A battle between colonists and Wampanoag Native Americans during King Philip's War, 1675-1676. (Library of Congress)

"Pokanoket," the name of one of the principal Wampanoag villages and home to Ousa Mequin (Massasoit), the grand sachem (chief), who treated with the Pilgrims, was often mistakenly used in the early 17th century to identify the Wampanoags.

Epidemic diseases introduced by European fishermen and slave traders in the late 16th and early 17th centuries decimated the indigenous population of New England. The coastal Wampanoags were especially affected. By the time of the establishment of the English colony at Plymouth in 1620, there were perhaps no more than 2,000 Wampanoags left on the mainland. Some villages, such as Patuxet (site of the Plymouth Colony), were entirely wiped out. Island Wampanoag populations fared slightly better owing to their relative isolation.

In addition to the devastation wrought by disease, the Wampanoag Confederacy was weakened in the early 17th century by raids from Micmac war parties to the north and encroaching Pequots to the south. The formidable Narragansetts, essentially untouched by the epidemics because of their isolation on the islands of Narragansett Bay, grew in power and prestige during this period, ultimately forcing the Wampanoags to pay them tribute. Seeing his power diminish, Massasoit skillfully concluded a treaty of alliance with the colonists at Plymouth in 1621. The treaty provided security for the vulnerable Englishmen in exchange for aid to the Wampanoag Confederacy in case of hostilities with their rivals. The alliance also served to keep the Wampanoags out of the Pequot War (1636–1638) and enabled Massasoit to resist Puritan efforts to Christianize his people.

The death of Massasoit in 1662 ushered in a dramatic change in the relationship between the Wampanoags and the English colonists. Massasoit's eldest son, Wamsutta, succeeded his father as grand sachem and began selling land to colonies other than Plymouth. Seized at gunpoint by Plymouth colonists who interpreted his land deals as a threat, Wamsutta was taken to the Plymouth court in 1662 and forced to defend his actions. Before he could do so, the grand sachem fell ill and died. His untimely death—there is some circumstantial evidence that he was poisoned by the English—shifted power to Wamsutta's younger brother, Metacom, also known as King Philip.

Over the next decade, Metacom grew increasingly distrustful of the colonists. English encroachments onto Wampanoag land, interference in native political affairs, and establishment of Christian missions and "praying towns" ultimately drove the Wampanoag grand sachem to the breaking point. The resulting conflict, known as King Philip's War (1675–1676), proved devastating to the Wampanoags as well as to the indigenous population of southern New England. One-fourth of the estimated 3,000 Native Americans killed in the war were Wampanoags. Many of the Wampanoags who were captured or surrendered were subsequently sold into slavery. The survivors (possibly as few as 400 people) were relocated, along with remnants of other native communities, onto Cape Cod or mixed into praying towns. Their descendants can be found today around Gay Head on Martha's Vineyard and at Mashpee on the mainland.

Wampum

Native American form of currency and exchange, also used as a sign of friendship and alliance, sometimes worn as jewelry or adornment. The word "wampum" comes from the Narragansett word for "white shell beads." Wampum beads were in two colors: white (wòmpi) beads (wompam) from the heavy whelk clam shell (meteaûhock) and purple-black (súki) beads (suckáuhock) obtained from the growth rings of the qahog shell (suckauanaûsuck). The purple beads were the more valuable.

Native Americans have treasured shell beads for thousands of years; indeed, the oldest beads found in archaeological digs are quite large. Working with stone drills meant that bead manufacture was both tedious and difficult, and so the beads were highly treasured. Before contact with Europeans, wampum often was made of wood. The resulting wooden beads were then painted white and black.

With the introduction of metal awls obtained from white traders, particularly from the Dutch, the manufacture of wampum enjoyed a golden age. Small holes could be drilled in the shell, and coastal natives soon set up primitive factories. In the process they often created large shell middens (refuse heaps) of cast-off shell fragments. Because European coins of silver and other metals were scarce in the colonies, wampum soon became crucial as a medium of exchange. For instance, six feet of strung wampum beads were worth 10 shillings. Six feet of purple wampum was worth 12

shillings. Belts of wampum were worth far more than that on the open market.

Wampum was used as money, jewelry, ornamentation, and for bonds between nations. Wampum, when exchanged, sealed a pledge. Wampum belts, such as the famous Hiawatha Belt, were used to seal a pledge that created the union of the five original Iroquois nations. A belt found in the Vatican Library represented a concordat between the Roman Catholic Church and the Micmacs of French-held Nova Scotia. This wampum belt, presented in 1610, is thought to be the oldest in existence.

Wamsutta (Alexander)

Born: Unknown Died: 1662

Leader of the Wampanoag natives, 1660–1662. Wamsutta (Alexander) was the son of Massasoit, the Wampanoag grand sachem (chief)

Wampum belt symbolizing a covenant chain. (Library of Congress)

Artist's depiction of the death of Wamsutta, chief of the Wampanoags. (North Wind Picture Archives)

who signed a peace agreement with the Plymouth Colony in 1621. Massasoit kept the peace with Plymouth and occasionally sold land to the English. Wamsutta, known to the English as Alexander, became the leader of the Wampanoag on the death of his father in 1660.

Shortly after Wamsutta came to power, Plymouth officials became concerned when he sold land to the colony at Rhode Island. The Plymouth leadership informed Wamsutta that he could only sell land to the Plymouth Colony. Apparently this had little effect on Wamsutta, however, as he continued to sell land to the Rhode Island settlers.

Frustrated with what they regarded as Wamsutta's intransigence, Plymouth resorted to sterner measures, in 1662 sending an armed party under Major Josiah Winslow to seize the sachem. Winslow captured Wamsutta while he was hunting and took him and his son under guard back to Plymouth. There the Plymouth authorities questioned him at length, and according to some reports, they attempted to get him to abrogate an earlier agreement that gave the Wampanoags full control over their lands. They finally released Wamsutta but held his son hostage to ensure his good behavior.

There are conflicting versions as to what happened next. Some sources claim Wamsutta became ill while in English custody, and others say he became sick on the way home. The English claimed that his illness was brought on by hot weather, but the Wampanoags believed that the colonists had poisoned him. In any case, Wamsutta died shortly thereafter.

On Wamsutta's death, his brother Metacom (known to the English as Philip) became the sachem of the Wampanoag. If anything, Metacom was a more implacable foe of the English than his brother, launching the conflict that came to be known as King Philip's War in 1675–1676.

Wappingers

Conglomeration of American Indian nations in the Hudson River Valley. At the time of European contact, seven Algonquin bands,

including the Wappinger proper, constituted the Wappinger Confederacy. The Wappingers were situated on the eastern side of the Hudson River Valley. In fact, the word "Wappinger" has been translated as "easterner." The French referred to them as *loups* (wolves).

The Wappingers were an agricultural people who raised corn, beans, squash, and tobacco. They also fished and during the winter months they relied on hunting. The Wappingers lived in a mix of wigwams and wooden long house dwellings, but in the winter moved into larger fortified dwellings. Estimates vary widely as to the confederacy's population in 1600, from as high as 20,000 people to a more reasonable figure of 3,000. This great variance was due in part to the difficulty of knowing which tribes considered themselves Wappingers.

During the 17th century, the Wappingers engaged in more than two decades of intermittent warfare with the Dutch, who settled the region. Beginning in the 1620s, Dutch settlers increasingly moved into the Hudson River Valley. The pace of European settlement picked up further in the early 1640s, putting pressure on Dutch governor-general Willem Kieft to remove or exterminate the Wappingers to open land for expansion.

Kieft therefore orchestrated a war—known as Kieft's War—by ordering the February 1643 massacre of Wappinger men, women, and children. This sad incident came to be known as the "Slaughter of the Innocents." Enraged, the Wappingers and allied Mahicans declared war and drove the Dutch back into last-ditch fortified positions. Finally, with help from hired English soldiers led by Captain John Underhill from New England, Kieft turned the tide of the war. He also brutally punished his opponents, slaughtering more than 1,600 Wappingers before concluding a peace treaty with the survivors in 1645.

Wappinger anger against the Dutch continued to simmer, and the killing of a Delaware woman in 1655 triggered the Peach War. That conflict saw the Wappingers ally with the Delawares and, later, the Esopus. The Dutch-Indian Wars dragged on until 1664, when Gov. Petrus Stuyvesant used hostages as leverage to force the natives to surrender. When the English attacked and conquered New Netherland the same year, the Wappingers lent their support to the invaders. They continued to support the English in future wars.

The long period of warfare proved utterly destructive to the Wappingers. The nation began a steady decline in influence, and its population plummeted. By the 1730s, only a few hundred Wappingers remained in the Hudson River Valley. Some joined nearby tribes; others settled in other areas of New York.

The last great sachem of the Wappingers was Daniel Nimham, whose people had relocated near Stockbridge, Massachusetts, in the mid-1700s. For decades he lobbied colonial and British courts to return native lands taken from his people. During the French and Indian War (1754–1763), he fought on the British side, perhaps with the hope of improving his legal claims. The effort proved fruitless. British courts denied Wappinger petitions at every turn. When the colonists went to war against Great Britain, it was thus under-

standable that Nimham chose to support the Patriots against the English crown. The American Revolutionary War claimed the lives of nearly half of the remaining Wappinger men. In the 19th century, many of the surviving Wappingers were relocated to a reservation in Wisconsin.

War Belt

A form of wampum used in various diplomatic capacities, primarily among the Native American nations of the Northeast and the Northern Plains. The colors and designs on the belts transmitted various messages. War belts thus served an important function in Native American diplomatic proceedings.

The war belts were made up of dark red or purple beads. The darker colored beads were considered more valuable in trade as well. The specific design signified the precise meaning of the belt. The belts could transmit various messages, including declarations of war, the summoning of natives to make war, or appeals for assistance in a conflict. The belts did not, however, automatically constitute an order to go to war.

War Club

A blunt-force weapon used by Native American warriors for closein fighting. Usually made of maple or ironwood, the war club possessed a long shaft and heavy ball end. The ball end could be fabricated out of wood or stone. Clubs were often decorated, sometimes with a record of the accomplishments of the warrior who carried it, sometimes with various other designs.

The war club, along with the bow and arrow, were the principal weapons of the various Native Americans from New England to the Great Lakes before Europeans introduced the musket. Raiding parties throughout these regions employed the war club, both

Native American war club from New England. (Wildside Press)

in their ceremonies and in combat. During the 18th century, the European-produced tomahawk gradually replaced the war club among these natives.

War of the Regulation

Start Date: April 1768 End Date: 1771

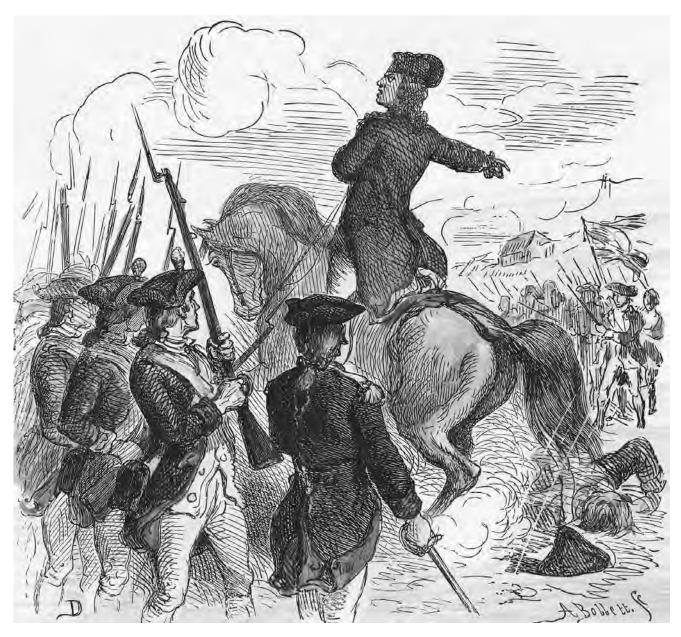

A series of confrontations between militia forces under the command of Gov. William Tryon of North Carolina and western, back-country settlers—known as Regulators—between 1768 and 1771. The North Carolina Regulators had begun protesting several issues as early as 1765, mostly through peaceful means. Among other things, they were angered at the lack of representative government, high and unfair taxes, corrupt local officials, the lack of clear land titles, and a cavalier assembly. By 1768 several Regulator leaders had been arrested, prompting some 3,000 farmers to descend on the town of Hillsborough in Orange County.

There were several phases of the War of the Regulation. The first involved loosely organized protests and acts of violence in Orange County. In April 1768, several Regulators fired gunshots into the house of a local official who had been accused of corruption and fraud. Later that summer, after an intermittent campaign of intimidation, two Regulator leaders faced charges of inciting rebellion. In response to the arrests, approximately 700 Regulators descended on the county jail. There they forced officials to release the Regulator leaders. By the time the Regulators came to trial, Governor Tryon had mustered a force of about 1,500 militiamen near the county seat of Hillsborough. At the courthouse they faced a force of about 3,700 poorly armed protesters. Nevertheless, there was no bloodshed or skirmishing of any sort. Most Regulators simply returned to their homes after Tryon ordered them to disarm.

In 1769, the Regulators turned to peaceful means to press their agenda, electing several members to the lower house of assembly. Although these victories were encouraging, it was difficult to achieve much in the assembly because most representatives from eastern counties were generally unsympathetic to Regulator grievances.

The next phase of the War of the Regulation began in 1770, after the Regulator assemblymen failed to win reelection. Late in the year, Regulators descended on Hillsborough and seized the superior court. They also severely beat one official and destroyed his home. During this outburst of violence other officials sent urgent pleas for Tryon to send forces to put down the growing rebellion.

Tryon then began raising a militia to establish order in the central and western counties in March 1771. After gathering some

Contemporary illustration showing North Carolina governor William Tryon suppressing the revolt of the Regulators in 1771. (North Wind Picture Archives)

1,000 men, Tryon marched toward Hillsborough. He sent orders to General Hugh Waddell, commander of militia units in the western counties, also to march toward Hillsborough. After Waddell left the town of Salisbury in Rowan County, a force of about 2,000 Regulators blocked his path. Outnumbered and uncertain of Tryon's whereabouts, Waddell retreated west across the Yadkin River to wait for news from Tryon.

On May 15, 1771, as Tryon marched from Hillsborough to relieve Waddell, he encountered a large force of 2,000 to 3,000 Regulators at Great Alamance Creek. Tyron demanded that the Regulators lay down their weapons and turn over their leaders. Fighting began the next day shortly after Tryon executed a Regulator he had

taken hostage during one of several failed battlefield parleys. The Regulators had no discernible command structure, and their resistance to Tryon's force began to crumble when some began running out of ammunition. The Battle of Alamance lasted for about two hours and resulted in the deaths of 9 men on each side.

In the months after the battle, Tryon marched through the western counties to establish order. He also offered a reward for anyone capturing or killing the principal leaders of the movement. A year later, several leaders stood trial but were freed when all charges were dropped.

Historians have debated the causes of the Regulator movement for over a century. Older interpretations viewed the conflict as a struggle between western settlers and east coast elites allied with the governor. Later scholars have argued that other factors like class and religion contributed to the environment of dissension. Other historians have focused on the Regulators' demands to reform corrupt governmental practices and to facilitate the settling of land.

Warren, Peter

Born: March 10, 1703 Died: July 29, 1752

British naval officer, politician, and governor of Louisbourg and Cape Breton Island (1745–1746). Peter Warren was born on March 10, 1703, at Warrenstown, County Meath, Ireland. On his mother's side of the family there were at least two admirals. Warren enlisted in the British Navy in April 1716 as an ordinary seaman. In 1719, he became a midshipman, and in 1723 was promoted to lieutenant. He made post captain in 1727. During much of the time from 1730 to 1745, Warren was on the North American station, much of the time in command of the station ship *Solebay*. He spent time at Boston, New York, Charles Town (present-day Charleston, South Carolina), Annapolis Royal, and Canso (Nova Scotia). This gave him an intimate knowledge of the conditions in the colonies as well as their waters.

During King George's War (1744–1748), Warren played a key role in the 1745 British siege of the French fortress of Louisbourg. Following the English victory, he became governor of Louisbourg and Cape Breton Island, serving in that capacity until December 1746. Warren became immensely wealthy from prize money awarded for the French ships taken at Louisbourg.

Warren returned to sea duty as a rear admiral under Vice Admiral George Anson and thus shared in the British naval victory over the French 70 miles off Cape Finisterre, Spain, in the Bay of Biscay

on the afternoon of May 3, 1747, when Anson's 14 ships of the line intercepted a force of 38 French ships under Admiral Jacques-Pierre de Tafanel de la Jonquière in two convoys bound both for New France and India. La Jonquière formed into line of battle ahead with his 12 strongest ships and ordered the rest to crowd on every stretch of canvas and flee. In the ensuing battle, without any loss to themselves, the British took those French ships that had remained to engage them as well as 7 vessels of the convoy and 2 of their frigate escorts. In recognition of this victory, Warren was made a Knight of the Bath and promoted to vice admiral. When Anson returned to the Admiralty, Warren took over his position as commander of the Western Squadron.

Warren was elected to the House of Commons representing Westminster in 1748. He never again returned to sea duty. Warren died while on a trip to Ireland after a brief illness in Dublin, on July 29, 1752.

Warships

At the beginning of the colonial period, the dominant warship type was the three-masted ship, known in England as a carrack, in France as *caraque*, and in the Netherlands as *kraeck*. The carrack predominated in Europe until the 17th century. The earliest types had a rounded stern in a carvel-built (planks flush rather than overlapping) hull. The ships were rigged with square sails on the fore and mainmast and a lateen sail on the mizzen. A centerline ladder led to the round top of the mainmast. By the 16th century the carrack had become a larger vessel of up to 125 feet in overall length by about 34 feet in beam. They also gained a fourth mast aft: an extra mizzen, known as the "bonaventure mizzen," or "bonaventure" for short.

Traditionally, in time of war merchant ships were simply fitted out to carry weaponry. With the introduction of gunpowder weapons at sea in the 14th century, the carrack's armament might range from as few as 18 to as many as 56 small guns, some of which were placed in the tops of the masts ("the fighting tops" as they became known).

The carrack had considerable advantage as a gun ship over the rowed galley, which mounted only a few guns forward. Because fighting at sea was very much like that on land, the higher structures fore and aft, which might actually be built up in time of war to gain height advantage, were known as the castles: the forecastle and the aftercastle.

Ship Designations during the Colonial Era

Common Name	Rating	Number of Guns
Ship of the Line	First	100+
•	Second	90-98
	Third	64-84
Frigate	Fourth	50-60
· ·	Fifth	30-44
	Sixth	20-28

About 1500 a major change occurred in the way ships were armed with the invention of gun ports cut in the side of the ships. Up until this point, most guns were lighter types, carried high in the ship. Gun ports have been credited to a French shipwright at Brest named Descharges in 1501. Gun ports could be lowered shut in bad weather, and they allowed the placement of larger guns on the lower decks, producing greater stability, although at least two great warships—the *Mary Rose* in England in 1545 and the *Vasa* in Sweden in 1628—were lost when they suddenly heeled over with too much weight topside and the gun ports open.

The caravel was another important ship type, at least for the Age of Discovery. The lateen-rigged caravel was able to sail into or against the wind. Although Christopher Columbus's *Santa Maria* was a carrack, both the *Nina* and the *Pinta* were caravels. Long and narrow, caravels were some 50–60 feet in overall length and had two or three masts. As warships, caravels were employed primarily on scout and escort duty.

Galleons were the predominant warship types of the early 16th century. Appearing by about 1525, galleons predominated until about 1650. The galleon was essentially a streamlined carrack, both longer and narrower. The carrack had a forecastle that projected far out over the bow. In the galleon this was both lowered and moved back into the hull. With heavier guns now mounted low in the ship, such structures were no longer required. The galleon's most distinctive feature, however, was a large beakhead projecting forward from the stem designed to assist in working the sails.

Although usually associated with the ships used by the Spanish in transporting treasure from the New World and forming the Armada of 1588 sent against England, most warships of the period were galleons. English king Henry VIII's large *Henry Grâce à Dieu* was rebuilt in the 1530s in galleon form and the English ships that opposed the Spanish Armada were sleeker vessels of the galleon type employing longer range cannon to good advantage.

Gradually the larger warships evolved into the type of warship most identified with the age of fighting sail, the ship of the line. By 1650 such ships had emerged with two and three gun decks. Warships grew both longer and wider in beam, to the maximum size their wooden frames could sustain without "hogging," that is, drooping at the ends. Improvements in rigging and sail system enhanced the maneuverability of the largest ships.

The largest and most majestic vessels of the age of fighting sail, ships of the line (or "line-of-battle ships," a term that yielded in the

late 19th century to "battleship"), were so known because, with up to 30 inches of wooden planking protection, they were capable of standing in the main battle line that characterized naval tactics of the day. They were heavily timbered, three-masted, square (full) rigged vessels of 2- to 4-gun decks.

More than 200 feet in length and 50 feet in beam, ships of the line carried crews of 600–800 men. The bigger the ship, the more expensive it was to build, yet the larger warships were less expensive to maintain per gun than smaller vessels.

In the ship of the line the three masts—the foremast, the main-mast, and the mizzenmast—held up to five separate sails each. The mainmast usually consisted of three separate sections that could tower 200 feet above the waterline, with the main yard extending horizontally over 100 feet across. A large ship of the line could take seven years to complete and consume 2,000 trees (approximately 60 acres of mature forest). Oak, because of its hardness, was the preferred construction wood.

Ships were first known by "establishment," then they were "rated" according to the number of guns they carried. Thus the largest ship of the line was a first rate mounting 100 guns or more, whereas the fourth rate mounted 64. Despite this rating system, armament varied widely from ship to ship, even those of the same class. Individual captains had their own preferences and there were frequent changes in regulations.

Ships often carried more guns than their rate because captains generally wanted as much ordnance on their vessels as possible. This was partly a matter of prestige and partly from the desire to be ready to meet an opponent with the maximum possible firepower; but overloading a ship affected its sailing qualities and could actually damage a vessel by producing hogging, thus impeding the chances of it escaping pursuing ships.

By the end of the colonial period, the smallest ships of the line were those of 64 guns, although there were some who believed the smallest that could effectively stand in the line of battle was one rated at 74 guns. The third rate 74 was in fact the most prevalent English ship of the line at the end of the colonial period.

Complementing the ships of the line were smaller, specialized warships. The next largest warship was the frigate, the workhorse of navies in the age of sail. It was comparable in function to the later cruiser. Fast and powerful, frigates scouted ahead of the main battle fleet in order to provide warning of the approach of enemy vessels. They also served on detached service, as commerce destroyers, and as convoy escorts.

Frigates were square-rigged ships (each mast had cross yards) mounting their principal ordnance on a single covered gun deck. The open (spar) deck carried the lighter guns. Armament varied greatly, depending on ship size. Small frigates might mount 24–30 guns; the larger ones, 50–60. Frigates grew in size over the years and, at the beginning of the 18th century, were up to 175 feet in length and up to 2,000 tons or more.

"Sloop" was a general term applied to small warships capable of great range that carried their main battery guns on a single deck.

This category of light warship might mount between 8 and 24 guns. Small vessels were used where a larger warship was not required, such as in carrying dispatches and escorting merchantmen. Large sloops could also be used to attack enemy commerce. These warships were comparable to destroyers of the 20th century.

Brigs, two-masted square-rigged ships, were next in line, followed by cutters, single-masted, fore-and-aft-rigged ships. The smallest warships were gunboats; carrying a variety of rigs, they mounted only one or several guns.

Probably the single most important ship type in American waters during the colonial period was the schooner (an American term). These small, fast, and inexpensive-to-build ships were usually two-masted vessels carrying chiefly fore-and-aft sails and whose aftermast was not shorter than the foremast. Often employed for fishing and smuggling, they could in wartime carry 4 to 10 guns. Schooners served notably as privateers during the French and Indian War (1754–1763).

Among specialized vessels was the bomb brig or bomb ketch, usually referred to simply as a "bomb." The French successfully employed five such vessels in the shelling of Algiers in 1682 and against Genoa two years later. Bomb vessels were about 100 tons burden and 60–70 feet long on deck. Bombs were strongly built to enable them to withstand the shock of the discharge of their heavy mortars. The bomb was a fore-and-aft-rigged vessel with a tall mainmast and smaller mizzenmast. Armament consisted of one or two high-angle fire mortars, usually of 10- or 13-inch bore size.

Transports and storeships were essential in expeditionary operations. Fire ships were any expendable vessel that would be loaded with combustibles and explosives and sent against an enemy anchorage. Blockships were other expendable vessels, such as hulks that might be sunk in channels to prevent enemy access to one's own harbor.

Although wooden warships required frequent repair and refit, they could also have extraordinarily long service lives. HMS *Victory*, possibly the world's most famous wooden warship, was commissioned in 1765. Although it underwent a number of refits, it remained in active sea service for more than half a century.

Contrary to popular conception, the British did not always build the best ships. Many French and Spanish vessels were more strongly constructed and faster than their British counterparts, and some were more heavily armed. Such differences were not major. In any case, Britain's rivals at sea often failed to use their ships properly—the result of a lack of government commitment, poor leadership, and insufficient training and practice. A vessel's speed was determined less by its design than by its condition and especially whether her hull was clean or fouled with barnacles.

Sailing warships were highly efficient and developed instruments of war. They were also self-contained communities designed to store supplies sufficient for their crews for months at sea in varying weather conditions without revictualing. Supplies included not only food, shot, and shell, but any resources the crew might require, including spare cordage and spars sufficient to make most

repairs at sea. By the end of the colonial period, beginning in the 1770s, the introduction of copper sheathing and bolts below the waterline slowed the buildup of marine growth that hindered a ship's sailing qualities.

Washington, George

Born: February 22, 1732 Died: December 14, 1799

Virginia surveyor, planter, and militia officer, commander in chief of the Continental Army during the American Revolutionary War (1775–1783), and the first president of the United States (1789–1797). One of seven children and the eldest son of his father Augustine Washington's second marriage, George Washington was born into a wealthy planter family at Wakefield in Westmoreland County, Virginia, on February 22, 1732. After his father's death in 1743, he received little formal education beyond tutoring from his half-brother Lawrence.

Washington became a surveyor in Culpepper County in 1749, when his mother blocked plans by Lawrence to have him join the Royal Navy. Washington spent several years surveying Virginia's western land claims prior to inheriting the estate of Mount Vernon on Lawrence's death there in July 1752. That same year he received (with help from Lawrence) an appointment from Lt. Gov. Robert Dinwiddie as a major in the Virginia Militia.

Washington's military career actually began in 1753, when he volunteered to investigate reports of French incursions into the Ohio River Valley. Traveling with a small party, he arrived at Fort Le Boeuf that December with a message from Dinwiddie that called on the French to withdraw. Washington returned to Virginia the next month with news that, although he had been correctly received, the French had been noncommittal. Washington's journal of the arduous trip was soon published, bringing him favorable public notice.

In the spring of 1754, Dinwiddie ordered the formation of a Virginia regiment to oppose the French. Lacking the necessary military experience, Washington did not seek its command but he did ask for, and received, a commission as a lieutenant colonel and the post of second-in-command. When the designated commander died accidentally in May, Washington himself took command and led a small force of some 160 Virginians and allied natives across the Alleghenies.

Arriving at Great Meadows (near present-day Pittsburgh, Pennsylvania), on May 28, 1754, Washington led a preemptive strike

Portrait of Virginia militia colonel George Washington, 1772, by C. W. Peale. (National Archives)

against the French, surprising a small French force. The Virginians suffered 3 casualties and the French 12 to 14. Among the dead on the French side was the commander, Joseph Coulon de Villiers de Jumonville. In effect, this action began the French and Indian War (1754–1763). Villiers had been slain while wounded by Washington's native allies and controversy surrounded Washington's precise role in allowing his death. A large French force led by Jumonville's brother, Captain Louis Coulon de Villiers, soon sought out the Virginians, who had meanwhile constructed a stockade fort nearby, dubbed Fort Necessity.

Five weeks later, Fort Necessity surrounded and cut off, Washington surrendered on July 3. He was allowed to return home with his men after he had unwittingly signed a statement admitting to responsibility in Villiers's death at Great Meadows.

Washington was upset to learn that with the arrival of British regulars in America, on Dinwiddie's suggestion the Virginia provincial troops were to be made into independent companies, leaving Washington bereft of command. Facing the prospect of being reduced to captain in command of a company, Washington resigned his commission in October 1754.

In February 1755, British major general Edward Braddock arrived in North America to command an expedition against the French position of Fort Duquesne near present-day Pittsburgh. Washington asked to accompany him, and Braddock agreed to take him along as a volunteer aide-de-camp. This avoided the issue of rank and allowed Washington to observe the British Army in the field. Washington demonstrated both leadership and courage during the virtual annihilation of Braddock's two regiments in the French and native ambush on July 9, known as the Battle of the Monongahela. Washington sought to assist the fatally wounded Braddock and had two horses shot out from beneath him and four bullets through his coat. He demonstrated considerable leadership in helping to organize the British retreat.

Washington did not attempt to blame Braddock and came out of the debacle a hero. In August 1755, he accepted command of the Virginia Regiment as a full colonel. He set about training the regiment in the hopes that it could be incorporated into the British Army as a regular regiment and that he and his officers would thus obtain regular British Army commissions. During the war, Washington's troops were primarily engaged in policing the 350 miles of Virginia's frontier, building and garrisoning a string of forts there. Washington's men defeated a series of native raids in 1756 and 1757.

During the course of the war, Washington received high marks for creating a thoroughly professional force marked by high esprit de corps. Washington gained a reputation as an excellent commanding officer and administrator, who both led by example and was sympathetic to the needs of his men. He was, however, critical of his superiors for not immediately mounting a new offensive against Fort Duquesne and he often failed to understand the strategic picture or appreciate the myriad problems facing the British.

Washington's repeated efforts to secure acceptance of his regiment into the British Army met with rebuff. He did secure permission to accompany Brigadier General John Forbes during the latter's successful capture of Fort Duquesne in 1758. Forbes, who generally disparaged colonial officers, thought highly of Washington, and gave him command of a brigade of some 700 provincial troops. During the expedition, Washington gained valuable command experience.

At the end of 1758, Washington resigned as colonel of the Virginia Regiment in order to marry the wealthy widow Martha Custis and take a seat in the Virginia House of Burgesses. During the next 16 years he enjoyed life among Virginia's leading families, expanding Mount Vernon, and supporting the move toward the American Revolution as a delegate to both the First and Second Continental Congresses. When war erupted between the colonies and Great Britain in 1775, Washington wore his old provincial uniform to Congress's meetings as a reminder that he deserved command of the new Continental Army. His military experience during the French and Indian War, the fact that he was native born, his political and social ties from the most populous and prosperous British colony in North America, and his reputation as a man of integrity who supported the principle of civilian rule, all made him the logical choice.

Washington ably led the Continental Army during the American Revolutionary War. Merely holding it together was a considerable feat. He made numerous mistakes early in the war but learned from them and was scrupulous in his respect for civilian authority. After the war and the failure of the Articles of Confederation, Washington presided over the Constitutional Convention and became the first president of the United States. Serving two terms from 1789 to 1797, he performed invaluable service in cementing the institutions of the new republic. Washington then retired to his beloved Mount Vernon, where he died on December 14, 1799.

Webb, Daniel

Born: 1700

Died: November 11, 1773

British Army general. Probably born in Wiltshire, England, in 1700, Daniel Webb joined the British Army as an ensign in the 1st Foot Guards in 1721. Promoted to captain in April 1722, Webb transferred to the cavalry in 1732. During the War of the Austrian Succession (1740–1748), Webb fought in the battles of Dettingen and Fontenoy. For 10 years, from 1745, Webb commanded the 7th Dragoons.

Major General Webb arrived in New York on June 7, 1756, during the French and Indian War (1754–1763), with instructions to relieve William Shirley as British commander in chief in America, replacing him in that position on an interim basis until the arrival of Major General James Abercromby. The timid Webb, however, delayed carrying out his orders for nine days until Abercromby arrived, when the two then traveled to Albany to relieve Shirley of command.

On July 12, Abercromby, in his role as acting British commander until the arrival of the new British commander in chief in North America, John Campbell, Lord Loudoun, on July 23, ordered Webb to advance with his regiment to Oswego, which was threatened by French forces under French major general Louis-Joseph, Marquis

de Montcalm. Webb was slow to depart, however, and Loudoun had to reissue the order to advance when he took up his command.

Moving slowly, Webb and the 44th Regiment had only reached German Flats when Oswego surrendered. Learning of this event, Webb concentrated his force at Fort Williams, where he was joined by Sir William Johnson and 1,000 colonial militiamen. Fearing a further French advance, Webb panicked, burning Fort Williams and carrying out an inglorious retreat back to German Flats. Despite Webb's demonstrated lack of the necessary spirit and judgment for independent command as illustrated by the embarrassing retreat, Loudoun left him in command in New York when he and Abercromby departed for Halifax to plan the aborted expedition against Louisbourg.

By July 1757, Montcalm had assembled a force of 8,000 men at Fort Carillon (Ticonderoga) for planned operations against New York. Rather than concentrate the forces at his disposal to meet and engage the French, Webb chose to split his 5,000-strong command. He placed 1,500 troops at Fort William Henry under Lieutenant Colonel George Munro and he remained with the bulk of his command at Fort Edward 14 miles to the south.

Amid reports of Montcalm's advance, Webb arrived at Fort William Henry on July 25 to confer with Munro. This visit was cut short when reports of the imminent arrival of the French flotilla caused Webb to rush back to Fort Edward. On August 2, Webb dispatched 1,000 men to reinforce Fort William Henry, but after the siege began the following day, he did little to assist Munro's command. Overestimating the size of Montcalm's force, Webb did not attempt to relieve the fort and, instead, sent Munro a message suggesting that he seek the best possible surrender terms. Even after the arrival at Fort Edward of Johnson with nearly 2,000 colonial militiamen and native allies, Webb refused to assist Fort William Henry, which, unaided, surrendered on August 9.

Harshly condemned by Munro for abandoning Fort William Henry and labeled a coward by Johnson, Webb was dismissed in December 1757. Despite his humiliating performance in America, Webb was subsequently appointed to a staff position with British forces in Germany in 1758 and received promotion to lieutenant general in 1761. Webb died on November 11, 1773.

Weiser, Conrad

Born: November 2, 1696 Died: July 13, 1760

Frontier diplomat, leader of the German-speaking community in colonial Pennsylvania, and intermediary between colonial authorities and the Iroquois Confederation. Conrad Weiser was born at Affstat in the German Rhineland principality of Württemburg on November 2, 1696. He arrived in North America in 1710. Weiser settled first in the Hudson River Valley and then moved to the Mohawk River Valley on the New York frontier.

During 1711–1712, Weiser went to live with Quaynant, a chief of the Mohawks, so that he could learn the Iroquois language. This enabled him to serve as an intermediary between the powerful Iroquois Confederation and the German-speaking community. While among the Mohawks, Weiser was adopted into the family of Quaynant's wife. This, plus his knowledge of their language, customs, and diplomatic practices, gave Weiser an influence among the Iroquois enjoyed by few other white men.

The Weiser family and other German pioneers moved from New York to the Tulpehocken Valley in western Pennsylvania in 1729. There Weiser's special relationship with the Iroquois made him an invaluable go-between for Pennsylvania leaders eager to maintain good relations with the Six Nations.

Weiser became the main instrument in the Pennsylvania Provincial Council's plan to expand the colony's commercial interests into the Ohio Country. This scheme rested on the principle enshrined in the 1713 Treaty of Utrecht whereby the Iroquois Confederation was recognized as the overlord of the western Native Americans, including the Delawares and the Shawnees who lived in western Pennsylvania and the Ohio River Valley.

It now became Weiser's task to convince the Iroquois to exercise their overlordship on behalf of British and Pennsylvanian traders eager to take allegedly lucrative markets in the Ohio Valley away from the French. Toward this end, he worked closely with Oneida chief Shikellamy, who had been named the emissary of the Iroquois Grand Council at Onondaga. In 1748, when the provincial council learned that low French prices for furs were alienating western Native Americans, it decided to move quickly to take advantage of an opportunity to supplant the French.

The council decided to open relations directly with the western tribes without passing through their Iroquois overlords. In August 1748, Weiser was dispatched to persuade Native American representatives at the large multitribal village of Logstown on the Ohio River in Pennsylvania to permit the opening of a trail for trading purposes through the Ohio Country. His journey to Logstown was

the first visit of an Anglo-American envoy to Native Americans on the western side of the Appalachian Mountains.

The Logstown meeting was the high water mark of Weiser's influence among the Native Americans and the Pennsylvanian authorities. The death of Shikellamy in 1748 deprived him of a powerful ally. Also, discontent among the Delawares and the Shawnees over their tributary status with the Iroquois provided an opening for the French to forge an alliance with them, sealed by the French expedition into the region led by Captain Pierre-Joseph Céleron de Blainville in 1749. Blainville's mission, to lay claim to the Ohio Valley for the French king, was a direct consequence of Weiser's visit to Logstown.

When the French and Indian War (1754–1763) began, Weiser, by now the chief magistrate of Berks and Lancaster counties in Pennsylvania, was selected as one of the colony's delegates to the Albany Conference, alongside Benjamin Franklin. During the war, as a lieutenant colonel in the Pennsylvania Militia from 1756 to 1758, he commanded its 1st Battalion, which had been given the task of protecting the frontier between the Delaware River and the Susquehanna River. When British troops managed to defeat the French and their native allies and drive them from western Pennsylvania in 1758, Weiser resigned his commission and returned to private life. His last public act was to participate in the negotiations leading to the Treaty of Easton in 1758. Weiser died on July 13, 1760, at his farm near Reading, the settlement in Lancaster County that he had helped found and lay out in 1748.

Wells (Maine)

British settlement situated on Maine's southeastern coast, notable as the most remote English outpost to survive the early Abenaki-English wars. Although native forces attacked Wells on several occasions, it was never abandoned or destroyed, in contrast to English settlements farther east.

John Wheelwright founded the town of Wells in September 1641, on the Maine coast between the Kennebunk River and the Ogunquit River. Settlers erected many sawmills on the nearby waterways, which allowed the town's inhabitants to prosper. The outbreak of war between the English and their native neighbors in Maine (then part of Massachusetts) would soon arrest this prosperity, however.

During King Philip's War (1675-1676), King William's War (1689–1697), Queen Anne's War (1702–1713), and Dummer's War (1722–1727), Pennacook and Abenaki warriors attacked outlying English settlements all across Maine. Because of its size, Wells was a frequent target. Although the natives often burned many of the inhabitants' sawmills and houses, Wells as a whole survived, whereas more easterly English villages collapsed under the pressure of American Indian attacks. Credit for this achievement belongs to the town's garrison houses. Wells's comparatively large population meant that its garrison houses were stronger and had more defenders than those in other Maine outposts. As a result, even when hostile natives captured the neighboring fort at Black Point, they were unable to do significant damage to Wells. After Dummer's War and the diminution of American Indian military power in Maine, the frontier moved beyond Wells, and the town ceased to be a primary military target.

Wessagusset Raid

Start Date: April 4, 1623 End Date: April 5, 1623

Attack led by the captain general of Plymouth Colony, Myles Standish, against the Native Americans of Massachusetts in the spring of 1623. On February 17, 1621, Myles Standish had been appointed the commander of the newly established Plymouth Colony. As such, he had charge of all the colony's military operations.

Direct contact with the natives in the Massachusetts area, especially the Wampanoags, began in March of 1621. This was only a few months after the Pilgrims arrived in the New World. At first, relations with the natives were relatively peaceful. However, in 1622, the settlement of Wessagusset (now Weymouth, Massachusetts) was founded by a wealthy London merchant, Thomas Weston. Unlike Plymouth, Wessagusset had been established for economic and not religious reasons. Weston and his settlers constructed a few huts and commenced trade with the Wampanoags. Soon, disease and starvation, along with other English settlers moving in without permission, led to rising tensions with the natives.

After 10 Wessagusset settlers died from starvation or disease, others began stealing from the Native Americans. Led by the Massachusetts tribe, the natives began plotting to exterminate the Wessachusetts

Captain general of Plymouth Colony Myles Standish. In 1623, Standish led the attack on Native Americans at Wessagusset. (Library of Congress)

sagusset settlement. Tribal leaders, particularly Wituwaument and Pecksuot, appeared to be threatening not only Wessagusset, but also Plymouth. Their plan was ultimately to wipe out the Pilgrims so they would not exact retribution for the killings of those settlers at Wessagusset. At the same time, word of a massacre of Virginia settlers by Native Americans had reached Plymouth. In consequence, the settlers mobilized and the colony was placed in a high state of readiness.

In the early winter of 1623, Phineas Pratt, the new leader of Wessagusset, heard rumors that the natives were planning to attack both his settlement and Plymouth once the snow melted. Pratt then traveled by foot to Plymouth only to find out that the settlers there had already learned of the planned attack from the Wampanoag sachem (chief) Massasoit. Massasoit, an ally of Plymouth, had been given medical treatment by a Plymouth settler and had informed him of the impending attack. Massasoit urged the English to strike first.

Rather than wait for the Native Americans to carry out their plan, the colony dispatched Standish to deal a preemptive blow. On April 4, 1623, Standish sailed to Wessagusset with 10 men armed with muskets. The next day, as Standish and his men met with the Native American leaders and a large number of warriors inside the stockade, violence erupted. Standish and his men killed 5 Native Americans, among them Wituwaument and Pecksuot. The rest of the Native Americans quickly fled. Natives then murdered 3 Wessagusset settlers in retaliation.

The following day, Standish and his crew sailed back to Plymouth. The Wessagusset Raid marked the first time that Plymouth Colony used military force to kill Native Americans. Wituwaument's head was taken back to Plymouth, where it was displayed at the fort as a warning against future native plots. Most of the Wessagusset settlers were brought to Plymouth or to fishing stations on the Maine coast. In time, many of them returned to Europe. Standish's effort was not in vain, for the natives' plan to wipe out the colonies in the Massachusetts territory quickly fell apart.

Westbrook, Thomas

Born: ca. 1680 Died: February 1744

Commander of provincial Maine–New Hampshire forces during Dummer's War (1722–1727). Thomas Westbrook was born about 1680, probably near Portsmouth, New Hampshire. His father was a well-to-do land owner and trader as well as a member of the provincial Council of New Hampshire. Emulating his father's financial success—and certainly helped by it—Westbrook became a prosperous mill operator and a large land holder himself. He was also active in the local militia. When war broke out between the New Englanders of Massachusetts and the French and their Abenaki allies in 1722, Westbrook immediately prepared for service.

In January 1723, as a militia colonel, Westbrook led a contingent of militia on a raid against Norridgewock, an important

Abenaki village and stronghold on the Kennebec River. Westbrook had hoped to capture or kill the French Jesuit Sébastien Râle, resident at Norridgewock since 1695. Râle had cultivated unusually close relations with the Abenakis, and many New Englanders blamed him for inciting the natives to violence.

When Westbrook and his men arrived at the village, Râle, apparently forewarned, had already fled. The Westbrook contingent proceeded to burn the mission church and ransack Râle's quarters. In the process, the men stumbled on Râle's three-volume dictionary of the Abenaki language, a find of incomparable worth. They stole the volumes.

After the Norridgewock raid, Westbrook commanded the combined Maine–New Hampshire provincial forces for the remainder of the war. When the war ended, he moved to Falmouth, Maine, along the coast, where he continued to pursue his merchant and manufacturing interests. Westbrook died in Falmouth, Maine, in February 1744.

Western Design

Start Date: 1654 End Date: 1656

English strategy to attack Spain's American colonies, particularly those in the West Indies. In 1654, Oliver Cromwell and his Council of State made plans to conquer Spain's American possessions. The decision was partly motivated by the successful conclusion of war with the Dutch (1652–1654) and the continuing need to distract English public opinion from a heavy-handed government at home.

Cromwell targeted Catholic Spain because of its perceived threat to Protestant England. He also saw Spain as a lucrative target. Cromwell believed that Spanish vulnerability promised a short, triumphant war and that cutting off Spain from its colonies would weaken that nation permanently. Cromwell's plan was bolstered by his conviction that God would back any venture spreading the Puritan revolution beyond England. New England Puritans were also calling for aggressive English action in the West Indies.

In the summer of 1654, therefore, the English government prepared two fleets, their destinations kept carefully secret. The first under General-at-Sea Robert Blake was destined for the Mediterranean. The second, under General-at-Sea William Penn, was to strike the Caribbean. Penn set sail from Spithead on Christmas Day, 1654. His force numbered 38 ships, 20 of them transports lifting five regiments totaling some 2,500 men under the command of General Robert Venables. The expedition's task was to take the Spanish island of Hispaniola.

The expeditionary force reached Barbados in January. Plans to raise additional land forces from this island proved impossible, but the land force was doubled in part by the formation of a force of 1,200 seamen from the ships of the fleet who would then fight on land.

The fleet sailed from Barbados at the end of March and reached San Domingo, Hispaniola, on April 13. That same day 4,000 men were landed near San Domingo under Venables's command but with only three days of supplies and no entrenching tools. The remainder of the land force was put ashore the next day. Penn stood ready with his ships to shell the San Domingo forts when the troops attacked. Venables was slow to move, however, and the Spanish defeated the English assault when it finally did occur on the 25th. Venables refused to make another effort, claiming with some justification that much of his force was unreliable.

The troops were then reembarked, and on May 4 the fleet departed Hispaniola for Jamaica, reaching that island on January 10. Jamaica had fewer than 1,500 Spanish colonists. The ships of the fleet opened up a bombardment of the Spanish fort, and the defenders abandoned their positions on the landing of the English troops. The whole island surrendered on the 17th. The fleet remained at Jamaica for a month, pacifying the island and scouring the vicinity for Spanish ships.

News of the defeat at Hispaniola overshadowed the victory at Jamaica, angering Cromwell and heartening his detractors. On their return to England, Penn and Venables were both briefly imprisoned in the Tower of London. Cromwell responded to public reaction to the failure of the Western Design by calling for public fasting and humiliation. Save for Jamaica, the Western Design was a failure. Unappreciated at the time, England gained an island that would become its most lucrative Caribbean possession. Nonetheless, the overall failure of Cromwell's Western Design eroded Puritan millennialism, stymied Cromwell's foreign policies, fiscally burdened the English government, and provoked an open war with Spain (1656–1659).

Westos

Native American group that migrated from the Great Lakes region into Virginia, and then into Carolina and Georgia. The Westos played a key role in the Native American slave trade with the English colonists. Newcomers to the Southeast and armed with guns they acquired in Virginia, the Westos (also known as Eries, Rickahocans, and Chichimecos) terrorized other American Indians in Alabama, Florida, Carolina, and Georgia with their slave raids during the late 17th century. In the process, they changed the sociopolitical landscape of the indigenous peoples of the region.

An Iroquoian-speaking nation originally known as the Eries, the Westos lived around the eastern Great Lakes. On losing a war with the Iroquois Confederation, the Westos were dispersed in 1656. Many fled toward Virginia, with some 600 being captured by the Iroquois before they reached the English colony. In late 1656, those who made it to the Virginia frontier defeated a small number of colonists and their native allies in battle for control of the native trade in western Virginia.

Known as the Rickahocans to the Virginians, the Westos then formed a trade alliance with Virginia settlers. The Westos provided deerskins and native slaves to Virginians in return for guns, ammunition, metal knives, hatchets, and other items. By 1659, Westo slave raids brought them into the Southeast, where they attacked those groups that came to be associated with the Creek Confederacy in the 18th century and the missionized natives of Spanish Florida. The Spanish called these new invaders the Chichimecos.

Thanks to the guns they received from Virginia traders, the Westos held a tactical advantage over other native peoples, and as a result they terrorized the indigenous inhabitants of the Deep South until 1680. Only the missionized natives—with the support of Spanish garrisons and guns—were able to defend their territory with any degree of success. The arrival of the Westos in the Deep South led directly to the consolidation of the Tama from the interior of Georgia with several coastal groups and refugees from the Guale missions to create the people later known to the Spanish and the English as the Yamasees.

In 1670, the English established Charles Town (present-day Charleston, South Carolina) as the first permanent settlement of the Carolina Colony. The Westos soon established a trade alliance with the new colony that allowed them to maintain a monopoly on the Native American slave and deerskin trades by preventing the English from trading directly with other Native Americans.

Despite the fact that the government of South Carolina wanted to maintain the alliance with the Westos, a group of colonists had other ideas. Known as the "Goose Creek Men," these individuals armed and encouraged a group of Shawnees known as the Savannahs to attack the Westos. The alliance of the Shawnees and the Goose Creek Men quickly defeated the Westos in the Westo War of 1680. Those Westos who remained chose to live among the Coweta, and their presence among this group of Muskogees assisted the

Cowetas in their rise to prominence within the coalescing Creek Confederacy of the late 17th and early 18th centuries.

Wheatley, Phillis

Born: ca. 1753

Died: December 5, 1784

The first published African American poet in the American colonies. Details about Phillis Wheatley's early life in West Africa remain obscure, but she is believed to have been born in 1753. She arrived in Boston as a slave in July 1761 and was sold to John Wheatley, a prominent local merchant. Apparently she was named for the ship that brought her to America, the *Phillis*. Although the Wheatley family owned several slaves, Phillis appears to have held a privileged position within the household. Initially, she received religious instruction and learned to speak, read, and write in English. Later, her education expanded to include literature, history, Latin, and geography.

Within four years of her arrival, Wheatley had begun to write her own poetry, an activity her owner's family encouraged. Wheatley's poems centered around religious themes (particularly death) and the growing tension between Great Britain and the American colonies.

As Wheatley's talent for writing matured, the family became more involved in promoting her work to a wider audience and began a campaign to publish her poems. In December 1767, Wheatley's first poem, "On Messrs Hussey and Coffin," was published in Newport, Rhode Island. In 1770, her poem on the death of Methodist minister George Whitefield brought her considerable attention throughout New England.

Wheatley's first and only book was *Poems on Various Subjects*, *Religious and Moral*, published in London in 1773, the first book published by an African American. To erase doubts that an African American slave, particularly a woman, could write poetry, a letter appeared in the front of the book signed by eighteen of Boston's most prestigious citizens, including Gov. Thomas Hutchinson and John Hancock, testifying that a close examination of Wheatley and

Phillis Wheatley, born in Africa and brought to North America as a slave, became an acclaimed writer and the first published African American poet. (Library of Congress)

her work had convinced them that she had indeed written the poetry herself. The volume received good reviews and sold well in both England and America. In the fall of 1773, shortly after her book was published, the Wheatley family released her from slavery, although she continued to live with them.

Although the success of her volume boded well for Wheatley, upheaval in her personal life during and after the American Revolution put an end to her career as a poet. By 1779, most of the Wheatley family had died, and Wheatley herself had married a free African American named John Peters. She bore him three children over the next five years, but all of them died young. Financial difficulties plagued the family, and Wheatley's attempts to publish additional volumes of poetry were unsuccessful. Wasted by poverty and disease, she died in Boston, perhaps in childbirth, on December 5, 1784.

Both during her lifetime and after her death, Wheatley's work received attention primarily because she was a woman and an African American slave. Serious literary evaluation of her poetry has been overshadowed by efforts to use her as an example in the debate over African American intellectual ability. Thomas Jefferson, in particular, brought attention to her work when he cited her poetry in his *Notes on the State of Virginia* as "below the dignity of criticism," a comment that vaulted her to the center of controversy about the capacity of African Americans to engage in intellectual pursuits.

Williams, Roger

Born: December 21, 1603 Died: March 15, 1683

English Puritan minister and founder of Rhode Island. Roger Williams was born in London on December 21, 1603, and attended Pembroke College at Cambridge University, graduating in 1627. Ordained to the clergy, shortly thereafter he joined other Puritan dissenters and sailed to the Massachusetts Bay Colony, arriving there in 1631.

During a two-year stay in Plymouth Colony, Williams interacted regularly with the nearby Native Americans. He assiduously studied their language to facilitate mission work among them. By 1636, he was fully conversant in the Algonquian language. By 1643, Williams had become so well versed in the native culture and language that he published *Key to the Indian Languages*, an indispensable dictionary.

In 1633, Williams accepted a pastorate in Salem (Massachusetts Bay Colony). In October 1635, however, the colony's leadership banished him for claiming, among other things, that the Massachusetts Bay charter was illegitimate. This, he argued was because it ignored the property rights of the natives. By then, Williams had already established himself as a champion, of sorts, of Native American causes.

Williams then fled south from Massachusetts Bay with his followers and established Providence, Rhode Island, in June 1636. He so named the settlement because he believed that God had cared for him and his supporters after his banishment and had led them to safety.

In Providence, Williams cultivated cordial and strong ties with the Narragansetts, from whom he formally secured land rights to begin building his new settlement. Among other things, Rhode Island's government promoted religious toleration and separated church law from civil law. The Massachusetts Bay authorities soon

Illustration of Narragansett Native Americans and Roger Williams. The founder of Rhode Island, Williams developed an excellent relationship with the Narragansett tribe. (Library of Congress)

requested Williams's help, however. By 1636, they feared that the powerful Pequots sought an alliance with the Narragansetts against them. Williams traveled 30 miles alone by canoe to negotiate with the Narragansett sachems Canonicus and Miantonomo. In three days he convinced the Narragansetts to abandon their association with the Pequots and instead form an alliance with the English. The Pequots were soon decimated in the Pequot War (1636–1638).

When conflict erupted between the Narragansetts and the Mohegans in the mid-1640s, Williams counseled Massachusetts authorities to remain neutral. His advice was disregarded, but his negotiations did avert war between the Narragansetts and the English. The terms of the agreement, however, punished the Narragansetts rather severely. Again in 1654 Williams tried to prevent the Massachusetts leadership from taking military action against the Niantics and their leader Ninigret for killing other natives on Long Island.

Tensions between the English and the various New England tribes continued to build through the 1670s, as the colonists claimed more and more land. At one point in 1671, Williams allowed himself to be taken into the custody of the Wampanoags in order to ensure the safety of their sachem, Metacom (King Philip), during his deliberations with the Plymouth leadership. By 1675, the English feared a potential Native American alliance led by Metacom. Although the Narragansetts promised Williams that no alliance existed with Metacom, the situation quickly deteriorated. In June 1675, various New England tribes, including the Wampanoags, the Narragansetts, and the Mohegans, united against the colonists in King Philip's War (1675–1676).

Even though Rhode Island officially claimed neutrality in the war, Williams served as one of two captains of the Providence Militia. As a result, his home was burned by natives during an attack. Williams's mediation efforts during King Philip's War proved his last major attempt to broker peace between the English and the New England natives. Williams died on March 15, 1683, at Providence, Rhode Island.

Wills Creek (Maryland)

Trading outpost and the site of Fort Cumberland, located at the junction of Wills Creek and the Potomac River near the border of Maryland and Virginia. In 1750, the Ohio Company purchased land

around Wills Creek to be used as the hub for its trading and land speculation enterprises. The company had been organized in 1748 by a group of prominent Englishmen and Virginians. These investors had realized the significant economic potential that lay in the vast territory along the Ohio River, between the Appalachian Mountains and the Mississippi River, and thus began stockpiling supplies on the south side of the Potomac River at Wills Creek, Maryland.

From this point, the Ohio Company planned additional settlements farther west and began clearing an 80-mile wagon road to the Monongahela River. The company hoped that Wills Creek would become a major trading depot and rallying point for British and colonial supplies and troops to and from the Ohio River Valley. On the Maryland side of the river, Ohio Company officials erected a modest storage facility. On the Virginia side stood another structure identified as a "new store."

In the early 1750s, as Franco-British relations continued to deteriorate, Lt. Gov. Robert Dinwiddie of Virginia ordered the fortification of Wills Creek. The order came as France and Britain were fast careening toward open war. Thus, during the winter of 1754–1755, Virginia provincial troops constructed there a star-shaped fort with four bastions. Colonel James Innes supervised the work and named the post Fort Mount Pleasant. Later in 1755, the British commander in North America, Major General Edward Braddock, ordered the fortification updated and reinforced. The name was then changed to Fort Cumberland, after the Duke of Cumberland, a son of King George II. It was this redoubt that Braddock designated as his first objective on his 1755 expedition to Fort Duquesne, and it was from here that Braddock began to cut his road westward.

Both Virginia and Maryland stationed troops at Fort Cumberland until 1756. That year, the Maryland General Assembly ordered its troops to withdraw to Fort Frederick, some 70 miles to the east, then the farthest point west the colony would defend. The only offensive "action" Maryland and Virginia troops stationed there saw in 1756 was what later became known as the Dagworthy Affair. Captain John Dagworthy of Maryland's provincial forces fought to assert his right as a royally commissioned officer to issue orders to Colonel George Washington, whose commission bore only the signature of Dinwiddie.

The British garrisoned Fort Cumberland until 1765. The ruins of Fort Cumberland at Wills Creek are located beneath Emmanuel Episcopal Church (1849) in present-day Cumberland, Maryland.

Windsor Blockhouse (Connecticut)

Fortified village that was one of the first English settlements in the Connecticut River Valley. Despite early difficulties, the fortification allowed the English to flourish and eventually push the Dutch out of the region and dominate the local trade with Native Americans.

Stories about economic opportunities in the Connecticut River Valley spread among the English colonists in Plymouth and Boston during the 1620s. As more settlers arrived from England, open land suitable for farming around the original settlements vanished. In 1632, Edward Winslow led a scouting party from Plymouth up the Connecticut River. They noted the many meadows for farming and beavers that would supply pelts for trade with England. With Dutch traders beginning to move into the region, there was some urgency in the establishment of English settlements.

In 1633, a group of 70 settlers under Lieutenant William Holmes sailed up the Connecticut River to establish a trading post. The Dutch had established Fort Good Hope on the west side of the river and ordered the English party not to proceed. Ignoring Dutch threats to open fire on them, the English sailed past and established their base a mile upriver.

The English had brought with them a collapsible frame house that they quickly fortified against Dutch or Native American attack. This trading post upstream of the Dutch gave the English an advantage in trading with the local natives. By 1664 the Dutch traders were forced out of the Connecticut River Valley.

Another party of settlers from Boston came into the Connecticut River Valley in the fall of 1633. Commanded by Captain John Mason, they established a settlement near the trading post and named it Windsor Blockhouse. It was also known as Matianuck Fort, the Plymouth Trading House, and Palisado Green. The settlement consisted of a number of houses and a separate meetinghouse on a high point. A lookout platform on the meetinghouse provided warning of attack, and a palisade similar to those used by local Native Americans enclosed the settlement. One end of the logs was buried up to three feet in the ground, with another 10–12 feet extending above ground. The roughly rectangular enclosure measured 990 feet on the south, 1,140 feet on the west, 825 on the north, and 1,320 feet on the east. A wide ditch enclosed the entire fortification.

During the Pequot War (1636–1638), native war parties prowled around Windsor Blockhouse, but they were unwilling to assault the strong fortifications. The subsequent destruction of the Pequots permitted the English to found more settlements in the Connecticut River Valley. Trade with the Native Americans flourished and the area became a center of agriculture in the colony. By the 1660s, both the Dutch and the Native Americans had been forced from the valley, and the palisade around Windsor was allowed to fall into ruin.

Winslow, John

Born: May 10, 1703 Died: April 14, 1774

Massachusetts military officer and politician. Born in Marshfield on May 10, 1703, John Winslow was the great grandson of Edward Winslow, who came to North America on the *Mayflower* and served as the governor of Plymouth Colony. Much of his life was spent in the military, and Winslow was known for his popularity with his men, his ability to recruit soldiers, and his disdain for commanders who regarded colonial soldiers as poor fighters.

Although he was from a distinguished family, Winslow himself was barely literate. He spent much of his early years working a number of government jobs, but soon tired of these and joined the provincial forces in Massachusetts. He saw his first combat during the Anglo-Spanish War (War of Jenkins' Ear, 1739–1744), when in 1740 he secured a commission as a captain in a provisional company in the abortive expedition against Cuba.

Winslow then went to Boston, where in 1748, through the influence of Gov. William Shirley of Massachusetts, he secured a commission as a captain in the regular British Army. He then served at Annapolis Royal, Nova Scotia, and St. John's, Newfoundland, in the 40th Regiment of Foot (the "Fighting Fortieth"). In 1751, he exchanged places with another officer and left active duty on half-pay to return to Massachusetts, where he assisted Governor Shirley in the general court during 1752–1753.

In 1754, during the French and Indian War (1754–1763), Shirley named Winslow major general of the Massachusetts Militia and gave him command of an expedition of 800 men mounted in response to a report that the French intended to seize the area of Maine (then part of Massachusetts) between the Chaudière River and the Kennebec River. Winslow constructed two forts to provide protection for future colonists: Fort Augusta (Augusta, Maine) and Fort Winslow (Winslow, Maine). The expedition was a resounding success and established Winslow's military reputation.

In the winter of 1754–1755, Shirley ordered Winslow to recruit a force at Boston in order to be ready to carry out the governor's plan for a coordinated attack against the French. It is a clear indication of Winslow's popularity that he was able to enlist some 2,000 men. On April 14, 1755, Shirley met at Alexandria on the Potomac River with Lt. Gov. Robert Dinwiddie of Virginia, Lt. Gov. James Delancey of New York, Gov. Arthur Dobbs of North Carolina, Gov. Robert Hunter Morris of Pennsylvania, and Horatio Sharpe of Maryland. In this Council of Alexandria, the governors agreed to mount a four-pronged offensive against the French.

One of the four attacks was against Acadia. In this expedition Winslow, now a lieutenant colonel, commanded one of two provincial regiments under the overall expedition commander, British Army colonel Robert Monckton. In June 1755, this force captured France's Fort Beauséjour, the only one of the four English operations that met success that year. In August, on the special request of Gov. Charles Lawrence of Nova Scotia, Winslow traveled down the St. Lawrence River with most of his men to the Minas area of Acadia to oversee the deportation of Acadians there. Winslow found the task distasteful and took care to see that the Acadians at least had a chance to retrieve their possessions and that they were treated well. Winslow then returned with his men first to Halifax and then to Boston.

In 1756, Shirley appointed Winslow to command Massachusetts troops against French Fort St. Frédéric near Crown Point. Here he clashed with Lord Loudoun, who proposed to integrate British regular and provincial forces. Winslow opposed this because the provincials had enlisted on the assumption they would be fighting only under their own officers and colonial officers might lose the ranks they held under colonial appointment. In response to Shirley's pleas, Winslow finally agreed to Loudoun's request and found himself commanding some 7,000 provincial troops in the vicinity of Fort Edward and Fort William Henry. The men did not see action, thanks to Loudoun's excessive caution.

Apparently disillusioned by his military experiences, Winslow returned to politics in 1757. He served in the Massachusetts legislature as representative for Marshfield during 1757–1758 and again during 1761–1765. In 1762, he became chief justice of the court of common pleas. Winslow moved to Hingham in 1766, where he died on April 14, 1774.

Winslow, Josiah

Born: ca. 1629

Died: December 18, 1680

Colonial militia officer, governor of Plymouth Colony (1673–1680), and commander of colonial military forces during King Philip's War (1675–1676). The son of Edward Winslow and Susanna Fuller White, Josiah Winslow was born in Plymouth around 1629. Several years later his father founded the town of Marshfield, and the fam-

Woodcut portrait of Josiah Winslow, governor of Plymouth Colony during 1673–1680. (North Wind Picture Archives)

ily took up residence there. Winslow attended Harvard College in the 1640s but did not receive a degree because he did not intend to pursue a career as a minister.

Winslow's military and political careers took off while he was still quite young. In 1652, he was appointed captain and commander of the Marshfield Militia and won election to the colony's court of assistants. Plymouth officials bestowed two additional appointments on him in 1658: a civil post as commissioner to the United Colonies of New England and a seat on the colony's Supreme War Council. The latter position was responsible for planning operations, raising troops, and procuring supplies in wartime. The following year, Winslow was appointed commander of the colony's militia, with the rank of major.

Winslow took prompt action in 1662 on learning that the Wampanoags were selling land to people from outside the colony, in violation of their treaty with Plymouth. Winslow summoned their chief, Wamsutta, to Plymouth (possibly by force), and the Wampanoags agreed to abide by the treaty and accept Plymouth's control over some of their affairs. Winslow undertook a similar expedition in 1671 against a group of dissident natives, which led to the disarming of the Wampanoags and their further submission to colonial authorities.

Winslow became the first American-born colonial governor when he was elected to head the Plymouth Colony in 1673. This was a time of deteriorating Anglo-native relations; in January 1675, a Christian Native American informed Winslow that Wampanoag leader Metacom (King Philip) was organizing a confederacy to resist the colonists, but Winslow refused to believe the report. The

hanging of three Wampanoags in June 1675 for the alleged murder of Winslow's informant led to the outbreak of King Philip's War.

Winslow called the militia into action to defend the colony, and in November he assumed command of a colonial force and attacked the Narragansetts, who had allied with Philip. On December 19, 1675, Winslow's troops crushed the Narragansetts in a battle known as the Great Swamp Fight. Physically ill and utterly exhausted from the campaign, Winslow gave up his military command in February 1676 and focused his efforts on rebuilding the colony, which suffered heavily from native attacks. He was still engaged in that effort when he died at Marshfield on December 18, 1680.

Winthrop, John

Born: January 12, 1588 Died: March 26, 1649

English Puritan and the first governor of the Massachusetts Bay Colony. John Winthrop was born in Edwardstone, Suffolk, England, on January 12, 1588. He attended Trinity College at Cambridge University but did not receive a degree. For a time he practiced law and oversaw Groton Manor in England. He then decided to leave England on the Puritan expedition to North America. In 1630, he sailed with other Puritans to New England and began serving as the first governor of the Massachusetts Bay Colony that same year.

Conflict soon arose with nearby Native Americans, and in the mid-1630s tensions heightened with the Pequots in particular. In 1636, the colony's leadership (including Winthrop, now a member of the Standing Council) decided to take action. They sent Captain John Endicott and a force of 90 men to attack those tribes deemed responsible for the killings of several Englishmen. The expedition was also directed to demand retribution from the Pequots, who were seen as complicit in the deaths.

Following Endicott's largely unsuccessful raid, word reached colonial authorities that the Pequots were seeking an alliance with the powerful Narragansetts against the English. Winthrop, who also served as commander of a militia unit, wrote to Roger Williams, the founder of Providence, Rhode Island, and requested his help. Although Winthrop had played a leading role in Williams's recent banishment from the Massachusetts Bay Colony, he realized that Williams had important connections with the Narragansett sachems. Williams convinced the Narragansetts in October 1636 to abandon their association with the Pequots and instead ally them-

Portrait of John Winthrop, one of the most powerful political leaders in Massachusetts Bay during the colony's critical formative years. (Library of Congress)

selves with the English. In the ensuing Pequot War (1636–1638), Winthrop then persuaded the Plymouth Colony to join in the war effort. The Pequots were badly defeated in the war.

Following the war, Winthrop worked with other colonial leaders to bring the New England colonies together for mutual defense purposes. By 1643, he was leading a committee that drew up Articles of Confederation among Massachusetts Bay and the colonies of Connecticut, New Haven, and Plymouth. The result was the New England Confederation. In addition to establishing collective defense, the confederation also established a means to settle intercolonial disputes.

Apart from warfare, defense, and civil issues, Winthrop also became involved—perhaps unwisely—in French politics. In 1643, he allowed Charles de Saint Étienne de La Tour to recruit troops in Boston to help him establish his leadership of French Acadia. The Frenchman had been locked in a power struggle with his rival, Charles de Menou d'Aulnay, over control of Acadia. Many colonists condemned Winthrop's association with a Roman Catholic and questioned the wisdom of participating in a French conflict. Following these events, Winthrop nonetheless continued to play a central role in the politics of the colony until his death on March 26, 1649, in Boston.

Winthrop, John (Fitz-John)

Born: March 14, 1637 Died: November 27, 1707

British and colonial military officer and governor of Connecticut (1698–1707). John Winthrop, also known as Fitz-John Winthrop, was the grandson of Massachusetts Bay's first governor, John Winthrop. He was born in Ipswich, Massachusetts, on March 14, 1637, and enrolled at Harvard College but left in 1657 to sail to England and take a commission in the Parliamentary forces during the English Civil War (1642–1649). He quickly won promotion from lieutenant to captain, serving in the forces of General George Monck in Scotland and in Monck's march on London in 1660 that led to the restoration of King Charles II to the English throne.

After the Restoration, Winthrop's unit was disbanded, and he returned to Connecticut to take up politics. Winthrop soon found himself lured back into martial pursuits, however. He fought against the Dutch in the Third Anglo-Dutch War (1672–1674) and against Native Americans in King Philip's War (1674–1675). Winthrop also served in Sir Edmund Andros's Governor's Council in the Dominion of New England.

In 1690, during King William's War (1689–1697), Winthrop was commissioned a major general and given command of an expedition against Canada. He set out from Hartford, Connecticut, on July 14, 1690, intent on stopping raids by French-supported natives. He also hoped to capture Montreal, but supply problems, poor coordination, and a general lack of support soon caused him to cancel the invasion and order a retreat. He was briefly arrested and imprisoned for treason because of the failed invasion but was subsequently exonerated by the Connecticut government.

Winthrop became governor of Connecticut in 1698 and was reelected regularly until his death in 1707. During that time he struggled to preserve the military autonomy of his province. During Queen Anne's War (1702–1713), he refused to send Connecticut troops outside the colony's boundaries. In fact, in 1704 he even disbanded the provincial militia rather than be pressured into sending Connecticut troops on distant campaigns. Winthrop died in office on November 27, 1707, while in Boston, Massachusetts.

Wolfe, James

Born: January 2, 1727 Died: September 13, 1759

British commander in the Battle of the Plains of Abraham before Quebec on September 13, 1759. From an Irish family, James Wolfe was born at Westerham in Kent, England, on January 2, 1727. He entered the army at the age of 14 with a commission in the British Marines. Wolfe saw active service with the 12th Foot in the War of the Austrian Succession, in which he fought at the Battle of Dettingen (1743) in Bavaria. Soon thereafter he became a captain in the 4th Foot.

Wolfe participated in the heavy fighting at Falkirk and Culloden during the Jacobite Rising of 1745. Despite his youth, Wolfe became a lieutenant colonel of the 20th Foot in 1750 and was stationed for the most part in Scotland until the outbreak of the Seven Years' War (1756–1763, the French and Indian War in America, 1754–1763). Wolfe's first major action during the war was at Rochefort, France, in 1757, a failed combined arms diversionary expedition against a French coastal military base.

In 1758, having achieved the reputation as one of the top officers in the service of his age and rank, Wolfe was posted to America with a local commission as brigadier general under Major General Jeffery Amherst, the British commander in chief in North America. Wolfe then took part in the campaign against the French stronghold of Louisbourg, Canada. Wolfe was instrumental in the capture of that fortress in 1758, particularly in getting his brigade onshore under trying conditions and in the successful defense of the British siege lines against French sorties. His role in the siege earned him much praise and the notice of British prime minister William Pitt the Elder. Pitt subsequently entrusted Wolfe with the command (and the local rank of major general) of all British military and naval forces to be marshaled in 1759 for a daunting attempt to capture Quebec.

Taking Quebec proved to be a formidable challenge for Wolfe, who was in declining health during the siege and had strained relationships with his army subordinates. After months of periodic shelling of Quebec and a disastrous frontal assault against the French lines, Wolfe decided on a daring plan, opposed by his leading subordinates, to covertly land a substantial force at Anse au Foulon (today Wolfe's Cove), only a mile and a half from the city. On the night of September 12, 1759, his men scaled the steep cliffs there, dispatching the few French sentinels on duty.

By the morning of September 13, Wolfe had positioned 4,500 men and two artillery pieces on the heights of the Plains of

Painting by Benjamin West in 1769 depicting the death of British major general James Wolfe, mortally wounded in the Battle of Quebec on September 13, 1759. (Library of Congress)

Abraham, ready to receive the expected French counterattack. In the ensuing battle, the British were victorious. Twice wounded earlier in the fighting, Wolfe was then wounded a third time when a ball passed through his lungs. This proved fatal. Wolfe died the same day, his passing eased by news of the British victory.

Word of the victory and Wolfe's death at the moment of triumph made Wolfe a national hero and a romantic figure in England. His body was returned to England and buried in the crypt of St. Alfege's Church, Greenwich.

Woodward, Henry

Born: ca. 1646 Died: ca. 1690

English trader and diplomat, credited with establishing Anglo-American Indian trade and diplomacy in the Southeast. It is virtually impossible to discuss the establishment of South Carolina without talking about Henry Woodward. His talents were crucial to 17th-century South Carolina and the American southeastern frontier.

Henry Woodward was perhaps born in Barbados about 1646 and moved to the North American continent as a young adult. He came to Port Royal (near present-day Beaufort, South Carolina) in 1666 as one of its first settlers. Woodward's talents for dealing with Native Americans were immediately recognized, and he soon became a mediator in Native American affairs and a trader among them.

Early in his career, Woodward was captured by the Spanish and taken to Florida. While in St. Augustine, he lived with the parish priest and became a Catholic. He also studied the Spanish methods of conducting trade with Native Americans. In 1668, he escaped his captivity when the buccaneer Robert Searles raided St. Augustine.

Woodward sailed around the Caribbean with Searles for a time as a ship surgeon. In 1669, the ship was wrecked on the Caribbean island of Nevis, and Woodward's career took a new direction. Boarding a Carolina-bound ship, he landed at Bull's Island, South Carolina, in 1670. There he was immediately enlisted by the Carolina Proprietary Government to head a delegation to the Catawba center of Cofitachique, probably near present-day Camden, South Carolina. Woodward then managed to return to Charles Town (present-day Charleston) with a treaty signed by the emperor of Cofitachique that permitted the European colony. He also publicized the grandeur of Cofitachique.

During a trip into the interior, Woodward discovered that Virginia had already established a trade route to the natives. He was among the first to follow this trade path, and by 1673, the path was well known. In 1674, Woodward visited the powerful Westos, writing a description of their village: "A Faithful Relation of My Westoe Voiage." By 1677, the Westos, who had firearms and posed a problem for the European settlers, had been expelled from the Carolinas and Woodward fell into disrepute. Woodward then traveled to England to secure a pardon for his involvement with the Westos.

Returning to South Carolina with the pardon, Woodward worked to establish trade with the Lower Creeks. The last information on Henry Woodward is from 1686, when he reportedly fell ill and was carried from the frontier to Charles Town on a litter, during which 150 Native American burden bearers joined the caravan. They also carried valuable animal skins for the Charles Town trade. This difficult trip may have contributed to Woodward's death.

Writs of Assistance

Administrative search warrants that allowed the search and possible seizure of goods or property. Unlike search warrants, no due process or justification was necessary to obtain a writ of assistance. The intent of these was to stop smuggling or other violations of British trade or impost laws. Their name derives from the fact that the Crown official possessing the writ was empowered to have the assistance of local officials, such as the constable or other peace officers, or, if need be, the local community to enforce the writ.

In 1662, Parliament authorized the writs, which allowed customs officials of the nonjudicial court of exchequer to search any

James Otis Jr. of Massachusetts, who in 1761 appeared before the Massachusetts Superior Court and claimed that Writs of Assistance violated the British constitution. (Library of Congress)

individual's possessions for contraband goods. If the officials met with resistance in their search, the act allowed for the destruction of personal property in order to satisfy the requirements of the writ. The life of the monarch limited the duration of the writs of assistance, thus making any writ enforceable at any time and with near unlimited amount of times customs officials could search an individual's property.

In 1696, Parliament extended the issuing of writs to the American colonies. Because most of the colonies lacked courts of exchequer, however, the writs were generally unused. Yet Massachusetts and New Hampshire allowed writs of assistance because they permitted the English courts of exchequer to have jurisdiction within their colonies.

In the American colonies, the concern with writs did not become a contested issue until England began to tighten the imperial reins during and after the French and Indian War (1754–1763). In 1756, Massachusetts issued its first writ of assistance, with several more issued during the rest of the decade. Massachusetts merchants met the issuing of these writs with great resistance. When King George II died in 1760, the writs issued during his reign, including those in Massachusetts, died with him. In 1761, when Charles Paxton, an unpopular Boston customs official, applied for and was granted a new writ of assistance by Thomas Hutchinson, the chief justice of the Massachusetts Superior Court (also lieutenant governor),

James Otis Jr. appeared before the court and claimed that the writs violated the British Constitution.

The Writs of Assistance Case of 1761 pitted Otis against the Massachusetts Superior Court. Otis claimed that because the writs were open-ended, they violated the fundamental principles of English law. Governments possessed the right, he claimed, to search an individual's property but only if done through a search warrant and with justified reasons. He noted that writs of assistance allowed a search for anything at any time, which amounted to an abuse of power. Therefore, he claimed that any issuing of a writ of assistance would be in violation of English legal principles and thus null and void. Despite Otis's appeals to the fundamental legal principles of the English constitution, the Massachusetts Superior Court issued the writ, creating a firestorm of controversy in the colonies. Years later, John Adams reflected that the Writs of Assistance Case was the spark that ignited the American Revolution. It was not only one of the first instances of American resistance to British power but also directly led to the Fourth Amendment to the United States Constitution.

Wyatt, Francis

Born: ca. 1588 Died: 1644

Governor of Virginia (1621–1626, 1639–1641). Francis Wyatt was born in Kent, England, to a prominent family about 1588. Knighted in 1603, he married into a family with strong connections to the Virginia (London) Company. In 1621, Wyatt's wife's uncle appointed him governor of Virginia to succeed Sir George Yardley, and he arrived in Jamestown that same year to undertake his new duties.

The privately owned Virginia Company charged Wyatt with cementing the province's new governmental structure, which included the right to trial by jury and an elected assembly that met annually. These procedures established a precedent for future English colonies in the New World.

The 1614 marriage between John Rolfe and Pocahontas had finally brought to Virginia a semblance of security. This situation encouraged settlers to spread out over an area stretching more than 100 miles, a process that continued during Wyatt's first year as gov-

ernor in 1621. What settlers did not know was that Opechancanough, leader of the Powhatan Confederacy since 1618, was secretly plotting to expel the English from the region.

In early 1622, Opechancanough and Wyatt faced off over a minor clash between natives and settlers. Wyatt refused to apologize or offer concessions for the incident, a stance that deeply offended Opechancanough. Wyatt, however, came out of the confrontation believing that the local natives had renewed their friendship with the English settlers.

At noon on March 22, 1622, widespread simultaneous native attacks hit outlying settlements, killing 347 English men, women, and children. More than one quarter of Virginia's total population died within a matter of several hours. On learning of the attacks, Wyatt acted quickly. He ordered most plantations abandoned and concentrated most of the remaining settlers in and around the capital of Jamestown. Opechancanough chose not to move against Jamestown's strong defenses.

With Jamestown secured, Wyatt gathered most of the colony's able-bodied men and in June 1622 launched the first of several punitive expeditions. Realizing how difficult it would be to pin down and engage Opechancanough and his warriors, Wyatt instead had his men focus on depriving the natives of the necessities of life. Wyatt ordered his men to kill animals, destroy all food, and take or destroy any items that could aid the natives. This campaign brought such deprivation to the natives over the ensuing months that in March 1623 a desperate Opechancanough sued for peace.

Intent on permanently eliminating the Powhatan threat or even exterminating the Powhatans, Wyatt rejected the overture. Instead, he launched new offensives using men and weapons recently arrived from England. The campaigns against the Powhatans continued until a peace treaty was finally concluded in 1632.

The 1622 massacre by the Powhatans and its aftermath compelled the English crown to take control of Virginia in 1624. Nevertheless, Wyatt continued as governor until 1626, when he returned to England on the death of his father. Wyatt came back to Virginia in 1639, when he succeeded the unpopular John Harvey as the colony's governor, serving until 1641. Wyatt returned to England when his tenure ended. He died in Bexley sometime in 1644.

Y

Yamasees

Native American group from central Georgia that resettled in large numbers in Carolina, some 100 miles from Charles Town (Charleston, South Carolina). The Yamasees were related to the Hitchitis and the Oconees, two other Muskogean-speaking groups that were part of the Creek Confederacy. At the time of first contact, the Yamasees lived on the Oconee River above the Fall Line in Georgia. The site was along a major east-west trade route.

The Spanish tried to convert the Yamasees to Christianity in 1570 with little success. However, the Yamasees remained involved in the Spanish trade through the Guale missions on the Georgia coast. They also probably added to their numbers as Guales and Timucuas in the Spanish missions fled northward to escape Spanish rule.

In the early 1660s, the slave-raiding Westos arrived in South Carolina and Georgia. Westo raids hit the Yamasees hard. These raids compelled the Yamasees to disperse and resettle in several different areas. Some Yamasees settled among the natives in Spanish missions. Others moved to the Lower Chattahoochee River area to live among other groups that spoke various dialects similar to their own.

Although the Yamasees settled among and near the Spanish missions, most did not wish to embrace Christianity. Finally, the Spanish tried to force conversion and participation in their native labor system known as the *repartimiento* (to divide or redistribute). Because of these Spanish demands and the inability of the Spaniards to protect them from French and English pirate raids, many Yamasees moved to the lower Savannah River in the early 1680s. Finally, in 1684, the Yamasees established a trade relationship with the English that for a time benefited both parties.

In the years immediately prior to 1715, the British colonists began to abuse their Yamasee trading partners. This included fraud, extor-

tion, and physical beatings. The English settlers also began to ignore the ceremonial trappings that native people expected to accompany trade. This treatment of the Yamasees along with Yamasee participation in a growing alliance among the southern tribes dominated by the Creeks led to the Yamasee War (1715–1717).

In the Yamasee War, almost all of the natives in South Carolina and Georgia took up arms against the Carolina settlers and nearly destroyed the colony. In 1716, however, the colonists defeated the native alliance. Some Yamasees then fled to Florida for protection by the Spanish near St. Augustine. Others sought protection among the Creeks, who were in the process of moving from central Georgia back to the Chattahoochee River. The Hitchitis eventually absorbed most of these Yamasees.

In an attack on the Spanish at St. Augustine in 1727, the British destroyed the Yamasee village located nearby. In 1763 when the Spanish ceded Florida to the British at the end of the French and Indian War (1754–1763), many of the last of the Spanish Yamasees left with the Spanish for the West Indies. Others remained in Florida and assimilated into the Miccosukee Seminoles during the later half of the 18th and the early 19th centuries. A small number among the Miccosukee Seminoles preserved the Yamasee name until 1812. After that, they disappeared from the historical record.

Yamasee War

Start Date: April 15, 1715 End Date: November 1717

A costly frontier conflict that devastated the colony of South Carolina and led to the near-extinction of the Yamasee tribe. The Yamasees were a Muskogean-speaking people inhabiting the southern reaches of Georgia at the time the Spanish were occupy-

ing nearby Florida. They enjoyed cordial relations initially and received Franciscan missionaries until 1680, when the Spanish attempted to deport tribal members to the Caribbean to work as slaves. A war ensued and the Yamasees migrated northward to the vicinity of St. Helena and modern-day Hilton Head Island, where the English colony of South Carolina was developing. Initially, the Yamasees and the British were amicably disposed. The Yamasees performed useful services to the British, not the least of which was to act as a buffer between them and the Spanish. They also played a prominent role in the essential deerskin trade and actually fought on behalf of the English during the Tuscarora War (1711–1713).

Around this time, however, poorly regulated British traders and native agents engaged in unscrupulous practices with the Yamasees, including appropriating land without payment, wholesale cheating in trade, and demanding immediate payment for tribal debts estimated at £50,000. When the tribesmen proved unable to comply, the English usually resorted to seizing wives and children for the slave market. Such systematic abuse propelled the Yamasees to violence against their antagonists, and they began consorting with neighbor-

ing tribes like the Catawbas, the Apalachees, and the Creeks to initiate military action.

The ensuing Yamasee War began on April 15, 1715 (Good Friday), when native warriors staged carefully orchestrated attacks against English outposts along the South Carolina frontier. Traders and native agents were especially targeted for revenge, and upwards of 100 colonials were slaughtered at Pocataligo. Other war bands struck at the settlement of St. Bartholomew, between the Edisto River and the Combahee River, burning it and scattering the inhabitants. The ensuing crush of white refugees toward Charles Town (Charleston) greatly swelled the population of that region, which gave it the ability to muster sufficient manpower for a defense.

Gov. Charles Craven proved exceptionally able and energetic in this regard, and in late April he mounted a limited offensive with 240 men. Near Salkehatchie, they engaged and defeated 500 warriors. About this same time, a second column under Colonel Mackay stormed the occupied village of Pocataligo, dispersing a larger force of Yamasees. In another action fought on July 19, 1715, 120 militiamen under Captain George Chicken chased a band of warriors into a swamp, surrounded them, then attacked, killing 40 and freeing several white captives. Warfare at this time had broken down into large-scale raiding by both sides, with notable actions at New London and Daufuskie Island (adjacent to Hilton Head Island and the Savannah River). The Yamasees and their coalition were unable to withstand the colonial resurgence and began appealing to other tribes for assistance.

Their Creek neighbors agreed to help, providing additional war bands to supplement their original contingent. Thus augmented, the tribesmen were able to resume their destructive raids and in an action near Port Royal on August 1, 1716, killed several defenders. But the South Carolinians, now reinforced by militiamen from North Carolina and Virginia, were able to withstand this new round of native attacks. They soon began driving the Creeks and the Yamasees back into the swamps of Georgia.

By January 1716, the Creeks felt sufficiently threatened to appeal to their traditional enemy, the Cherokees, who constituted the largest tribe in the Southeast. The Cherokees proved coy initially but, in light of their good relations with the English, they announced their decision by slaughtering the Creek emissaries. This combination of colonial militia under Craven's effective leadership, now backed by ample Cherokee manpower, proved too much for the Creeks and the remnants of the Yamasee coalition. Both were soon driven from the colony, the Creeks moving deeper into Georgia and the Yamasees withdrawing completely into Florida, being welcomed by the Spanish as allies. It was not until November 1717 that the Creeks and the English formally concluded a peace treaty. The Yamasees were never a party to this agreement, and from their Florida enclave they launched sporadic raids for more than a decade.

Despite its relatively brief duration, the Yamasee War was one of the most costly conflicts waged by a European colony. South Carolina, with a population of only 5,500 settlers, took proportionately heavier losses than those incurred by New Englanders during King

Philip's War (1675–1676). Many frontier communities lay gutted, and the lucrative fur trade, heretofore a staple of the local economy, was severely disrupted for many years. And despite Craven's able leadership, the proprietary government's response to the crisis was perceived as sluggish. Thus, in 1719 it was overthrown by the inhabitants and replaced by royal governance.

The Creeks also drew important lessons from the conflict, realizing that they lacked the power to openly confront both the English and the Cherokees and, moreover, could not readily rely on assistance from either France or Spain. They thereafter embarked on a course of cautious neutrality, partly to offset half a century of enmity toward the Cherokees, which had arisen from this war. But the biggest losers proved to be the conflict's instigators, the Yamasees. Driven from their homeland and subject to periodic raids from the new English colony of Georgia, they progressively became weaker in terms of numbers. They were gradually absorbed by their Creek and Seminole neighbors. This once proud and influential tribe had disappeared as an identifiable culture by the end of the 18th century, although it is speculated that the Altamaha Cherokees of present-day Burke County, Georgia, may be their descendants. The Oklawaha band of the Seminoles is also thought to be largely descended from the Yamasees.

York, Attack on

Event Date: January 25, 1692

Near destruction of the English settlement on the coast of Maine (then part of Massachusetts) by Abenaki warriors during King William's War (1689–1697). The attack was known as the Candlemas Day Massacre, so named because of its proximity to the Christian feast day known as Candlemas.

In the fall and winter of 1691–1692, 400 Abenaki warriors joined with French officers to attack various English forts and frontier settlements. The offensives were concentrated along the northern and eastern New England frontier. Some 150 of these natives participated in the attack on York, an English settlement of about 500 inhabitants along the York River. As with many other frontier communities York had suffered from sporadic violence and the loss of men during King Philip's War (1675–1676) and the early years of King William's War.

834 York, Attack on

Led by Penobscot sachem (chief) Madockawando, the Abenakis struck York on the morning of January 25, 1692. They quickly killed two woodcutters and captured trapper Arthur Bragdon as he entered the woods to set his traps. In exchange for his life, Bragdon provided information on the town's defenses. Two parties of warriors then assaulted one of York's five garrison houses as well as the majority of the inhabitants' homes, quickly overwhelming any opposition. Many of York's residents found shelter in the four remaining garrisons, but 50 inhabitants were killed, including the town's minister, Shubael Dummer. Nearly 100 other settlers were taken prisoner. For several hours before withdrawing, parties of Abenakis sacked the town, burning most of its buildings save for the occupied garrison houses, the meetinghouse, and the jail. They even stripped lead from window casings to mold into bullets. Before departing, the raiders released captives equal to the number of Native American prisoners released by Captain Benjamin Church at Pejepscot in 1690.

In the aftermath of the raid, York became an armed camp as provincial soldiers arrived to maintain this key Maine outpost. Dummer's death had a broader impact on New England, convincing the English that the religious machinations of French priests among the Abenakis had sparked this latest conflict with the natives.

Appendices

Rank Structures

Military ranks of the various forces in North America during the colonial period are generally similar to those in use today. Still, there were variations in rank titles and ranking structures, and some military forces changed the titles and meanings of some ranks during the 17th and 18th centuries. For example, the French Army eliminated the rank of maréchal de bataille in the 1660s, and in 1710 the French Navy changed the rank of lieutenant de galiote to artillery lieutenant. The Spanish Navy changed the status of the sailing master, or maestre, during the 17th century, so that he was no longer considered second-in-command of a ship behind the captain. Further adding to the complexity was the tendency to grant special positions to individuals for either merit or a specific campaign. Hernán Cortés was granted the rank of captain general, commanding 11 companies for his campaign into Mexico. This is not to be confused with the Spanish Navy's rank of captain general, which was the senior admiral commanding an entire fleet.

Complexities such as these can make explaining ranking structures a difficult task. Add to this the tendency for many authors to list equivalent ranks in English rather than Spanish or French, and tracking down exact titles for the various forces becomes trouble-some. This essay and the rank tables below present general guidelines for ranks among the British, French, and Spanish armies, navies, and provincial/militia forces.

Armies

Armies of the colonial period's various belligerents generally contained equivalent ranks, although titles in some cases varied not only among different nations but also among different branches of service.

British Army ranks and units are similar in name to those still used today. Generals commanded armies; lieutenant generals, corps; major generals, divisions; and brigadier generals (or simply

brigadiers), brigades. The primary unit in the British Army was the regiment. A colonel usually owned and controlled a regiment, but he was not often present in North America. Many regiments were therefore commanded by lieutenant colonels, followed in seniority by majors. Captains commanded companies, aided by lieutenants and ensigns. Most companies had two or three subalterns. Enlisted ranks consisted of sergeants, corporals, and privates. The senior sergeant in a regiment was called the sergeant major, though this was more of an honorary title than an actual rank. Most companies had six or seven of these noncommissioned officers, often with more sergeants than corporals. Men who served a special function, such as drummers, ranked above the average private but below a corporal. The senior drummer of a regiment was the drum major, who served in the colonel's company and carried more seniority than any sergeant in the regiment but less than any officer.

The French Army contained a rank structure very similar to that of the British Army, with only minor variations. At the lowest levels, the infantry contained privates, corporals, and sergeants; cavalry had troopers and brigadiers; and the lowest-ranking dragoons were simply called dragoons and were led by brigadiers. Infantry and cavalry units used similar ranking schemes for the officer class, with the lowest levels called cadets or volunteers. Cavalry units had the rank of maréchal de logis, an equivalent of which was not present in the infantry. Next was the ensign (infantry) or cornet (cavalry), the lowest-ranking commissioned officer. A few infantry regiments had a sous-lieutenant, or sublieutenant. From that point, infantry and cavalry used the same ranks. Lieutenants served under captains, who generally commanded companies. Major was an administrative post for a battalion, and anyone achieving that rank was not likely to advance any further. The lieutenant colonel often had actual field command of a regiment when the colonel was not present. The ranks of major and lieutenant colonel were awarded solely on merit and did not require purchase. Colonels commanded and usually "owned" regiments, and they were almost always nobles. The French Army also had the rank of colonel general, designating the commander of a branch of service, such as the infantry or cavalry. The position was eliminated for infantry in 1661 and was often symbolic for other branches of service.

Generals began with the rank of brigadier, a rank standardized in the 1660s. Brigadiers served under the direction of lieutenant generals but retained command of their regiments. Only nobles could bypass the rank of brigadier. Next was the maréchal de camp, a rank that was usually symbolic unless the individual holding it was given specific duties. In the 17th century, maréchaux de camp became adjutants to lieutenant generals and chiefs of staff. An additional rank called maréchal de bataille indicated an officer in charge of placing units before battle, but it disappeared in the 17th century. Lieutenant generals usually commanded portions of armies under direction of maréchaux, or marshals. Marshals commanded field armies and were junior only to princes and kings. Of these ranks, the highest seen in pre-1775 North America was lieutenant general, granted to the Marquis de Montcalm in 1758.

The Spanish command structure in North America differed slightly from those used by the British and French. Spain never fielded troops on the same scale as either Britain or France. The most significant Spanish military post in North America was at St. Augustine in Florida. The supreme commander of all Spanish troops in Florida was the governor, but the primary military figure was the sergeant major, who had direct command over the soldiers and reported to the governor. Three captains each commanded a militia company, assisted by ensigns. Enlisted men consisted of sergeants, corporals, drummers, fifers, pages, and regular soldiers. The only slight deviations from this command structure were in the artillery, which consisted of a single captain and 19 artillerymen, and in the fort, in which the commander of the fort had the assistance of four adjutants. There were slight variations in the Spanish command structure depending on the situation. When Hernán Cortés led his expedition into Mexico in 1518, he was named captain general, in command of 11 companies of soldiers, each in turn led by a captain.

Provincial and Militia Units

There are few differences between provincial and militia units. Men serving in provincial units were paid and enlisted for a specified term. Campaigns often required them to serve in areas far from their homes, sometimes even beyond their colony's borders. Militamen generally served closer to their residences and either mustered in response to an immediate threat or served on a single campaign before returning home. Otherwise, organizational and ranking structures were very similar for both provincial forces and militia.

Provincial forces in the British colonies used the same rank structure as the regular British Army but did not necessarily hold the same authority. Until 1758, when William Pitt reversed the policy, provincial field officers (majors and colonels) serving alongside regular units only ranked as eldest captains in comparison to the regular officers. After Pitt's retraction, provincial field officers were junior only to regular officers of equivalent ranks.

Both types of forces generally followed ranking schemes akin to that of their regular army counterparts, but there were some slight variations. For example, the lowest-ranking militiamen in Massachusetts were called centinels rather than privates. Otherwise, ranks and responsibilities within militia units correspond to those of regular army forces.

Methods used for appointing officers varied by colony. In Massachusetts, the governor appointed colonels. Colonels in turn appointed all of their own officers, from captains down to ensigns. In Connecticut, the assembly appointed all field-grade officers. Militiamen elected all of the company-grade officers, but the assembly actually issued the commissions. After Benjamin Franklin's 1747 pamphlet *Plain Truth* reached Pennsylvania's citizens, the colony adopted his ideas for the creation of militia units. Each company of at least 100 men elected its own captain, lieutenant, and ensign. Companies formed regiments, and company commanders throughout the colony in turn met to elect colonels, lieutenant colonels, and majors.

Navies

The British Navy served as a model for many nations. Its ranking structure survives to this day in Britain, the United States, and elsewhere. At its highest level is the admiral of the fleet. Directly below him are admirals, then vice admirals, and rear admirals, each of which was broken into divisions named "of the blue" and "of the white." The highest rank seen in colonial North America was admiral of the blue, which Edward Boscawen achieved in 1758 just before the Louisbourg expedition.

Below the various admiralty ranks was captain, the commander of a ship of the line. A commander directed a ship that held at least 10 guns but was too small to be considered a ship of the line. A lieutenant served as the second-in-command of a ship and was responsible for sailing the vessel, standing watch, mustering men, and ensuring that the men stayed on deck and attended to their duties. If the ship was large enough to require more than one lieutenant, the most senior was called the 1st lieutenant. Below lieutenants were midshipmen, who assisted officers on watch, commanded a ship's boats, oversaw the health of a group of sailors, and in combat commanded a gun crew or delivered messages or signals. Lowest in rank among the officer class were the captain's servants, as young as 13 years old, who served as apprentices or trainee officers until old enough to rate as midshipmen.

Warrant officers were specialists who attended to specific duties. The top of the hierarchy consisted of the master, surgeon, chaplain, and purser, all of whom were considered professionals. Responsible for navigating the ship, a master held a status as high as any officer except the captain and 1st lieutenant. Standing officers were next in line: the boatswain, who was responsible for rig-

ging, ropes, blocks, and discipline; the gunner; carpenter; caulker; cooper; sailmaker; cook; and master at arms.

At the bottom were petty officers and seamen. Petty officers consisted of the quartermaster, captains of the forecastle and of the top, and the various mates, such as the gunner's mate or boatswain's mate. They generally commanded groups or teams of seamen and supervised them in their duties. Seamen were lowest in the ranking structure, broken up by age and experience. The youngest were third-class seamen, usually under 15 years of age, who served as officers' servants. Second-class seamen were basically seamen-intraining. First-class seamen were potential officers. Landsmen were seamen of adult age with no prior experience. Ordinary seamen had served for at least two years and were generally competent in most shipboard tasks. An experienced, proven sailor could earn the title of able seaman.

Aside from the previously listed ranks, ships often carried marines. They could account for as much as 20 percent of the crew and usually wore red coats. They could help in various shipboard duties but generally knew little, if anything, of sailing. They acted as sentries on board the ship, but they were most valuable during combat, in which they fired muskets, worked guns, boarded enemy vessels or repelled enemy boarders, or engaged in amphibious operations.

The highest ranks of France's naval forces contained some oddities. The overall ruler of the French Navy was the "admiral of France," a title eliminated in 1627 but resurrected in 1669 and given to two-year vice amiraux, or vice admirals, served as the overall naval administrators, but the next two ranks seem out of place. Until 1791, when rank titles changed, naval general officers who served in combat were either lieutenants généraux des armées navales or chefs d'escadre, roughly corresponding to vice admirals and rear admirals in the Royal Navy, respectively. Next were two classes of officers, capitaines des vaisseaux, or captains of ships, and officiers subalternes. The latter ranks included lieutenants des vaisseaux and ensigns des vaisseaux. For a time, French ships often carried two captains, a capitaine commandant and a commandant en second. The latter was actually a captain-in-training, ranking below a senior lieutenant. Officers holding any of the above ranks generally came from either the gardes de la marine or the gardes du pavillon-amiral, cadet corps into which the sons of nobles enrolled. Intermediate grades, including the ranks of capitaine de frégate (frigate captain), capitaine de brûlot (fire ship captain), lieutenant de frégate (frigate lieutenant), and capitaine de flûte (storeship captain), were sometimes bestowed on commoners who proved themselves. The numbers of officers holding these ranks fluctuated based on the whims of naval administrators, many of whom wished to keep them at a minimum because of a baseless fear that commoners would come to dominate the navy.

The enlisted ranks of the French Navy were typical of a western force. The upper levels included petty officers (officiers mariniers), able-bodied seamen (matelots), and workers (sailmakers, caulkers, and carpenters). Petty officers of 55 to 60 years of age who were

sick or injured were called seamen hors service and were either given permanent leave at half-pay or employed on merchant vessels. Novices were boys and young men between the ages of 16 and 25 who lacked blue-water experience. They ranked as seamen when serving on naval vessels. Cabin boys (mousses) rounded out the lowest levels of the enlisted ranks. When they reached the age of 18, mousses were classed as matelots.

The French Navy also had its own marines. These compagnies franches de la marine were originally troops sent from France to complement existing defenses. Their usual purposes in France included protecting ships and ports, but in North America they often saw garrison duty in the major French settlements. The compagnies franches used an organizational structure similar to that of the French Army. The primary unit of organization was the company, of which there were between 30 and 40 in the 1750s. A captain commanded each company, assisted by a lieutenant, first ensign (enseigne en pied), second ensign (enseigne en second), two sergeants, and three corporals. The remainder of the ranks consisted of cadets, drummers, and privates.

The Spanish Navy initially used a ranking system that deviated slightly from common Western practices. At the highest level was the captain general, the overall fleet commander. Below him was the almirante, or admiral. Like the other navies discussed here, a captain, or capitán, commanded a ship, but this specific rank had two divisions. A capitán de mar commanded only the ship and crew, whereas a capitán de mar y guerra commanded the ship, its crew, and all infantry forces on board. Below the captain was the maestre, or master. In other Western navies, the sailing master enjoyed a status as high as most other officers except the captain and lieutenant(s), but was not necessarily so high on the chain of command. In the 17th century, the alférez, or lieutenant, came to replace the maestre as second-in-command to the capitán de mar y guerra, thus conforming to standard western practices. Next in line was the pilot, who plotted the ship's course. The piloto mayor was the principal navigator for an entire fleet.

Next came a series of minor officials, of which the contramaestre, the master's helper, was most senior. The guardián relayed the contramaestre's orders; the despensero doled out food, water, and supplies; the alguacil de agua, when present, rationed water; and the maestre de plata kept a record of all of the treasure brought on board a ship. The escribano, or notary, registered and witnessed all transactions, and the capellán, or chaplain, oversaw care of the sick and ensured that the surgeon visited them. Ideally, a large ship had a doctor, surgeon, and pharmacist, or médico, cirujano, and boticario, respectively, but many vessels instead carried a surgeon assisted by a barber, or even a single combined barber-surgeon.

Below the minor officials were the maestranza (workmen) and the common sailors. The maestranza included the carpenter, caulker, cooper (tonelero), diver (buzo), and, on warships, the trumpeter (trompeta). Sailors included common seamen (marineros), apprentices (grumetes), and pages (pajes).

^aComprised of the Mohawk, Oneida, Onondaga, Seneca, and Tuscarora tribes.
^bComprised of some 30 groups, including the Appomattock, Chickahominy, Matagony, Pamunkey, and Rappahannock tribes.

Chronology

- 1492 August 3 Christopher Columbus begins his voyage of discovery. Sailing under the aegis of King Ferdinand and Queen Isabella, Genoese navigator and explorer Christoforo Colombo (Cristóbal Colón in Spanish and Christopher Columbus in English), appointed admiral of the ocean sea, viceroy, and governor of any territory he might discover, departs Palos, Spain, with three ships to find a new route to Asia. In the course of his voyage from August 1492 to March 1493, Columbus makes landfall in the West Indies and is one of the first Europeans, after the Vikings, to discover the Americas.
- 1493–1496 Christopher Columbus's second voyage. Sailing in 17 ships with some 1,200 men, Columbus establishes a Spanish colony on the island of Hispaniola, the first Spanish colony in the New World.
- 1494 June 7 Treaty of Tordesillas. In 1493, Pope Alexander VI divides the unexplored territory of the world between Spain and Portugal in the Papal bull *Inter Caetera*. Formalized in the Treaty of Tordesillas of June 7, 1494, this arrangement establishes a line 370 leagues west of the Cape Verde Islands (the bull *Inter Caetera* had placed it 100 leagues east of the islands). Spain is to have exclusive rights to territory west of the line, Portugal east of it.
- 1497 March–August John Cabot's first voyage. Italian John
 Cabot, who has settled in England, receives a warrant
 from King Henry VII to embark on a voyage of discovery.
 Cabot sights land, probably Cape Breton or Newfoundland, which he claims for England, then sails south along
 the coast, probably as far as Maine, before returning to
 England.

- 1498 John Cabot's second voyage. Seeking to reach Japan, Cabot explores the North American coast as far south as Delaware or Chesapeake Bay.
- 1498–1500 Christopher Columbus's third voyage. Columbus sights South America and explores the Gulf of Paria then proceeds to Santa Domingo.
- 1502–1504 Christopher Columbus's fourth and final voyage. With four ships, Columbus sails to Martinique and then explores the Central American coast before being shipwrecked and marooned in Jamaica during June 1503–June 1504.
- 1509 Sebastian Cabot sails from England and later claims to have reached Hudson Bay.
- 1519–1521 Spanish conquest of Mexico. Spanish military officer Hernán Cortés (Cortez) lands on the eastern coast with a small Spanish force. Relying on alliances with native kingdoms chafing under subjection to the Aztecs, he conquers the mighty Aztec Empire.
- 1519–1522 Circumnavigation of the globe by a Spanish expedition under Portuguese Ferdinand Magellan, who is killed in the Philippines.
- 1540–1542 Spanish expedition into present-day New Mexico.

 Spaniard Francisco Vázquez de Coronado moves north from northern Mexico with 300 soldiers and a large number of native allies searching for the illusory Seven Cities of Gold. In present-day Arizona, Coronado reaches the Zuni village of Hawikuh, supposedly one of the Seven Cities, capturing it on July 7, 1540. The other supposed cities also turn out to be simple villages devoid of riches. Nonetheless, Coronado leads his men through New

- Mexico, Texas, Oklahoma, and into Kansas before returning to Mexico City in July 1542. Although he fails in his original intent, Coronado extends Spanish influence into much of the present southwestern United States.
- 1564 The French establish a colony along the St. Johns River in Florida, led by Jean de Ribault and René de Laudonnière.
- 1565 Pedro Menéndez de Avilés establishes the Spanish outpost of St. Augustine in present-day Florida as a base of operations against the French, who have planted their own settlement along the St. Johns River. On September 20, 1565, Ménendez attacks and destroys the French settlement.
- 1568 April Frenchman Dominique de Gourgues leads an attack on Spanish Florida, capturing two small posts and seizing Fort San Mateo. Avenging the earlier Spanish massacre, he executes all Spanish prisoners. Despite this temporary success, the French abandon any further effort to colonize Florida.
- 1576–1606 English voyages in order to locate a northwest passage to Asia.
- 1577-1580 Francis Drake's circumnavigation of the globe.
- 1599 January 21–23 Battle of Acoma Pueblo. Resentful of harsh treatment by the Spanish, the Indians of Acoma Pueblo in New Mexico revolt. Spanish reinforcements scale the mesa and launch a surprise attack on the night of January 22, 1599. The next day, the Spaniards kill approximately 800 natives. Another 580 are taken captive, and Spanish authorities order the amputation of one foot of each of the adult males.
- 1604 France establishes a trading post at Port Royal, Acadia (now Annapolis Royal, Nova Scotia).
- 1607 May 14 The English establish their first permanent settlement in North America at Jamestown, Virginia.
- 1608 July French explorer Samuel de Champlain establishes a trading post at Quebec on the St. Lawrence River. Allying themselves with the Algonquins, Hurons, and Montaignais, the French drive the Iroquois from the St. Lawrence Valley.
- 1614 Dutch colonists establish Fort Nassau south of present-day Albany, New York, and over the next decade create settlements on Manhattan Island and Fort Nassau, near present-day Gloucester, New Jersey.
- 1620 November 11 The English establish their second permanent settlement in North America, at Plymouth, later part of Massachusetts.
- 1622 March 22 Native Americans attack the English settlers at Jamestown, Virginia, in widespread coordinated attacks that kill 347 settlers. The colonists retaliate and, in 1623, under promise of peace talks, they lure 250 natives to their deaths.
- 1624 May 24 Virginia's private charter is revoked and it becomes a royal colony.

- 1629 July 19 English capture of Quebec. An English expedition under Gervase Kirke forces French commander Samuel de Champlain to surrender Quebec. However, it and other French St. Lawrence settlements and Acadia are returned to France by England by the Treaty of St. Germain-en-Laye on March 29, 1632.
- over Kent Island, the largest island in Chesapeake Bay and site of the third permanent English settlement in North America. In August 1631, William Claiborne, secretary of the Virginia colony, founds a settlement there to trade with Native Americans and refuses to recognize the island as part of the Maryland land grant to George Calvert, First Baron Baltimore. In intermittent fighting, coupled to religious warfare in Maryland during 1644–1646, Claiborne seizes the island in 1644. He is forced from, and returns to, the island twice before leaving permanently in 1658, ending the dispute. Kent Island is now a part of Maryland.
- 1636 July 1636-September 1638 Pequot War. Conflict between Pequot Native Americans of the lower Connecticut River Valley and the English colonies of Massachusetts Bay and Connecticut is ignited by the murders of several English traders. In August 1636, Massachusetts sends a force to punish the natives, beginning the war. The Pequots are unable to rally other tribes. On May 26, 1637, Connecticut and Massachusetts militiamen and Mohegan Native Americans under captains John Mason and John Underhill attack a Pequot settlement on the Mystic River. Of some 400–700 Pequots, only 7 are taken alive and a reported 7 escape. This Mystic Fort Fight largely breaks Pequot resistance, although fighting continues into the summer. In July 1637, a large number of Pequots are surrounded in a swamp near modern-day New Haven, Connecticut. The war officially ends in the Treaty of Hartford on September 21, 1638. The Pequots cease to exist as an independent people and are absorbed by other tribes.
- 1638 Swedish colonists establish Fort Christina on the Delaware River, site of modern-day Wilmington, Delaware.
- ca. 1640s–1701 The French and Iroquois Wars, also known as the Iroquois Wars or the Beaver Wars. Members of the Iroquois Confederation, led by the Mohawks, fight the tribes of the Great Lakes area in an effort to gain territory and control the fur trade with the Europeans. As a consequence of the fighting, the Iroquois expand their territory and destroy several large tribal confederacies, including the Hurons, Eries, and Susquehannocks, and they drive other eastern tribes west of the Mississippi River. After some setbacks, the Iroquois seek peace. In 1701 at Montreal, the natives, the French, and the English conclude the Grande Paix (Great Peace), bringing to a close the

- nearly continuous warfare. The Iroquois agree to stop their attacks and to allow survivors of opposing tribes to return to their ancestral homes. The confederation then allies with the English.
- 1641–1664 The Dutch-Indian Wars. Persistent ill will between the Dutch and Native Americans leads to a series of conflicts between European settlers in New Netherland and neighboring Algonquian tribes. There are four periods of open warfare: Kieft's War (1639–1645), the Peach War (1655), the First Esopus War (1659–1660), and the Second Esopus War (1663–1664). The outcome of these wars largely favors the Dutch.
- 1644 Native Americans attack English settlers at Jamestown, Virginia, killing more than 400 colonists. Savage English reprisals follow.
- 1647–1655 Dutch-Swedish hostilities. Construction of opposing forts on the frontiers of New Netherland and New Sweden lead to hostilities. Sweden has made little investment in North America, and a Dutch victory is virtually a foregone conclusion. Sweden's official role in colonial America ends on September 15, 1655, when Gov. John Classon Rising surrenders New Sweden to New Netherland.
- 1664 September 7 English capture of New Amsterdam. In March 1664, the king of England, Charles II, grants his brother James, Duke of York, a charter for territory in North America from Connecticut to Delaware. To enforce his claim, James dispatches a small task force of four frigates to North America. It arrives in New York Harbor on August 29. The Dutch are caught by surprise, and because the governor of New Netherland, Petrus Stuyvesant, has angered the citizens by his heavy-handed methods, few answer his call to defend the colony. On September 7, he surrenders New Amsterdam to Colonel Richard Nicolls commanding a small force of British regulars and provincial volunteers. On September 20, English colonel George Cartright takes Fort Orange, which is renamed Albany. The entire Dutch settlement is transferred to the English and renamed New York.
- 1673 August 17, 1673–November 10, 1674 Dutch recapture of New York. In the course of the Third Anglo-Dutch War (1672–1674), a Dutch fleet arrives off New York on August 7, 1673, and the Dutch retake the city on August 17. It is restored to the English as a consequence of the Treaty of Westminster, ending the war on February 19, 1674, and is formally surrendered on November 10.
- 1675 June 20, 1675–October 1676 King Philip's War. This last general war between Native Americans and English colonists in southern New England is named for Wampanoag sachem Metacom, known to colonists as King Philip, who opposes colonial expansion and efforts to subject the natives to colonial law. On June 20, 1675, Wampanoag warriors attack Swansea in southwest Plymouth Colony,

and the conflict quickly spreads. Although a number of tribes join the Wampanoags, others remain neutral and still others side with the colonists. The natives refuse open combat and adopt hit-and-run guerrilla tactics. In the fall of 1675, fighting shifts to the Connecticut River Valley, and in October the natives attack and destroy much of Springfield. Convinced that the Narragansetts are aiding Metacom, on December 19, 1675, Massachusetts Bay, Plymouth, and Connecticut field more than 1,000 men against them under overall command of Gov. Josiah Winslow of Plymouth. In the so-called Great Swamp Fight, the colonists attack and burn the Narragansetts' principal fortified village, located near present-day South Kingston, Rhode Island, on December 19, 1675. The colonists lose 20 dead and 200 wounded. Estimates of native dead range from 600 to more than 1,000.

The Mohawks join the colonists in attacking their weakened native rivals. Their intervention, superior colonial numbers, and changes in colonial tactics such as targeting native food supplies all take their toll. That summer many of Metacom's followers surrender. Metacom is killed on August 12, 1676, and by October the war is at an end, save in Maine, where intermittent violence continues for several years. The tribes of southern New England never recover.

- 1676 May 10, 1676–January 1677 Bacon's Rebellion in Virginia.

 Planter Nathaniel Bacon, angered by what he regards as

 Virginia governor Sir William Berkeley's conciliatory policy toward the natives, leads an attack on the Pumunkeys.

 Bacon marches on Jamestown with armed followers and receives a commission to move against the Native Americans. From July to September, Bacon dominates

 Jamestown, forcing Berkeley to flee. On September 19,

 Bacon and his supporters burn Jamestown and public opinion turns solidly against him. Bacon dies in late October and the rebellion collapses, ending by January 1677.
- 1680–1690 Revolt of Pueblo Native Americans against Spanish authorities in New Mexico. Spanish repression brings on the revolt, led by a shaman, Popé. In all some 380 Spaniards are killed. The Spanish attempt to reclaim New Mexico in November 1681, but Pueblo warriors repel them. French interest in the lower Mississippi delta area revives Spanish interest, however, and the Spanish retake New Mexico in 1690.
- 1682 April 9 French explorer René-Robert Cavelier, Sieur de La Salle, reaches the Gulf of Mexico. Traveling from Canada, he descends the Mississippi River and reaches its mouth and the gulf on April 9, 1682. La Salle claims the entire Mississippi River and all territory watered by it and its tributaries for France, naming it "Louisiana" after King Louis XIV.

- 1684-1687 French explorer René-Robert Cavelier, Sieur de La Salle, attempts to establish a colony at the mouth of the Mississippi River. France and Spain are then at war, and La Salle receives the governorship of all Louisiana and sails for Louisiana from France in 1684 with four ships and 400 men. Although the Spaniards capture his principal supply ship, La Salle continues on with only about 180 men in the remaining three ships. Proceeding too far west, he lands near present-day Matagorda Bay, Texas. With 45 men, La Salle sets out in January 1687 with a small party to try to reach Canada and secure aid. En route, his men mutiny and murder La Salle in March 1687 near the Trinity River. Few of his party reach Fort St. Louis on the Illinois River, and Native Americans kill most of the French colonists who remained behind. La Salle nonetheless gives France a vast new colonial empire and alters the history of North America.
- 1689–1697 Beginning of King William's War (known in Europe as the War of the League of Augsburg). On May 9, 1689, King William III of England declares war on France.

 There is fighting in Hudson Bay, the St. Lawrence and upper Hudson River Valleys, and in Acadia. The fighting includes Native Americans, with the Iroquois Confederation siding with the English and most other tribes joining the French. A planned English colonial expedition against Quebec fails, although New England colonists do capture Port Royal in Acadia, returned by England in the peace.
- 1690 May 11 English capture of Port Royal. On May 1, 1690, representatives of Plymouth, Massachusetts, Connecticut, and New York meet at Albany and decide to invade French Canada with two land forces and a naval expedition up the St. Lawrence. On May 11, Sir William Phips leads a force against Port Royal, capital of Acadia and a base for French privateers attacking New England shipping. Phips commands seven ships carrying 736 men. With a garrison of only 80 men and the fortifications in poor repair with no cannon mounted, the French surrender on May 21. The French recover Port Royal the next year, and the Treaty of Ryswick of 1697, ending the war, confirms Port Royal and Acadia as French.
- 1702 November 10–December 29 English seizure of St.

 Augustine. As part of Queen Anne's War (1702–1713, known in Europe as the War of Spanish Succession),

 Gov. James Moore of Carolina leads an expedition of 800–1,200 colonists and Native Americans by land and sea to take St. Augustine, the only major Spanish military outpost in North America. The English fail to achieve surprise, and Spanish governor Joseph de Zúñiga y Cerda, although heavily outnumbered, ably defends Castillo de San Marcos. The English begin a siege on November 10 but end it on December 29, 1702, with the

- arrival of Spanish reinforcements. Moore burns St. Augustine and his own ships, returning to Carolina overland.
- 1703–1704 Raids by English forces against the French and Spanish on the southern frontier. Carolina colonists and Native Americans enjoy some success raiding Spanish settlements in Florida, but Choctaw Native Americans prevent the English and allied natives from achieving success against the French Gulf Coast settlements.
- 1703–1707 Raids along the northeast frontier between New England and New France (Canada). The French actively encourage raids by their Abenaki allies and mount allied operations against New England. The English colonists retaliate in Acadia. In 1704 and 1707, the English fail in efforts to take Port Royal in Acadia, the principal base for French privateers operating against New England shipping and fishing. In August 1704, French and Indian forces attack and destroy the English settlement of Bonavista, and in 1708 they seize St. John's.
- 1710 October 16 English capture of Port Royal, Acadia. In October 1709, English colonial governors agree on a joint expedition to seize Port Royal. Colonel Francis Nicholson commands a regiment of Royal Marines and 3,500 provincials supported by 36 Royal Navy warships. The siege begins on September 24, 1710, and Port Royal surrenders on October 16 and is renamed Annapolis Royal. Under the terms of the 1713 Treaty of Utrecht ending the war, Acadia passes to the British, who rename it Nova Scotia.
- 1711 August Failed English effort to take Quebec. In 1711, New England colonial leaders plan a major operation against French Canada in the form of a seaborne assault on Quebec and a simultaneous, diversionary attack from Albany against Montreal. London agrees to provide substantial naval support, and Admiral Sir Hovenden Walker arrives at Boston in June. Securing provisions proves difficult, and Walker departs at the end of July with only three months of supplies but with 11 warships escorting some 60 transport and supply vessels carrying 4,000 British troops. With sailors and colonial forces, the expeditionary force numbers more than 12,000 men, the largest armed force to that point in the colonies. In the heavy fog on the St. Lawrence on the night of August 23, seven transports and a supply vessel founder, leaving nearly 900 men dead and causing Walker to abandon the operation. The Montreal campaign then collapses.
- 1711–1713 Tuscarora War. Encroachments by colonists and abuses by colonial traders in North Carolina lead to war in 1711. The Tuscaroras kill some 200 colonists and fight the Creeks and Yamasees. The war ends in March 1713 with a Tuscarora surrender.
- 1715–1717 Yamasee War. The Yamasee Native Americans of South Carolina, angered by settler encroachments and

actions of unscrupulous traders, go to war. The fighting begins on April 15, 1715, and the Yamasees soon kill several hundred settlers and even threaten the principal Carolina settlement of Charles Town (present-day Charleston). Gov. Charles Craven rallies the Carolina forces and the fighting disintegrates into raids by both sides. The Creeks aid the Yamasees, but the South Carolinians, reinforced by North Carolina and Virginia militia and supported by the Cherokees, are able to withstand the new attacks and drive their adversaries into the swamps of Georgia. Peace is concluded between the Creeks and the English in November 1717, but the Yamasees remain at war and continue to launch sporadic raids from Florida until 1728.

- 1720–1722 Spanish occupation of much of present-day Texas, carried out to forestall a French move there.
- 1742 July 7 Battle of Bloody Marsh. This battle on St. Simons Island, Georgia, just south of Savannah, is Spain's only offensive against English colonists in Georgia during the War of Jenkins' Ear, 1739–1744. Gov. Manuel de Montiano of Florida launches this attack with more than 4,000 men to avenge destruction caused by an unsuccessful British assault on St. Augustine in May. The Spaniards land on St. Simons Island, and on July 7, Gov. James Oglethorpe personally leads his troops against the Spaniards in a swamp known as Bloody Marsh. The English defeat the Spanish, killing 50 and causing the remainder to return to Florida. The battle marks the end of Spanish efforts to conquer Georgia.
- 1744–1745 Unsuccessful French and allied Micmac Native American attacks on Annapolis Royal, Nova Scotia, in September and October 1744 and the spring of 1745 during King George's War (1744–1748, part of the European War of the Austrian Succession, 1740–1748).
- 1745 June 16 English capture of Louisbourg from the French.

 New England colonists organize their largest military operation of King George's War, an expedition against the great French fortress of Louisbourg on Cape Breton Island that guards the mouth of the St. Lawrence.

 William Pepperell commands the expedition of more than 4,000 men, supported by Royal Navy warships.

 Colonial troops come ashore on April 30, and French governor Louis Du Pont Duchambon surrenders Louisbourg on June 16. New Englanders are furious when the British government returns Louisbourg to France in exchange for Madras in India under the terms of the 1748 Treaty of Aix-la-Chapelle, which ends the war.
- 1754 May 28 Battle of Jumonville's Glen. Alarmed by French inroads into the Ohio Valley in territory claimed by Virginia, Virginia's Lt. Gov. Robert Dinwiddie sends Lieutenant Colonel George Washington, some 150 militiamen, and a few native allies to dislodge the French

- from the confluence of the Allegheny River and Monongahela River, where they are erecting Fort Duquesne. Washington and some 47 men catch up with a French scouting force of 35 men under Ensign Joseph Coulon de Villiers de Jumonville near present-day Uniontown, Pennsylvania, on May 28, 1754. Washington wins the ensuing battle, with Jumonville and other surrendered French slain by the natives. This battle begins the French and Indian War (1754–1763).
- Jumonville's Glen, Washington orders construction of the aptly named Fort Necessity near present-day Uniontown, Pennsylvania. Captain Louis Coulon de Villiers, the slain Jumonville's brother, leads some 600 French Canadians and 100 native allies from Fort Duquesne. Following a brief battle on July 3, 1754, Washington and about 450 colonial militiamen surrender and are allowed to march back to Virginia with the honors of war. Both sides now begin mobilizing for a larger conflict.
- 1755 June 19–30 Bay of Fundy expedition. Provincial forces, accompanied by some British regulars, sail to the Bay of Fundy and capture two forts: St. John and Beausejour. With all of the Fundy area firmly under their control, the British exile the French Acadians in October.
- 1755 July 9 Battle of the Monongahela. In mid-April 1755, the new British commander in North America, Major General Edward Braddock, arrives in Virginia with two British regiments to take Fort Duquesne. On July 9, just west of the Monongahela River and about 10 miles short of his goal, Braddock's force of British and provincials is surprised by a French and native force of some 900 men (two-thirds natives) under Captain Daniel Liénard de Beaujeu. Braddock is mortally wounded, and the British abandon their baggage and withdraw. The French and natives lose 23 killed and 16 wounded, the British and provincials, 456 killed and 521 wounded.
- 1755 August 13–14 Battle of Oswego. Fearing British attacks from Oswego, New York, on Lake Ontario's southeastern shore and from the Champlain Valley against Montreal and the St. Lawrence River Valley, French governor-general Pierre de Rigaud de Vaudreuil orders the French military commander in Canada, Major General Louis-Joseph, Marquis de Montcalm, to attack the vulnerable British outposts. Montcalm crosses Lake Ontario with 3,000 men and on August 13, 1755, begins bombarding British Fort Ontario, commanded by Colonel James Mercer. That night Mercer is forced to withdraw across the Oswego River to Fort Oswego. Montcalm attacks it the next morning. Mercer is killed, and the new commander, Lieutenant Colonel John Littlehales, surrenders Fort Oswego that day. The French capture nearly 1,600 men and camp followers, as well as 6 ships, 77

- artillery pieces, 12 tons of gunpowder, 200 tons of provisions, and more than sufficient specie to pay for the cost of the expedition. Montcalm razes the fort and withdraws. The French triumph at Oswego secures Lake Ontario and removes the threat to their western supply lines. Both sides then go into winter quarters.
- William Johnson leads 3,500 British colonists and 300 natives from Albany, New York, toward France's Fort St. Frédéric on Lake Champlain. To defend the fort against the British, Baron Ludwig A. Dieskau proceeds up the Richelieu River with 2,000 French regulars, Canadian militiamen, and natives. On September 8, 1755, Dieskau attacks Johnson's camp at the southern end of Lake George. Although Johnson prevails, he is forced to halt his advance. Johnson then constructs Fort William Henry at the southern end of the lake, and the French counter by building Fort Carillon at Ticonderoga to the north.
- 1755 August–September British expedition against Fort Niagara.
 Gov. William Shirley of Massachusetts leads some 1,000
 men from Albany, New York, up the Mohawk Valley
 toward Fort Niagara. Reaching Oswego, Shirley decides
 his force is inadequate to meet the reinforced French and
 withdraws.
- 1757 June–September Abortive British expedition against Louisbourg. This fortress on Cape Breton Island is a haven for French privateers operating against the New England fishing industry, and in late June 1757, British major general John Campbell, Lord Loudoun, arrives at Halifax from New York to lead an expedition of 12,000 men against Louisbourg. The French garrison has been reinforced and a French squadron has also arrived there. The British squadron under Vice Admiral Francis Holborne that was to operate in conjunction with the land force is scattered in a storm and forced to return to Britain for repairs. The expedition is called off.
- 1757 August 9 French capture of Britain's Fort William Henry.

 Taking advantage of the absence of British troops for the operation against Louisbourg, Major General Louis-Joseph, Marquis de Montcalm, moves from Fort Carillon (Ticonderoga) with 6,000 French troops and militiamen and almost 2,000 allied natives to attack Britain's Fort William Henry at the head of Lake George. There Lieutenant Colonel George Monro has some 1,500 regulars and militia. In addition to a reduced garrison, the fort had undergone a surprise winter attack that also destroyed British ships protecting its water approaches.

 Montcalm is thus able to transport siege cannon via Lake George.

The siege opens on August 3, 1757. With the fort's walls crumbling and learning that he could not expect reinforcement, Monro surrenders on August 9. The terms

- provide safe passage to Fort Edward and retention of personal effects. Upset with the terms, natives enter the fort and scalp most of the British wounded and sick left behind as unable to travel. Then, as the British begin the march to Fort Edward, the natives attack the column. The few French escorts are powerless to intervene, and between 69 and 184 British are killed. Montcalm, dismayed by the violation of the surrender terms by his native allies, instead of proceeding to Fort Edward, burns Fort William Henry and returns north. Both sides then go into winter quarters.
- 1758 March British strategy for America. Prime Minister William
 Pitt is determined to defeat the French in North America.
 His three-pronged strategy for 1758 includes the capture
 of Louisbourg, Fort Duquesne, and Fort Carillon (Ticonderoga). These accomplished, the British will move
 against both Montreal and Quebec.
- 1758 July 8 Battle of Fort Carillon (Ticonderoga). In late June, the British commander in North America, Major General James Abercomby, leads 13,000 men down Lake George toward French Fort Carillon. Outnumbered at least three to one and knowing the fort cannot withstand a significant siege, the French commander, Major General Louis-Joseph, Marquis de Montcalm, orders construction of an outer position and deploys the bulk of his 4,200 defenders along it. On July 8, Abercromby orders at least six assaults of the line. All fail. Having sustained almost 2,500 casualties to only 400 for the defenders, Abercromby withdraws.
- 1758 July 27 British capture of Louisbourg. Anticipating an attack at Louisbourg on Cape Breton Island, Major General Montcalm increases the size of the French squadron to 5 ships of the line and 6 other warships. In all, Louisbourg is defended by some 6,000 men. Major General Jeffery Amherst takes command of the British invasion force of 13,200 men, and Admiral Edward Boscawen commands 39 warships manned by 14,000 officers and men. The expeditionary force of 167 ships sails on May 29. On June 8, the British begin coming ashore in a contested landing. The governor of Louisbourg, Augustin de Boschenry de Drucour, carries out a capable defense, but once the British are ashore, it is largely a matter of time, and on July 26 Drucour surrenders. The siege claims British losses of 195 men killed and 363 wounded, and French losses of 400-800 killed and 3,600 prisoners, including 1,400 wounded. In addition, the British secure 216 guns. New France never recovers from the loss.
- 1758 August 27 British capture of Fort Frontenac. British colonel
 John Bradstreet leads 3,000 provincial troops up the
 Mohawk River to capture France's Fort Frontenac (modern Kingston, Ontario) at the entrance to the St.
 Lawrence on Lake Ontario.

- 1758 November 24 French forces abandon Fort Duquesne. In July 1758, British brigadier general John Forbes departs Carlisle, Pennsylvania, with some 7,000 men, 5,000 of them provincials, to march on Fort Duquesne. On September 14, 1758, a British advance force of 800 men is defeated by the French at Duquesne with the loss of 300 men, but Forbes perseveres. Abandoned by their native allies, cut off from Canada by the destruction of Fort Frontenac, and with Forbes less than a day's march away, the French burn Fort Duquesne on November 24 and depart. The next day the British occupy the remains.
- 1759 Spring Prime Minister William Pitt's strategy for Britiain's war in North America in 1759 calls for the capture of Fort Niagara to cut off western Canada from the St. Lawrence, an offensive up the Lake Champlain Valley to the St. Lawrence, and an assault on the French capital and stronghold of Quebec.
- 1759 July 25 British capture of Fort Niagara. British brigadier general John Prideaux leads 2,000 regulars up the Mohawk Valley to reoccupy Fort Oswego. The British then move by water along the south shore of Lake Ontario against Fort Niagara, commanded by Captain Pierre Pouchot de Maupas. Pouchot hopes to hold out until a French relief force can arrive from Fort Machault, but with its defeat in the Battle of La Belle Famille on July 24, he surrenders Fort Niagara the next day. Prideaux is killed during the siege.
- 1759 July 26 British capture of France's Fort Carillon. British major general Jeffery Amherst with 11,000 regulars moves against French Fort Carillon (Ticonderoga) on Lake Champlain, taking it on July 26. On July 31, he captures Crown Point farther north, where he spends the winter.
- 1759 September 13 Battle of the Plains of Abraham (Quebec). The centerpiece of British strategy to win the war in America in 1759 is to capture the French stronghold/capital of Quebec. Major General James Wolfe commands the land force of some 9,000 men, and Rear Admiral Charles Saunders commands the naval component. Staging from Louisbourg, on June 26, Saunders lands Wolfe's men on an island in the St. Lawrence just below the city of Quebec. Major General Louis-Joseph de Montcalm commands some 12,000 French troops in the seemingly impregnable fortress city situated on high cliffs next to the river. After two months, several fruitless attempts, considerable illness, and the threat by Saunders to depart because of the onset of winter, on the night of September 12–13, Wolfe manages to get a small force up a difficult path to the heights. The remainder of Wolfe's force follows.

By the morning of September 13, Wolfe has 4,500 men on the Plains of Abraham before Quebec. Montcalm immediately attacks with 4,500 men. Unfortunately for

- the French, Montcalm's rival, Gov. Pierre François de Vaudreuil, refuses to release the city's artillery. The ensuing battle is hard-fought, but superior British discipline carries the day. Both commanders are mortally wounded. This most important battle in the history of North America secures British control of the continent.
- 1760 April 28 Battle of Sainte Foy (Second Battle of Quebec). Following their defeat at Quebec in September 1759, most French troops escape up the St. Lawrence River to Montreal under Montcalm's replacement, Major General François Gaston de Lévis. The British squadron departs in October but leaves behind at Quebec 7,300 men under Brigadier General James Murray. This number is soon halved by hunger, scurvy, and unusually cold weather. Had the French attacked that winter, they would have had an excellent chance of victory.

Because of the earlier ice-melt at Montreal, Lévis mobilizes his forces by mid-April and moves down the St. Lawrence toward Quebec with 6,900 men. On April 24, Lévis strikes inland and by the evening of April 27 skirmishes with British troops at Sainte Foy, five miles west of Quebec. The next day Murray marches out of Quebec with some 3,800 men, charges the French lines, and is defeated. The French suffer 833 casualties, the British 1,124. Lévis lays siege to Quebec, but the British Navy reestablishes its blockade of the mouth of the St. Lawrence, and in May their supply ships arrive at Quebec.

- 1760 September 8 Surrender of New France. With the arrival of British supply ships at Quebec, the French military commander in Canada, Major General François Gaston de Lévis, is forced to raise the siege of Quebec and withdraw to Montreal. Three British columns converge on that city. Brigadier General James Murray leads a British force up the St. Lawrence from Quebec, arriving at Varenne downstream from Montreal on August 31. Another British force under Colonel William Haviland moves up the Lake Champlain Valley and forces the French from Île-aux-Noix by August 25, while British major general Jeffery Amherst proceeds down the St. Lawrence River on August 10, forces the surrender of Fort Lévis by August 25, and arrives at Montreal from the west by September 6. Vastly outnumbered, New France's Gov. Pierre de Rigaud de Vaudreuil de Cavagnial capitulates on September 8, ending French rule of Canada.
- 1763 February 10 Treaty of Paris. France cedes to Britain the remainder of Acadia, Cape Breton Island, Canada, and the islands in the St. Lawrence. France retains fishing rights off the Newfoundland Banks and the tiny islands of St. Pierre and Miquelon. France also yields all territory east of the Mississippi River, retaining only New Orleans, which along with the rest of Louisiana is ceded to Spain.

- 1763 May–November Pontiac's Rebellion (Pontiac's War).

 Native Americans, most of whom had supported the French in the war with the British, are unhappy with British rule and the policies of the British commander in chief in North America, Major General Jeffery Amherst.

 Ottawa chief Pontiac takes the lead in rousing natives from western New York to the Illinois River, abetted by Delaware mystic Neolin, known as the Prophet, who preaches a return to traditional ways.

 In May, forced to abort a surprise attack, Pontiac begins a long and unsuccessful siege of Detroit (May–
 - In May, forced to abort a surprise attack, Pontiac begins a long and unsuccessful siege of Detroit (May–November). Elsewhere, the natives capture Fort Sandusky on May 16, Fort Miami on May 27, and Fort Michilimackinac on June 2. In a two-week span, eight forts fall. The British victory in the Battle of Bushy Run of August 5–6 (see below) is the turning point. Although sporadic warfare continues for two years, most native groups soon conclude peace with the British by November.
- 1763 August 5–6 Battle of Bushy Run. Colonel Henry Bouquet leads 400 men from Fort Niagara to relieve Fort Pitt.

 About 30 miles from his goal, Bouquet's column is attacked by a large force of Delawares, Wyandots, Mingos, and Shawnees. In the battle, Bouquet's men drive off the attackers and continue on to Fort Pitt, relieving it on August 10.
- 1770 March 5 Boston Massacre. Increasing tensions between
 Bostonians and British soldiers erupt into violence. When
 British soldiers attempt to break up an unruly mob, a soldier fires his musket, resulting in a brief volley of fire that leaves 5 colonists dead and several more injured.
- 1771 May 16 Battle of Alamance Creek. In Guilford County, North Carolina, a battle occurs between 1,500 militiamen under the command of the royal governor, William Tryon, and 2,000–3,000 Regulators, farmers from the western counties protesting government corruption. In this largest violent confrontation between opposing forces of Anglo-

- Americans in the colonial period, the militiamen disperse the Regulators. Each side loses 9 men killed. Sixty-one militiamen are wounded, along with an unknown number of Regulators. Subsequently, 6 Regulators are convicted of treason and hanged, ending the insurrection.
- 1773 December 16 Boston Tea Party. Opposed to a tax on tea and monopoly by the British East India Tea Company that will undercut smuggled Dutch tea, a group of colonists, poorly disguised as Mohawk Indians, dump some 90,000 pounds of tea from British ships into Boston Harbor. London, tired of what it regards as continued colonial lawlessness, responds by suspending Massachusetts's charter and closing the port of Boston until the colonists pay for the tea.
- 1774 April–October Lord Dunmore's War. This conflict between colonists and natives begins in April 1774, when numbers of frontiersmen attack native settlements in the Ohio River Valley. Native retaliatory raids prompt Virginia's governor, John Murray, Fourth Earl Dunmore, to send 2,000 men into the area. Pennsylvanians and Virginians manipulate events as a means of subverting the Proclamation Line of 1763, which prohibits colonial settlement west of the Appalachians.
- 1774 October 10 Battle of Point Pleasant. Chief Cornstalk of the Shawnees leads 1,000 Shawnee, Mingo, Delaware, Wyandot, and Ottawa warriors in an attack on Colonel Andrew Lewis and 1,100 unsuspecting militia camped at Point Pleasant at the confluence of the Kanawha River and Ohio River. In a hard-fought battle, the attackers are scattered. The Virginians suffer some 75 killed and 150 wounded, and the Shawnees lose perhaps 33 dead. Cornstalk, who had wanted peace, secures it on October 19, 1774, when the natives surrender all claims to lands south and east of the Ohio River.

Spencer C. Tucker

Glossary

canister shot

A collection of small shot or other materials,

Defensive obstacle formed of felled trees with

abatis

banquette	sharpened limbs that face the route of enemy advance. See entry. A firing step for infantry at the base of the	(case shot)	such as nails or shrapnel, enclosed in a wooden or tin cylinder of a size appropriate to fit a cannon's muzzle. Meant for antipersonnel use at short range.
bastion	parapet. A projecting piece of a fortification, often in the form of an irregular pentagon.	cannon	A firearm of large enough size that it requires mounting on a carriage. Cannon generally fired solid, grape, and canister shot on a flat
bateau battery	See entry. An artillery position containing several guns.	carriage	trajectory. The wheeled support vehicle on which an
bayonet	A stabbing instrument made of steel and inserted into or around the muzzle of a musket or rifle.	colonel	artillery piece is mounted and carried. Superior officer of a regiment, ranking above
blockhouse	See entry.		the lieutenant colonel, who usually has actual command of the regiment. Colonels rank
blunderbuss	A short gun possessing a big bore and customarily an outward-spreading discharging muzzle.		immediately below general officers, specifi- cally brigadiers, and the rank is often hon-
bomb	An explosive projectile consisting of a hollow shell filled with gunpowder or other explosive material ignited by a fuse.	1	orary and conferred upon princes and distinguished officers.
breastwork	Rudimentary mass of earth erected for protec-	corporal	A noncommissioned military officer ranking above a private but below a sergeant.
	tion, usually temporarily. Often used to provide cover for cavalry or artillery or for troops	counterscarp	The outer wall of a ditch, which supports the covered way.
brig (brigantine)	encamped within artillery range of enemy forces. See entry (warships).	covered way	Protective path on top of the counterscarp but sunk behind the glacis.
brigadier (brigadier general)	Military rank between colonel and major general, usually denoting the commander of a brigade. Often a temporary rank, with the senior colonel of the combined regiments or battalions holding the rank.	crownwork	A single-fronted outwork consisting of a bastion joined by curtains to demibastions at either end. Crownworks occupied advantageous ground that would have been difficult to incorporate into a fort's primary defenses.

	Similar to a hornwork but containing a bastion in its center.	grenadier	Originally, a soldier employed to carry and throw grenades. As grenades declined in use
curtain	The section of the bastioned frontage of a fort that links two adjacent bastions.		in the early 18th century, the term was retained to denote elite units comprised of the tallest and finest men in a regiment.
cwt	Hundred weight. British system of weighing ordnance equaling 118 pounds. Weights of cannon were chiseled onto the piece in three	harquebus (arquebus)	See entry.
	figures: hundred weight, quarter hundred weight (28 pounds), and actual pounds. Thus 12.3.12 would mean a weight of 1,344 + 84 + 12, or 1,440 pounds.	hornwork	A single-fronted outwork comprised of two demibastions connected by a curtain. Horn- works occupied advantageous ground which would have been difficult to incorporate into a
demibastion	A work taking the shape of half a bastion, having one face and one flank.		fort's primary defenses. Similar to a crownwork, but lacking a bastion in its center.
demilune	A crescent-shaped or triangular outwork constructed outside of the main ditch and in front of a bastion.	howitzer	A short artillery piece, usually of light weight, used to fire small bombs or shells. A howitzer was more mobile and had greater range than a
ditch	Trench outside the curtain, between and forming the scarp and counterscarp. Could be wet or dry.		mortar but fired smaller projectiles at a lower trajectory. A howitzer differentiated from can- non in that it had a shorter range, higher tra- jectory, and fired explosive shells.
embrasure	An opening in a wall or parapet for the purpose of firing a gun through it. An embrasure's sides slanted outward so that it is wider on the inside than the outside, thus increasing the gun's angle of fire.	inspector general	British Army staff officer charged with reviewing all army requisitions accounts. Only after the inspector general had audited such requests and they had been approved by the commanding general would they be paid by
enfilade	Fire from artillery or muskets that rakes a position from one end to the other.	invest	the British Treasury. The action of seizing all of the approaches to a
ensign	A commissioned infantry officer of the lowest grade.		fort or fortress, thus cutting off support.
epaulement	A mass erected to provide protection from	lieutenant lieutenant colonel	Military officer next in rank to captain. Military officer ranking above a major but
fascine	enemy fire. Differs from a parapet. A bundle of sticks bound together to fill		below a colonel and having command of a regiment.
frigate	ditches, strengthen the sides of trenches, and build batteries. See entry (warships).	loophole	A hole or narrow slit in a wall wider inside than outside through which muskets could be
gabion	A cylindrical wicker basket open at both ends so that it may be easily filled with earth. Used in building fortifications.	lunette	fired. A projecting fieldwork consisting of two faces and two flanks. Similar to but larger than a redan.
garrison house	See entry. Incline that extends downward from a fort.	major	A military officer ranking above a captain but below a lieutenant colonel.
glacis	The glacis protects inner defenses from enemy artillery fire and exposes attacking infantry to artillery and musket fire from the parapet.	major general	A military officer ranking above a brigadier but below a lieutenant general. In colonial America, commanders in chief held the rank
grape shot	Small iron balls bound together with wire or cord, often in a canvas bag or around a wooden spindle, and forming a single charge		of major general. Officers appointed to direct campaigns also held this rank, though often temporarily.
aronado	for a cannon. A small bomb or explosive shall deterreted by	militia	See entry.
grenade	A small bomb or explosive shell detonated by a fuse and thrown by hand.	mortar	A short artillery piece possessing a large bore, trunnions at the breech, and capable of high-

	trajectory angle of fire. Used to fire explosive shells or bombs in a high arc.	scarp (escarp)	A steep bank or wall immediately in front of the curtain and forming the outer rampart or		
musket	See entry.		inner wall of the ditch.		
outwork	Fortification built outside the main walls of a fort or fortress.	schooner	See entry (warships).		
		scout	See entry.		
palisade	Fenced wall of upright and pointed logs fixed into a ground base. Also a stockade of sharp-	sergeant	A noncommissioned military officer ranking above a corporal.		
	ened posts for protection.	sergeant major	A noncommissioned military officer of the		
parapet	A wall of earth or stone used to cover troops		highest grade.		
	from enemy observation or fire. In permanent works, a protection against enemy fire raised on top of the rampart.	ship	See entry (warships).		
		sloop	See entry (warships).		
place d'armes	An open space for the assembling of troops.	snow	See entry (warships).		
(place of arms)		spontoon	A short pike or halberd carried by 18th-century infantry officers.		
presidio	Spanish term for a fort or fortified settlement.	sutler	See entry.		
private	An ordinary soldier holding no significant rank.	swivel	A small gun, usually no larger than a 1-		
privateer	See entry (privateering).		pounder, set on a mount that pivoted freely.		
provincial troops	See entry.		Swivels were used on both land and sea. On		
	An embankment of earth raised for the defense		ships, swivel guns were found mounted on the rails of smaller vessels in order to repel		
rampart	of a place, specifically against artillery, and		boarders.		
	usually surmounted by a parapet.	talus	An earthen slope inside a fort rising from the		
ranger	See entry.		parade to the terreplein.		
ranging	To move over a region so as to scout or reconnoiter.	tenaille	A small, low outwork consisting of two reentering angles and placed in front of the curtain		
ravelin	A triangular outwork consisting of two faces		and between two bastions.		
	that form a salient angle, constructed outside of the main ditch and in front of the curtain.	terreplein	The level platform on top of the rampart and behind the parapet on which guns are		
redan	A simple V-shaped fortification consisting of		emplaced.		
	two walls or faces that form a salient angle.	tomahawk	See entry.		
	Similar to but smaller than a lunette.	traverse	Barriers or parapets of earth raised at inter-		
redoubt	See entry.		vals on the covered way or terreplein to pro-		
revetment	A retaining wall supporting the face of a rampart or the side of a ditch.	trunnions	tect against enfilading fire. The knoblike projections on opposite sides of		
rifle	See entry.		a cannon, mortar, or howitzer, used to mount		
sachem	See entry.		and pivot the piece on a carriage.		
sap	A narrow, covered trench used to approach or	wampum	See entry.		
	undermine an enemy position.	war belt	See entry.		
scalping	See entry.	war club	See entry.

1. Treaty of Tordesillas, June 7, 1494

Introduction

In 1492, the Genoese (Italian) mariner Christopher Columbus claimed a small piece of the New World for Spain. His voyage opened up a vast new territory for European exploration and conquest. Spain and Portugal were already plying the Atlantic coast of Africa to trade in slaves. In 1493, at the request of Spain's King Ferdinand and Queen Isabella, Pope Alexander VI decreed a longitudinal line to divide the New World and the Atlantic Ocean into Spanish and Portuguese spheres. Portugal protested, rightly, that the line's placement heavily favored Spain. In 1494, the two nations signed the Treaty of Tordesillas, which set a line considerably westward of the one set by papal decree, roughly between 48 and 49 degrees west longitude. Spain acquired the right to explore and conquer everything west of this line, while Portugal's sphere of influence encompassed everything east of the line. This division still gave Spain all of North and Central America and much of South America. Portugal received the right to much of present-day Brazil. The pope did not approve the new line set by the treaty until 1506, and other European powers did not recognize it at all. Ultimately, Portugal extended the borders of Brazil westward, far beyond the treaty line.

Primary Source

Don Ferdinand and Dona Isabella, by the grace of God king and queen of Castile, Leon, Aragon, Sicily, Granada, Toledo, Valencia, Galiciaj Majorca Seville, Sardinia, Cordova, Corsica, Murcia, Jaen, Algarve, Algeciras, Gibraltar, and the Canary Islands, count and countess of Barcelona, lord and lady of Biscay and Molina, duke and duchess of Athens and Neopatras, count and countess of Roussillon and Cerdagne, marquis and marchioness of Oristano and Gociano, together with the Prince Don John, our very dear and very beloved first-born son, heir of our aforesaid kingdoms and lordships. Whereas by Don Enrique Enriques, our chief steward, Don Gutierre de Cardenas, chief commissary of Leon, our chief auditor, and Doctor Rodrigo Maldonado, all members of our council, it was treated, adjusted, and agreed for us and in our name and by virtue of our power with the most serene Dom John, by the grace of God, king of Portugal and of the Algarves on this side and beyond the sea in Africa, lord of Guinea, our very dear and very beloved brother, and with Ruy de Sousa, lord of Sagres and Berenguel, Dom Joao de Sousa, his son, chief inspector of weights and measures of the said Most Serene King our brother, and Ayres de Almada, magistrate of the civil cases in his court and member of his desembargo, all members of the council of the aforesaid Most Serene King our brother, [and acting] in his name and by virtue of his power, his ambassadors, who came to us in regard to the controversy over what part belongs to us and what part to the said Most Serene King our brother, of that which up to this seventh day of the present month of June, the date of this instrument, is discovered in the ocean sea, in which said agreement our aforesaid representatives promised among other things that within a certain term specified in it we should sanction, confirm, swear to, ratify, and approve the abovementioned agreement in person: we, wishing to fulfill and fulfilling all that which was thus adjusted, agreed upon, and authorized in our name in regard to the above-mentioned, ordered the said instrument of the aforesaid agreement and treaty to be brought before us that we might see and examine it, the tenor of which, word for word, is as follows:

In the name of God Almighty, Father, Son, and Holy Ghost, three truly separate and distinct persons and only one divine essence. Be it manifest and known to all who shall see this public instrument, that at the village of Tordesillas, on the seventh day of the month of June, in the year of the nativity of our Lord Jesus Christ 1494, in the presence of us, the secretaries, clerks, and notaries public subscribed below, there being present the honorable Don Enrique Enriques, chief steward of the very exalted and very mighty princes, the lord and lady Don Ferdinand and Dona Isabella, by the grace of God king and queen of Castile, Leon, Aragon, Sicily, Granada, etc., Don Gutierre de Cardenas, chief auditor of the said lords, the king and queen, and Doctor Rodrigo Maldonado, all members of the council of the said lords, the king and queen of Castile, Leon, Aragon, Sicily, Granada, etc., their qualified representatives of the one part, and the honorable Ruy de Sousa, lord of Sagres and Berenguel, Dom Juan de Sousa, his son, chief inspector of weights and measures of the very exalted and very excellent lord Dom John, by the grace of God king of Portugal and of the Algarves on this side and beyond the sea in Africa, lord of Guinea, and Ayres de Almada, magistrate of civil cases in his court and member of his desembargo, all of the council of the said lord King of Portugal, and his qualified ambassadors and representatives, as was proved by both the said parties by means of the letters of authorization and procurations from the said lords their constituents, the tenor of which, word for word, is as follows:

[Here follow the full powers granted by Ferdinand and Isabella to Don Enrique Enriques, Don Gutierre de Cardenas, and Dr. Rodrigo Maldonado on June 5, 1494; and the full powers granted by John II. to Ruy de Sousa, Joao de Sousa, and Ayres Almada on March 8, 1494.]

Thereupon it was declared by the above-mentioned representatives of the aforesaid King and Queen of Castile, Leon, Aragon, Sicily, Granada, etc., and of the aforesaid King of Portugal and the Algarves, etc.:

[I.] That, whereas a certain controversy exists between the said lords, their constituents, as to what lands, of all those discovered in the ocean sea up to the present day, the date of this treaty, pertain to each one of the said parts respectively; therefore, for the sake of peace and concord, and for the preservation of the relationship and love of the said King of Portugal for the said King and Queen of Castile, Aragon, etc., it being the pleasure of their Highnesses, they, their said representatives, acting in their name and by virtue of their powers herein described, covenanted and agreed that a boundary or straight line be determined and drawn north and south, from pole to pole, on the said ocean sea, from the Arctic to the Antarctic pole. This boundary or line shall be drawn straight, as aforesaid, at a distance of three hundred and seventy leagues west of the Cape Verde Islands, being calculated by degrees, or by any other manner as may be considered the best and readiest, provided the distance shall be no greater than abovesaid. And all lands, both islands and mainlands, found and discovered already, or to be found and discovered hereafter, by the said King of Portugal and by his vessels on this side of the said line and bound determined as above, toward the east, in either north or south latitude, on the eastern side of the said bound provided the said bound is not crossed, shall belong to, and remain in the possession of, and pertain forever to, the said King of Portugal and his successors. And all other lands, both islands and mainlands, found or to be found hereafter, discovered or to be discovered hereafter, which have been discovered or shall be discovered by the said King and Queen of Castile, Aragon, etc., and by their vessels, on the western side of the said bound, determined as above, after having passed the said bound toward the west, in either its north or south latitude, shall belong to, and remain in the possession of, and pertain forever to, the said King and Queen of Castile, Leon, etc., and to their successors.

[2.] Item, the said representatives promise and affirm by virtue of the powers aforesaid, that from this date no ships shall be despatched—namely as follows: the said King and Queen of Castile,

Leon, Aragon, etc., for this part of the bound, and its eastern side, on this side the said bound, which pertains to the said King of Portugal and the Algarves, etc.; nor the said King of Portugal to the other part of the said bound which pertains to the said King and Queen of Castile, Aragon, etc.-for the purpose of discovering and seeking any mainlands or islands, or for the purpose of trade, barter, or conquest of any kind. But should it come to pass that the said ships of the said King and Queen of Castile, Leon, Aragon, etc., on sailing thus on this side of the said bound, should discover any mainlands or islands in the region pertaining, as abovesaid, to the said King of Portugal, such mainlands or islands shall pertain to and belong forever to the said King of Portugal and his heirs, and their Highnesses shall order them to be surrendered to him immediately. And if the said ships of the said King of Portugal discover any islands and mainlands in the regions of the said King and Queen of Castile, Leon, Aragon, etc., all such lands shall belong to and remain forever in the possession of the said King and Queen of Castile, Leon, Aragon, etc., and their heirs, and the said King of Portugal shall cause such lands to be surrendered immediately.

[3.] Item, in order that the said line or bound of the said division may be made straight and as nearly as possible the said distance of three hundred and seventy leagues west of the Cape Verde Islands, as hereinbefore stated, the said representatives of both the said parties agree and assent that within the ten months immediately following the date of this treaty their said constituent lords shall despatch two or four caravels, namely, one or two by each one of them, a greater or less number, as they may mutually consider necessary. These vessels shall meet at the Grand Canary Island during this time, and each one of the said parties shall send certain persons in them, to wit, pilots, astrologers, sailors, and any others they may deem desirable. But there must be as many on one side as on the other, and certain of the said pilots, astrologers, sailors, and others of those sent by the said King and Queen of Castile, Aragon, etc., and who are experienced, shall embark in the ships of the said King of Portugal and the Algarves; in like manner certain of the said persons sent by the said King of Portugal shall embark in the ship or ships of the said King and Queen of Castile, Aragon, etc.; a like number in each case, so that they may jointly study and examine to better advantage the sea, courses, winds, and the degrees of the sun or of north latitude, and lay out the leagues aforesaid, in order that, in determining the line and boundary, all sent and empowered by both the said parties in the said vessels, shall jointly concur. These said vessels shall continue their course together to the said Cape Verde Islands, from whence they shall lay a direct course to the west, to the distance of the said three hundred and seventy degrees, measured as the said persons shall agree, and measured without prejudice to the said parties. When this point is reached, such point will constitute the place and mark for measuring degrees of the sun or of north latitude either by daily runs measured in leagues, or in any other manner that shall mutually be deemed better. This said line shall be drawn north and south as aforesaid, from the said Arctic

pole to the said Antarctic pole. And when this line has been determined as abovesaid, those sent by each of the aforesaid parties, to whom each one of the said parties must delegate his own authority and power, to determine the said mark and bound, shall draw up a writing concerning it and affix thereto their signatures. And when determined by the mutual consent of all of them, this line shall be considered as a perpetual mark and bound, in such wise that the said parties, or either of them, or their future successors, shall be unable to deny it, or erase or remove it, at any time or in any manner whatsoever. And should, perchance, the said line and bound from pole to pole, as aforesaid, intersect any island or mainland, at the first point of such intersection of such island or mainland by the said line, some kind of mark or tower shall be erected, and a succession of similar marks shall be erected in a straight line from such mark or tower, in a line identical with the above-mentioned bound. These marks shall separate those portions of such land belonging to each one of the said parties; and the subjects of the said parties shall not dare, on either side, to enter the territory of the other, by crossing the said mark or bound in such island or mainland.

[4.] Item, inasmuch as the said ships of the said King and Queen of Castile, Leon, Aragon, etc., sailing as before declared, from their kingdoms and seigniories to their said possessions on the other side of the said line, must cross the seas on this side of the line, pertaining to the said King of Portugal, it is therefore concerted and agreed that the said ships of the said King and Queen of Castile, Leon, Aragon, etc., shall, at any time and without any hindrance, sail in either direction, freely, securely, and peacefully, over the said seas of the said King of Portugal, and within the said line. And whenever their Highnesses and their successors wish to do so, and deem it expedient, their said ships may take their courses and routes direct from their kingdoms to any region within their line and bound to which they desire to despatch expeditions of discovery, conquest, and trade. They shall take their courses direct to the desired region and for any purpose desired therein, and shall not leave their course, unless compelled to do so by contrary weather. They shall do this provided that, before crossing the said line, they shall not seize or take possession of anything discovered in his said region by the said King of Portugal; and should their said ships find anything before crossing the said line, as aforesaid, it shall belong to the said King of Portugal, and their Highnesses shall order it surrendered immediately. And since it is possible that the ships and subjects of the said King and Queen of Castile, Leon, etc., or those acting in their name, may discover before the twentieth day of this present month of June, following the date of this treaty, some islands and mainlands within the said line, drawn straight from pole to pole, that is to say, inside the said three hundred and seventy leagues west of the Cape Verde Islands, as aforesaid, it is hereby agreed and determined, in order to remove all doubt, that all such islands and mainlands found and discovered in any manner whatsoever up to the said twentieth day of this said month of June, although found by ships and subjects of the said King and Queen of

Castile, Aragon, etc., shall pertain to and remain forever in the possession of the said King of Portugal and the Algarves, and of his successors and kingdoms, provided that they lie within the first two hundred and fifty leagues of the said three hundred and seventy leagues reckoned west of the Cape Verde Islands to the abovementioned line—in whatsoever part, even to the said poles, of the said two hundred and fifty leagues they may be found, determining a boundary or straight line from pole to pole, where the said two hundred and fifty leagues end. Likewise all the islands and mainlands found and discovered up to the said twentieth day of this present month of June by the ships and subjects of the said King and Queen of Castile, Aragon, etc., or in any other manner, within the other one hundred and twenty leagues that still remain of the said three hundred and seventy leagues where the said bound that is to be drawn from pole to pole, as aforesaid, must be determined, and in whatever part of the said one hundred and twenty leagues, even to the said poles,—they that are found up to the said day shall pertain to and remain forever in the possession of the said King and Queen of Castile, Aragon, etc., and of their successors and kingdoms; just as whatever is or shall be found on the other side of the said three hundred and seventy leagues pertaining to their Highnesses, as aforesaid, is and must be theirs, although the said one hundred and twenty leagues are within the said bound of the said three hundred and seventy leagues pertaining to the said King of Portugal, the Algarves, etc., as aforesaid.

And if, up to the said twentieth day of this said month of June, no lands are discovered by the said ships of their Highnesses within the said one hundred and twenty leagues, and are discovered after the expiration of that time, then they shall pertain to the said King of Portugal as is set forth in the above.

The said Don Enrique Enriques, chief steward, Don Gutierre de Cardenas, chief auditor, and Doctor Rodrigo Maldonado, representatives of the said very exalted and very mighty princes, the lord and lady, the king and queen of Castile, Leon, Aragon, Sicily, Granada, etc., by virtue of their said power, which is incorporated above, and the said Ruy de Sousa, Dom Joao de Sousa, his son, and Arias de Almadana, representatives and ambassadors of the said very exalted and very excellent prince, the lord king of Portugal and of the Algarves on this side and beyond the sea in Africa, lord of Guinea, by virtue of their said power, which is incorporated above, promised, and affirmed, in the name of their said constituents, [saying that they and their successors and kingdoms and lordships, forever and ever, would keep, observe, and fulfill, really and effectively, renouncing all fraud, evasion, deceit, falsehood, and pretense, everything set forth in this treaty, and each part and parcel of it; and they desired and authorized that everything set forth in this said agreement and every part and parcel of it be observed, fulfilled, and performed as everything which is set forth in the treaty of peace concluded and ratified between the said lord and lady, the king and queen of Castile, Aragon, etc., and the lord Dom Alfonso,

king of Portugal (may he rest in glory) and the said king, the present ruler of Portugal, his son, then prince in the former year of 1479, must be observed, fulfilled, and performed, and under those same penalties, bonds, securities, and obligations, in accordance with and in the manner set forth in the said treaty of peace. Also they bound themselves [by the promise] that neither the said parties nor any of them nor their successors forever should violate or oppose that which is abovesaid and specified, nor any part or parcel of it, directly or indirectly, or in any other manner at any time, or in any manner whatsoever, premeditated or not premeditated, or that may or can be, under the penalties set forth in the said agreement of the said peace; and whether the fine be paid or not paid, or graciously remitted, that this obligation, agreement, and treaty shall continue in force and remain firm, stable, and valid forever and ever. That thus they will keep, observe, perform, and pay everything, the said representatives, acting in the name of their said constituents, pledged the property, movable and real, patrimonial and fiscal, of each of their respective parties, and of their subjects and vassals, possessed and to be possessed. They renounced all laws and rights of which the said parties or either of them might take advantage to violate or oppose the foregoing or any part of it; and for the greater security and stability of the aforesaid, they swore before God and the Blessed Mary and upon the sign of the Cross, on which they placed their right hands, and upon the words of the Holy Gospels, wheresoever they are written at greatest length, and on the consciences of their said constituents, that they, jointly and severally, will keep, observe, and fulfill all the aforesaid and each part and parcel of it, really and effectively, renouncing all fraud, evasion, deceit, falsehood, and pretense, and that they will not contradict it at any time or in any manner. And under the same oath they swore not to seek absolution or release from it from our most Holy Father or from any other legate or prelate who could give it to them. And even though, proprio motu, it should be given to them, they will not make use of it; rather, by this present agreement, they, acting in the said name, entreat our most Holy Father that his Holiness be pleased to confirm and approve this said agreement, according to what is set forth therein; and that he order his bulls in regard to it to be issued to the parties or to whichever of the parties may solicit them, with the tenor of this agreement incorporated therein, and that he lay his censures upon those who shall violate or oppose it at any time whatsoever. Likewise, the said representatives, acting in the said names, bound themselves under the same penalty and oath, that within the one hundred days next following, reckoned from the day of the date of this agreement, the parties would mutually exchange the approbation and ratification of this said agreement, written on parchment, signed with the names of the said lords, their constituents, and sealed with their hanging leaden seals; and that the instrument which the said lords, the king and queen of Castile, Aragon, etc., should have to issue, must be signed, agreed to, and sanctioned by the very noble and most illustrious lord, Prince Don Juan, their son. Of all the foregoing they authorized two copies, both of the same tenor exactly, which they signed with their

names and executed before the undersigned secretaries and notaries public, one for each party. And whichever copy is produced, it shall be as valid as if both the copies which were made and executed in the said town of Tordesillas, on the said day, month, and year aforesaid, should be produced. The chief deputy, Don Enrique, Ruy de Sousa, Dom Juan de Sousa, Doctor Rodrigo Maldonado, Licentiate Ayres. Witnesses who were present and who saw the said representatives and ambassadors sign their names here and execute the aforesaid, and take the said oath: The deputy Pedro de Leon and the deputy Fernando de Torres, residents of the town of Valladolid, the deputy Fernando de Gamarra, deputy of Zagra and Cenete, contino of the house of the said king and queen, our lords, and Joao Suares de Sequeira, Ruy Leme, and Duarte Pacheco, continos of the house of the said King of Portugal, summoned for that purpose. And I, Fernando Alvarez de Toledo, secretary of the king and queen, our lords, member of their council, and their scrivener of the high court of justice, and notary public in their court and throughout their realms and lordships, witnessed all the aforesaid, together with the said witnesses and with Estevan Vaez, secretary of the said King of Portugal, who by the authority given him by the said king and queen, our lords, to certify to this act in their kingdoms, also witnessed the abovesaid; and at the request and with the authorization of all the said representatives and ambassadors, who in my presence and his here signed their names, I caused this public instrument of agreement to be written. It is written on these six leaves of paper, in entire sheets, written on both sides, together with this leaf, which contains the names of the aforesaid persons and my sign; and the bottom of every page is marked with the notarial mark of my name and that of the said Estevan Vaez. And in witness I here make my sign, which is thus. In testimony of truth: Fernando Alvarez. And I, the said Estevan Vaez (who by the authority given me by the said lords, the king and queen of Castile, and of Leon, to make it public throughout their kingdoms and lordships, together with the said Fernando Alvarez, at the request and summons of the said ambassadors and representatives witnessed everything), in testimony and assurance thereof signed it here with my public sign, which is thus.

The said deed of treaty, agreement, and concord, above incorporated, having been examined and understood by us and by the said Prince Don John, our son, we approve, commend, confirm, execute, and ratify it, and we promise to keep, observe, and fulfill all the abovesaid that is set forth therein, and every part and parcel of it, really and effectively. We renounce all fraud, evasion, falsehood, and pretense, and we shall not violate or oppose it, or any part of it, at any time or in any manner whatsoever. For greater security, we and the said prince Don John, our son, swear before God and Holy Mary, and by the words of the Holy Gospels, wheresoever they are written at greatest length, and upon the sign of the Cross upon which we actually placed our right hands, in the presence of the said Ruy de Sousa, Dom Joao de Sousa, and Licentiate Ayres de Almada, ambassadors and representatives of the said Most Serene King of

Portugal, our brother, thus to keep, observe, and fulfill it, and every part and parcel of it, so far as it is incumbent upon us, really and effectively, as is abovesaid, for ourselves and for our heirs and successors, and for our said kingdoms and lordships, and the subjects and natives of them, under the penalties and obligations, bonds and abjurements set forth in the said contract of agreement and concord above written. In attestation and corroboration whereof, we sign our name to this our letter and order it to be sealed with our leaden seal' hanging by threads of colored silk. Given in the town of Arevalo, on the second day of the month of July, in the year of the nativity of our Lord Jesus Christ, 1494.

I, THE KING. I, THE QUEEN. I, THE PRINCE.

I, FERNANDO ALVAREZ de Toledo, secretary of the king and of the queen, our lords, have caused it to be written by their mandate. . . . doctor.

2. Pedro de Ayala, Letter to Spain regarding John Cabot's Voyage, 1497

Introduction

England's first landfall on the far side of the Atlantic Ocean occurred during the 1497 voyage of the Italian mariner John Cabot (Giovanni Caboto). Only five years earlier, Christopher Columbus had crossed the Atlantic and discovered, or rediscovered, the New World, in the form of an island in the Caribbean. Cabot had immigrated to England and tried to raise funds for a transatlantic voyage. The king, on hearing of Columbus's triumph for Spain, gave Cabot a patent to explore and to profit from his discoveries. English merchants provided financial support. Cabot's account of his voyage has been lost, and no other firsthand accounts exist. Historians debate the exact location of Cabot's landfall, advancing theories about various locations in Labrador, Newfoundland, and Cape Breton Island. Regardless, Cabot's discovery formed the basis for England's future claims in North America. The following year, the Spanish ambassador to England wrote to his king and queen about Cabot's 1497 expedition and a second expedition then in progress. (The fate of Cabot's 1498 expedition is unknown.) The ambassador reported that Cabot's discoveries actually belonged to Spain under the 1494 Treaty of Tordesillas, but that the king of England disagreed.

London, December 18, 1497

I think your majesties have already heard that the King of England has equipped a fleet in order to discover certain islands and mainland which he was informed some people from Bristol, who manned

a few ships for the same purpose last year, had found. I have seen the map which the discoverer has made, who is another Genoese, like Colon [and?] who has been in Seville and in Lisbon, asking assistance for this discovery. The people of Bristol have, for the last seven years, sent out every year two, three, or four light ships [caravelas], in search of the island of Brazil and the seven cities, according to the fancy of this Genoese. The King determined to send out [ships], because, the year before, they brought certain news that they had found land. The fleet consisted of five vessels, which carried provisions for one year. It is said that one of them, in which another Fai [friar?] Buil went, has returned to Ireland in great distress, the ship being much damaged. The Genoese continued his voyage. I, having seen the route which they took, and the distance they sailed, find that what they have found, or what they are in search of, is what your Highnesses already possess since it is, in fine, what fell to your Highnesses by the treaty with Portugal. It is expected that they will be back in the month of September. I inform your Highnesses in regard to it. The king of England has often spoken to me on this subject. He hoped to derive great advantage from it. I think it is not further distant than four hundred leagues. I told him that, in my opinion, the land was already in the possession of your Majesties; but, though I gave him my reasons, he did not like it. Because I believe that your Highnesses will presently receive information in regard to all this matter, and the chart or map which this man has made, I do not now send it; it is here and it, according to my opinion, is false, in order to make it appear that they are not the said islands.

3. Giovanni da Verrazano,Report on the Voyage of Verrazano,1524 [Excerpt]

Introduction

Giovanni da Verrazano was, like Columbus and Cabot, an Italian mariner sailing under the flag of a foreign nation. Like many other Florentines of his time, he may have had family and business connections in France. When Verrazano proposed a voyage of discovery to the king of France, Portuguese diplomats in France heard of it and grew alarmed that he might trespass on their interests in Brazil. The Verrazano expedition set out in January 1524 in a single vessel to search for a western passage to China. The *Dauphine* reached the coast of North America at present-day North Carolina near its border with South Carolina. There the mariners went ashore and met the native inhabitants. Verrazano continued exploring along the coast, sailing as far north as present-day Newfoundland before returning to France. Verrazano's report, prepared immediately on his return, demonstrates his understanding that he had reached an entirely new land, and that a large land mass

lay between Europe and Asia. His voyage formed the basis of France's claims to land in North America. Verrazano made two more transatlantic voyages in search of Asia: in 1526–1527 to Brazil and in 1528 to Florida and the Caribbean, where he was killed by native islanders.

The Written Record of the Voyage of 1524 of Giovanni da Verrazano as recorded in a letter to Francis I, King of France, July 8th, 1524

Since the storm that we encountered in the northern regions, Most Serene King, I have not written to tell Your Majesty of what happened to the four ships which you sent out over the Ocean to explore new lands, as I thought that you had already been informed of everything—how we were forced by the fury of the winds to return in distress to Brittany with only the Normandy and the Dauphine, and that after undergoing repairs there, we began our voyage with these two ships, equipped for war, following the coasts of Spain, as Your Most Serene Majesty will have heard; and then according to our new plan, we continued the original voyage with only the Dauphine; now on our return from this voyage, I will tell Your Majesty of what we found.

We set sail with the Dauphine from the deserted rock near the Island of Madeira, which belongs to the Most Serene King of Portugal, on the XVII day of January last; we had fifty men, and were provided with food for eight months, with arms and other articles of war, and naval munitions; we sailed westward on the gentle breath of a light easterly wind. In XXV days we covered eight hundred leagues. On the XXIIII day of February we went through a storm as violent as ever sailing man encountered. We were delivered from it with the divine help and goodness of the ship, whose glorious name and happy destiny enabled her to endure the violent waves of the sea. We continued on our westerly course, keeping rather to the north. In another XXV days we sailed more than four hundred leagues, where there appeared a new land which had never been seen before by any man, either ancient or modern. At first it appeared to be rather low-lying; having approached to within a quarter of a league, we realized that it was inhabited, for huge fires had been built on the seashore. We saw that the land stretched southward, and coasted along it in search of some port where we might anchor the ship and investigate the nature of the land, but in fifty leagues we found no harbor or place where we could stop with the ship. Seeing that the land continued to the south, we decided to turn and skirt it toward the north, where we found the land we had sighted earlier. So we anchored off the coast and sent the small boat in to land. We had seen many people coming to the seashore, but they fled when they saw us approaching; several times they stopped and turned around to look at us in great wonderment. We reassured them with various signs, and some of them came up, showing great delight at seeing us and marveling at our clothes, appearance, and our whiteness; they showed us by various signs where we could most easily secure the boat, and offered

us some of their food. We were on land, and I shall now tell Your Majesty briefly what we were able to learn of their life and customs.

They go completely naked except that around their loins they wear skins of small animals like martens, with a narrow belt of grass around the body, to which they tie various tails of other animals which hang down to the knees; the rest of the body is bare, and so is the head. Some of them wear garlands of birds' feathers. They are dark in color, not unlike the Ethiopians, with thick black hair, not very long, tied back behind the head like a small tail. As for the physique of these men, they are well proportioned, of medium height, a little taller than we are. They have broad chests, strong arms, and the legs and other parts of the body are well composed. There is nothing else, except that they tend to be rather broad in the face: but not all, for we saw many with angular faces. They have big black eyes, and an attentive and open look. They are not very strong, but they have a sharp cunning, and are agile and swift runners. From what we could tell from observation, in the last two respects they resemble the Orientals, particularly those from the farthest Sinarian regions. We could not learn the details of the life and customs of these people because of the short time we spent on land, due to the fact that there were few men, and the ship was anchored on the high seas. Not far from these people, we found others on the shore whose way of life we think is similar. I will now tell Your Majesty about it, and describe the situation and nature of this land. The seashore is completely covered with fine sand XV feet deep, which rises in the form of small hills about fifty paces wide. After climbing farther, we found other streams and inlets from the sea which come in by several mouths, and follow the ins and outs of the shoreline. Nearby we could see a stretch of country much higher than the sandy shore, with many beautiful fields and plains full of great forests, some sparse and some dense; and the trees have so many colors, and are so beautiful and delightful that they defy description. And do not think, Your Majesty, that these forests are like the Hyrcanian Forest or the wild wastelands of Scythia and the northern countries, full of common trees; they are adorned and clothed with palms, laurel, cypress, and other varieties of tree unknown in our Europe. And these trees emit a sweet fragrance over a large area, the nature of which we could not examine for the reason stated above, not because we found it difficult to get through the forests—indeed, they are nowhere so dense as to be impenetrable. We think that they belong to the Orient by virtue of the surroundings, and that they are not without some kind of narcotic or aromatic liquor. There are other riches, like gold, which ground of such a color usually denotes. There is an abundance of animals, stags, deer, hares; and also of lakes and pools of running water with various types of bird, perfect for all the delights and pleasures of the hunt. This land lies at 34 degrees. The air is salubrious and pure, and free from the extremes of heat and cold; gentle winds blow in these regions, and the prevailing winds in summertime, which was beginning when we were there, are northwest and westerly; the sky is clear and cloudless, with infrequent rain, and if occasionally the south winds bring in clouds and murkiness, they are dispelled in an instant, and the sky is once more clear and bright; the sea is calm and unruffled, its waves gentle. And although the whole shore tends to be low and has no harbors, it is not dangerous for sailors, since it is quite distinct and without rocks; the water is deep, for at four or five paces from land it is at least XX feet deep whatever the tide, and this depth increases in relation to the distance from the shore. With such good coastal conditions, no ship in distress in a storm could perish in these parts unless she broke her ropes. And we proved this by experience; for several times at the beginning of March, when the winds usually blow fiercely in any region, we were overwhelmed by storms as we lay at anchor at sea, and we found the anchor broken rather than torn from the seabed or moved at all. We left this place and continued to follow the coast, which we found veered to the east. All along it we saw great fires because of the numerous inhabitants; we anchored oft the shore, since there was no harbor, and because we needed water we sent the small boat ashore with XXV men. The sea along the coast was churned up by enormous waves because of the open beach, and so it was impossible to put anyone ashore without endangering the boat. We saw many people on the beach making various friendly signs, and beckoning us ashore; and there I saw a magnificent deed, as Your Majesty will hear. We sent one of our young sailors swimming ashore to take the people some trinkets, such as little bells, mirrors, and other trifles, and when he came within four fathoms of them, he threw them the goods and tried to turn back, but he was so tossed about by the waves that he was carried up onto the beach half dead. Seeing this, the native people immediately ran up; they took him by the head, the legs, and arms and carried him some distance away. Whereupon the youth, realizing he was being carried away like this, was seized with terror, and began to utter loud cries. They answered him in their language to show him he should not be afraid. Then they placed him on the ground in the sun, at the foot of a small hill, and made gestures of great admiration, looking at the whiteness of his flesh and examining him from head to foot. They took oft his shirt and shoes and hose, leaving him naked, then made a huge fire next to him, placing him near the heat. When the sailors in the boat saw this, they were filled with terror, as always when something new occurs, and thought the people wanted to roast him for food. After remaining with them for a while, he regained his strength, and showed them by signs that he wanted to return to the ship. With the greatest kindness, they accompanied him to the sea, holding him close and embracing him; and then to reassure him, they withdrew to a high hill and stood watching him until he was in the boat. The youth learned the following about these people: they are dark in color like the other [tribes], their skin is very glossy, they are of medium height, their faces are more clear-cut, their body and other limbs much more delicate and much less powerful, but they are more quick-witted. He saw nothing else. We left this place still following the coast which veered somewhat to the north, and after fifty leagues we reached another land which seemed much more beautiful and full of great forests. We anchored there, and with XX men

we penetrated about two leagues inland, to find that the people had fled in terror into the forests. Searching everywhere, we met with a very old woman and a young girl of XVIII to XX years, who had hidden in the grass in fear. The old woman had two little girls whom she carried on her shoulders, and clinging to her neck a boy—they were all about eight years old. The young woman also had three children, but all girls. When we met them, they began to shout. The old woman made signs to us that the men had fled to the woods. We gave her some of our food to eat, which she accepted with great pleasure; the young woman refused everything and threw it angrily to the ground. We took the boy from the old woman to carry back to France, and we wanted to take the young woman, who was very beautiful and tall, but it was impossible to take her to the sea because of the loud cries she uttered. And as we were a long way from the ship and had to pass through several woods, we decided to leave her behind, and took only the boy. We found these people whiter than the previous ones; they were dressed in certain grasses that hang from the branches of the trees and which they weave with different threads of wild hemp. Their heads are bare and of the same shape as the others. On the whole they live on pulses, which are abundant and different from ours in color and size, but are excellent and have a delicious taste; otherwise they live by hunting fish and birds, which they catch with bows and snares. They make [the bows] of hard wood, the arrows of reeds, and at the point they put the bones of fish and other animals. The wild animals here are much more ferocious than in Europe because they are continually being molested by hunters. We saw many of their little boats made out of a single tree, twenty feet long and four feet wide, which are put together without stone, iron or any other kind of metal. For in the whole country, in the area of two hundred leagues that we covered, we did not see a single stone of any kind. They use the fourth element [fire] and burn the wood as much as necessary to hollow out the boat: they do the same for the stern and the prow so that when it sails it can plow through the waves of the sea. The land is like the previous one in situation, fertility, and beauty; the woods are sparse; the land is covered with different types of trees, but they are not so fragrant, since there it is more northern and cold. We saw there many vines growing wild, which climb up around the trees as they do in Cisalpine Gaul: they would doubtless produce excellent wines if they were properly cultivated, for several times we found the dry fruit sweet and pleasant, not unlike our own. The people must value them, because wherever they grow, the bushes around them are removed so that the fruit can ripen better. We found wild roses, violets, and lilies, and many kinds of herbs and fragrant flowers different from ours. We did not find out about their houses, as they were in the interior of the country. We think from the many signs we saw that they are built of wood and grasses; we also think from various conjectures and signs that many of them who sleep in the country have nothing but the sky for cover. We learned nothing more of them. We think that all the others of the country we visited earlier live in the same way. After staying here for three days, anchored off the coast, we decided to leave because of the scarcity

of ports, and we continued to follow the coast to the northeast, sailing only during the day and casting anchor at night. After a hundred leagues we found a very agreeable place between two small but prominent hills; between them a very wide river, deep at its mouth, flowed out into the sea; and with the help of the tide, which rises eight feet, any laden ship could have passed from the sea into the river estuary. Since we were anchored off the coast and well sheltered, we did not want to run any risks without knowing anything about the river mouth. So we took the small boat up this river to land which we found densely populated. The people were almost the same as the others, dressed in birds' feathers of various colors, and they came toward us joyfully, uttering loud cries of wonderment, and showing us the safest place to beach the boat. We went up this river for about half a league, where we saw that it formed a beautiful lake, about three leagues in circumference. About XXX of their small boats ran to and fro across the lake with innumerable people aboard who were crossing from one side to the other to see us. Suddenly, as often happens in sailing, a violent unfavorable wind blew in from the sea, and we were forced to return to the ship, leaving the land with much regret on account of its favorable conditions and beauty; we think it was not without some properties of value, since all the hills showed signs of minerals. We weighed anchor, and sailed eastward since the land veered in that direction, and we covered LXXX leagues, always keeping in sight of land. We discovered a triangular-shaped island, ten leagues from the mainland, similar in size to the island of Rhodes; it was full of hills, covered in trees, and highly populated to judge by the fires we saw burning continually along the shore. We baptized it in the name of your illustrious mother but did not anchor there because the weather was unfavorable. We reached another land XV leagues from the island, where we found an excellent harbor; before entering it, we saw about XX boats full of people who came around the ship uttering various cries of wonderment. They did not come nearer than fifty paces, but stopped to look at the structure of our ship, our persons, and our clothes; then all together they raised a loud cry which meant that they were joyful. We reassured them somewhat by imitating their gestures, and they came near enough for us to throw them a few little bells and mirrors and many trinkets, which they took and looked at, laughing, and then they confidently came on board ship. Among them were two kings, who were as beautiful of stature and build as I can possibly describe. The first was about XXXX years old, the other a young man of XXIIII, and they were dressed thus: the older man had on his naked body a stag skin, skillfully worked like damask with various embroideries; the head was bare, the hair tied back with various bands, and around the neck hung a wide chain decorated with many different-colored stones. The young man was dressed in almost the same way. These people are the most beautiful and have the most civil customs that we have found on this voyage. They are taller than we are; they are a bronze color, some tending more toward whiteness, others to a tawny color; the face is clear-cut; the hair is long and black, and they take great pains to decorate it; the eyes are black and alert, and their

manner is sweet and gentle, very like the manner of the ancients. I shall not speak to Your Majesty of the other parts of the body, since they have all the proportions belonging to any well-built man. Their women are just as shapely and beautiful; very gracious, of attractive manner and pleasant appearance; their customs and behavior follow womanly custom as far as befits human nature; they go nude except for a stag skin embroidered like the men's, and some wear rich lynx skins on their arms; their bare heads are decorated with various ornaments made of braids of their own hair which hang down over their breasts on either side. Some have other hair arrangements such as the women of Egypt and Syria wear, and these women are older and have been joined in wedlock. Both men and women have various trinkets hanging from their ears as the Orientals do; and we saw that they had many sheets of worked copper which they prize more than gold. They do not value gold because of its color; they think it the most worthless of all, and rate blue and red above all other colors. The things we gave them that they prized the most were little bells, blue crystals, and other trinkets to put in the ear or around the neck. They did not appreciate cloth of silk and gold, nor even of any other kind, nor did they care to have them; the same was true for metals like steel and iron, for many times when we showed them some of our arms, they did not admire them, nor ask for them, but merely examined the workmanship. They did the same with mirrors; they would look at them quickly, and then refuse them, laughing. They are very generous and give away all they have. We made great friends with them, and one day before we entered the harbor with the ship, when we were lying at anchor one league out to sea because of unfavorable weather, they came out to the ship with a great number of their boats; they had painted and decorated their faces with various colors, showing us that it was a sign of happiness. They brought us some of their food, and showed us by signs where we should anchor in the port for the ship's safety, and then accompanied us all the way until we dropped anchor. We stayed there for XV days, taking advantage of the place to refresh ourselves. Every day the people came to see us on the ship, bringing their womenfolk. They are very careful with them, for when they come aboard and stay a long time, they make the women wait in the boats; and however many entreaties we made or offers of various gifts, we could not persuade them to let the women come on board ship. One of the two kings often came with the queen and many attendants for the pleasure of seeing us, and at first they always stopped on a piece of ground about two hundred paces away from us, and sent a boat to warn us of their arrival, saying they wanted to come and see the ship: they did this as a kind of precaution. And once they had a reply from us, they came immediately, and watched us for a while; but when they heard the irksome clamor of the crowd of sailors, they sent the queen and her maidens in a light little boat to wait on a small island about a quarter of a league from us. The king remained a long while, discussing by signs and gestures various fanciful notions, looking at all the ship's equipment; and asking especially about its uses; he imitated our manners, tasted our food, and then courteously took his leave of us. Sometimes when our men stayed on a

small island near the ship for two or three days for their various needs, as is the custom of sailors, he would come with seven or eight of his attendants, watch our operations, and often ask us if we wanted to stay there any length of time, offering us all his help. Then he would shoot his bow and run and perform various games with his men to give us pleasure. We frequently went five to six leagues into the interior, and found it as pleasant as I can possibly describe, and suitable for every kind of cultivation-grain, wine, or oil. For there the fields extend for XXV to XXX leagues; they are open and free of any obstacles or trees, and so fertile that any kind of seed would produce excellent crops. Then we entered the forests, which could be penetrated even by a large army; the trees there are oaks, cypresses, and others unknown in our Europe. We found Lucullian apples, plums, and filberts, and many kinds of fruit different from ours. There is an enormous number of animals-stags, deer, lynx, and other species; these people, like the others, capture them with snares and bows, which are their principal weapons. Their arrows are worked with great beauty, and they tip them not with iron but with emery, jasper, hard marble, and other sharp stones. They use the same kind of stone instead of iron for cutting trees, and make their little boats with a single log of wood, hollowed out with admirable skill; there is ample room in them for fourteen to XV men; they operate a short oar, broad at the end, with only the strength of their arms, and they go to sea without any danger, and as swiftly as they please. When we went farther inland we saw their houses, which are circular in shape, about XIIII to XV paces across, made of bent saplings; they are arranged without any architectural pattern, and are covered with cleverly worked mats of straw which protect them from wind and rain. There is no doubt that if they had the skilled workmen that we have, they would erect great buildings, for the whole maritime coast is full of various blue rocks, crystals, and alabaster, and for such a purpose it has an abundance of ports and shelter for ships. They move these houses from one place to another according to the richness of the site and the season. They need only carry the straw mats, and so they have new houses made in no time at all. In each house there lives a father with a very large family, for in some we saw XXV to XXX people. They live on the same food as the other people—pulse (which they produce with more systematic cultivation than the other tribes, and when sowing they observe the influence of the moon, the rising of the Pleiades, and many other customs derived from the ancients), and otherwise on game and fish. They live a long time, and rarely fall sick; if they are wounded, they cure themselves with fire without medicine; their end comes with old age. We consider them very compassionate and charitable toward their relatives, for they make great lamentations in times of adversity, recalling in their grief all their past happiness. At the end of their life, the relatives perform together the Sicilian lament, which is mingled with singing and lasts a long time. This is all that we could learn of them. . . . Having supplied all our needs, we left this port on the sixth day of May and continued along the coast, never losing sight of land. We sailed one hundred and fifty leagues and found the land similar in nature, but

somewhat higher, with several mountains which all showed signs of minerals. We did not land there because the weather was favorable and helped us in sailing along the coast: we think it resembles the other. The shore ran eastward. At a distance of fifty leagues, keeping more to the north, we found high country full of very dense forests, composed of pines, cypresses, and similar trees which grow in cold regions. The people were quite different from the others, for while the previous ones had been courteous in manner, these were full of crudity and vices, and were so barbarous that we could never make any communication with them, however many signs we made to them. They were clothed in skins of bear, lynx, sea-wolf and other animals. As far as we could judge from several visits to their houses, we think they live on game, fish, and several fruits which are a species of root which the earth produces itself. They have no pulse, and we saw no sign of cultivation, nor would the land be suitable for producing any fruit or grain on account of its sterility. If we wanted to trade with them for some of their things, they would come to the seashore on some rocks where the breakers were most violent, while we remained in the little boat, and they sent us what they wanted to give on a rope, continually shouting to us not to approach the land; they gave us the barter quickly, and would take in exchange only knives, hooks for fishing, and sharp metal. We found no courtesy in them, and when we had nothing more to exchange and left them, the men made all the signs of scorn and shame that any brute creature would make. Against their wishes, we penetrated two or three leagues inland with XXV armed men, and when we disembarked on the shore, they shot at us with their bows and uttered loud cries before fleeing into the woods. We did not find anything of great value in this land, except for the vast forests and some hills which could contain some metal: for we saw many natives with "paternostri" beads of copper in their ears. We departed, skirting the coast in a northeasterly direction; we found the country more beautiful, open and bare of trees, with high mountains in the interior which slope down toward the seashore. In fifty leagues we discovered XXXII islands, all near the continent: they were small and pleasant in appearance, but high, and followed the curve of the land; some beautiful ports and channels were formed between them, such as those formed in the Adriatic Gulf in Illyria and Dalmatia. We made no contact with the people and we think they were, like the others, devoid of manners and humanity. After sailing CL leagues in a northeasterly direction we approached the land which the Britons once found, which lies in 50 degrees; and since we had exhausted all our naval stores and provisions, and had discovered seven hundred leagues or more of new land, we took on supplies of water and wood, and decided to return to France. Due to the lack of [a common] language, we were unable to find out by signs or gestures how much religious faith these people we found possess. We think they have neither religion nor laws, that they do not know of a First Cause or Author, that they do not worship the sky, the stars, the sun, the moon, or other planets, nor do they even practice any kind of idolatry; we do not know whether they offer any sacrifices or other prayers, nor are there any temples or churches of prayer among their peoples. We consider that they have no religion and that they live in absolute freedom, and that everything they do proceeds from Ignorance; for they are very easily persuaded, and they imitated everything that they saw us Christians do with regard to divine worship, with the same fervor and enthusiasm that we had.

[...]

All this land or New World which we have described above is joined together, but is not linked with Asia or Africa (we know this for certain), but could be joined to Europe by Norway or Russia; this would be false according to the ancients, who declare that almost all the north has been navigated from the promontory of the Cimbri to the Orient, and affirm that they went around as far as the Caspian Sea itself. Therefore the continent would lie between two seas, to the east and west; but these two seas do not in fact surround either of the two continents. for beyond 54 degrees south from the Equator the New World extends eastward for a great distance, and to the north of the Equator it passes 66 degrees and continues eastward as far as 70 degrees. I hope that with Your Majesty's help we shall have more certain knowledge of this; may God Almighty prosper you in everlasting glory, so that we may see the perfect end to our cosmography, and that the sacred word of the gospel may be fulfilled: "their sound has gone out into every land." In the ship "Dauphine" on the VIII day of July. M.D. XXIIII.

Humble servant JANUS VERAZANUS.

4. The First Relation of Jacques Cartier, 1534

Introduction

Jacques Cartier was born in a French coastal town in 1491. Veteran of many North Atlantic fishing expeditions, Cartier received a commission from the king of France to sail to North America and build on Verrazano's 1524 success. Like earlier European explorers, he was to seek the still hoped-for passage to Asia, as well as search for gold, spices, and other valuable trade goods. Cartier set sail from France in April 1534. He explored the Gulf of Saint Lawrence and returned to France with two natives. The following year, the king placed Cartier in command of another, larger expedition. Returning to the Saint Lawrence and guided by the two natives, Cartier reached present-day Quebec and Montreal. His party spent a brutal winter at Quebec and many died. When spring came, Cartier abducted several Iroquois chiefs and returned to France. This second voyage established the first French presence in Canada and made lasting enemies of the Iroquois. The king ordered another expedition in 1541 to establish a more lasting colony in the face of Spanish claims. After another brutal winter, Cartier again abandoned Quebec. France lost interest in the region until Samuel de

Champlain returned decades later. Either Cartier or one of his men wrote this firsthand account.

Primary Source

How our men set up a great Crosse upon the poynt of the sayd Porte, and the Captaine of those wild men, after a long Oration, was by our Captain appeased, and contented that two of his Children should goe with him.

Upon the 25 of the moneth, wee caused a faire high Crosse to be made of the height of thirty foote, which was made in the presence of many of them, upon the point of the entrance of the sayd haven, in the middest whereof we hanged up a Shield with three Floure de Luces in it, and in the top was carved in the wood with Anticke letters this posie, Vive le Roy de France. Then before them all we set it upon the sayd point. They with great heed beheld both the making and setting of it up.

So soone as it was up, we altogether kneeled downe before them, with our hands toward Heaven, yeelding God thankes: and we made signes unto them, shewing them the Heavens, and that all our salvation dependeth onely on him which in them dwelleth: whereat they shewed a great admiration, looking first one at another, and then upon the Crosse. And after wee were returned to our ships, their Captaine clad with an old Beares skin, with three of his sonnes, and a brother of his with him, came unto us in one of their boates, but they came not so neere us as they were wont to doe: there he made a long Oration unto us, shewing us the crosse we had set up, and making a crosse with two fingers, then did he shew us all the Countrey about us, as if he would say that all was his, and that wee should not set up any crosse without his leave. His talke being ended, we shewed him an Axe, faining that we would give it him for his skin, to which he listned, for by little and little hee came neere our ships. One of our fellowes that was in our boate, tooke hold on theirs, and suddenly leapt into it, with two or three more, who enforced them to enter into our ships, whereat they were greatly astonished. But our Captain did straightwaies assure them, that they should have no harme, nor any injurie offred them at all, and entertained them very friendly, making them eate and drinke. Then did we shew them with signes, that the crosse was but onely set up to be as a light and leader which wayes to enter into the port, and that wee would shortly come againe, and bring good store of iron wares and other things, but that we would take two of his children with us, and afterward bring them to the sayd port againe: and so wee clothed two of them in shirts, and coloured coates, with red cappes, and put about every ones necke a copper chaine, whereat they were greatly contented: then gave they their old clothes to their fellowes that went backe againe, and we gave to each one of those three that went backe, a hatchet, and some knives, which made them very glad. After these were gone, and had told the newes unto their fellowes, in the afternoone there came to our ships sixe boates of them, with five or sixe men in every one, to take their farewels of those two we had detained to take with us, and brought them some fish, uttering many words which we did not understand, making signes that they would not remove the crosse we had set up.

How after we were departed from the sayd porte, following our voyage along the sayd coast, we went to discover the land lying Southeast, and Northwest.

The next day, being the 25 of the moneth, we had faire weather, and went from the said port: and being out of the river, we sailed East-northeast, for after the entrance into the said river, the land is environed about, and maketh a bay in maner of halfe a circle, where being in our ships, we might see all the coast sayling behind, which we came to seeke, the land lying Southeast and Northwest, the course of which was distant from the river about twentie leagues.

5. Accounts of Spanish Explorers, 1536, 1539, and 1540 [Excerpts]

Introduction

Between 1492 and the first Spanish landfall in the present-day United States, Spain had established a presence in the Caribbean and brutally conquered the Aztecs in Mexico. Impressed by the wealth won by Hernán Cortés in Mexico, Spaniards turned northward in search of precious metals. In 1528, Pánfilo de Narváez landed his expedition on Tampa Bay, in Florida. Failing to find riches, the men were defeated by the Apalachee Indians and fled to the coast. After Narváez and others drowned in a shipwreck off Texas, the survivors became captives of the natives. Álvar Núñez Cabeza de Vaca and three companions, who spent eight years among the Indians, were the only ones to eventually be returned to their countrymen, in 1536. Cabeza de Vaca repeated rumors of great wealth in the interior of North America, and this inspired other Spaniards to explore the region. In 1539, Hernando de Soto landed an expedition in Florida and cut a swath of pillage and destruction through the Southeast, finally crossing the Mississippi River and entering the Great Plains. In 1540, Francisco Vasquez de Coronado entered the Southwest from Mexico in search of the rumored cities of gold. He too killed and pillaged with abandon, but failed to find the fabled riches.

Álvar Núñez Cabeza de Vaca to Holy Roman Emperor Charles V of what befell the armament in the Indies whither Pánfilo de Narváez went for Governor from the year 1527 to 1537

SACRED CAESARIAN CATHOLIC MAJESTY:

Among the many who have held sway, I think no prince can be found whose service has been attended with the ardor and emula-

tion shown for that of your Highness at this time. The inducement is evident and powerful: men do not pursue together the same career without motive, and strangers are observed to strive with those who are equally impelled by religion and loyalty.

Although ambition and love of action are common to all, as to the advantages that each may gain, there are great inequalities of fortune, the result not of conduct, but only accident, nor caused by the fault of anyone, but coming in the providence of God and solely by His will. Hence to one arises deeds more signal than he thought to achieve; to another the opposite in every way occurs, so that he can show no higher proof of purpose than his effort, and at times even this is so concealed that it cannot of itself appear.

As for me, I can say in undertaking the march I made on the main by the royal authority, I firmly trusted that my conduct and services would be as evident and distinguished as were those of my ancestors and that I should not have to speak in order to be reckoned among those who for diligence and fidelity in affairs your Majesty honors. Yet, as neither my counsel nor my constancy availed to gain aught for which we set out, agreeably to your interests, for our sins, no one of the many armaments that have gone into those parts has been permitted to find itself in straits great like ours, or come to an end alike forlorn and fatal. To me, one only duty remains, to present a relation of what was seen and heard in the ten years I wandered lost and in privation through many and remote lands. Not merely a statement of positions and distances, animals and vegetation, but of the diverse customs of the many and very barbarous people with whom I talked and dwelt, as well as all other matters I could hear of and discern, that in some way I may avail your Highness. My hope of going out from among those nations was always small, still my care and diligence were none the less to keep in particular remembrance everything, that if at any time God our Lord should will to bring me where I now am, it might testify to my exertion in the royal behalf.

As the narrative is in my opinion of no trivial value to those who in your name go to subdue those countries and bring them to a knowledge of the true faith and true Lord, and under the imperial dominion, I have written this with much exactness; and although in it may be read things very novel and for some persons difficult to believe, nevertheless they may without hesitation credit me as strictly faithful. Better than to exaggerate, I have lessened in all things, and it is sufficient to say the relation is offered to your Majesty for truth. I beg it may be received in the name of homage, since it is the most that one could bring who returned thence naked. . . .

Our arrival at Apalache

When we came in view of Apalachen, the Governor ordered that I should take nine cavalry with fifty infantry and enter the town. Accordingly the assessor and I assailed it; and having got in, we found only women and boys there, the men being absent; however

these returned to its support, after a little time, while we were walking about, and began discharging arrows at us. They killed the horse of the assessor, and at last taking to flight, they left us.

We found a large quantity of maize fit for plucking, and much dry that was housed; also many deer-skins, and among them some mantelets of thread, small and poor, with which the women partially cover their persons. There were numerous mortars for cracking maize. The town consisted of forty small houses, made low, and set up in sheltered places because of the frequent storms. The material was thatch. They were surrounded by very dense woods, large groves and many bodies of fresh water, in which so many and so large trees are fallen, that they form obstructions rendering travel difficult and dangerous. . . .

Narrative of the Expedition of Hernando de Soto

How the Governor arrived at Palache, and was informed that there was much gold inland.

On the twenty-third day of September the Governor left Napetaca, and went to rest at a river, where two Indians brought him a deer from the cacique of Uzachil; and the next day, having passed through a large town called Hapaluya, he slept at Uzachil. He found no person there; for the inhabitants, informed of the deaths at Napetaca, dared not remain. In the town was found their food, much maize, beans, and pumpkins, on which the Christians lived. The maize is like coarse millet; the pumpkins are better and more savory than those of Spain.

Two captains having been sent in opposite directions, in quest of Indians, a hundred men and women were taken, one or two of whom were chosen out for the Governor, as was always customary for officers to do after successful inroads, dividing the others among themselves and companions. They were led off in chains, with collars about the neck, to carry luggage and grind corn, doing the labor proper to servants. Sometimes it happened that, going with them for wood or maize, they would kill the Christian, and flee, with the chain on, which others would file at night with a splinter of stone, in the place of iron, at which work, when caught, they were punished, as a warning to others, and that they might not do the like. The women and youths, when removed a hundred leagues from their country, no longer cared, and were taken along loose, doing the work, and in a very little time learning the Spanish language.

From Uzachil the Governor went towards Apalache, and at the end of two days' travel arrived at a town called Axille. After that, the Indians having no knowledge of the Christians, they were come upon unawares, the greater part escaping, nevertheless, because there were woods near town. The next day, the first of October, the Governor took his departure in the morning, and ordered a bridge to be made over a river which he had to cross. The depth there, for

a stone's throw, was over the head, and afterward the water came to the waist, for the distance of a crossbow-shot, where was a growth of tall and dense forest, into which the Indians came, to ascertain if they could assail the men at work and prevent a passage; but they were dispersed by the arrival of crossbowmen, and some timbers being thrown in, the men gained the opposite side and secured the way. On the fourth day of the week, Wednesday of St. Francis, the Governor crossed over and reached Uitachuco, a town subject to Apalache, where he slept. He found it burning, the Indians having set it on fire.

Thenceforward the country was well inhabited, producing much corn, the way leading by many habitations like villages. Sunday, the twenty-fifth of October, he arrived at the town of Uzela, and on Monday at Anhayca Apalache, where the lord of all that country and province resided. The camp-master, whose duty it is to divide and lodge the men, quartered them about the town, at the distance of half a league to a league apart. There were other towns which had much maize, pumpkins, beans, and dried plums of the country, whence were brought together at Anhayca Apalache what appeared to be sufficient provision for the winter. These *ameixas* are better than those of Spain, and come from trees that grow in the fields without being planted.

Informed that the sea was eight leagues distant, the Governor directly sent a captain thither, with cavalry and infantry, who found a town called Ochete, eight leagues on the way; and, coming to the coast, he saw where a great tree had been felled, the trunk split up into stakes, and with the limbs made into mangers. He found also the skulls of horses. With these discoveries he returned, and what was said of Narvaez was believed to be certain, that he had there made boats, in which he left the country, and was lost in them at sea. Presently Juan de Añasco made ready to go to the port of Espiritu Santo, taking thirty cavalry, with orders from the Governor to Calderon, who had remained there, that he should abandon the town, and bring all the people to Apalache.

In Uzachill, and other towns on the way, Añasco found many people who had already become careless; still, to avoid detention, no captures were made, as it was not well to give the Indians sufficient time to come together. He went through the towns at night, stopping at a distance from the population for three or four hours, to rest, and at the end of ten days arrived at the port. He despatched two caravels to Cuba, in which he sent to Doña Ysabel twenty women brought by him from Ytara and Potano, near Cale; and, taking with him the foot-soldiers in the brigantines, from point to point along the coast by sea, he went towards Palache. Calderon with the cavalry, and some crossbowmen of foot, went by land. The Indians at several places beset him, and wounded some of the men. On his arrival, the Governor ordered planks and spikes to be taken to the coast for building a piragua, into which thirty men entered well armed from the bay, going to and coming from sea, waiting the

arrival of the brigantines, and sometimes fighting with the natives, who went up and down the estuary in canoes. On Saturday, the twenty-ninth of November, in a high wind, an Indian passed through the sentries undiscovered, and set fire to the town, two portions of which, in consequence, were instantly consumed.

On Sunday, the twenty-eighth of December, Juan de Añasco arrived; and the Governor directed Francisco Maldonado, captain of infantry, to run the coast to the westward with fifty men, and look for an entrance; proposing to go himself in that direction by land on discoveries. The same day, eight men rode two leagues about the town in pursuit of Indians, who had become so bold that they would venture up within two crossbow-shot of the camp to kill our people. Two were discovered engaged in picking beans, and might have escaped, but a woman being present, the wife of one of them, they stood to fight. Before they could be killed, three horses were wounded, one of which died in a few days. Calderon going along the coast near by, the Indians came out against him from a wood, driving him from his course, and capturing from many of his company a part of their indispensable subsistence.

Three or four days having elapsed beyond the time set for the going and return of Maldonado, the Governor resolved that, should he not appear at the end of eight days, he would go thence and wait no longer; when the captain arrived, bringing with him an Indian from a Province called Ochus, sixty leagues from Apalache, and the news of having found a sheltered port with a good depth of water. The Governor was highly pleased, hoping to find a good country ahead; and he sent Maldonado to Havana for provisions, with which to meet him at that port of his discovery, to which he would himself come by land; but should he not reach there that summer, then he directed him to go back to Havana and return there the next season to await him, as he would make it his express object to march in quest of Ochus.

Francisco Maldonado went, and Juan de Guzman remained instead, captain of his infantry. Of the Indians taken in Napetuca, the treasurer, Juan Gaytan, brought a youth with him, who stated that he did not belong to that country, but to one afar in the direction of the sun's rising, from which he had been a long time absent visiting other lands; that its name was Yupaha, and was governed by a woman, the town she lived in being of astonishing size, and many neighboring lords her tributaries, some of whom gave her clothing, others gold in quantity. He showed how the metal was taken from the earth, melted, and refined, exactly as though he had seen it all done, or else the Devil had taught him how it was; so that they who knew aught of such matters declared it impossible that he could give that account without having been an eye-witness; and they who beheld the signs he made, credited all that was understood as certain. . . .

How the Indians rose upon the Governor, and what followed upon that rising.

The Governor, in view of the determination and furious answer of the cacique, thought to soothe him with soft words; to which he made no answer, but, with great haughtiness and contempt, withdrew to where Soto could not see nor speak to him. The Governor, that he might send word to the cacique for him to remain in the country at his will, and to be pleased to give him a guide, and persons to carry burdens, that he might see if he could pacify him with gentle words, called to a chief who was passing by. The Indian replied, loftily, that he would not listen to him. Baltasar de Gallegos, who was near, seized him by the cloak of marten-skins that he had on, drew it off over his head, and left it in his hands; whereupon, the Indians all beginning to rise, he gave him a stroke with a cutlass, that laid open his back, when they, with loud yells, came out of the houses, discharging their bows.

The Governor, discovering that if he remained there they could not escape, and if he should order his men, who were outside of the town, to come in, the horses might be killed by the Indians from the houses and great injury done, he ran out; but before he could get away he fell two or three times, and was helped to rise by those with him. He and they were all badly wounded: within the town five Christians were instantly killed. Coming forth, he called out to all his men to get farther off, because there was much harm doing from the palisade. The natives discovering that the Christians were retiring, and some, if not the greater number, at more than a walk, the Indians followed with great boldness, shooting at them, or striking down such as they could overtake. Those in chains having set down their burdens near the fence while the Christians were retiring, the people of Mauilla lifted the loads on to their backs, and, bringing them into the town, took off their irons, putting bows and arms in their hands, with which to fight. Thus did the foe come into possession of all the clothing, pearls, and whatsoever else the Christians had beside, which was what their Indians carried. Since the natives had been at peace as far as to that place, some of us, putting our arms in the luggage, had gone without any; and two, who were in the town, had their swords and halberds taken from them, and put to use.

The Governor, presently as he found himself in the field, called for a horse, and, with some followers, returned and lanced two or three of the Indians; the rest, going back into the town, shot arrows from the palisade. Those who would venture on their nimbleness came out a stone's throw from behind it, to fight, retiring from time to time, when they were set upon.

At the time of the affray there was a friar, a clergyman, a servant of the Governor, and a female slave in the town, who, having no time in which to get away, took to a house, and there remained until after the Indians became masters of the place. They closed the entrance with a lattice door; and there being a sword among them, which the servant had, he put himself behind the door, striking at the Indians that would have come in; while, on the other side, stood the friar and the priest, each with a club in hand, to strike down the first that

should enter. The Indians, finding that they could not get in by the door, began to unroof the house: at this moment the cavalry were all arrived at Mauilla, with the infantry that had been on the march, when a difference of opinion arose as to whether the Indians should be attacked, in order to enter the town; for the result was held doubtful, but finally it was concluded to make the assault.

How the Governor set his men in order of battle and entered the town of Mauilla.

So soon as the advance and the rear of the force were come up, the Governor commanded that all the best armed should dismount, of which he made four squadrons of footmen. The Indians, observing how he was going on arranging his men, urged the cacique to leave, telling him, as was afterwards made known by some women who were taken in the town, that as he was but one man, and could fight but as one only, there being many chiefs present very skilful and experienced in matters of war, anyone of whom was able to command the rest, and as things in war were so subject to fortune, that it was never certain which side would overcome the other, they wished him to put his person in safety; for if they should conclude their lives there, on which they had resolved rather than surrender, he would remain to govern the land: but for all that they said, he did not wish to go, until, from being continually urged, with fifteen or twenty of his own people he went out of the town, taking with him a scarlet cloak and other articles of the Christians' clothing, being whatever he could carry and that seemed best to him.

The Governor, informed that the Indians were leaving the town, commanded the cavalry to surround it; and into each squadron of foot he put a soldier, with a brand, to set fire to the houses, that the Indians might have no shelter. His men being placed in full concert, he ordered an arquebuse to be shot off: at the signal the four squadrons, at their proper points, commenced a furious onset, and, both sides severely suffering, the Christians entered the town. The friar, the priest, and the rest who were with them in the house, were all saved, though at the cost of the lives of two brave and very able men who went thither to their rescue. The Indians fought with so great spirit that they many times drove our people back out of the town. The struggle lasted so long that many Christians, weary and very thirsty, went to drink at a pond near by, tinged with the blood of the killed, and returned to the combat. The Governor, witnessing this, with those who followed him in the returning charge of the footmen, entered the town on horseback, which gave opportunity to fire the dwellings; then breaking in upon the Indians and beating them down, they fled out of the place, the cavalry and infantry driving them back through the gates, where, losing the hope of escape, they fought valiantly; and the Christians getting among them with cutlasses, they found themselves met on all sides by their strokes, when many, dashing headlong into the flaming houses, were smothered, and, heaped one upon another, burned to death.

They who perished there were in all two thousand five hundred, a few more or less: of the Christians there fell eighteen, among whom was Don Carlos, brother-in-law of the Governor; one Juan de Gamez, a nephew; Men. Rodriguez, a Portuguese; and Juan Vazquez, of Villanueva de Barcarota, men of condition and courage; the rest were infantry. Of the living, one hundred and fifty Christians had received seven hundred wounds from the arrow; and God was pleased that they should be healed in little time of very dangerous injuries. Twelve horses died, and seventy were hurt. The clothing the Christians carried with them, the ornaments for saying mass, and the pearls, were all burned there; they having set the fire themselves, because they considered the loss less than the injury they might receive of the Indians from within the houses, where they had brought the things together.

The Governor learning in Mauilla that Francisco Maldonado was waiting for him in the port of Ochuse, six days' travel distant, he caused Juan Ortiz to keep the news secret, that he might not be interrupted in his purpose; because the pearls he wished to send to Cuba for show, that their fame might raise the desire of coming to Florida, had been lost, and he feared that, hearing of him without seeing either gold or silver, or other thing of value from that land, it would come to have such reputation that no one would be found to go there when men should be wanted: so he determined to send no news of himself until he should have discovered a rich country. . . .

How the Governor set out from Mauilla to go to Chicaça, and what befell him.

From the time the Governor arrived in Florida until he went from Mauilla, there died one hundred and two Christians, some of sickness, others by the hand of the Indians. Because of the wounded, he stopped in that place twenty-eight days, all the time remaining out in the fields. The country was a rich soil, and well inhabited: some towns were very large, and were picketed about. The people were numerous everywhere, the dwellings standing a crossbow-shot or two apart.

On Sunday, the eighteenth of November the sick being found to be getting on well, the Governor left Mauilla, taking with him a supply of maize for two days. He marched five days through a wilderness, arriving in a province called Pafallaya, at the town Taliepataua; and thence he went to another, named Cabusto, near which was a large river, whence the Indians on the farther bank shouted to the Christians that they would kill them should they come over there. He ordered the building of a piragua within the town, that the natives might have no knowledge of it; which being finished in four days, and ready, he directed it to be taken on sleds half a league up stream, and in the morning thirty men entered it, well armed. The Indians discovering what was going on, they who were nearest went to oppose the landing, and did the best they could; but the Christians drawing near, and the piragua being about to reach the shore, they fled into some cane-brakes. The men on horses went up the river to

secure a landing place, to which the Governor passed over, with the others that remained. Some of the towns were well stored with maize and beans.

Thence towards Chicaça the Governor marched five days through a desert, and arrived at a river, on the farther side of which were Indians, who wished to arrest his passage.

In two days another piragua was made, and when ready he sent an Indian in it to the cacique, to say, that if he wished his friendship he should quietly wait for him; but they killed the messenger before his eyes, and with loud yells departed. He crossed the river the seventeenth of December, and arrived the same day at Chicaça, a small town of twenty houses. There the people underwent severe cold, for it was already winter, and snow fell: the greater number were then lying in the fields, it being before they had time to put up habitations. The land was thickly inhabited, the people living about over it as they do in Mauilla; and as it was fertile, the greater part being under cultivation, there was plenty of maize. So much grain was brought together as was needed for getting through with the season.

Some Indians were taken, among whom was one the cacique greatly esteemed. The Governor sent an Indian to the cacique to say, that he desired to see him and have his friendship. He came, and offered him the services of his person, territories, and subjects: he said that he would cause two chiefs to visit him in peace. In a few days he returned with them, they bringing their Indians. They presented the Governor one hundred and fifty rabbits, with clothing of the country, such as shawls and skins. The name of the one was Alimamu, of the other Nicalasa. . . .

Account of the Expedition to Cibola, 1540, by Pedro de Castañeda, of Najera.

To me it seems very certain, my very noble lord, that it is a worthy ambition for great men to desire to know and wish to preserve for posterity correct information concerning the things that have happened in distant parts, about which little is known. I do not blame those inquisitive persons who, perchance with good intentions, have many times troubled me not a little with their requests that I clear up for them some doubts which they have had about different things that have been commonly related concerning the events and occurrences that took place during the expedition to Cibola, or the New Land, which the good viceroy—may he be with God in His glory-Don Antonio de Mendoza, ordered and arranged, and on which he sent Francisco Vazquez de Coronado as captain-general. In truth, they have reason for wishing to know the truth, because most people very often make things of which they have heard, and about which they have perchance no knowledge, appear either greater or less than they are. They make nothing of those things that amount to something, and those that do not they make so remarkable that they appear to be something impossible to believe. This may very well have been caused by the fact that, as that country was not permanently occupied, there has not been anyone who was willing to spend his time in writing about its peculiarities, because all knowledge was lost of that which it was not the pleasure of God—He alone knows the reason—that they should enjoy. In truth, he who wishes to employ himself thus in writing out the things that happened on the expedition, and the things that were seen in those lands, and the ceremonies and customs of the natives, will have matter enough to test his judgment, and I believe that the result can not fail to be an account which, describing only the truth, will be so remarkable that it will seem incredible.

And besides, I think that the twenty years and more since that expedition took place have been the cause of some stories which are related. For example, some make it an uninhabitable country, others have it bordering on Florida, and still others on Greater India, which does not appear to be a slight difference. They are unable to give any basis upon which to found their statements. There are those who tell about some very peculiar animals, who are contradicted by others who were on the expedition, declaring that there was nothing of the sort seen. Others differ as to the limits of the provinces and even in regard to the ceremonies and customs, attributing what pertains to one people to others. All this has had a large part, my very noble lord, in making me wish to give now, although somewhat late, a short general account for all those who pride themselves on this noble curiosity, and to save myself the time taken up by these solicitations. Things enough will certainly be found here which are hard to believe. All or the most of these were seen with my own eyes, and the rest is from reliable information obtained by inquiry of the natives themselves. Understanding as I do that this little work would be nothing in itself, lacking authority, unless it were favored and protected by a person whose authority would protect it from the boldness of those who, without reverence, give their murmuring tongues liberty, and knowing as I do how great are the obligations under which I have always been, and am, to your grace, I humbly beg to submit this little work to your protection. May it be received as from a faithful retainer and servant. It will be divided into three parts, that it may be better understood. The first will tell of the discovery and the armament or army that was made ready, and of the whole journey, with the captains who were there; the second, of the villages and provinces which were found, and their limits, and ceremonies and customs, the animals, fruits, and vegetation, and in what parts of the country these are; the third, of the return of the army and the reasons for abandoning the country, although these were insufficient, because this is the best place there is for discoveries—the marrow of the land in these western parts, as will be seen. And after this has been made plain, some remarkable things which were seen will be described at the end, and the way by which one might more easily return to discover that better land which we did not see, since it would be no small advantage to enter the country through the land which the Marquis of the Valley, Don Fernando Cortes, went in search of under the Western star, and which cost him no small sea armament. May it please our Lord to so favor me that with my slight knowledge and small abilities I may be able by relating the truth to make my little work pleasing to the learned and wise readers, when it has been accepted by your grace. For my intention is not to gain the fame of a good composer or rhetorician, but I desire to give a faithful account and to do this slight service to your grace, who will, I hope, receive it as from a faithful servant and soldier, who took part in it. Although not in a polished style, I write that which happened—that which I heard, experienced, saw, and did.

I always notice, and it is a fact, that for the most part when we have something valuable in our hands, and deal with it without hindrance, We do not value or prize it so highly as if we understood how much we should miss it after we had lost it, and the longer we continue to have it the less we value it; but after We have lost it and miss the advantages of it, we have a great pain in the heart, and we are all the time imagining and trying to find ways and means by which to get it back again. It seems to me that this has happened to all or most of those who went on the expedition which, in the year of our Savior Jesus Christ 1540, Francisco Vazquez Coronado led in search of the Seven Cities. Granted that they did not find the riches of which they had been told, they found a place in which to search for them and the beginning of a good country to settle in, so as to go on farther from there. Since they came back from the country which they conquered and abandoned, time has given them a chance to understand the direction and locality in which they were, and the borders of the good country they had in their hands, and their hearts weep for having lost so favorable an opportunity. Just as men see more at the bullfight when they are upon the seats than when they are around in the ring, now when they know and understand the direction and situation in which they were, and see, indeed, that they can not enjoy it nor recover it, now when it is too late they enjoy telling about what they saw, and even of what they realize that they lost, especially those who are now as poor as when they went there. They have never ceased their labors and have spent their time to no advantage. I say this because I have known several of those who came back from there who amuse themselves now by talking of how it would be to go back and proceed to recover that which is lost, while others enjoy trying to find the reason why it was discovered at all. And now I will proceed to relate all that happened from the beginning.

In the year 1530 Nuño de Guzman, who was President of New Spain, had in his possession an Indian, a native of the valley or valleys of Oxitipar, who was called Tejo by the Spaniards. This Indian said he was the son of a trader who was dead, but that when he was a little boy his father had gone into the back country with fine feathers to trade for ornaments, and that when he came back he brought a large amount of gold and silver, of which there is a good deal in that country. He went with him once or twice, and saw some very large vil-

lages, which he compared to Mexico and its environs. He had seen seven very large towns which had streets of silver workers. It took forty days to go there from his country, through a wilderness in which nothing grew, except some very small plants about a span high. The way they went was up through the country between the two seas, following the northern direction. Acting on this information, Nuño de Guzman got together nearly 400 Spaniards and 20,000 friendly Indians of New Spain, and, as he happened to be in Mexico, he crossed Tarasca, which is in the province of Michoacan, so as to get into the region which the Indian said was to be crossed toward the North Sea, in this way getting to the country which they were looking for, which was already named "The Seven Cities." He thought, from the forty days of which the Tejo had spoken, that it would be found to be about 200 leagues, and that they would easily be able to cross the country. Omitting several things that occurred on this journey, as soon as they had reached the province of Culiacan, where his government ended, and where the New Kingdom of Galicia is now, they tried to cross the country, but found the difficulties very great, because the mountain chains which are near that sea are so rough that it was impossible, after great labor, to find a passageway in that region. His whole army had to stay in the district of Culiacan for so long on this account that some rich men who were with him, who had possessions in Mexico, changed their minds, and every day became more anxious to return. Besides this, Nuño de Guzman received word that the Marquis of the Valley, Don Fernando Cortes, had come from Spain with his new title, and with great favors and estates, and as Nuño de Guzman had been a great rival of his at the time he was president, and had done much damage to his property and to that of his friends, he feared that Don Fernando Cortes would want to pay him back in the same way, or worse. So he decided to establish the town of Culiacan there and to go back with the other men, without doing anything more. After his return from this expedition, he founded Xalisco, where the city of Compostela is situtated, and Tonala, which is called Guadalaxara, and now this is the New Kingdom of Galicia. The guide they had, who was called Tejo, died about this time, and thus the name of these Seven Cities and the search for them remains until now, since they have not been discovered. . . .

6. Accounts of the Destruction of Fort Caroline, 1565 [Excerpts]

Introduction

The first bloodshed between opposing European nations on North American soil took place in 1565. Despite Spanish claims to the region, the French believed that Giovanni da Verrazano's explorations and the lack of a permanent Spanish settlement entitled them to establish a post. In 1562, France sent an expedition to the

coast of present-day South Carolina. The party consisted of Protestants, called Huguenots, who were a minority in predominantly Catholic France. This first expedition failed when the men, suffering from hunger, abandoned the outpost and returned to France. Jean Ribault brought a second French expedition to the Florida coast and built Fort Caroline in 1564. In the meantime, the king of Spain had sent an expedition to establish a base at St. Augustine in 1565. The Spanish quickly moved to wipe out the French settlement. The Spanish commander, Pedro Menéndez de Avilés, captured and ordered the execution of Ribault and his men on the grounds that they would corrupt the Indians with their Protestantism. He spared the lives of a few highly skilled men, such as the carpenter who wrote the first account. The second account is excerpted from Menéndez's report to Spain's King Philip II.

A True and Perfect Description of the Last Voyage or Navigation Attempted by Captain John Ribault

After the tumult of the Civil War, the king determined to send a sufficient number of men and ships to Florida, one of the countries of India recently discovered by France. For the leadership of this enterprise, the court chose John Ribault, a man of heart and wisdom. He received seven ships to carry men, victuals, and munitions of war, and the king honored him with the title of lieutenant, or general of the fleet. He had a commission to impress whatever he needed, and he was expressly warned to keep his course to Florida, not to land in any other country or island, especially those under the dominion of the king of Spain.

News of this voyage quickly spread abroad and many were persuaded to submit themselves as candidates for the enterprise. They volunteered for a variety of reasons: some were spurred by an honest desire to see Florida, hoping that the trip would enrich them; others were driven by the desire for adventure; some had nothing to lose: they preferred to tempt the raging seas than to remain in their current poor state and condition.

Rumors spread that Florida promised all that a man might wish for in the world. Florida enjoyed the singular favor of heaven, for it had neither frost nor snow, and yet it avoided the burning heat of the lands to the south. Without laboring or tilling the soil, the fields brought forth enough to sustain all that dwell or shall dwell therein. It must be the most fruitful and richest of countries. If but there were men that would employ their industry and diligence to cultivate the soil. . . .

[...]

Overcome with these promises and covetous of the riches to be secured, particularly the gold, men came from all over and enlisted for the journey. Ribault selected from among them those most fit....

[...]

You have heard how Captain John Ribault set off with some soldiers to seek the Spaniards. After looking for five days without success, he met the flagship of his fleet, the Trinitie. He had been told to hold the coast against the Spaniards, so he returned to our fort in Florida, not knowing its fate. The weather was troublesome, for the wind blew hard and it rained continually. The first day the tempest increased so strongly that they could not resist it, and were driven to shore about fifty leagues above the May River. They were shipwrecked and lost their munitions but the men survived except for Captain Grange who fell upon a mast and was drowned. His loss was much lamented for he always gave good counsel. Those who were saved from the rage of the waves found themselves snared in a trap from which there was no remedy. Unless they would eat such things that the earth brought forth, like herbs, roots and the like, they would not be able to satisfy their craving stomachs. Neither was there anything to quench their thirst, except ponds of water that were so covered with scum, that merely to look on it would make a man sick. Their hunger and thirst were so great that they consumed these strange and unwholesome things for eight days. Fortunately, on the ninth day they found a little bark, which gave them hope of reaching the fort.

[…]

As mentioned before, they had to cross the River of Dolphins to get to the fort. The first day they reached the river and saw on the other side a company of armed men with their standards displayed. They assumed that they were Spaniards. Disheartened, and unsure of what to do, they sent some of their company to swim across the river to offer to submit to the Spaniards in return for their lives.

The swimmers were received courteously by a company under the command of Captain Vallemande. He swore by the word of a gentleman and a Christian knight to use his good will for the Frenchmen, and since it was always practiced in war that the victorious should be content (especially with Frenchmen), without asking of the vanquished anything more, he gave us signs to convince us of the truth of his promise, that none should have any doubt. He would provide no reason for our countries to war.

He ordered a barge to be made ready and commanded five of his men to cross the river and fetch the French. They convinced John Ribault and thirty of his men to enter. Ribault was gently received by Vallemande but his men were carried off, bound with their hands behind their backs, two and two together. While Vallemande entertained our good Captain Ribault with flattering words, the rest of our men were carried over, thirty at a time. Ribault trusted Vallemande's faithful promise. Our men continued to come over thirty at a time, bound two by two. When all had come over, the Spanish marched them toward the fort. Ribault and others, especially the

Sieur of Ottigny, changed their countenance when they saw the men bound together, contrary to Vallemande's assurances. The latter said that they were bound only to bring them in safely, and that he would keep that which he promised. When they were near the fort he asked of them who were mariners, carpenters, gunners, and others who were necessary to the running of a ship. Thirty men stepped forward. Shortly after, a company from the fort came, and our men were made to follow Vallemande like beasts being led to the slaughter. Then with the noise of drums, flutes, and trumpets, the courage of these furious Spaniards was extended upon the poor Frenchmen still bound. There was a fray—who could best strike a man with a pike, halberd or sword. Within a half hour they won the field, and claimed a glorious victory, by cruelly killing those who had yielded and whom they had received on their faith and promises.

During this cruelty Captain Ribault made certain exhortations to Vallemande to save his life. Also the Sieur of Ottigny got on his knees and reminded Vallemande of his faithful promise, but it was all to no effect, for he turned his back, went a short distance from them, and then one of his murderers struck Captain Ribault from behind with a dagger. Ribault fell and the murderer doubled his strokes, till he had taken his life from him.

 $[\ldots]$

Reports of Pedro Menéndez de Avilés to King Philip II

On the 28th of September [1565] the Indians notified me that many Frenchmen were about six leagues from here on the coast, that they had lost their vessels and escaped by swimming and in boats. Taking fifty soldiers I was with them next morning at daylight, and leaving my men in ambush, I took one with me to the banks of the river, because they were on one side and I on the other bank. I spoke to them, told them I was Spanish; they said they were French. They asked me to come over to them either alone or with my partner, the river being narrow. I replied that we did not know how to swim, but that they could safely come to us. They agreed to do so, and sent a man of some intellect, master of a boat, who carefully related to me how they had left their Fort with four galleons and eight small vessels, that each carried twenty-four oars with four hundred picked soldiers and two hundred marines and John Ribault as General and Monsieur Le Grange, who was General of the Infantry, and other good captains, soldiers, and gentlemen, with the intention of finding me on the sea, and if I attempted to land, to land their people on the small boats and capture me . . . [t] hat they were overtaken by a hurricane and tempest and were wrecked about twenty or twentyfive leagues from here. . . . [H]e asked for himself and companions safe passage to their Fort, since they were not at war with the Spaniards. I then told him how we had taken their Fort and hanged all those we found in it, because they had built it without Your Majesty's permission and because they were scattering the odious

Lutheran doctrine in these Provinces, and that I had [to make] war [with] fire and blood, as Governor and Captain-General of these Provinces, against all those who came to sow this hateful doctrine; representing to him that I came by order of Your Majesty to place the Gospel in these parts and to enlighten the natives in all that the Holy Church of Rome says and does so as to save their souls. That I would not give them passage; rather would I follow them by sea and land until I had taken their lives. He begged to be allowed to go with this embassy and that he would return at night swimming, if I would grant him his life. I did to show him that I was in earnest and because he would enlighten me on many subjects. Immediately after his return to his companions there came a gentleman, a Monsieur Laudonnier, a man well versed and cunning to tempt me. After much talk he offered to give up their arms if I would grant their lives. I told him he could surrender the arms and give themselves up to my mercy, that I might do with them that which our Lord ordered. More than this he could not get from me, and that God did not expect more of me. Thus he returned and they came to deliver up their arms. I had their hands tied behind them and had them stabbed to death, leaving only sixteen, twelve being great big men, mariners whom they had stolen, the other four master carpenters and caulkers—people for whom we have much need, and it seemed to me to punish them in this manner would be serving God, our Lord, and Your Majesty. Hereafter they will leave us free to plant the Gospel, enlighten the natives, and bring them to obedience and submission to Your Majesty. The lands being extensive, it will be well to make them work fifty years—besides, a good beginning makes a good end, so I have hopes in our Lord that in all He will grant me prosperity and success, so that I and my descendants may give to Your Majesty those Kingdoms full and return the people Christians. My particular interest as I have written Your Majesty is this: We are gaining great favor with the Indians and will be feared by them, although we make them many gifts.

7. The Thirty-Nine Articles of Religion, 1571

Introduction

For centuries in Western Europe, Christianity and Roman Catholicism had been one and the same, but in 1517 Martin Luther brought about the Protestant Reformation. In 1534, England's King Henry VIII embraced Protestantism and formed the Church of England, declaring himself its head. In 1554, Queen Mary restored Catholicism as the official religion of England. Five years later, Queen Elizabeth I restored the Church of England. Under her rule, and that of the next two kings, Catholicism was outlawed, and those who continued to practice it faced arrest. The Anglican archbishops, bishops, and clergy drafted the Thirty-Nine Articles of Religion

in 1563. The articles set forth the basic beliefs and doctrines of the Church of England. Parliament ordered the Anglican Church to adopt them in 1571. Several of the articles were specifically directed against the beliefs and practices of Roman Catholics and various Christian minorities. For example: article 12 mocks "Romish" doctrine as "invented"; other articles reject conducting worship in Latin and call for marriage to be permitted among the clergy. Articles promoting baptism and the swearing of oaths are directed against the beliefs of Anabaptists and Quakers. Strife among Anglicans, Roman Catholics, and Protestant minorities such as Quakers played a part in the wars of Europe and colonial America.

Primary Source

Articles of Religion

(Spelling and punctuation are conformed to modern usage.)

I. Of Faith in the Holy Trinity.

There is but one living and true God, everlasting, without body, parts, or passions; of infinite power, wisdom, and goodness; the Maker, and Preserver of all things both visible and invisible. And in unity of this Godhead there be three persons, of one substance, power, and eternity, the Father, the Son, and the Holy Ghost.

II. Of the Word or Son of God which was made very Man.

The Son, which is the Word of the Father, begotten from everlasting of the Father, the very and eternal God, of one substance with the Father, took Man's nature in the womb of the blessed Virgin, of her substance: so that two whole and perfect Natures, that is to say the Godhead and Manhood, were joined together in one Person, never to be divided, whereof is one Christ, very God and very man, who truly suffered, was crucified, dead, and buried, to reconcile his father to us, and to be a sacrifice, not only for original guilt, but also for all actual sins of men.

III. Of the going down of Christ into Hell.

As Christ died for us, and was buried: so also it is to be believed that he went down into hell.

IV. Of the Resurrection of Christ.

Christ did truly rise again from death, and took again his body, with flesh, bones, and all things appertaining to the perfection of Man's nature, wherewith he ascended into Heaven, and there sitteth, until he return to judge all Men at the last day.

V. Of the Holy Ghost.

The Holy Ghost, proceeding from the Father and the Son, is of one substance, majesty, and glory, with the Father and the Son, very and eternal God.

VI. Of the Sufficiency of the Holy Scriptures for Salvation.

Holy Scripture containeth all things necessary to salvation: so that whatsoever is not read therein, nor may be proved thereby, is not

to be required of any man, that it should be believed as an article of the faith, or be thought requisite as necessary to salvation. In the name of Holy Scripture, we do understand those canonical Books of the Old and New Testament, of whose authority was never any doubt in the Church.

Of the names and number of the Canonical Books.

Genesis.

Exodus.

Leviticus.

Numbers.

Deuteronomy.

Joshua.

Judges.

Ruth.

The 1. Book of Samuel.

The 2. Book of Samuel.

The 1. Book of Kings.

The 2. Book of Kings.

The 1. Book of Chronicles.

The 2. Book of Chronicles.

The 1. Book of Esdras.

The 2. Book of Esdras.

The Book of Esther.

The Book of Job.

The Psalms.

The Proverbs.

Ecclesiastes or Preacher.

Cantica, or Songs of Solomon

Four Prophets the greater.

Twelve Prophetes the less.

And the other Books (as Hierome saith) the Church doth read for example of life and instruction of manners; but yet doth it not apply them to establish any doctrine; such as are these following:

The third Book of Esdras, The fourth Book of Esdras, The Book of Tobias, The Book of Judith, The rest of the Book of Esther, The Book of Wisdom, Jesus the Son of Sirach, Baruch, the Prophet, The Song of the three Children, The Story of Susanna, Of Bel and the Dragon, The Prayer of Manasses. The 1. Book of Maccabees, The 2. Book of Maccabees.

All the Books of the New Testament, as they are commonly received, we do receive and account them for Canonical.

VII. Of the Old Testament.

The Old Testament is not contrary to the New: for both in the Old and New Testament everlasting life is offered to mankind by Christ, who is the only Mediator between God and Man, being both God and Man. Wherefore they are not to be heard, which feign that the old Fathers did look only for transitory promises. Although the Law

904 7. The Thirty-Nine Articles of Religion

given from God by Moses, as touching Ceremonies and Rites, do not bind Christian men, nor the Civil precepts thereof, ought of necessity to be received in any common wealth; yet notwithstanding, no Christian man whatsoever, is free from the obedience of the Commandments, which are called moral.

VIII. Of the Creeds.

The Three Creeds, Nicene Creed, Athanasius's Creed, and that which is commonly called the Apostles Creed, ought thoroughly to be received and believed: for they may be proved by most certain warrants of Holy Scripture.

IX. Of Original or Birth Sin.

Original Sin standeth not in the following of Adam (as the Pelagians do vainly talk;) but it is the fault and corruption of the Nature of every man, that naturally is ingendered of the offspring of Adam, whereby man is very far gone from original Righteousness, and is of his own nature inclined to evil, so that the flesh lusteth always contrary to the spirit, and therefore in every person born into this world, it deserveth God's wrath and damnation. And this infection of nature doth remain, yea in them that are regenerated, whereby the lust of the flesh, called in Greek phronema sarkos (which some do expound, the wisdom, some sensuality, some the desire of the flesh) is not subject to the Law of God. And although there is no condemnation for them that believe and are baptized; yet the Apostle doth confess that concupiscence and lust hath of itself the nature of sin.

X. Of Free Will.

The condition of man after the fall of Adam is such, that he can not turn and prepare himself, by his own natural strength and good works, to faith and calling upon God: Wherefore we have no power to do good works pleasant and acceptable to God, without the grace of God by Christ preventing us, that we may have a good will, and working with us, when we have that good will.

XI. Of the Justification of Man.

We are accounted righteous before God, only for the merit of our Lord and Saviour Jesus Christ, by faith, and not for our own works or deservings. Wherefore, that we are justified by faith only, is a most wholesome doctrine, and very full of comfort, as more largely is expressed in the Homily of Justification.

XII. Of Good Works.

Albeit that good works, which are the fruits of faith, and follow after Justification, can not put away our sins, and endure the severity of God's judgement: yet are they pleasing and acceptable to God in Christ, and do spring out necessarily of a true and lively Faith, in so much that by them, a lively Faith may be as evidently known, as a tree discerned by the fruit.

XIII. Of Works before Justification.

Works done before the grace of Christ, and the Inspiration of his spirit, are not pleasant to God, forasmuch as they spring not of faith in Jesus Christ; neither do they make men meet to receive grace, or (as the School authors say) deserve grace of congruity: yea, rather for that they are not done as God hath willed and commanded them to be done, we doubt not but they have the nature of sin.

XIV. Of Works of Supererogation.

Voluntary Works besides, over and above Gods Commandments, which they call Works of Supererogation, cannot be taught without arrogancy and impiety: for by them men do declare, that they do not only render unto God as much as they are bound to do, but that they do more for his sake then of bounden duty is required: whereas Christ saith plainly, When ye have done al that are commanded to you, say, We be unprofitable servants.

XV. Of Christ alone without Sin.

Christ in the truth of our nature, was made like unto us in al things, sin only except, from which he was clearly void, both in his flesh, and in his spirit. He came to be the Lamb without spot, who by the sacrifice of himself once made, should take away the sins of the world: and sin, (as Saint John saith) was not in him. But all we the rest, although baptized, and born again in Christ, yet offend in many things, and if we say we have no sin, we deceive ourselves, and the truth is not in us.

XVI. Of Sin after Baptism.

Not every deadly sin willingly committed after Baptism, is sin against the Holy Ghost, and unpardonable. Wherefore, the grant of repentance is not to be denied to such as fall into sin after Baptism. After we have received the Holy Ghost, we may depart from grace given, and fall into sin, and by the grace of God (we may) arise again and amend our lives. And therefore, they are to be condemned, which say they can no more sin as long as they live here, or deny the place of forgiveness to such as truly repent.

XVII. Of Predestination and Election.

Predestination to Life, is the everlasting purpose of God, whereby before the foundations of the world were laid, he hath constantly decreed by his counsel secret to us, to deliver from curse and damnation, those whom he hath chosen in Christ out of mankind, and to bring them by Christ to everlasting salvation, as vessels made to honour. Wherefore they which be endued with so excellent a benefit of God, be called according to God's purpose by his spirit working in due season: they through Grace obey the calling: they be justified freely: they be made sons of God by adoption: they be made like the image of his only begotten son Jesus Christ: they walk religiously in good works, and at length by gods mercy, they attain to everlasting felicity.

As the godly consideration of Predestination, and our Election in Christ, is full of sweet, pleasant, and unspeakable comfort to godly persons, and such as feel in themselves the working of the Spirit of Christ, mortifying the Works of the flesh, and their earthly members, and drawing up their mind to high and heavenly things, as well because it

doth greatly establish and confirm their faith of eternal salvation to be enjoyed through Christ, as because it doth fervently kindle their love towards God: So, for curious and carnal persons, lacking the Spirit of Christ, to have continually before their eyes the sentence of Gods Predestination, is a most dangerous downfall, whereby the devil doth thrust them either into desperation, or into wretchlessness of most unclean living, no less perilous then desperation.

Furthermore, we must receive God's promises in such wise, as they be generally set forth to us in Holy Scripture: and in our doings, that Will of God is to be followed, which we have expressly declared unto us in the Word of God.

XVIII. Of obtaining eternal Salvation, only by the Name of Christ. They also are to be had accursed, that presume to say, that every man shall be saved by the law or sect which he professeth, so that he be diligent to frame his life according to that law, and the light of nature. For Holy Scripture doth set out unto us only the name of Jesus Christ, whereby men must be saved.

XIX. Of the Church.

The visible Church of Christ, is a congregation of faithful men, in the which the pure word of God is preached, and the Sacraments be duly ministered, according to Christ's ordinance in all those things that of necessity are requisite to the same.

As the Church of Jerusalem, Alexandria, and Antioch, have erred: so also the Church of Rome hath erred, not only in their living and manner of Ceremonies, but also in matters of Faith

XX. Of the Authority of the Church.

The Church hath power to decree Rites or Ceremonies, and authority in Controversies of Faith: And yet it is not lawful for the Church to ordain anything that is contrary to God's Word written, neither may it so expound one place of scripture, that it be repugnant to another. Wherefore, although the Church be a witness and a keeper of holy Writ, yet, as it ought not to decree any thing against the same, so besides the same, ought it not to enforce any thing to be believed for necessity of Salvation.

XXI. Of the Authority of General Councils.

General Counsels may not be gathered together without the commandment and will of princes. And when they be gathered together (forasmuch as they be an Assembly of Men, whereof all be not governed with the spirit and word of God) they may err, and sometime have erred, even in things pertaining unto God. Wherefore, things ordained by them as necessary to salvation, have neither strength nor authority, unless it may be declared that they be taken out of Holy Scripture.

XXII. Of Purgatory.

The Romish Doctrine concerning Purgatory, Pardons, Worshipping and Adoration as well of Images, as of Reliques, and also invocation

of Saints, is a fond thing, vainly invented, and grounded upon no warranty of Scripture, but rather repugnant to the Word of God.

XXIII. Of Ministering in the Congregation.

It is not lawful for any man to take upon him the office of publick preaching, or ministering the Sacraments in the congregation, before he be lawfully called and sent to execute the same. And those we ought to judge lawfully called and sent, which be chosen and called to this work by men who have publick authority given unto them in the congregation, to call and send ministers into the Lord's vineyard.

XXIV. Of Speaking in the Congregation, in such a Tongue as the people understandeth.

It is a thing plainly repugnant to the word of God, and the custom of the Primitive Church, to have publick prayer in the Church, or to minister the Sacraments in a tongue not understanded of the people.

XXV. Of the Sacraments.

Sacraments ordained of Christ, be not only badges or tokens of Christian men's profession: but rather they be certain sure witnesses and effectual signs of grace and Gods good will towards us, by the which he doth work invisibly in us, and doth not only quicken, but also strengthen and confirm our Faith in him.

There are two Sacraments ordained of Christ our Lord in the Gospel, that is to say, Baptism, and the Supper of the Lord.

Those five, commonly called Sacraments, that is to say, Confirmation, Penance, Orders, Matrimony, and Extreme Unction, are not to be counted for Sacraments of the Gospel, being such as have grown partly of the corrupt following of the Apostles, partly are states of life allowed in the Scriptures: but yet have not like nature of Sacraments with Baptism and the Lord's Supper, for that they have not any visible sign or ceremony ordained of God.

The Sacraments were not ordained of Christ to be gazed upon, or to be carried about: but that we should duly use them. And in such only, as worthily receive the same, they have a wholesome effect or operation: But they that receive them unworthily, purchase to themselves damnation, as Saint Paul saith.

XXVI. Of the Unworthiness of the Ministers, which hinders not the effect of the Sacraments.

Although in the visible Church the evil be ever mingled with the good, and sometime the evil have chief authority in the Ministration of the Word and Sacraments: yet forasmuch as they do not the same in their own name but in Christ's, and do minister by his commission and authority, we may use their Ministry, both in hearing the word of God, and in the receiving of the Sacraments. Neither is the effect of Christ's ordinance taken away by their wickedness, nor the grace of Gods gifts diminished from such as by faith and rightly do receive the Sacraments ministered unto them, which be effec-

906 7. The Thirty-Nine Articles of Religion

tual, because of Christ's institution and promise, although they be ministered by evil men.

Nevertheless, it appertaineth to the discipline of the Church, that enquiry be made of evil ministers, and that they be accused by those that have knowledge of their offences: and finally being found guilty by just judgement, be deposed.

XXVII. Of Baptism.

Baptism is not only a sign of profession, and mark of difference, whereby Christian men are discerned from other that be not christened: but is also a sign of regeneration or New Birth, whereby as by an instrument, they that receive baptism rightly, are grafted into the Church: the promises of the forgiveness of sin, and of our adoption to be the sons of God, by the Holy Ghost, are visibly signed and sealed: faith is confirmed: and grace increased by virtue of prayer unto God. The Baptism of young Children, is in any wise to be retained in the Church, as most agreeable with the institution of Christ.

XXVIII. Of the Lord's Supper.

The Supper of the Lord, is not only a sign of the love that Christians ought to have among themselves one to another: but rather it is a Sacrament of our redemption by Christ's death: insomuch that to such as rightly, worthily, and with faith receive the same the bread which we break is a partaking of the body of Christ, and likewise the cup of blessing, is a partaking of the blood of Christ.

Transubstantiation (or the change of the substance of bread and wine) in the Supper of the Lord, cannot be proved by holy Writ, but is repugnant to the plain word of scripture, overthroweth the nature of a Sacrament, and hath given occasion to many superstitions.

The Body of Christ is given, taken, and eaten in the Supper only after an heavenly and spiritual manner: And the mean whereby the body of Christ is received and eaten in the Supper, is Faith.

The Sacrament of the Lord's Supper was not by Christ's ordinance reserved, carried about, lifted up, or worshipped.

XXIX. Of the wicked which eat not the Body of Christ in the use of the Lord's Supper.

The wicked, and such as be void of a lively faith, although they do carnally and visibly press with their teeth (as Saint Augustine saith) the Sacrament of the Body and Blood of Christ: yet in no wise are the partakers of Christ, but rather to their condemnation do eat and drink the sign or Sacrament of so great a thing.

XXX. Of both kinds.

The cup of the Lord is not to be denied to the lay people. For both the parte of the Lord's Sacrament, by Christ's ordinance and commandment, ought to be ministered to all Christian men alike. XXXI. Of the one Oblation of Christ finished upon the Crosse.

The offering of Christ once made, is the perfect redemption, propitiation, satisfaction for sin, but that alone. Wherefore the sacrifices of Masses, in which it was commonly said that the Priests did offer Christ for the quick and the dead; to have remission of pain or guilt, were blasphemous fables, and dangerous deceits.

XXXII. Of the Marriage of Priests.

Bishops, Priests, and Deacons, are not commanded by God's Law either to vow the estate of single life, or to abstain from marriage. Therefore it is lawful also for them, as for all other Christian men, to marry at their own discretion, as they shall judge the same to serve better to godliness.

XXXIII. Of Excommunicate Persons, how they are to be avoided. That person which by open denunciation of the Church, is rightly cut of from the unity of the Church, and excommunicated, ought to be taken of the whole multitude of the faithful as an Heathen and Publican, until he be openly reconciled by penance, and received into the Church by a judge that hath authority thereto.

XXXIV. Of the Traditions of the Church.

It is not necessary that traditions and ceremonies be in all places one, or utterly alike, for at all times they have been diverse, and may be changed according to the diversity of countries, times, and men's manners, so that nothing be ordained against God's Word. Whosoever through his private judgement, willingly and purposely doth openly break the Traditions and Ceremonies of the Church, which be not repugnant to the word of God, and be ordained and approved by common authority, ought to be rebuked openly, (that others may fear to do the like) as he that offendeth against the Common order of the Church, and hurteth the authority of the Magistrate, and woundeth the consciences of the weak brethren.

Every particular or national Church, hath authority to ordain, change, and abolish ceremonies or rites of the Church ordained only by mans authority, so that all things be done to edifying.

XXXV. Of Homilies.

The second Book of Homilies, the several titles whereof we have joined under this article, doth contain a godly and wholesome Doctrine, and necessary for these times, as doth the former Book of Homilies, which were set forth in the time of Edward the Sixth; and therefore we judge them to be read in Churches by the Ministers diligently, and distinctly, that they may be understanded by the people.

Of the names of the Homilies.

- 1 Of the right use of the Church.
- 2 Against peril of Idolatry.
- 3 Of repairing and keeping clean of Churches.
- 4 Of good works, first of Fasting.
- 5 Against gluttony and drunkenness.

- 6 Against excess of Apparel.
- 7 Of Prayer.
- 8 Of the place and time of Prayer.
- 9 That Common Prayers and Sacraments ought to be ministered in a known Tongue.
- 10 Of the reverend estimation of Gods Word.
- 11 Of Alms doing.
- 12 Of the Nativity of Christ.
- 13 Of the Passion of Christ.
- 14 Of the Resurrection of Christ.
- 15 Of the worthy receiving of the Sacrament of the Body and Blood of Christ.
- 16 Of the Gifts of the Holy Ghost.
- 17 For the Rogation days.
- 18 Of the state of Matrimony.
- 19 Of Repentance.
- 20 Against Idleness.
- 21 Against Rebellion.

XXXVI. Of Consecration of Bishops and Ministers.

The Book of Consecration of Archbishops, and Bishops, and ordering of Priests and Deacons, lately set forth in the time of Edward the Sixth, and confirmed at the same time by authority of Parliament, doth contain all things necessary to such consecration and ordering: neither hath it any thing, that of it self is superstitious or ungodly. And therefore, whosoever are consecrate or ordered according to the rites of that Book, since the second year of the aforenamed King Edward, unto this time, or hereafter shall be consecrated or ordered according to the same rites, we decree all such to be rightly, orderly, and lawfully consecrated and ordered.

XXXVII. Of the Civil Magistrates.

The King's (or Queen's) Majesty hath the chief power in this Realm of England, and other her dominions, unto whom the chief government of all estates of this Realm, whether they be Ecclesiastical or Civil, in all causes doth appertain, and is not, nor ought to be subject to any foreign jurisdiction.

Where we attribute to the King's Majesty the chief government, by which titles we understand the minds of some slanderous folks to be offended: we give not to our princes the ministering either of God's word, or of Sacraments, the which thing the Injunctions also lately set forth by Elizabeth our Queen, doth most plainly testify: But that only prerogative which we see to have been given always to all godly Princes in holy Scriptures by God himself, that is, that they should rule all estates and degrees committed to their charge by God, whether they be Ecclesiastical or Temporal, and restrain with the civil sword the stubborn and evildoers.

The Bishop of Rome hath no jurisdiction in this Realm of England. The laws of the Realm may punish Christian men with death, for heinous and grievous offences.

It is lawful for Christian men, at the commandment of the Magistrate, to wear weapons, and serve in the wars.

XXXVIII. Of Christian Men's Goods, which are not common.

The Richs and Goods of Christians are not common, as touching the right, title, and possession of the same, as certain Anabaptists do falsely boast. Notwithstanding every man ought of such things as he possesseth, liberally to give alms to the poor, according to his ability.

XXXIX. Of a Christian Man's Oath.

As we confess that vain and rash swearing is forbidden Christian men by our lord Jesus Christ, and James his Apostle: So we judge that Christian religion doth not prohibit, but that a man may swear when the Magistrate requireth, in a cause of faith and charity, so it be done according to the prophets teaching, in justice, judgement, and truth.

8. Juan Rogel, Account of the Massacre of Spanish Jesuits in Chesapeake Bay, August 28, 1572

Introduction

Like the other European powers, Spain hoped to find a seagoing passage to Asia. The Chesapeake Bay (called Bahia de Santa Maria by the Spanish) appeared a promising direction in which to search. The Spanish explorer Juan Menéndez Marques promoted the establishment of a Jesuit mission on the bay. On his visit, Menéndez exchanged a Spanish youth for an Indian one. In 1570, eight Jesuits from Florida, accompanied by the Indian youth, built a mission on the York River. The Indian youth returned to his people and reportedly turned against the Spanish. The Jesuits expected the Powhatan Indians to give them food, which was in short supply. Instead, the Spanish demand led the Indians to attack and kill them in 1571. The Indians also attacked a Spanish supply ship that arrived after the massacre. Yet another Spanish expedition attacked the Powhatans and rescued the Spanish youth. A Jesuit who accompanied the rescue expedition wrote this letter to his superior. He describes the recovery of the Spanish youth, Alonso, and relates Alonso's account of how the Jesuits died. He also suggests that a well-armed Spanish settlement would keep a new mission safe. However, Spain made no further attempts to settle the Chesapeake Bay.

Primary Source

Our Most Reverend Father in Christ,

At the end of last June, I wrote to Your Paternity from Havana, telling how, under an order of holy obedience, I made ready to make this journey in search of Ours who had come to these parts. Although I

had written from there that at the end of the trip I had to go to the Isles of Azores, because the Governor Pedro Menendez was obliged to take the ship, in which I had come here, for the trip to Spain; nevertheless, when he reached San Agustin, he changed his plans. He decided to make this trip in person at the head of his fleet, and on completing the trip, to give me a ship in which I might go back to the island of Cuba. Thus, on July 30, we left San Agustin for this purpose, and after staying at Santa Elena for five days, we arrived at the Bay of the Mother of God. With me are Brother Juan de la Carrera and Francisco de Villareal and the small store of supplies we had on Santa Elena. After this we will all go to Havana to await the order of Father Provincial since Father Sedeño would order me to do that.

Reaching this bay, the Governor immediately ordered us to search for Alonso, the boy who came with Father Baptista. He had not died, according to what we heard from one of the Indians of this region, who was captured by the pilot on his second trip. This Indian has been brought along in chains. Anchoring the fleet in a port of this bay, the Governor sent an armed *fragatilla* with 30 soldiers to a fresh-water stream where Ours disembarked when they came here. This place is 20 leagues from this port. It seemed best to me to take the bound native in company to be our spokesman. The order of the Governor was to take the uncle of Don Luis, a principal chief of that region, as well as some leading Indians. On taking them, we were to ask them to give us the boy and we would let them go. Everything happened in excellent fashion, for within an hour after our arrival, he took the chief with five of this leaders and eight other Indians.

This was the method capture. After we had anchored in the middle of the narrow stream, Indians soon appeared on the bank and some entered the boat. To these the Spaniards gave gift and made some exchanges. When they left, the boat very contentedly, others arrived. With a third group came the chief and his leaders; one of them wore as a decoration or trinket a silver paten that Ours had brought. At once the Spaniards seized them and forced them down into the boat, and dressing the ship, passed to the mouth of the stream 3 leagues away by oar. On the way, the soldiers killed some Indians who were trying to shoot arrows at us and had wounded a soldier.

At the mouth of the river, which was very wide, we anchored again an arquebus shot away from the shore. Canoes of Indians came in peace, and they said that the boy was in the hands of a leading chief who lived two days journey from there, near this port. They asked that we give them time to send for him and bring him. This we did, and we gave them trinkets to give the chief who held the boy and we stayed there waiting for him. It seems that as soon as the chief learned of the capture of the others and about the fleet and the imminent death of the Indians, he sought to curry favor with the Governor. For he did not want to let the boy be brought to our ship, but he sent him to this port with two Indians. It is a marvelous thing in how short a time the Governor learned what was happening there from the mouth of the boy.

When the Indians did not bring the boy, we fought off an ambush of many canoes loaded with archers ready to attack the vessel. First, there came two large canoes filled with Indians who were so concealed that no one was seen except the two who steered and they pretended they brought us oysters. Before they got aboard the watchman discovered them. We made ready and the others retreated. At my request, the steersmen were not fired upon, for we were still not certain whether it was an ambush or whether they came in peace. When the time was up and the boy did not come we waited for a night and further into midday and finally we set sail with our captives. By way of farewell, the pilot steered the ship towards land with the excuse that he wanted to speak to them, and then he ordered a blast from the arquebuses into the group of Indians who were standing crowded together on the shore. I believe many of them were killed and this was done without any knowledge of mine until it happened. Then we returned to this port.

Now I will relate to Your Paternity how Ours who were here suffered death, as this boy tells it. After they arrived there, Don Luis abandoned them, since he did not sleep in their hut more than two night nor stay in the village where the Fathers made their settlement for more than five days. Finally he was living with his brothers a journey of a day and a half away. Father Master Baptista sent a message by a novice Brother on two occasions to the renegade. Don Luis would never come, and Ours stayed therein a great distress, for they had no one by whom they could make themselves understood to the Indians. They were without means of support, and no one could buy grain from them. They got along as best they could, going to other villages to barter maize with copper and tin, until the beginning of February. The boy says that each day Father Baptista caused prayers to be said for Don Luis, saying that the devil held him in great deception. As he had twice sent for him and he had not come, he decided to send Father Quirós and Brother Gabriel de Solis and Brother Juan Baptista to the village of the chief near where Don Luis was staying. Thus they could take Don Luis along with them and barter for maize on the way back. On the Sunday after the feast of the Purification, Don Luis came to the three Jesuits who were returning with other Indians. He sent an arrow through the heart of Father Quirós and then murdered the rest who had come to speak with him. Immediately Don Luis went on to the village where the Fathers were, and with great quiet and dissimulation, at the head of a large group of Indians, he killed the five who waited there. Don Luis himself was the first to draw blood with one of those hatchets which were brought along for trading with the Indians; then he finished the killing of Father Master Baptista with his axe, and his companions finished off the others. This boy says that when he saw them killing the Fathers and Brothers, he sought to go among the Indians as they inflicted the wounds so that they might kill him too. For it seemed better to him to die with Christians than live alone with Indians. A brother of Don Luis took him by the arm and did not let him go. This happened five or six days after the death of the others. This boy then told Don Luis to bury them since he had killed them, and at least in their burial, he was kind to them.

The boy stayed in the same hut for 15 days. Because of the famine in the land, Don Luis told him that they should go and seek grain. Alonso came in this way with him to the chief where he remained. The chief told the boy to stay and he would treat him well and hold him as a son. This he did. Finally Don Luis distributed the clothes of the Fathers among himself and his two brothers who shared in the murders. The boy took nothing but the relics and beads of Father Baptista which he kept till now and handed over to us. After this Don Luis went away very anxious to get hold of the boy to kill him, so that there would be no one to give details of what happened to Ours, but because of this fear of the chief with whom the boy was staying, he gave up the idea.

When he had learned the truth, the Governor acted in this fashion. He told the captured chief that he must bring in Don Luis and his two brothers for punishment, and if he did not do this, the Governor would punish all those captured. Since three had been killed in that chief's lands, he could not escape blame for the murders. The chief promised that he would bring them within five days. We are waiting for this time to elapse, and I am not sure whether the Governor will send us on our trip to the island of Cuba before the time is up. He will report to Spain, God willing, whatever action he will have taken. The country remains very frightened from the chastisement the Governor inflicted, for previously they were free to kill any Spaniard who made no resistance. After seeing the opposite of what the Fathers were, they tremble. This chastisement has become famous throughout the land, and if this further one is done, it will be all the more famous.

I have noticed something about this region. There are more people here than in any of the other lands I have seen so far along the coast explored. It seemed to me that the natives are more settled than in other regions I have been and I am confident that should Spaniards settle here, provided they would frighten the natives that threaten harm, we could preach the Holy Gospel more easily than elsewhere. We are keeping this boy with us. He is very fluent in the language and had almost forgotten his Spanish. After he was freed from his captivity, we asked him if he wished to be with us, or go with his father who is also here. He said that he wanted to be with us only. In order to make sure that he retains the language and does not forget it, I am debating whether to bring along with me an Indian boy, who has come along with Alonso, leaving his parent and home to be with him. Thus he might train in the language, unless, meanwhile, Your Paternity or Father Provincial order otherwise.

For my part, I can say to Your Paternity that if it is judged in Our Lord that this enterprise ought to be begun, and if you desire that the task should fall to me, I would consider myself most fortunate. I fear that there will be the same difficulty among these people in making conversions, as has been found in the places where we have been. If there is to be some fruit here, it will have to be by wearing them away like water on a rock. I believe there are fewer inconven-

iences and difficulties than in regions where I have already stayed. First, because the country is so cold, there will be no reason for long absences away from their huts in winter. Also it appears to me that there are more tribes and more natives in this region than in others where I have dwelt.

When this boy was with Don Luis, following the death of the others, Don Luis left the vestments and books and everything else locked up in chests. On returning, they took up their share of spoils. He said that a brother of Don Luis is going around clothed in the Mass vestment and altar cloths. The captured chief told me that Don Luis gave the silver chalice to an important chief in the interior. The paten was given to one of those Indians we captured, while the other images were thrown away. Among other things there was a large crucifix in a chest; some Indians told this boy that they do not dare approach that chest since three Indians who wanted to see what was in it, fell down dead on the spot. So they keep it closed and protected. About the books, Alonso said that after pulling off the clasps, the Indians tore them all up and threw them away.

If I should learn any other details, whether those sent out by the Governor bring in Don Luis and his companions, I will write them from Havana to Your Paternity, when, in Our Lord's pleasure, we arrive there.

As I can not think of anything else to write, I close. I commend myself to the holy sacrifices and prayers of Your Paternity and of the Fathers and Brothers of the Company. God Our Lord Grant Your Paternity His Holy Spirit for all success in fulfilling His Divine Will.

From the Bay of the Mother of God in Florida, August 28, 1572.

Your Paternity's unworthy son and servant in Our Lord, [signed:] Juan Rogel.

9. Pedro Menéndez de Avilés, Letters to the King of Spain regarding the Indians of Florida, 1572 and 1573

Introduction

Between 1492 and the first Spanish landfall in the present-day United States, Spain had established a presence in the Caribbean and brutally conquered the Aztecs in Mexico. Spanish contact with native peoples invariably resulted in decimation of the natives by violence and disease. The Spaniards turned northward to explore for precious metals. Pánfilo de Narváez landed his expedition on Tampa Bay, Florida, in 1528. The Apalachee Indians defeated the

Spanish and forced them to flee to the coast. In 1539, Hernando de Soto landed an expedition in Florida and cut a swath of pillage and destruction through the Southeast. In 1565, the king of Spain sent an expedition, commanded by Pedro Menéndez de Avilés, to establish a base at St. Augustine. After wiping out the French, Menéndez turned his attention to the Indians, many of whom remained intractably hostile to the Spanish. In his letter of 1572 addressed to his king, he recommends that the hostile natives be exterminated or captured and sold into slavery. Philip II apparently did not grant the desired permission, so Menéndez presented his arguments more strongly in 1573. However, Philip ordered that the Spanish focus on converting Native Americans to Christianity rather than conquering them.

Primary Source

1572

The Adelantado, Pedro Menendez, says that it is seven years since he went upon the conquest and settlement of Florida from these parts, and he has tried and is trying his utmost that the Indians may be taught and very well treated, and no trouble or vexatins be caused them, in order that they may listen to the religious, and render obedience to your Majesty, with the more love and willingness; but all the Indians, from the river of Mosquitos, at the beginning of the Bahama Channel, as far as Los Martires, and returning up to the bay of Tocobaga (although great gifts and demonstrations of friendship have been made them, and many were brought to Havana and taken back to their lands, and gave allegiance to your Majesty)—have broken the peace many times, slaying many Christians, and they have been forgiven. And yet withal this is of no use, nor has it been, for they have been accustomed since the Indies have been discovered to kill all the people from the ships which are, the most of them, lost in this district; and although concerning this I have told the caciques of that land they should not do it, and that if they slew them I would make war upon them, killing them and making slaves of those I captured alive—and they promised me not to do it—they do not keep their word, nor have they wished to comply. I have made peace with them three times, and three times they have broken it, and when they saw they could kill Christians safely, they did it, as it happened after this in Tocobaga, when they treacherously slew twenty soldiers. At Los Martires, about twenty months ago, they killed eight Spaniards from a boat which was going from Florida to Havana; and in Giga, which is in that same Bahama Channel, when an English corsair had seized a vessel wherein came thirty persons, and they, under a deceptive peace were preparing the boat so that it would have more available space, that they might go therein to Havana, the Indians killed them all, except one woman with two little girls, and one little boy, and one man whom they left for dead, and he lived, for afterward I had him removed and taken to Havana. Two other ships, which were going from New Spain to Santo Domingo to take on sugar and hides, were lost by reason of a storm off Cape Canaveral, at the end of the Bahama Channel; and

as the crews were journeying to the fort of San Agustin, thirty leagues thence, the Indians slew most of them, when they had gone half the distance, and they kept others alive to use as slaves, whom I afterward ransomed; others took refuge at the fort of San Agustin. About thirteen months ago, when I sailed from Florida with two frigates to go to Havana, and thence in search of corsairs, I was wrecked at Cape Canaveral because of a storm which came upon me, and the other boat was lost fifteen leagues farther on in the Bahama Channel, in a river they call Ays, because the cacique is so called. Seeing the opportunity, he killed nineteen persons who were on board the frigate, without leaving one, and I, by miracle, reached the fort of San Agustin with seventeen persons I was taking. Three times the Indians gave the order to attack me, and the way I escaped from them was by ingenuity and arousing fear in them, telling them that behind me many Spaniards were coming who would slay them if they found them; that they should seek safety in the forest. The first year I set out on the conquest, I ransomed from among the Indians thirty-two persons, men and women, who had been slaves of the caciques and Indians for fifteen, eighteen and twenty years. There were some who had been numbered among two hundred and thirty Spaniards, men and women together, from wrecked ships, and each year the Indians sacrificed seventeen or eighteen in the feasts they hold, and they used the heads in their balls and ceremonies. They are so blood thirsty in this because they consider it a great glory and victory for them and that the other caciques of the interior may hold a high opinion of them and they may triumph, saying that they live on the seashore and are the masters of the Christians and hold them as slaves. They follow this custom because they consider it the pious and natural order of things, without observing amity, or hope that later on they may observe it in the service of God Our Lord and of your Majesty. It is needful that this should be remedied by permitting that war be made upon them with all rigor, a war of fire and blood, and that those taken alive shall be sold as slaves, removing them from the country and taking them to the neighboring islands, Cuba, Santo Domingo, Puerto Rico. So that in this manner, besides the service rendered to God Our Lord and to your Majesty, this district where war must be made on such people, because it is the most full of danger and where many ships are lost coming from the Indies to these kingdoms, will remain clear and unobstructed. It is very poor land, subject to inundation, and the Indians cannot sustain themselves except on roots and shellfish. And if this be done, no Indian will be living therein, and if any vessel shall be wrecked, the people can easily go in safety to the fort of San Agustin and take refuge there; and this will arouse fear, and be a great example among the friendly Indians, so that they may observe and fulfil the amity they establish; wherefore, etc.

1573

The Adelantado, Pero Menedez, says that through the reports he has presented, it will be found that God Our Lord and your Majesty will be well served in giving up as slaves the Indians of the Cabeca de los

Martires and the Bahama Channel, from Ays to Tocobaga, which is in the provinces of Florida; for all of them, since the Indies were discovered, have killed many Christians, under the pledge of peace and friendship they made to the captains-general who have gone there by order of your Majesty. And although, since he has gone about pacifying them, he has exerted his utmost ability with them, fearing God and your Majesty, trying to do all the good he could among them to preserve the friendship they established with him after having rendered obedience to your Majesty, and to pass over without coming to an open breach, many cases of Christians slain by them; and giving them to understand that he did this because he loved them and that if he wished to harm them he could safely do so, whereby they might be killed and made captive; and they knew this to be truth, without their being able to help it—it was not enough. On the contrary, they have continued in their evil ways, killing Christians under the peace pledge, exulting in victory over the inland caciques, their enemies; telling them that the Spaniard are their slaves, and that for this reason the inland caciques must obey them; these caciques of the coast being infamous people, Sodomites, sacrificers to the devil of many souls, in their ancient ceremonies; wherefore it would greatly serve God Our Lord and your Majesty if these same were dead, or given as slaves. Being informed of all this by the aforesaid reports, your majesty replies to the last petition presented concerning this matter, on the seventeenth of this month, that at present there is no occasion for giving up the Indians as slaves; and because the injury from delay may be irreparable, and Our Lord and your Majesty may be very ill-served thereby:

He beseeches your Majesty to be pleased to command that all the reports which he has given on this be examined, and that if expedient, what he has petitioned be decreed; for he knows that Our Lord will be well served thereby. It may appear that he will be better served if such Indians of that said district are not allowed to be sold or given as slaves, excepting the islands of Hispaniola, San Juan and Cuba for a period of twelve years, the buyers of them obligating themselves to teach them, and endeavor that they become Christians and be saved; and that before they land they shall be declared before the royal officials of your Majesty's Exchequer, in order that there may be no trickery so that, instead of the Indians of Florida, they might want to make slaves of others who are not from there; and if your Majesty should decree neither the one nor the other, he fears that the Indies of Florida will be depopulated of the Spaniards who are settled there. Because they are the key to all the Indies, as the treasure that comes therefrom must pass through that Bahama Channel; and because even though your Majesty may spend much from your Royal Exchequer, you will not be able to bring them to the point where they now are; besides the risk there is of Lutherans settling there, on account of the many Indian friends they have in those provinces—he entreats your Majesty to order that it all be examined, and, if there be reason, that what he has begged for be decreed; and if not, this is the last he asks, since thereby God Our

Lord and your Majesty and the profit of your Royal Exchequer will be so greatly served; and it is for the general good of all the Indies and those who navigate therein. And since he is occupied in your Majesty's service in these parts and the states of Flanders, let it not at any time be held to be his fault and charge if the settlers should depart from that land, because of the notable injuries they receive from the said Indians.

10. Ordinances for the Discovery, the Population and the Pacification of the Indies, July 13, 1573 [Excerpt]

Introduction

Beginning in 1492, Spain established a presence in the Caribbean, brutally conquered the Aztecs in Mexico, and turned their attention to exploiting North America. By 1536, Spanish explorers had heard rumors of fabulous cities of gold in the interior of the continent. Spanish ventures in the New World, though licensed by the king, were privately financed and expected to make a profit. Thus, conquistadors were primarily seeking their personal fortunes and would stop at nothing to find riches. Typical of these was Hernando de Soto, who in 1539 landed an expedition in Florida and cut a swath of pillage and destruction through the Southeast. Some of the men accompanying these expeditions of conquest began to express misgivings about their treatment of the native peoples. They were, however, in the minority. As late as 1573, for example, Pedro Menéndez de Avilés, governor of Florida, was recommending to King Philip II that the natives be exterminated or captured and sold into slavery. In 1573, however, Philip II issued a set of ordinances from which talk of conquest was absent. Instead, he emphasized "pacification" and conversion of the natives to Christianity, expressed concern for their welfare, and gave explicit instructions for earning their friendship and cooperation.

Primary Source

Don Felipe, by the Grace of God, King of Castilla . . . let it be known: That in order that the discoveries and new settlements and pacification of the land and provinces that are to be discovered, settled, and pacified in the Indies be done with greater facility and in accordance with the service to God Our Lord, and for the welfare of the natives, among other things, we have prepared the following ordinances:

1. No person, regardless of state or condition, should, on his own authority make a new discovery by sea or land, or enter a new settlement or hamlet in areas already discovered. If he were found

without our license and approval or by those who had our power to give it, he would face a death penalty and loss of all his possessions to our coffers. And, we order to all our viceroys, audiencias, and governors and other justices of the Indies, that they give no license to make new discoveries without previous consultation with us and only after having obtained our permission; but we do consent that in areas already discovered, they can give license to build towns as necessary, adhering to the order that in so doing they must keep to the laws of February regarding settlements in discovered lands, then they should send us a description.

- 2. Those who are in charge of governing the Indies, whether spiritually or temporally, should inform themselves diligently whether within their districts, including lands and provinces bordering them, there is something to be discovered and pacified, of the wealth and quality, of the peoples and nations who inhabit there; but do this without sending to them war personnel nor persons who can cause scandal. They [the governors] should inform themselves by the best means available; and likewise, they should obtain information on the persons who are best suited to carry out discoveries—and with those who are best fit for this purpose, they [the governors] should confer and make arrangements, offering them the honors and advantages that justly, without injury to the natives, can be given them—and—before carrying out what has been arranged or has been learned, give narratives to the viceroy and the audiencias and also send them to the Council, which, after looking at the case, will issue a license to proceed with the discovery, which should be carried out in the following order:
- 3. Having made, within the confines of the province, a discovery by land, pacified it, subjected it to our obedience, find an appropriate site to be settled by Spaniards—and if not [arrange] for the vassal Indians so they be secure.
- 4. If the boundaries of the settlement are populated, utilising commerce and ransom, go with vassal Indians and interpreters to discover those lands, and with churchmen and Spaniards, carrying offerings and ransoms and peace, try to learn about the place, the contents and quality of the land, the nation(s) to which the people there belong, who governs them, and carefully take note of all you can learn and understand, and always send these narratives to the Governor so that they reach the Council [Consejo de Indias].
- 5. Look carefully at the places and ports where it might be possible to build Spanish settlements without damage to the Indian population.

 $[\ldots]$

41. Do not select sites for towns in maritime locations because of the danger that exists of pirates and because they are not very healthy, and because in these [locations] there are less people able to work and cultivate the land, nor is it possible to instill in them these habits. Unless the site is in an area where there are good and principal harbors, among these, select for settlement only those that are necessary for the entry of commerce and for the defense of the land.

[…]

136. If the natives should resolve to take a defensive position toward the [new] settlement, they should be made aware of how we intend to settle, not to do damage to them nor take away their lands, but instead to gain their friendship and teach them how to live civilly, and also to teach them to know our God so they learn His law through which they will be saved. This will be done by religious, clerics, and other persons designated for this purpose by the governor and through good interpreters, taking care by the best means available that the town settlement is carried out peacefully and with their consent, but if they [the natives] still do not want to concur after having been summoned repeatedly by various means, the settlers should build their own town without taking what belongs to the Indians and without doing them more harm that it were necessary for the protection of the town in order that the settlers are not disturbed.

137. While the town is being completed, the settlers should try, inasmuch as this is possible, to avoid communication and traffic with the Indians, or going to their towns, or amusing themselves or spilling themselves on the ground [sensual pleasures?]; nor allow the Indians to enter within the confines of the town until it is built and its defenses ready and houses built so that when the Indians see them they will be struck with admiration and will understand that the Spaniards are there to settle permanently and not temporarily. They [the Spaniards] should be so feared that they [the Indians] will not dare offend them, but they will respect them and desire their friendship. At the beginning of the building of a town, the governor shall name one person who will occupy himself with the sowing and cultivation of the land, planting wheat and vegetables so that the settlers can be assisted in their maintenance. The cattle that they brought shall be put out to pasture in a safe area where they will not damage cultivated land nor Indian property, and so that the aforesaid cattle and its offspring may be of service, help, and sustenance to the town.

138. Having completed the erection of the town and the buildings within it, and not before this is done, the governor and settlers, with great care and holy zeal, should try to bring peace into the fraternity of the Holy Church and bring on to our obedience all the natives of the province and its counties, by the best means they know or can understand, and in the following manner:

139. Obtain information of the diversity of nations, languages, sects, and prejudices of the natives within the province, and about the lords they may pledge allegiance to, and by means of commerce and exchange, [the Spaniards] should try to establish friendship with them [the Indians], showing great love and caressing them and also

giving them things in barter that will attract their interest, and not showing greediness for their things. [The Spaniards] should establish friendship and alliances with the principal lords and other influential persons who would be most useful in the pacification of the land.

140. Having made peace and alliance with [the Indian lords] and with their republics, make careful efforts so that they get together, and then [our] preachers, with utmost solemnity, should communicate and begin to persuade them that they should desire to understand matters pertaining to the holy Catholic faith. Then shall begin our teaching [efforts]—with great providence and discretion, and in the order stipulated in the first book of the holy Catholic faith—utilizing the mildest approach so as to entice the Indians to want to learn about it. Thus you will not start by reprimanding their vices or their idolatry, nor taking away their women nor their idols, because they should not be scandalized or develop an enmity against the Christian doctrine. Instead, they should be taught first, and after they have been instructed, they should be persuaded that on their own will they should abandon all that runs contrary to our holy Catholic faith and evangelical doctrine.

 $[\ldots]$

148. The Spaniards to whom the Indians are entrusted [encomendados], should seek with great care that these Indians be settled into towns, and that, within these, churches be built so that the Indians can be instructed into Christian doctrine and live in good order. Because we order you see to it that these Ordinances, as presented above, be incorporated, complied with, and executed, and that you make what in them is contained be complied with and executed, and never take action or move against them, nor consent that others take action or move against either their content or form, under penalty of our Lord.

Dated in the Woods of Segovia, the thirteenth of July, in the year fifteen hundred and seventy-three, I the King; the Licendiado Otalaza; the Licendiado Diego Gasca de Alazar; the Licenciado Gamboa, the Doctor Gomez de Santillán.

11. Francis Fletcher, Account of Francis Drake on the California Coast, 1579 [Excerpt]

Introduction

The renowned English seaman Francis Drake was born in poverty and went to sea as a boy. He conceived an enduring hatred for Spain when he and his shipmates were attacked off the coast of Mexico in

1567. Thereafter he took every opportunity to raid Spanish ships and outposts. In command of a five-vessel fleet, Drake set sail from England in 1577. After crossing the Atlantic Ocean and passing through the Straits of Magellan to the Pacific, he raided up the western coast of South America. In June 1579, Drake's expedition landed on the California coast and laid claim to the country. The narrator—Francis Fletcher, a minister on the expedition—argues that the Spanish had never visited that coast. Drake then crossed the Pacific and rounded the Horn of Africa, returning home in September 1580. Having circumnavigated the globe, Drake was knighted by Queen Elizabeth I. He later raided Spanish settlements in the West Indies, destroyed St. Augustine on the Florida coast in 1586, and on his way back to England rescued the English garrison left on Roanoke Island. He served as a vice admiral at the defeat of the Spanish Armada in 1588. Drake died of fever in 1596 while on yet another expedition against Spanish outposts in the West Indies.

Primary Source

 $[\ldots]$

They are a people of a tractable, free, and loving nature, without guile or treachery; their bowes and arrows (their only weapons, and almost all their wealth) they use very skillfully, but yet not to do any great harme with them, being by reason of their weaknesse more fit for children then for men, sending the arrows neither farre off nor with any great force: and yet are the men commonly so strong of body, that that which 2 or 3 of our men could hardly beare, one of them could take upon his backe, and without grudging carrie it easily away, up hill and downe hill and English mile together: they are also exceeding swift in running, and of long continuance, the use whereof is so familiar with them, that they seldome goe, but for the most part runne. One thing we observed in them with admiration, that if at any time they chanced to see a fish so neere the shoare that they might reach the place without swimming, they would never, or very seldome, misse to take it.

After that our necessary businesses were well dispatched, our Generall, with his gentlemen and many of his company, made a journey up into the land, to see the manner of their dwelling, and to be the better acquainted with the nature and commodities of the country. There houses were all such as we have formerly described, and being many of them in one place, make severall villages here and there. The inland we found to be farre different from the shoare, a goodlly country, and fruitfull soyle, stored with many blessings fit for the use of a man: infinite was the company of very large and fat Deere which there we sawe by thousands, as we supposed, in a heard: besides a multitude of a strange kinde of Conies, by farre exceeding them in number: their heads and bodies, in which they resemble other Conies, are but small; his tayle, like the tayle of a Rat, exceeding long; and his feet like the pawes of a Want or moale; under his chinne, on either side, he hath a bagge, into which he gathereth his meate, when

he hath filled his belly abroade, that he may with it, either feed his young, or feed himselfe when he lists not to travaile from his burrough; the people eate their bodies, and make great account of their skinnes, for their kings holidaies coate was made of them.

This country our Generall name *Albion*, and that for two causes; the one in respect of the white bancks and cliffs, which lie toward the sea; the other, that it might have some affinity, even in name also, with our own country, which was sometimes so called.

Before we went from thence, our Generall caused to be set up a monument of our being there, as also of her majesties and successors right and title to that kingdome; namely, a plate of brasse, fast nailed to a great and firme poste; whereon in engraven her graces name, and the day and yeare of our arrival there, and of the free giving up of the province and kingdome, both by the king and people, into her majesties hands: together with her highnesse picture and armes, in a piece of sixpence currant English monie shewing itselfe by a hoe made of purpose thorough the plate; underneath was likewise engraven the name of our Generall, etc.

The Spaniards never had any dealing, or so much as set a foote in this country, the utmost of their discoveries reaching onely to many degrees Southward of this place.

And now, as the time of our departure was perceived by them to draw nigh, so did the sorrowes and miseries of this people seeme to themselves to increase upon them, and the more certiane they were of our going away, the more doubtful they shewed themselves what they might doe; so that we might easily judge that the joy (being exceeding great) wherewith they received us at our first arrival, was cleane drowned in their excessive sorrow of our departing. For they did not onely loose on a sudden all mirth, joy, glad countenance, pleasant, speeches, agility of body, familiar rejoicing one with another, and all pleasure what ever flesh and blood might bee delighted in, but with sighes and sorrowings, with heavy hearts and grieved minds, they powred out wofull complaints and moanes, with bitter teares and wringing of their hands, tormenting themselves. And as men refusing all comfort, they onely accounted themselves as cast-awayes, and those whom the gods were about to forsake: so that nothing we could say or do, was able to ease them of their so heavy a burthen, or to deliver them from so desperate a straite, as our leaving of them did seeme to them that it would cast them into.

Howbeit, seeing they could not still enjoy our presence, the (supposing us to be gods indeed) thought it their duties to intreate us that, being absent, we would yet be mindfull of them, and making signes of their desires that in time to come wee would see them againe, they stole upon us a sacrifice, and set it on fire erre we were aware, burning therein a chaine and a bund of feathers. We laboured by all meanes possible to withhold or withdraw them, but could not prevaile, till at last we fell to prayers and singing of Psalmes, whereby they were allured immediately to forget their

folly, and leave their sacrifice unconsumed, suffering the fire to go out; and imitating us in all our actions, they fell a lifting of their eyes and hands to heaven, as they saw us do.

The 23 of July the tooke a sorrowfull farewell of us, but being loath to leave us, they presently ranne to the top of the hils to keepe us in their sight as long as they could, making fires before and behind, and on each side of them, burning therein (as is to be supposed) sacrifices at our departure.

12. Edward Haies, Report of the Voyage of Humphrey Gilbert to Newfoundland, 1583

Introduction

Sir Humphrey Gilbert was a soldier, member of Parliament, and a favorite of Queen Elizabeth I. After his repeated requests, the queen finally granted him a patent to colonize new lands across the Atlantic. With his half brother Walter Raleigh, Gilbert outfitted seven ships and set sail in 1578, but the expedition fell apart due to poor leadership. Gilbert again set sail with five vessels in June 1583. He arrived at St. John's, Newfoundland, in August. Since the early 1500s, fishermen from England, France, Spain, and Portugal had been sailing each spring to the Grand Banks in the North Atlantic to fish for cod. The fishermen treated Newfoundland's coast as neutral ground for common use. They set up stations onshore to process the catch and worked out a system for allocating space. An informal government exercised what authority existed. A so-called fishing admiral—the commander of the first fishing vessel to arrive each spring—administered justice during the fishing season. When Gilbert's expedition arrived, Gilbert read his patent to the assembled fishermen and claimed the land for England. Edward Haies, captain of one of Gilbert's ships, describes their arrival and the ceremony. Gilbert's ship went down in a storm on the return voyage. France and England eventually established year-round colonies on the Newfoundland coast, but the small population of colonists struggled through the long winters.

Primary Source

Thus after we had met with the Swallow, we held on our course Southward, until we came against the harbor called S. John, about 5 leagues from the former Cape of S. Francis: where before the entrance into the harbor, we found also the Frigate or Squirrill lying at anker. Whom the English marchants (that were and alwais be Admirals by turnes interchangeably over the fleetes of fishermen within the same harbor) would not permit to enter into the harbor. Glad of so happy meeting both of Swallow and Frigate in one day (being Saturday the 3. of August) we made readie our fights, and pre-

pared to enter the harbor, any resistance to the contrarie notwith-standing, there being within of all nations, to the number of 36 sailes. But first the Generall dispatched a boat to give them knowledge of his comming for no ill intent, having Commission from her Majestie for his voyage he had in hand. And immediately we followed with a slacke gale, and in the very entrance (which is but narrow, not above 2 buts length) the Admirall fell upon a rocke on the larboord side by great oversight, in that the weather was faire, the rocke much above water fast by the shore, where neither went any sea gate. But we found such readinesse in the English Marchants to helpe us in that danger, that without delay there were brought a number of boats, which towed off the ship, and cleared her of danger.

Having taken place convenient in the road, we let fall ankers, the Captaines and masters repairing aboord our Admirall: whither also came immediately the Masters and owners of the fishing fleete of Englishmen, to understand the Generals intent and cause of our arrivall there. They were all satisfied when the general had shewed his commission, and purpose to take possession of those lands to the behalfe of the crowne of England, and the advancement of Christian religion in those Paganish regions, requiring but their lawfull ayde for repayring of his fleete, and supply of some necessaries, so farre as might conveniently be afforded him, both out of that and other harbors adjoining. In lieu whereof, he made offer to gratifie them, with any favour and priviledge, which upon their better advise they should demand, the like being not to be obteyned hereafter for greater price. So craving expedition of his demand, minding to proceede further South without long detention in those parts, he dismissed them, after promise given of their best indevour to satisfie speedily his so reasonable request. The marchants with their Masters departed, they caused forthwith to be discharged all the great Ordinance of their fleete in token of our welcome.

It was further determined that every ship of our fleete should deliver unto the marchants and Masters of that harbour a note of all their wants: which done, the ships as well English as strangers, were taxed at an easie rate to make supply. And besides, Commissioners were appointed, part of our owne companie and part of theirs, to go into other harbours adjoyning (for our English marchants command all there) to leavie our provision: whereunto the Portugals (above other nations) did most willingly and liberally contribute. Insomuch as we were presented (above our allowance) with wines, marmalades, most fine ruske or bisket, sweet oyles and sundry delicacies. Also we wanted not of fresh salmons, trouts, lobsters and other fresh fish brought daily unto us. Moreover as the maner is in their fishing, every weeke to choose their Admirall a new, or rather they succeede in orderly course, and have weekely their Admirals feast solemnized: even so the General, Captaines and masters of our fleete were continually invited and feasted. To grow short, in our abundance at home, the intertainment had bene delightfull, but after our wants and tedious passage through the Ocean, it seemed more acceptable and of greater contentation, by how much the same was unexpected in that desolate corner of the world: where at other times of the yeare, wilde beasts and birds have only the fruition of all those countries, which now seemed a place very populous and much frequented.

The next morning being Sunday and the 4 of August, the Generall and his company were brought on land by English marchants, who shewed unto us their accustomed walks unto a place they call the Garden. But nothing appeared more then Nature it selfe without art: who confusedly hath brought foorth roses abundantly, wilde, but odoriferous, and to sense very comfortable. Also the like plenty of raspis berries, which doe grow in every place.

Munday following, the Generall had his tent set up, who being accompanied with his own followers, summoned the marchants and masters, both English and strangers to be present at his taking possession of those Countries. Before whom openly was read and interpreted unto the strangers his Commission: by virtue whereof he tooke possession in the same harbour of S. John, and 200 leagues every way, invested the Queenes Majestie with the title and dignitie thereof, had delivered unto him (after the custome of England) a rod and a turffe of the same soile, entering possession also for him his heires and assignes for ever: And signified unto al men, that from that time forward, they should take the same land as a territorie appertaining to the Queene of England, and himselfe authorized under her Majestie to possesse and enjoy it, And to ordaine lawes for the government thereof, agreeable (so neere as conveniently might be) unto the lawes of England: under which all people coming thither hereafter, either to inhabite, or by way of traffique, should be subjected and governed. And especially at the same time for a beginning, he proposed and delivered three lawes to be in force immediately. That is to say: the first for Religion, which in publique exercise should be according to the Church of England. The 2. for maintenance of her Majesties right and possession of those territories, against which if any thing were attempted prejudiciall the partie or parties offending should be adjudged and executed as in case of high treason, according to the lawes of England. The 3. if any person should utter words sounding to the dishonour of her Majestie, he should loose his eares, and have his ship and goods confiscate.

These contents published, obedience was promised by generall voyce and consent of the multitude aswell of Englishmen as strangers, praying for continuance of this possession and government begun. After this, the assembly was dismissed. And afterward were erected not farre from that place the Armes of England ingraven in lead, and infixed upon a pillar of wood. Yet further and actually to establish this possession taken in the right of her Majestie, and to the behoofe of Sir Humfrey Gilbert knight, his heires and assignes for ever: the Generall granted in fee farme divers parcels of land lying by the water side, booth in this harbor of S. John, and elsewhere, which was to the owners a great commoditie, being thereby assured (by their proper inheritance) of grounds convenient to dresse and to drie their fish, whereof many times before they did faile, being prevented by them that came first into the harbor. For which grounds they did

covenant to pay a certaine rent and service unto sir Humfrey Gilbert, his heires or assignes for ever, and yeerely to maintaine possession of the same, by themselves or their assignes.

Now remained only to take in provision granted, according as every shippe was taxed, which did fish upon the coast adjoining. In the meane while, the Generall appointed men unto their charge: some to repaire and trim the ships, others to attend in gathering together our supply and provisions: others to search the commodities and singularities of the countrey, to be found by sea or land, and to make relation unto the Generall what eyther themselves could knowe by their owne travaile and experience, or by good intelligence of English men or strangers, who had longest frequented the same coast. Also some observed the elevation of the pole, and drewe plats of they countrey exactly graded. And by that I could gather by each mans severall relation, I have drawen a briefe description of the Newfoundland, with the commodities by sea or lande already made, and such also as are in possibilitie and great likelihood to be made: Neverthelesse the Cardes and plats that were drawing, with the due gradation of the harbors, bayes, and capes, did perish with the Admirall: wherefore in the description following, I must omit the particulars of such things.

13. Charter to Sir Walter Raleigh,1584 [Excerpt]

Introduction

After his half-brother, Sir Humphrey Gilbert, perished at sea, Walter Raleigh received a royal charter to colonize North America. Like she had granted to Gilbert, Queen Elizabeth I gave Raleigh permission to explore, settle, own, and govern any lands not already controlled or occupied by Christians. The charter applied only to whatever land Raleigh could succeed in colonizing before six years had passed. Raleigh never set foot on North American soil, but he sponsored numerous expeditions—in 1584, 1585, 1586, 1587, 1588, and 1590. The first expedition was a success: Captains Arthur Barlowe and Philip Amadas explored an area of the North Carolina coast and returned to England with two natives they had befriended. The land was named Virginia, after the virgin queen, and Raleigh received a knighthood. The second expedition set up a garrison on Roanoke Island, which the men abandoned after making enemies of the natives. The 1587 expedition founded what came to be known as the "Lost Colony," after 117 men, women, and children disappeared without a trace. Of the two latter expeditions, only the 1590 voyage reached Roanoke Island, finding the colony a deserted ruin. After the queen's death, King James I imprisoned Raleigh for treason in 1603 and had him executed in 1618.

Knowe yee that of our especial grace, certaine science, and meere motion, we have given and graunted, and by these presents for us, our heires and successors, we give and graunt to our trustie and welbeloved servant Walter Ralegh, Esquire, and to his heires assignes for ever, free libertie and licence from time to time, and at all times for ever hereafter, to discover, search, finde out, and view such remote, heathen and barbarous lands, countries, and territories, not actually possessed of any Christian Prince, nor inhabited by Christian People, as to him, his heires and assignes, and to every or any of them shall seems good, and the same to have, holde, occupie and enjoy to him, his heires and assignes for ever, with all prerogatives, commodities, jurisdictions, royalties, privileges, franchises, and preheminences, thereto or thereabouts both by sea and land, whatsoever we by out letters patents may graunt, and as we or any of our noble progenitors have heretofore graunted to any person or persons, bodies politique or corporate: and the said Walter Ralegh, his heires and assignes, and all such as from time to time, by licence of us, our heires and successors, shall goes or travaile thither to inhabite or remaine, there to build and fortifie, at the discretion of the said Walter Ralegh his heires and assignes, the statutes or acte of Parliament made against fugitives, or against such as shall depart, remaine or continue out of our Realme of England without Licence, or any other statue, acte, lawe, or any ordinance whatsoever to the contrary in anywise notwithstanding.

And we do likewise by these presents, of our especial grace, mere motion, and certain knowledge, for us, our heires and successors, give and graunt full authoritie, libertie and power to the said *Walter* Ralegh, his heires and assignes, and every of them, that he and they, and every or any of them, shall and may at all and every time, and times hereafter, have, take, and leade in the saide voyage, and travaile thitherward, or to inhabit there with him, or them, and every or any of them, such and so many of our subjects as shall willingly accompanie him or them, and every or any of them to whom also we doe by these presents, give full libertie and authority in that behalfe, and also to have, take, an employ, and use sufficient shipping and furniture for the Transportations and Navigations in that behalfe, so that none of the same persons or any of them, be such as hereafter shall be restrained by us, our heires, or successors.

And further that the said *Walter Ralegh*, his heires and assignes, and every of them, shall have holde, occupie, and enjoye to him, his heires and assignes, and every of them for ever, all the soile of all such lands, territories, and Countreis, so to bee discovered and possessed as aforesaide, and of all such Cities, castles, townes, villages, and places in the same, with the right, royalties, franchises, and jurisdictions, as well marine as other within the saide landes, or countries, or the seas thereunto adioyning, to be had, or used, with full power to dispose thereof, and of every part in fee-simple or otherwise, according to the order of the lawes of England, as neere as the same conveniently may bee, at his, and their will and pleasure, to any persons then being, or that shall

remaine within the allegiance of us, our heires, and successors: reserving always to us our heires, and successors, for all services, duties, and demaundes, the fift part of all the oare of golde and silver, that from time to time, and at all times after such discoveries, subduing and possessing, shalbe there gotten and obtained: All which landes, Countreis, and territories, shall for ever be holden of the said *Walter Ralegh*, his heires, or assignes, of us, our heirs and successors, by homage, and by the said payment of the said fift part, reserved onely for all services.

 $[\ldots]$

And for as much as upon the finding our, discovering, or inhabiting of such remote lands, countries, and territories as aforesaid, it shal be necessary for the safetie of al men, that shal adventure them selves in this journies or voyages to determine to live together in Christian peace, and civil quietness each with other, whereby every one may with more pleasure and profit enioy that whereunto they shall attaine with great paine and peril, we for us, our heires and successors, are likewise pleased and contented, and by these presents do give and graunt to the said Walter Ralegh, his heires and assignes for ever, that hee and they, and every or any of them shall and may from time to time for ever hereafter, within the said mentioned remote landes and Countreis in the way by the seas thither, and from thence, have full and mere power and authhoritie to correct, punish, pardon, governe, and rule by their and every or any of their good discretions and policies, as well in causes capital, or criminall, as civil, both marine and other, all such our subjects as shall from time to time adventure themselves in the said journies or voyages, or that shall at any time hereafter inhabite any such landes, countries, or territories as aforesaide, or shall abide within 200, leagues of any of the side place or places, where the saide Walter Ralegh, his heires or assignes inhabite within 6. yeeres next ensuing the date hereof, according to such statues, lawes and ordinances, as shall bee by him the saide Walter Ralegh his heires and assignes, and every or any of them devised, or established, for the better government of the said people as aforesaid. So always as the said statutes, lawes, and ordinances may be as neere as conveniently may, agreeable to the forme of the lases, statues, government, or pollicie of England, and also so as they be not against the true Christian faith, now professed in the Church of England, nor in any wise to withdrawe any of the subjects or people of those landes or places from the allegiance of us, our heires and successours, as their immediate Soveraigne under God.

 $[\ldots]$

Provided always, and our will and pleasure is, and wee do hereby declare to all Christian kings, princes and states, that if the saide *Walter Ralegh*, his heires or assignes, or any of them, or any other by their licence or appointment, shall at any time or times hereafter, robbe or spoile by sea or by lande, or do any acte of unjust or unlawful hostilitie, to any of the subjects, of us, our heires or successors, or to any of the subjects of any kings, princes, rulers, governors, or

estates, being then in perfect league and amitie with us, our heires and successors, and that upon such injury, or upon iust complaint of any such prince, ruler, governoir, or estate, or their subjects, wee, our heires and successours, shall make open proclamation within any the portes of our Realme of England, that the saide Walter Ralegh, his heires and assignes, and adherents, or any to whome these our letters patents may extende, shall within the termes to be limited, by such proclamation, make full restitution, and satisfaction of all such injuries done, so as both we and the said princes, or other so complayning, may holde us and themselves fully contented, And that if the saide Walter Ralegh, his heires and assignes, shall not make or cause to be made satisfaction accordingly, within such time so to be limited, that then it shall be lawfull to us our heires and successors, to put the saide Walter Ralegh, his heires and assignes and adherents, and all the inhabitants of the said places to be discovered (as is aforesaide) or any of them out of our allegiance and protection, and that from and after such time of putting out of protection the said Walter Ralegh, his heires, assignes and adherents, and others so to be put out, and the said places within their habitation, possession and rule, shal be out of our allegiance and protection, and free for all princes and others, to pursue with hostilitie, as being not our subjects, norby us any way to the auounced, maintained or defended, nor to be holden as any of ours, nor to our protection or dominion, or allegiance any way belonging, for that expresse mention of the cleer yeerely value of the certaintie of the premises, or any part thereof, or of any other gift, or grant by us, or any our progenitors, or predecessors to the said Walter Ralegh, before this time made in these present be not expressed, or any other grant, ordinance, provision, proclamation, or restraint tot the contrary thereof, before this time given, ordained, or provided; or any other thing, cause, or matter whatsoever, in any wise notwithstanding. In witness whereof, we have caused these our letters to be made patents. Witnesse our selves, at Westminster, the 25. day of march, in the sixe and twentieth yeere of our Raigne.

14. Richard Hakluyt, *Discourseon Western Planting*, 1584 [Excerpt]

Introduction

Richard Hakluyt the Younger—a well-educated and influential man—served as secretary for England's ambassador to France, but he had a covert mission as well. Several Englishmen interested in exploring and colonizing North America asked Hakluyt to gather whatever information he could find about the unknown continent from French, Spanish, and Portuguese sources. He returned to England to report his findings in July 1584. The first Walter Raleigh—sponsored expedition to North America, led by Captains

Arthur Barlowe and Philip Amadas, returned in September 1584, bringing with it two natives and glowing reports of the North Carolina coast. England's would-be colonizers of North America believed that in order to succeed, they must engage the queen's interest and support. Hakluyt prepared a long secret report urging England to establish "plantations" on the continent in the west—thus the reference to "western planting." The 21-point introduction appears here. Hakluyt's official position gave him valuable international information that permitted him to persuade his readers that England must preempt other European powers in North America. His arguments in favor of colonization touch on the potential military, religious, social, and economic benefits. Hakluyt also published accounts of the early English expeditions to North America.

Primary Source

- That this westerne discoverie will be greately for thinlargemente of the gospell of Christe, whereunto the princes of the refourmed relligion are chefely bounde, amongst whome her Majestie ys principall.
- 2. That all other Englishe trades are growen beggerly or daungerous, especially in all the Kinge of Spayne his domynions, where our men are dryven to flinge their bibles and prayer bookes into the sea, and to forsweare and renounce their relligion and conscience and consequently theyr obedience to her Majestie.
- That his westerne voyadge will yelde unto us all the commodities of Europe, Affrica, and Asia, as farr as wee were wonte to travell, and supply the wantes of all our decayed trades.
- 4. That this enterprise will be for the manifolde imploymente of nombers of idle men, and for bredinge of many sufficient, and for utteraunce of the greate quantitie of the commodities of our realme.
- 5. That this voyadge will be a great bridle to the Indies of the Kinge of Spaine and a meane that wee may arreste at our pleasure for the space of tenne weekes or three monethes every yere, one or twoo hundred saile of his subjectes shippes at the fysshinge in Newfounde lande.
- 6. That the mischefe that the Indian threasure wroughte in time of Charles the late Emperor, father to the Spanishe kinge, is to be had in consideration of the Queens moste excellent Majestie, leaste the contynual commynge of the like threasure from thence to his sonne, worke the unrecoverable annoye of this realme, whereof already wee have had very dangerous experience.
- What speciall meanes may bringe Kinge Phillippe from his highe throne, and make him equall to the princes his neighbours, wherewithal is shewed his weakenes in the West Indies.
- 8. That the lymites of the Kinge of Spaines domynions in the West Indies be nothinge so large as ys generally ymagined and surmised, neither those partes which be holdeth be of

- any such forces as ys falsly geven oute by the popishe clergye and others his fautors, to terrifie the princes of the relligion and to abuse and blynde them.
- The names of the riche townes lienge alonge the sea coaste on the northe side from the equinoctical of the mayne lande of America under the kinge of Spayne.
- 10. A brefe declaration of the chefe ilandes in the bay of Mexico beinge under the Kinge of Spaine, with their havens and fortes, and what commodities they yelde.
- 11. That the Spaniardes have executed most outragious and more then Turkishe cruelties in all the West Indies, whereby they are everywhere there become moste odious unto them, whoe woulde joyne with us or any other moste willingly to shake of their moste intolerable yoke, and have begonne to doe it already in dyvers places where they were lordes heretofore.
- 12. That the passage in this voyadge is easie and shorte, that it cutteth not nere the trade of any other mightie princes, nor nere their contries, that it is to be perfourmed at all tymes of the yere, and nedeth but one kinde of winde, that Ireland beinge full of goodd havens on the southe and west sides, it the nerest parte of Europe to yt, which by this trade shall be in more securitie, and the sooner drawen to more civilitie.
- 13. That hereby the revenewes and customes of her Majestie, bothe outwardes and inwardes, shall mightily be inlarged by the toll, excises, and other dueties, which withoute oppression may be raised.
- 14. That this action will be greately for thincrease, maynetey-naunce and safetie of our navye, and especially of greate shippinge, which is the strengthe of our realme, and for the supportation of all those occupations that depende upon the same.
- 15. That spedie plantinge in divers fitt places is moste necessarie upon these luckye westerne discoveries, for feare of the daunger of being prevented by other nations which have the like intentions, with the order thereof, and other reasons therewithall alleaged.
- 16. Meanes to kepe this enterprise from overthrowe, and the enterprisers from shame and dishonour.
- 17. That by these colonies the Northwest Passage to Cathaia and China may easely quickly and perfectly be searched oute, aswell by river and overlande as by sea, for proofe whereof here are quoted and alleaged divers rare testymonies oute of three volumes of voyadges gathered by Ramusius and other grave authors.
- 18. That the Queene of Englands title to all the West Indies, or at the leaste to as moche as is from Florida to the circle articke, is more lawfull and righte then the Spaniardes, or any other Christian Princes.
- 19. An aunswer to the Bull of the Donation of all the West Indies graunted to the Kinges of Spaine by Pope Alexander the VIth who was himself a Spaniardes borne.

- 20. A brefe collection of certaine reasons to induce her Majestie and the state to take in hande the westerne voyadge and the plantinge there.
- 21 A note of some thinges to be prepared for the voyadge, which is sett downe rather to drawe the takers of the voyadge in hande to the presente consideration then for any other reason, for that divers thinges require preparation longe before the voyadge, withoute which the voyadge is maymed.

15. Captain Arthur Barlowe's Narrative of the First Voyage to the Coasts of America, 1584 [Excerpt]

Introduction

After his half-brother, Sir Humphrey Gilbert, perished at sea, Walter Raleigh received from Queen Elizabeth I a royal charter to explore and colonize North America. The charter applied only to whatever land Raleigh could succeed in colonizing before six years had passed. Raleigh never visited North America, but he sponsored numerous expeditions—in 1584, 1585, 1586, 1587, 1588, and 1590. The first expedition was a success: Captains Arthur Barlowe and Philip Amadas returned to England in September 1584 and gave a glowing report of the North Carolina coast, a land of plenty with a temperate climate, inhabited by welcoming natives. The returning ships also carried two Indian men named Manteo and Wanchese, whom the English treated like celebrities. The land was named Virginia, in honor of the virgin queen. The second expedition set up a garrison on Roanoke Island, which the men abandoned after making enemies of the natives. The 1587 expedition founded what came to be known as the "Lost Colony," after 117 men, women, and children disappeared without a trace. Of the two latter expeditions, only the 1590 voyage reached Roanoke Island, finding the colony a deserted ruin.

 $[\ldots]$

This Island had many goodly woodes full of Deere, Conies, Hares, and Fowle, even in the middest of Summer in incredible abundance. The woodes are not such as you finde in Bohemia, Moscovia, or Hercynia, barren and fruitles, but the highest and reddest Cedars of the world, farre bettering the Ceders of the Açores, of the Indies, or Lybanus, Pynes, Cypres, Sassaphras, the Lentisk, or the tree that beareth the Masticke, the tree that beareth the rine of blacke Sinamon, of which Master Winter brought from the streights of Magellan, and many other of excellent smell and qualitie. We remained by the side of this Island two whole dayes before we saw any people

of the Countrey: the third day we espied one small boate rowing towardes us having in it three persons: this boat came to the Island side, foure harquebuz-shot from our shippes, and there two of the people remaining, the third came along the shoreside towards us, and wee being then all within boord, he walked up and downe upon the point of the land next unto us: then the Master and the Pilot of the Admirall, Simon Ferdinando, and the Captaine Philip Amadas, my selfe, and others rowed to the land, whose comming this fellow attended, never making any shewe of feare or doubt. And after he had spoken of many things not understood by us, we brought him with his owne good liking, aboord the ships, and gave him a shirt, a hat and some other things, and made him taste of our wine, and our meat, which he liked very wel: and after having viewed both barks, he departed, and went to his owne boat again. . . .

The next day there came unto us divers boates, and in one of them the Kings brother, accompanied with fortie or fiftie men, very handsome and goodly people, and in their behaviour as mannerly and civill as any of Europe. His name was Granganimeo, and the king is called Wingina, the countrey Wingandacoa and now by her Majestie Virginia. . . .

[…]

The Kings brother had great liking of our armour, a sword, and divers other things which we had: and offered to lay a great box of pearl in gage for them: but we refused it for this time, because we would not make them knowe, that we esteemed thereof, untill we had understoode in what places of the countrey the pearle grew: which now your Worshippe doeth very well understand.

He was very just of his promise: for many times we delivered him merchandize upon his word, but ever he came within the day and performed his promise. He sent us every day a brase or two of fat Bucks, Conies, Hares, Fish the best of the world. He sent us divers kindes of fruits, Melons, Walnuts, Cucumbers, Gourdes, Pease, and divers rootes, and fruites very excellent good, and of their Countrey corne, which is very white, faire and well tasted, and groweth three times in five moneths: in May they sow, in July they reape, in June they sow, in August they reape: in July they sow, in September they reape: onely they cast the corne into the ground, breaking a little of the soft turfe with a wodden mattock, or pickeaxe: our selves prooved the soile, and put some of our Pease in the ground, and in tenne dayes they were of fourteene ynches high: they have also Beanes very faire of divers colours and wonderfull plentie: some growing naturally, and some in their gardens, and so have they wheat and oates.

The soile is the most plentifull, sweete, fruitfull and wholsome of all the worlde: there were above fourteene severall sweete smelling timber trees, and the most part of their underwoods are Bayes and such like: they have those Okes that we have, but farre greater and

920 16. Watercolor by John White

better. After they had bene divers times aboord our shippes, my selfe, with seven more went twentie mile into the River, that runneth towarde the Citie of Skicoak, which River they call Occam: and the evening following, wee came to an Island which they call Raonoak, distant from the harbour by which we entered, seven leagues: and at the north end thereof was a village of nine houses, built of Cedar, and fortified round about with sharpe trees, to keepe out their enemies, and the entrance into it made like a turne pike very artificially; when wee came towardes it, standing neere unto the waters side, the wife of Granganimeo the kings brother came running out to meete us very cheerefully and friendly, her husband was not then in the village: some of her people shee commanded to drawe our boate on shore for the beating of the billoe: others she appointed to cary us on their backes to the dry ground, and others to bring our oares into the house for feare of stealing. When we were come into the utter roome, having five roomes in her house, she caused us to sit downe by a great fire, and after tooke off our clothes and washed them, and dryed them againe: some of the women plucked off our stockings and washed them, some washed our feete in warme water, and shee her selfe tooke great paines to see all thinges ordered in the best maner shee could, making great haste to dress some meate for us to eate.

[…]

Thus Sir, we have acquainted you with the particulars of our discovery made this present voyage, as farre foorth as the shortnesse of the time we there continued would affoord us to take viewe of: and so contenting our selves with this service at this time, which wee hope hereafter to inlarge, as occasion and assistance shalbe given, we resolved to leave the countrey, and to apply ourselves to returne for England. . . .

 $[\ldots]$

We brought home also two of the Savages being lustie men, whose names were Wanchese and Manteo.

16. Watercolor by John White, ca. 1585

Introduction

John White made several voyages to North America. His paintings of the Indians of the North Carolina coast are among the earliest to be created by a first hand witness to the lives of the native peoples. They are notable for their portrayal of native life before it was irrevocably changed by European contact. White sailed the North Atlantic with Martin Frobisher in 1577, and traveled to Carolina on

An Algonquin village by John White, ca. 1585. His paintings of the Indians of the North Carolina coast are among the earliest to be created by a firsthand witness to the lives of the native peoples. (Library of Congress)

several Walter Raleigh–sponsored expeditions during the 1580s. His images helped stir interest in colonization. White came to the Carolina coast again in 1587 as governor of the English colony on Roanoke Island. White's granddaughter, Virginia Dare, was the first European child born on North American soil. The colony's 117 English men, women, and children—like Ralph Lane's garrison of 1585—had arrived too late to plant crops, and faced starvation. White returned to England to organize a relief mission and bring back food. Political events conspired to delay White's return to the Roanoke colony until 1590. After his three-year absence, he found only a deserted ruin, and stormy weather prevented him from searching further. The fate of the lost colonists remains unknown, though some historians theorize that the native people either killed, enslaved, or absorbed the colonists into their villages.

17. Pedro Menéndez Marqués, Spanish Report of Francis Drake's Attack on St. Augustine, 1586

Introduction

The renowned English seaman Francis Drake was born in poverty and went to sea as a boy. He conceived an enduring hatred for Spain when he and his shipmates were attacked off the coast of Mexico in 1567. Thereafter he took every opportunity to raid Spanish ships and outposts. Drake circumnavigated the globe in command of an expedition lasting from 1577 to 1580. In the course of his voyage he made his fortune raiding Spanish ports and shipping. On his return to England, Queen Elizabeth I knighted him. In 1586, Drake set out to raid Spanish interests in the West Indies. Turning northward, he destroyed the fort and town of St. Augustine, which the Spanish had established on the Florida coast in 1565. As a result, Pedro Menéndez Marqués, the commander of St. Augustine, recalled his men from an outlying fort and appealed for help. Help eventually arrived from Cuba and Spain to rebuild the settlement. Meanwhile, on his way back to England, Drake rescued the English garrison left on Roanoke Island. Drake later served as a vice admiral at the defeat of the Spanish Armada in 1588, and died of fever in 1596 while on yet another expedition against Spanish outposts in the West Indies.

Primary Source

Pedro Menéndez Marqués to the president of the House of Trade, San Agustin June 17, 1586

Very Illustrious Sir

I am reduced to such a situation that I do not know where to begin to relate the hardship and misery which have befallen this land. Therefore this communication will not be long, as will be observed.

On the 6th instant Francis Drake arrived at this port with 42 sail, 23 being large vessels and nineteen pinnaces, frigates and shallops. At dawn on the 7th he landed 500 men and with seven large pinnaces sought me forthwith in the fort. With 80 men I had in the fort I resisted him until nearly midday. In view of my resistance he sent to the ships which lay outside the bar for reinforcements, and in nine vessels landed some 2000 men and planted four pieces of artillery among certain sand dunes near the fort, which he began to batter it. I retired as best I could, to protect my women and children (more than 200 persons).

Having occupied the fort, the enemy took and sacked the town and burned the church with its images and crosses, and cut down the fruit trees, which were numerous and good. He burned the fort and carried off the artillery and munitions and food supplies. We are all left with the clothes we stood in, and in the open country with a little munition which was hidden. We are without food or any sort except six hogsheads of flour which will last twenty days at half a pound per head.

I am reporting to His Majesty in full in the accompanying despatch and entreat your lordship to forward it immediately, and to favour me as far and as speedily as possible, since help for Florida must come from your lordship's hands.

Our Lord, etc.

18. Philip II, Instructions to Locate the English Colony on Roanoke Island, November 27, 1586

Introduction

Under the 1494 Treaty of Tordesillas, Spain laid claim to much of the Americas. However, the other European powers did not recognize this claim. The English, French, and Dutch all explored the coast of North America. In 1562 and 1564, the French, based on the explorations of Giovanni da Verrazano, made two attempts to establish outposts on the coast of South Carolina and Florida. King Philip II of Spain then sent an expedition to establish a base in Florida and destroy the new French outpost. This was accomplished in 1565 with the founding of St. Augustine and the destruction of Fort Caroline and massacre of its inhabitants. Ever vigilant to safeguard Spain's claim to North America, Philip ordered his governor of Florida, Pedro Menéndez Marqués, to investigate the location of an English colony on the coast somewhere to the north of Florida. He was referring to the English presence on Roanoke Island, but his order demonstrates how vague was knowledge of the North American coast. Menéndez dispatched an expedition and reported its findings to the king. In 1589, Spanish authorities decided to destroy the English colony and plant a 300-man garrison on the Chesapeake Bay. The fate of the Roanoke colony was still unknown at that time, but the expedition against it never took place.

Primary Source

Philip II to Pedro Menéndez Marqués

The King

Pedro Menéndez, Marqués, My Governor and Captain General of the Provinces of Florida. Captain Vicene González has reported that as he was going under your orders along the coast near Newfoundland to find out if, as has been said, there were some pirates based there, he went investigating the whole coast and going into all the bays: and among the many others he went into, he came across one that is two leagues wide at the mouth and extends thirty leagues inland; he talked with an Indian chief whom many of the others respected, and among other pieces of information concerning the fertility and richness of the land, he gathered that to the North of that place there was a river that went through to the other ocean, and that near to it there were some English settlers, as is explained in more detail in the report he made, a copy of which accompanies this letter. It is important to find out in detail what there is in this, so I instruct you with great diligence and care to try and find out if it is true that there is in that area the river which is said to go from one ocean to the other, and how far north it is, and if by any chance it could be found out whether these pirates have tried to sail along it, and where they have settled, and what their plans are; and everything that you can discover either for certain or by hearsay you will send me an account of as quickly as possible.

From Madrid, 27th November 1586. signed; I the King

19. Ralph Lane, Account of the Englishmen Left at Roanoke Island,1586 [Excerpt]

Introduction

Walter Raleigh received from Queen Elizabeth I a royal charter to explore and colonize North America. Raleigh never visited North America, but he sponsored numerous expeditions—in 1584, 1585, 1587, 1588, and 1590. The first expedition, led by Captains Arthur Barlowe and Philip Amadas, returned to England in September 1584 and gave a glowing report of the North Carolina coast, a land of plenty with a temperate climate, inhabited by welcoming natives. The land was named Virginia, to honor the virgin queen. The second expedition, led by Raleigh's cousin Sir Richard Grenville in 1585, left a 108-man garrison under the command of Ralph Lane on Roanoke Island. The men built Fort Raleigh, which was to serve as a base from which to raid Spanish shipping. Having arrived in August—too late to plant crops—with insufficient food, they fell to fighting with the Indians. When Sir Francis Drake, fresh from the destruction of St. Augustine, called at Roanoke in June 1586, Lane and his men decided to return with him to England. Future settlers paid the price for their treatment of the natives. Within days of their departure, Grenville returned with food supplies and several hundred more men. After learning that the outpost had been abandoned, he left 15 men on the island to hold it for England, and put out to sea. Those 15 men were never seen again.

Primary Source

That I may proceede with order in this discourse, I thinke it requisite to divide it into two parts. The first shall declare the particularities of such partes of the Countrey within the maine, as our weake number, and supply of things necessarie did enable us to enter into the discovery of.

The second part shall set downe the reasons generally moving us to resolve on our departure at the instant with the Generall Sir Francis Drake, and our common request for passage with him, when the barkes, pinnesses, and boates with the Masters and Mariners meant by him to bee left in the Countrey, for the supply of such, as for a further time meant to have stayed there, were caryed away with tempest and foule weather: In the beginning whereof shall bee declared the conspiracie of Pemisapan, with the Savages of the maine to have cut us off, &c.

 $[\ldots]$

The second part touching the conspiracie of Pemisapan, the discovery of the same, and at the last, of our request to depart with Sir Francis Drake for England.

Ensenore a Savage father to Pemisapan being the onely friend to our nation that we had amongest them, and about the King, died the 20 of April 1586. He alone had before opposed himselfe in their consultations against all matters proposed against us, which both the King and all the rest of them after Grangemoes death, were very willing to have preferred. And he was not onely by the meere providence of God during his life, a meane to save us from hurt, as poysonings and such like, but also to doe us very great good, and singularly in this.

The King was advised and of himselfe disposed, as a ready meane to have assuredly brought us to ruine in the moneth of March 1586. himselfe also with all his Savages to have runne away from us, and to have left his ground in the Iland unsowed: which if hee had done, there had bene no possibilitie in common reason, (but by the immediate hande of God) that wee coulde have bene preserved from starving out of hande. For at that time wee had no weares for fish, neither coulde our men skill of the making of them, neither had wee one graine of Corne for seede to put into the ground.

In mine absence on my voyage that I had made against the Chaonists, and Mangoaks, they had raised a brute among themselves, that I and my company were part slaine, and part starved by the Chaonists, and Mangoaks. One part of this tale was too true, that I and mine were like to be starved, but the other false.

Neverthelesse untill my returne it tooke such effect in Pemisapans breast, and in those against us, that they grew not onely into contempt of us, but also (contrary to their former reverend opinion in shew, of the Almightie God of heaven, and Jesus Christ whom wee serve and worship, whom before they would acknowledge and confesse the onely God) now they began to blaspheme, and flatly to say, that our Lorde God was not God, since hee suffered us to sustaine much hunger, and also to be killed of the Renapoaks, for so they call by that generall name all the inhabitants of the whole maine, of what province soever. Insomuch as olde Ensenore, neither any of his fellowes, could for his sake have no more credite for us: and it came so farre that the king was resolved to have presently gone away as is aforesaid.

But even in the beginning of this bruite I returned, which when hee sawe contrary to his expectation, and the advertisement that hee had received: that not onely my selfe, and my company were all safe, but also by report of his owne. Savages which had bene with mee besides Manteo in that voyage, that is to say Tetepano, his sisters husband Eracano, and Cossine, that the Chanoists and Mangoaks (whose name and multitude besides their valour is terrible to all the rest of the provinces) durst not for the most part of them abide us, and that those that did abide us were killed, and that we had taken Menatonon prisoner, and brought his sonne that he best loved to Roanoak with mee, it did not a little asswage all devises against us: on the other side, it made Ensenores opinions to be received againe with greater respects. For he had often before tolde them, and then renewed those his former speeches, both to the king and the rest, that wee were the servants of God, and that wee were not subject to bee destroyed by them: but contrarywise, that they amongst them that sought our destruction, shoulde finde their owne, and not bee able to worke ours, and that we being dead men were able to doe them more hurt, then now we could do being alive: an opinion very confidently at this day holden by the wisest amongst them, and of their old men, as also, that they have bene in the night, being 100. miles from any of us, in the aire shot at, and stroken by some men of ours, that by sicknesse had died among them: and many of them holde opinion, that we be dead men returned into the world againe, and that wee doe not remaine dead but for a certaine time, and that then we returne againe.

All these speeches then againe grewe in ful credite with them, the King, and all, touching us, when hee sawe the small troupe returned againe, and in that sort from those whose very names were terrible unto them: But that which made up the matter on our side for that time was an accident, yea rather (as all the rest was) the good providence of the Almightie for the saving of us, which was this.

 $[\ldots]$

But the towne tooke the alarme before I meant it to them: the occasion was this, I had sent the Master of the light horseman, with a

few with him, to gather up all the canoas in the setting of the Sun, and to take as many as were going from us to Dasamonquepeio, but to suffer any that came from thence, to land. He met with a Canoa, going from the shore, and overthrew the Canoa, and cut off two Savages heads: this was not done so secretly but he was discovered from the shore; whereupon the cry arose: for in trueth they, privy to their owne villanous purposes against us, held as good espial upon us, both day and night, as we did upon them.

The allarme given, they tooke themselves to their bowes, and we to our armes: some three or foure of them at the first were slaine with our shot; the rest fled into the woods. The next morning with the light horsman and one Canoa taking 25 with the Colonel of the Chesepians, and the Sergeant major, I went to Dasamonquepeio: and being landed, sent Pemisapan word by one of his owne Savages that met me at the shore, that I was going to Croatoan, and meant to take him in the way to complaine unto him of Osocon, who the night past was conveying away my prisoner, whom I had there present tied in an handlocke. Heereupon the king did abide my comming to him, and finding myselfe amidst seven or eight of his principall Weroances and followers, (not regarding any of the common sort) I gave the watch-word agreed upon, (which was, Christ our victory) and immediatly those his chiefe men and himselfe had by the mercy of God for our deliverance, that which they had purposed for us. The king himselfe being shot thorow by the Colonell with a pistoll, lying on the ground for dead, and I looking as watchfully for the saving of Manteos friends, as others were busie that none of the rest should escape, suddenly he started up, and ran away as though he had not bene touched, insomuch as he overran all the company, being by the way shot thwart the buttocks by mine Irish boy with my petronell. In the end an Irish man serving me, one Nugent, and the deputy provost, undertooke him; and following him in the woods, overtooke him: and I in some doubt least we had lost both the king and my man by our owne negligence to have beene intercepted by the Savages, wee met him returning out of the woods with Pemisapans head in his hand.

20. A Brief and True Report of the New Found Land of Virginia by Thomas Hariot, 1588 [Excerpt] Introduction

Under charter from Queen Elizabeth I, Walter Raleigh sponsored numerous expeditions to North America—in 1584, 1585, 1587, 1588, and 1590. The first expedition returned to England in

September 1584 and gave a glowing report of the North Carolina coast, a land of plenty with a temperate climate, inhabited by welcoming natives. The land was named Virginia, to honor the virgin queen. The second expedition, led by Raleigh's cousin, Sir Richard Grenville in 1585, left a 108-man garrison under the command of Ralph Lane on Roanoke Island. Thomas Hariot, a mathematician and astronomer, accompanied this expedition as a scientific adviser. The men built Fort Raleigh, which was to serve as a base from which to raid Spanish shipping. Having arrived in August too late to plant crops—with insufficient food, they fell to fighting with the Indians. When Sir Francis Drake called at Roanoke in June 1586, Lane and his men abandoned Fort Raleigh. Hariot published his report to counteract the complaints of the returnees and describe the resources of the country. By the time this report was published, 117 men, women, and children had established a colony on Roanoke, but their ultimate fate was still unknown.

Primary Source

To the Adventurers, Favourers, and Welwillers of the enterprise for the inhabiting and planting in Virginia

[...]

The treatise whereof for your more readie view & easier understanding I will divide into three speciall parts. In the first I will make declaration of such commodities there already found or to be raised, which will not onely serve the ordinary turnes of you which are and shall bee the planters and inhabitants, but such an overplus sufficiently to bee yelded, or by men of skill to bee provided, as by way of trafficke and exchaunge with our owne nation of England, will enrich your Selves the providers; those that shall deal with you; the enterprisers in general; and greatly profit our owne countrey men, to supply the with most things which heretofore they have bene faine to provide, either of strangers or of our enemies: which commodities for distinction sake, I call *Merchantable*.

In the second, I will set downe all the commodities which wee know the countrey by out experience doeth yeld of it selfe for victual, and sustenance of mans life; such as is usually fed upon by the inhabitant of the countrey, as also by us during the time we were there.

In the last part I will make mention generally of such other commodities besides, as I am able to remember, and as I shall thinke behoofull for those that shall inhabite, and plant there to knowe of; which specially concerne building, as also some other necessary uses; with a briefe description of the nature and maners of the people of the countrey.

The first part of Merchantable *commodities*.

Silke of grasse or grasse Silke. There is a kind of grasse in the countrey upon the blades whereof there groweth very good silke in forme of a thin glittering skin to bee stript of. It growth two foote and a halfe high or better: the blades are about two foot in length, and half inch broad. The like growth in Persia, which is in the selfe same climate as *Virginia*, of which very many of the silke workes that come from thence into Europe are made.

 $[\ldots]$

The of the new found land of Virginia
The third and last part of such other
Thinges as is behoofull for those which shall
Plant and inhabit to know of; with a description
of the nature and manners of the
People of the countrey.
Of commodities for building and
Other necessary uses.

Those other things which I am more to make rehearsall of, are such as concerne building, and other mechanicall necessarie uses; as divers fortes of trees for house & ship timber, and other uses els: Also lime, stone, and brick, least that being not mentioned some might have bene doubted of, or by some that are malicious reported the contrary.

Okes, there are as faire, straight, tall, and as good timber as any can be, and also great store, and in some places very great.

Walnut trees, as I have saide before very many, some have bene seen excellent faire timber of foure & five fadome, & above fourscore foot straight without bough.

Firre trees fit for masts of ships, some very tall & great.

Rakiock, a kind of trees so called that are sweet wood of which the inhabitans that were neere unto us doe commoly make their boats or Canoes of the form of trowes; only with the helpe of fire, hatchets of stones, and shels; we have known some so great being made in that fort of one tree that they have carried well xx. men at once, besides much baggage: the timber of being great, tal, straight, soft, light & yet tough enough I thinke (besides other uses) to be fit also for masts of ships.

Cedar, a sweet wood good for seelings, Chests, Boxes Bedsteedes, Lutes, Virginals, and many things els, as I have also said before. Some of our company which have wandered in some places where I have not bene, have made certaine affirmation of *Cyprus* which for such and other excellent uses, is also a wood of price and no small estimation.

Maple, and also *Wich-hazle*, wherof the inhabitants use to make their bowes.

Holly a necessary thing for the making of birdlime.

Willowes good for the making of weares and weeles to take fish after the English manner, although the inhabitants use only reedes, which because they are so strong as also flexible, do serve for that turne very well and sufficiently.

Beech and *Ashe*, good for caske, hoopes: and if neede require, plow worke, as also for many things els.

Elme.

Sassafras trees.

Ascopo a kinde of tree very like unto Lawrell, the barke is hoat in taft and spicie, it is very like to that tree which Monardus describeth to bee *Cafsia Lignea* of the West Indies.

[...]

Of the nature and manners of *The people.*

It resteth I speake a word or two of the naturall inhabitants, their natures and maners, leaving large discourse thereof until time more convenient hereafter; nowe onely so farre foorth, as that you may know, how that they in respect of troubling our inhabiting and planting, are not to be feared; but that they shall have cause both to feare and love us, that shall inhabite with them.

They are a people clothed with loofe mantles made of Deere skins, & aprons of the same rounde about their middles, all els naked, of such a difference of statures only as wee in England; having no edge tooles or weapons of yron or steels to offend us withal, neither know they how to make any: those weapons they have, are onlie bowes made of Witch hazle, & arrows of reeds, flat edged truncheons also of wood about a yard long, neither have they any thing to defend themselves but targets made of barks; and some armours made of stickes wickered together with thread.

Their townes are but small, & neere the sea coast but few, some containing but 10. or 12. houses: some 20. the greatest that we have seene have bene but of 30. houses: if they bewalled it is only done with barks of trees made fast to stakes, or els with poles onely fixed upright and close one by another.

Their homses are made of small poles made fast at the tops in rounde forme after the maner as if used in many arbories in our gardens of England, in most townes covered with barkes, and in some with artificiall mattes made of long rushes, from the tops of the houses downe to the ground. The length of them is commonly double to the breadth, in some places they are but 12. and 16. yards long, and in other some wee have seene of foure and twentie.

In some places of the countrey one onely towne belongeth to the government of a *Wiroans* or chiefe Lorde; in other some two or three, in some sixe, eight, & more; the greatest *Wiroans* that yet we had healing with had but eighteene townes in his government, and able to make not above seven or eight hundred fighting men at the most: the language of every government is different from any other, and the farther they are distant the greater is the difference.

Their maner of warres amongst themselves is either by sudden surprising one an other most commonly about the dawning of the day, or moone light; or els by ambushes, or some suttle devises: Set battles are very rare, except it fall out where there are many trees, where eyther part may have some hope of defence, after the deliverie of every arrow, in leaping behind some or other.

If there fall out any warres between us & them, what their fight is likely to bee, we having advantages against them so many maner of waies, as by our discipline, our strange weapons and devises els; especially by ordinance: great and small, it may be easily imagine; by the experience we have had in some places, the turning up of their heeles against us in running away was the best defence.

In respect of us they are a people poore, and for want of skill and judgement in the knowledge and use of our things, doe esteeme our trifles before things of greater value; Nowwithstanding in their proper manner considering the want of such meanes as we have, they seeme very ingenious; For although they have no such tooles, nor any such craftes, sciences and artes as wee; yet in those thing they doe, they shewe excellencie of wit. And by how much they upon due consideration shall finde our manner of knowledges and craftes to exceede theirs in perfection, and speed for doing or execution, by so much the more is it probable that they should desire our friendship & love, and have the greater respect for pleasing and obeying us. Whereby may bee hoped if meanes of good government bee used, that they may in short time be brought to civilitie, and the imbracing of true religion.

[...]

The Conclusion.

[...]

And this is all the fruites of our labours, that I have thought necessary to advertise you of at this present: what els concerneth the nature and manners of the inhabitant of *Virginia*: The number with

the particularities of the vovages thither made; and of the actions of such that have bene by *Sir Water Raleigh* therein and there imployed, many worthy to bee remembered; as of the first discoverers of the Countrye: of our Generall for the time *Sir Richard Greinvile*: and after his departure, of our Governour there master *Rafe Lane*: with divers other directed and imployed under theyr governement: Of the Captaynes and Masters of the voyages made since for transportation; of the Governour and assistants of those alredie transported as of many persons, accidents, and thinges els, I have ready in a discourse by itself in a maner of a chronicle according to the course of times, and when time shall bee thought convenient shall be also published.

Thus referring my relation to your favourable constructions, expecting good successe of the action, from him which is to be acknowledge the authour and governour not only of this but of all things else, I take my leave of you, this moneth of *February*.1588.

21. John White, Account of the Disappearance of the Inhabitants of Roanoke Island, 1590

Introduction

John White's paintings of the Indians of the North Carolina coast are among the earliest to be created by a first hand witness to the lives of the native peoples. White sailed the North Atlantic with Martin Frobisher in 1577, and traveled to North Carolina on several Walter Raleigh-sponsored expeditions during the 1580s. His images helped stir interest in colonization. White came to the Carolina coast again in 1587 as governor of the English colony on Roanoke Island. White's granddaughter, Virginia Dare, was the first European child born on North American soil. The colony's 117 English men, women, and children—like Ralph Lane's garrison of 1585—had arrived too late to plant crops, and faced starvation. White returned to England to organize a relief mission and bring back food. Political events conspired to delay White's return to the Roanoke colony until 1590. After his three-year absence, he found only a deserted ruin, and stormy weather prevented him from searching further. He wrote this report shortly before his death in 1593, knowing that he would never learn the fate of the lost colonists. Some historians theorize that the native people either killed, enslaved, or absorbed the colonists into their villages.

Primary Source

The Admirals boat first passed the breach, but not without some danger of sinking, for we had a sea brake into our boat which filled us halfe full of water, but by the will of God and carefull styrage of Captaine Cooke we came safe ashore, saving onely that our furniture, victuals, match and powder were much wet and spoyled. For at this time the winde blue at Northeast and direct into the harbour so great a gale, that the Sea brake extremely on the barre, and the tide went very forcibly at the entrance. By that time our Admirals boat was halled ashore, and most of our things taken out to dry, Captaine Spicer came to the entrance of the breach with his mast standing up, and was halfe passed over, but by the rash and undiscreet styrage of Ralph Skinner his Masters mate, a very dangerous Sea brake into their boate and overset them quite, the men kept the boat some in it, and some hanging on it, but the next sea set the boat on ground, where it beat so, that some of them were forced to let goe their hold, hoping to wade ashore: but the Sea still beat them downe, so that they could neither stand nor swimme, and the boat twise or thrise was turned the keele upward, whereon Captaine Spicer and Skinner hung untill they sunke, and were seene no more. But foure that could swimme a litle kept themselves in deeper water and were saved by Captaine Cookes meanes, who so soone as he saw their oversetting, stripped himselfe, and foure other that could swimme very well, and with all haste possible rowed unto them, and saved foure. There were 11 in all and 7 of the chiefest were drowned, whose names were Edward Spicer, Ralph Skinner, Edward Kelly, Thomas Bevis, Hance the Surgion, Edward Kelborne, Robert Coleman. This mischance did so much discomfort the saylers, that they were all of one mind not to goe any further to seeke the planters. But in the end by the commandement and perswasion of me and Captaine Cooke, they prepared the boates: and seeing the Captaine and me so resolute, they seemed much more willing. Our boates and all things fitted againe, we put off from Hatorask, being the number of 19 persons in both boates: but before we could get to the place where our planters were left, it was so exceeding darke, that we overshot the place a quarter of a mile: there we espied towards the North ende of the Island the light of a great fire thorow the woods, to which we presently rowed: when wee came right over against it, we let fall our Grapnel neere the shore and sounded with a trumpet a Call, and afterwardes many familiar English tunes of Songs, and called to them friendly; but we had no answere, we therefore landed at day-breake, and comming to the fire, we found the grasse and sundry rotten trees burning about the place. From hence we went thorow the woods to that part of the Iland directly over against Dasamongwepeuk, and from thence we returned by the water side, round about the North point of the Iland, untill we came to the place where I left our Colony in the yeere 1586. In all this way we saw in the sand the print of the Salvages feet of 2 or 3 sorts troaden the night, and as we entred up the sandy banke upon a tree, in the very browe thereof were curiously carved these faire Romane letters CRO: which letters presently we knew to signifie the place, where I should find the planters seated, according to a secret token agreed upon betweene them and me at my last departure from them, which was, that in any wayes they should not faile to write or carve on the trees or posts of the dores the name of the place where they should be seated; for at my comming away they were prepared to remove from Roanoak 50 miles into the maine. Therefore at my departure from them in An. 1587 I willed them, that if they should happen to be distressed in any of those places, that then they should carve over the letters or name, a Crosse & in this forme, but we found no such signe of distresse. And having well considered of this, we passed toward the place where they were left in sundry houses, but we found the houses taken downe, and the place very strongly enclosed with a high palisado of great trees, with cortynes and flankers very Fortlike, and one of the chiefe trees or postes at the right side of the entrance had the barke taken off, and 5 foote from the ground in fayre Capitall letters was graven CROA-TOAN without any crosse or signe of distresse; this done, we entred into the palisado, where we found many barres of iron, two pigges of Lead, foure yron fowlers, Iron sacker-shotte, and such like heavie thinges, throwen here and there, almost overgrowen with grasse and weedes. From thence wee went along by the water side, towards the poynt of the Creeke to see if we could find any of their botes or Pinnisse, but we could perceive no signe of them, nor any of the last Falkons and small Ordinance which were left with them, at my departure from them. At our returne from the Creeke, some of our Saylers meeting us, told us that they had found where divers chests had bene hidden, and long sithence digged up againe and broken up, and much of the goods in them spoyled and scattered about, but nothing left, of such things as the Savages knew any use of, undefaced. Presently Captaine Cooke and I went to the place, which was in the ende of an olde trench, made two yeeres past by Captaine Amadas: wheere wee found five Chests, that had bene carefully hidden of the Planters, and of the same chests three were my owne, and about the place many of my things spoyled and broken, and my bookes torne from the covers, the frames of some of my pictures and Mappes rotten and spoyled with rayne, and my armour almost eaten through with rust; this could bee no other but the deede of the Savages our enemies at Dasamongwepeuk, who had watched the departure of our men to Croatoan; and assoone as they were departed digged up every place where they suspected any thing to be buried: but although it much grieved me to see such spoyle of my goods, yet on the other side I greatly joyed that I had safely found a certaine token of their safe being at Croatoan, which is the place where Manteo was borne, and the Savages of the Iland our friends.

22. Pedro Fernandez de Chocas, Account of the Guale Uprising, October 4, 1597

Introduction

Between 1492 and the first Spanish landfall in the present-day United States, Spain had established a presence in the Caribbean and brutally conquered the Aztecs in Mexico. Spanish contact with native peoples invariably resulted in decimation of the natives by

violence and disease. The Spaniards turned northward to explore for precious metals, and by 1565 had established a base at St. Augustine. The governor of Florida wrote to his king recommending that the hostile natives be exterminated or captured and sold into slavery. King Philip II instead ordered that the Spanish focus on converting Native Americans to Christianity rather than conquering them. During the 1590s, Franciscan friars began establishing missions in the regions surrounding St. Augustine. They used a combination of gifts, trade goods, destruction of native idols, and punishment to win converts. Epidemics of European diseases caused many Indians to seek—in vain—divine protection from the friars' religion. In 1597, the Guale region, along the coast of present-day Georgia, erupted into violence against the Spanish missions. This report describes how the uprising began with the killing of five friars and the capture of a sixth. The governor of Florida avenged the deaths by destroying Guale villages and enslaving the captives.

Primary Source

October 4, 1597

Fray Pedro Fernandez de Chocas to Gonzalo Mendez de Canzo

Let Him through whose virtues hell is rendered powerless, give me strength to endure the hardships which confront us at each moment. To-day Saturday, in the morning, twenty-three canoes filled with Indians from all the land and province of Guale appeared to this river of Puturiba; they were going to Guale. After the men of the two of the canoes had disembarked at the village of San Pedro, the principal village of this province, and shot arrows at the Indian who came out of his house when the dogs made a noise and barked, their presence was immediately made known through the whole village from the cries of the wounded man, who is not dead yet. Don Iuan and his Indians went in two canoes after the two canoes of the enemy, who drew over to the other side of the river, and landed, leaving in the canoes everything they were carrying. Our Christian Indians went in pursuit of them into the forest until they overtook one, and according to the custom of Indians, they slew him and took his scalp, although his hair was short, as he was a Christian. I censured this, for it they had bound him, as I had told them to do, the cause and reason of the war could have been learned from him. Another canoe was also found adrift, and leaving it at the landingplace, the enemy fled into the forest without the men of this village being able to overtake them. The rest went to Bejesse, which is beyond this island; and there, through an arequi, my fiscal, spoke with the Cacique of Asao and censured him, and he went to his district and begged him to land. He would not do so; rather did he shamelessly show the hat of the Father Vicar of Asao, Fray Francisco de Berascula, saying: "See, hero, [what belonged] to that Father. Come, you others, and bring him tortas." He also showed the arquebue with which the said father used to call for a canoe by the streams he had to pass when he went to visit his villages. And [the cacique] said, in a loud voice, that there no longer was any

Christianity since Our Lord had permitted this, and the enemy of our Catholic faith had ordained it thus, for the condemnation of so many souls. It is much to be deplored that with the said Father they killed the Father of Guale, Fray Miguel de Aunon; him of Tolomato, Fray Pedro de Corpa; him of Tupiqui, Fray Blas Rodriguez; him of Talapuz, Fray Francisco de Avila, priests all of them; and that they had only kept alive as a prisoner and slave the Father, Fray Antonio de Badajoz, a lay-brother; and they took him to Tulufina with all the martyred religious, as is proved to be the truth by all the spoils which are taken away from them here: cowls and shreds of garments which the Indians divided among themselves. For that is what they did with such inhumanity to the most innocent Lamb [of all]. How they must have felt, Senor General, those little lambs, on receiving martyrdom all alone as they were! The thought of this so moves me that I cannot go on farther. I envy them the crowns of glory which they bear before us; and I await in this desert, by saintly obedience, that which Our Lord in His mercy may have in store for me; for the enemy Indians are already threatening those of this land, telling them to wander away from it and go to Timucua, because there they will not be warred upon again. The number of all the Indians who came might have been upwards of four hundred. May that religious whom they say they have spared from death and are keeping in Tulufina be favored by the one only God; and may they give decent burial to the bodies of the blessed dead; and may it be possible that the dead are not so many. There may be peril in any delay in assistance, although it is not my purpose the they be avenged by fire and sword rather should the remedy be gentleness and forbearance, as is your Honor's custom and intent, for they should be taken and treated like children. But I beg in mercy that the religious who have been saved may be visited, and taken from the hands of their foes; and if this cannot be shortly provided for our defence, and for the assistance of these Christian natives, it would be well to send six or more veteran soldiers, who could be divided meantime between Bezesi, here and San Pedro, doing the duty of sentinels with the Indians, if they can content themselves with tortas, gacha, and fish whenever there is any for here there is nothing else; and even this could not be furnished unless it be for a short time. But they, being honorable men, God will not fail them, for the love of Whom we subject ourselves to these perils; and may He inspire your Honor for the good task, and defend us from our enemies. From Puturiba, the fourth day of October, 1597. The altarfurnishings I used when I said mass in this mission, which his Majesty gave us with the corporal cloths, and a silver chalice from the convent which I had borrowed, were left in Tolomato when I made the journey to the mountains in safety [to Tama?], glory be to God. If it be right, may another be supplied me from his Majesty's funds. Well does your Honor see how necessary this is for my consolation and that of the Indians, and the good and benefit of the souls of purgatory, which has its part in the sacrifice. I supplicate your Honor to provide [in these matters], since therein God our Lord will be served, etc.

[Signed:] Fray Pedro Fernandez de Chocas

23. Don Juan de Oñate, Letter from New Mexico, 1599 [Excerpt]

Introduction

Spanish ventures in the New World, though licensed by the king, were privately financed and expected to make a profit. In 1573, King Philip II ordered that Spanish conquistadors focus on pacifying and converting Native Americans to Christianity rather than conquering them. The order to pacify rather than conquer made it more difficult for investors to realize a profit. Don Juan de Oñate was named to pacify and colonize New Mexico, a land of scarce resources populated by pueblo-dwelling natives. Oñate entered New Mexico in 1598 with several hundred colonists, including soldiers and Franciscan friars. His soldiers rampaged through the country plundering the natives. In January 1599, Acoma Pueblo revolted and killed about a dozen Spaniards. Oñate ordered massive retaliation. His forces killed 800 men, women, and children and enslaved and mutilated hundreds of captives. His letter, written shortly after the massacre, gives lip service to pacification and only briefly mentions events at Acoma. Oñate then led several futile expeditions in search of fabled riches. Oñate's colonists, failing to find wealth in New Mexico, eventually returned to Mexico and complained of his conduct. The royal governor of Mexico recalled and prosecuted Oñate. The Spanish founded a permanent settlement at Santa Fe, New Mexico, in 1610.

[...

Although I reached [the province of New Mexico] on the twentyeighth day of May (going ahead with as many as sixty soldiers to pacify the land and free it from traitors, if in it there should be any, seizing Humana and his followers, to obtain full information, by seeing with my own eyes, regarding the location and nature of the land, and regarding the nature and customs of the people, so as to order what might be best for the army, which I left about twenty-two leagues from the first pueblos, after having crossed the Rio del Norte, at which river I took possession, in the name of his Majesty, of all these kingdoms and pueblos which I discovered before departing from it with scouts), the army did not overtake me at the place where I established it and where I now have it established, in this province of the Teguas, until the nineteenth day of August of the past year. During that time I travelled through settlements sixty-one leagues in extent toward the north, and thirty-five in width from east to west. All this district is filled with pueblos, large and small, very continuous and close together.

At the end of August I began to prepare the people of my camp for the severe winter with which both the Indians and the nature of the land threatened me; and the devil, who has ever tried to make good his great loss occasioned by our coming, plotted, as is his wont, exciting a rebellion among more than forty-five soldiers and captains, who under pretext of not finding immediately whole plates of silver lying on the ground, and offended because I would not permit them to maltreat these natives, either in their persons or in their goods, became disgusted with the country, or to be more exact, with me, and endeavored to form a gang in order to flee to that New Spain, as they proclaimed, although judging from what has since come to light their intention was directed more to stealing slaves and clothing and to other acts of effrontery not permitted. I arrested two captains and a soldier, who they said were guilty, in order to garrote them on this charge, but ascertaining that their guilt was not so great, and on account of my situation and of the importunate pleadings of the religious and of the entire army, I was forced to forego the punishment and let bygones be bygones.

Although by the middle of September I succeeded in completely calming and pacifying my camp, from this great conflagration a spark was bound to remain hidden underneath the ashes of the dissembling countenances of four of the soldiers of the said coterie. These fled from me at that time, stealing from me part of the horses, thereby violating not only one but many proclamations which, regarding this matter and others, I had posted for the good of the land in the name of his Majesty.

Since they had violated his royal orders, it appeared to me that they should not go unpunished; therefore I immediately sent post-haste the captain and procurator-general Gaspar Perez de Villagran and the captain of artillery Geronimo Marques, with an express order to follow and overtake them and give them due punishment. They left in the middle of September, as I have said, thinking that they would overtake them at once, but their journey was prolonged more than they or I had anticipated, with the result to two of the offenders which your Lordship already knows from the letter which they tell me they wrote from Sancta Barbara. The other two who fled from them will have received the same at your Lordship's hands, as is just.

I awaited their return and the outcome for some days, during which time I sent my *sargento mayor* to find and utilize the buffalo to the east, where he found an infinite multitude of them, and had the experience which he set forth in a special report. Both he and the others were so long delayed that, in order to lose no time, at the beginning of October, this first church having been founded, wherein the first mass was celebrated on the 8th of September, and the religious having been distributed in various provinces and *doctrinas*, I went in person to the province of Abo and to that of the Xumanas and to the large and famous salines of this country, which must be about twenty leagues east of here.

... I have, then, discovered and seen up to the present the following provinces:

The province of the Piguis, which is the one encountered in coming from that New Spain; the province of the Xumanas; the province of the Cheguas, which we Spaniards call Puaray; the province of the Cheres; the province of the Trias; the province of the Emmes; the province of the Teguas; the province of the Picuries; the province of the Taos; the province of the Peccos; the province of Abbo and the salines; the province of Juni; and the province of Mohoce.

These last two are somewhat apart from the rest, towards the west, and are the places where we recently discovered the rich mines, as is attested by the papers which your Lordship will see there. I could not work or improve these mines because of the death of my *maese de campo*, Joan de Zaldivar, and of the rectification of the results of it, which I completed at the end of last month. Nor could I complete my journey to the South Sea, which was the purpose with which I went to the said provinces, leaving my camp in this province of the Teguas, whence I am now writing.

There must be in this province and in the others abovementioned, to make a conservative estimate, seventy thousand Indians, settled after our custom, house adjoining house, with square plazas. They have no streets, and in the pueblos, which contain many plazas or wards, one goes from one plaza to the other through alleys. They are of two and three stories, of an *estado* and a half or an *estado* and a third each, which latter is not so common; and some houses are of four, five, six, and seven stories. Even whole pueblos dress in very highly colored cotton *mantas*, white or black, and some of thread—very good clothes. Others wear buffalo hides, of which there is a great abundance. They have most excellent wool, of whose value I am sending a small example.

It is a land abounding in flesh of buffalo, goats with hideous horns, and turkeys; and in Mohoce there is game of all kinds. There are many wild and ferocious beasts, lions, bears, wolves, tigers, penicas, ferrets, porcupines, and other animals, whose hides they tan and use. Towards the west there are bees and very white honey, of which I am sending a sample. Besides, there are vegetables, a great abundance of the best and greatest salines in the world, and a very great many kinds of very rich ores, as I stated above. Some discovered near here do not appear so, although we have hardly begun to see anything of the much there is to be seen. There are very fine grape vines, rivers, forests of many oaks, and some cork trees, fruits, melons, grapes, watermelons, Castilian plums, capuli, pinenuts, acorns, ground-nuts, and coralejo, which is a delicious fruit, and other wild fruits. There are many and very good fish in this Rio del Norte, and in others. From the ores here are made all the colors which we use, and they are very fine.

[...]

We have seen other nations such as the Querechos, or herdsmen, who live in tents of tanned hides, among the buffalo. The Apaches, of whom we have also seen some, are innumerable, and although I heard that they lived in rancherias, a few days ago I ascertained that they live like these in pueblos, one of which, eighteen leagues from here, contains fifteen plazas. They are a people whom I have compelled to render obedience to His Majesty, although not by means of legal instruments like the rest of the provinces. This has caused me much labor, diligence, and care, long journeys, with arms on the shoulders, and not a little watching and circumspection; indeed, because my maese de campo was not as cautious as he should have been, they killed him with twelve companions in a great pueblo and fortress called Acoma, which must contain about three thousand Indians. As punishment for its crime and its treason against his Majesty, to whom it had already rendered submission by a public instrument, and as a warning to the rest, I razed and burned it completely, in the way in which your Lordship will see by the process of this cause. All these provinces, pueblos, and peoples, I have seen with my own eyes.

There is another nation, that of the Cocoyes, an innumerable people with huts and agriculture. Of this nation and of the large settlements at the source of the Rio del Norte and of those to the northwest and west and towards the South Sea, I have numberless reports, and pearls of remarkable size from the said sea, and assurance that there is an infinite number of them on the coast of this country. And as to the east, a person in my camp, an Indian who speaks Spanish and is one of those who came with Humana, has been in the pueblo of the said herdsmen. It is nine continuous leagues in length and two in width, with streets and houses consisting of huts. It is situated in the midst of the multitude of buffalo, which are so numerous that my sargento mayor, who hunted them and brought back their hides, meat, tallow, and suet, asserts that in one herd alone he saw more than there are of our cattle in the combined three ranches of Rodrigo del Rio, Salvago, and Jeronimo Lopez, which are famed in those regions.

I should never cease were I to recount individually all of the many things which occur to me. I can only say that with God's help I shall see them all, and give new worlds, new, peaceful, and grand, to his Majesty, greater than the good Marquis gave to him, although he did so much, if you, Illustrious Sir, will give to me the aid, the protection, and the help which I expect from such a hand. And although I confess that I am crushed at having been so out of favor when I left that country, and although a soul frightened by disfavor usually loses hope and despairs of success, it is nevertheless true that I never have and never shall lose hope of receiving many and very great favors at the hand of your Lordship, especially in matters of such importance to his Majesty. And in order that you, Illustrious Sir, may be inclined to render them to me, I beg that you take note of the great increase which the royal crown and the rents of his

Majesty have and will have in this land, with so many and such a variety of things, each one of which promises very great treasures. I shall only note these four, omitting the rest as being well known and common:

First, the great wealth which the mines have begun to reveal and the great number of them in this land, whence proceed the royal fifths and profits. Second, the certainty of the proximity of the South Sea, whose trade with Piru, New Spain, and China is not to be depreciated, for it will give birth in time to advantageous and continuous duties, because of its close proximity, particularly to China and to that land. And what I emphasize in this matter as worthy of esteem is the traffic in pearls, reports of which are so certain, as I have stated, and of which we have had ocular experience from the shells. Third, the increase of vassals and tributes, which will increase not only the rents, but his renown and dominion as well, if it be possible that for our king these can increase. Fourth, the wealth of the abundant salines, and of the mountains of brimstone, of which there is a greater quantity than in any other province. Salt is the universal article of traffic of all these barbarians and their regular food, for they even eat or suck it alone as we do sugar. These four things appear as if dedicated solely to his Majesty. I will not mention the founding of so many republics, the many offices, their quittances, vacancies, provisions, etc., the wealth of the wool and hides of buffalo, and many other things, clearly and well known, or, judging from the general nature of the land, the certainty of wines and oils.

In view, then, Illustrious Sir, of things of such honor, profit, and value, and of the great prudence, magnanimity, and nobility of your Lordship, who in all matters is bound to prosper me and overcome the ill fortune of my disgrace, I humbly beg and supplicate, since it is of such importance to the service of God and of his Majesty, that the greatest aid possible be sent to me, both for settling and pacifying, your Lordship giving your favor, mind, zeal, and life for the conservation, progress, and increase of this land, through the preaching of the holy gospel and the founding of this republic, giving liberty and favor to all, opening wide the door to them, and, if it should be necessary, even ordering them to come to serve their king in so honorable and profitable a matter, in a land so abundant and of such great beginnings of riches. I call them beginnings, for although we have seen much, we have not yet made a beginning in comparison with what there is to see and enjoy. And if the number should exceed five hundred men, they all would be needed, especially married men, who are the solid rock on which new republics are permanently founded; and noble people, of whom there is such a surplus there....

24. Bartholomew Gosnold, Letter to his Father regarding his First Voyage to New England, 1602

Introduction

In 1602, Englishman Bartholomew Gosnold commanded an expedition to explore the New England coast and possibly establish a colony. The English referred to the entire east coast of North America as Virginia, the name conferred after the 1584 voyage sponsored by Walter Raleigh. Gosnold reached the New England, or "North Virginia," coast at southern Maine and explored as far south as Rhode Island. He gave Cape Cod its name and named the island of Martha's Vineyard after his daughter. Gosnold and his men decided they did not have enough food to survive the winter. They returned to England with a ship full of furs, lumber, and sassafras. Gosnold reported that the North Virginia climate was colder than that of European lands of the same latitude, but that it was nevertheless healthful as evidenced by the appearance of the native inhabitants. Gosnold's venture encouraged other English traders. In 1603 Martin Pring made a similar voyage, as did Sir George Waymouth in 1605. The French explorer Samuel de Champlain also charted the New England coast in search of a site for a French colony, but hard winters and French politics conspired to defeat the effort. In 1607, Gosnold returned to North America as vice admiral of the expedition to establish the colony at Jamestown, Virginia. He died there of malaria within months of his arrival.

My dutie remembred, &c. Sir, I was in good hope that my occasions would have allowed mee so much libertie, as to have come unto you before this time; otherwise I would have written more at large concerning the Countrie from whence we lately came, then I did: but not well remembring what I have already written (though I am assured that there is nothing set downe disagreeing with the truth) I thought it fittest not to goe about to adde any thing in writing, but rather to leave the report of the rest till I come my selfe; which now I hope shall be shortly, and so soone as with conveniency I may. In the meane time, notwithstanding whereas you seeme not to be satisfied by that which I have already written concerning some especiall matters. I have here briefely (and as well as I can) added these few lines for your further satisfaction: and the first as touching that place where we were most resident, it is in the Latitude of 41. degrees, and one third part: which albeit it be so much to the Southward, yet is it more cold then those parts of Europe, which are scituated under the same paralell: but one thing is worth the noting, that notwithstanding the place is not so much subject to cold as England is, yet did we finde the Spring to be later there, then it is with us here, by almost a moneth: this whether it hapned accidentally this last Spring to be so, or whether it be so of course, I am not very certaine: the latter seemes most likely, whereof also there may be given some sufficient reason, which now I omit: as for the Acornes we saw gathered on heapes, they were of the last yeare, but doubtlesse their Summer continues longer then ours. We cannot gather by any thing we could observe in the people, or by any triall we had thereof our selves: but that it is as healthfull a Climate as any can be. The Inhabitants there, as I wrote before, being of tall stature, comely proportion, strong, active, and some of good yeares, and as it should seeme very healthfull, are sufficient proofe of the healthfulnesse of the place. First, for our selves (thankes be to God) we had not a man sicke two dayes together in all our Voyage; whereas others that went out with us, or about that time on other Voyages (especially such as went upon reprisall) wer most of them infected with sicknesse, whereof they lost some of their men, and brought home a many sicke, returning notwithstanding long before us. But Verazzano and others (as I take it, you may reade in the Booke of Discoveries) doe more particularly intreate of the Age of the people in that coast. The Sassafras which we brought we had upon the Ilands: where though we had little disturbance, and reasonable plenty: yet for that the greatest part of our people were imployed about the fitting of our house, and such like affaires, and a few (and those but easie labourers) undertooke this worke, the rather because we were informed befor our going forth, that a tunne was sufficient to cloy England and further, for that we had resolved upon our returne, and taken view of our victuall, we judged it then needfull to use expedition; which afterward we had more certaine proofe of; for when we came to an anker before Portsmouth, which was some foure dayes after we made the land, we had not one Cake of Bread, nor any drinke, but a little Vinegar, left: for these and other reasons, we returned no otherwise laden then you have heard. And thus much I hope shall suffice till I can my selfe come to give you further notice, which though it be not so soone as I could have wisht, yet I hope it shall be in convenient time. In the meane time craving your pardon, for which the urgent occasions of my stay will pleade, I humbly take my leave. September 7, 1602.

Your dutifull Sonne, Barth. Gosnold

25. Virginia Company of London Charter, 1606

Introduction

The first permanent English settlement in the New World, Jamestown, was established in Virginia in 1607 by the Virginia Company of London. This charter, granted by King James I to the Virginia Company in 1606, gave the organization the authority to

claim and profit from the land. The charter granted the company an enormous tract of land in North America that included presentday New England. The company included "knights, gentlemen, merchants, and adventurers" who wanted mainly to make money for themselves and the company. Once in Virginia, they intended to search for gold and other valuable products. When the first settlers landed in Virginia, they contended for leadership of the colony. The leaders in turn faced the challenge of getting gentlemen to perform the manual labor required to build and feed a settlement. When the settlers failed to find easy riches, the company tried to raise money in England by selling shares. In 1609, the company received a second charter from James, which granted it greater autonomy in administering the colony's affairs. A third charter in 1612 extended the company's territorial holdings in North America. In the face of poor earnings, James revoked the charter in 1624, making Virginia a royal colony.

Primary Source

I JAMES, by the Grace of God, King of England, Scotland, France and Ireland, Defender of the Faith, &c. WHEREAS our loving and well-disposed Subjects, Sir Thomas Gates, and Sir George Somers, Knights, Richard Hackluit, Prebendary of Westminster, and Edward-Maria Wingfield, Thomas Hanham, and Ralegh Gilbert, Esqrs. William Parker, and George Popham, Gentlemen, and divers others of our loving Subjects, have been humble Suitors unto us, that We would vouchsafe unto them our Licence, to make Habitation, Plantation, and to deduce a Colony of sundry of our People into that Part of America, commonly called VIRGINIA, and other Parts and Territories in America, either appertaining unto us, or which are not now actually possessed by any Christian Prince or People, situate, lying, and being all along the Sea Coasts, between four and thirty Degrees of Northerly Latitude from the Equinoctial Line, and five and forty Degrees of the same Latitude, and in the main Land between the same four and thirty and five and forty Degrees, and the Islands thereunto adjacent, or within one hundred Miles of the Coasts thereof:

II. And to that End, and for the more speedy Accomplishment of their said intended Plantation and Habitation there, are desirous to divide themselves into two several Colonies and Companies; The one consisting of certain Knights, Gentlemen, Merchants, and other Adventurers, of our City of London and elsewhere, which are, and from time to time shall be, joined unto them, which do desire to begin their Plantation and Habitation in some fit and convenient Place, between four and thirty and one and forty Degrees of the said Latitude, along the Coasts of Virginia and Coasts of America aforesaid; And the other consisting of sundry Knights, gentlemen, Merchants, and other Adventurers, of our Cities of Bristol and Exeter, and of our Town of Plimouth, and of other Places, which do join themselves unto that Colony, which do desire to begin their Plantation and Habitation in some fit and convenient Place, between eight and thirty Degrees and five and forty Degrees of the said Lat-

itude, all alongst the said Coast of Virginia and America, as that Coast lyeth:

III. We, greatly commending, and graciously accepting of, their Desires for the Furtherance of so noble a Work, which may, by the Providence of Almighty God, hereafter tend to the Glory of his Divine Majesty, in propagating of Christian Religion to such People, as yet live in Darkness and miserable Ignorance of the true Knowledge and Worship of God, and may in time bring the Infidels and Savages, living in those Parts, to human Civility, and to a settled and quiet Government; DO, by these our Letters Patents, graciously accept of, and agree to, their humble and well-intended Desires;

IV. And do therefore, for Us, our Heirs, and Successors, GRANT and agree, that the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, and Edward-Maria Wingfield, Adventurers of and for our City of London, and all such others, as are, or shall be, joined unto them of that Colony, shall be called the first Colony; And they shall and may begin their said first Plantation and Habitation, at any Place upon the said Coast of Virginia or America, where they shall think fit and convenient, between the said four and thirty and one and forty Degrees of the said Latitude; And that they shall have all the Lands, Woods, Soil, Grounds, Havens, Ports, Ports, Rivers, Mines, Minerals, Marshes, Waters, Fishings, Commodities, and Hereditaments, whatsoever, from the said first Seat of their Plantation and Habitation by the Space of fifty Miles of English Statute Measure, all along the said Coast of Virginia and America, towards the West and Southwest, as the Coast lyeth, with all the Islands within one hundred Miles directly over against the same Sea Coast; And also all the Lands, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Waters, Marshes, Fishings, Commodities, and Hereditaments, whatsoever, from the said Place of their first Plantation and Habitation for the space of fifty like English Miles all alongst the said Coast of Virginia and America, towards the East and Northeast, or towards the North, as the Coast lyeth, together with all the Islands within one hundred Miles, directly over against the said Sea Coast; And also all the Lands, Woods, Soil, Grounds, Havens, Ports, Rivers, Mines, Minerals, Marshes, Waters, Fishings, Commodities, and Hereditaments, whatsoever, from the same fifty Miles every way on the Sea Coast, directly into the main Land by the Space of one hundred like English Miles; And shall and may inhabit and remain there; and shall and may also build and fortify within any the same, for their better Safeguard and Defence, according to their best Discretion, and the Discretion of the Council of that Colony; And that no other of our Subjects shall be permitted, or suffered, to plant or inhabit behind, or on the Backside of them, towards the main Land, without the Express License or Consent of the Council of that Colony, thereunto in Writing first had and obtained.

V. And we do likewise, for Us, our Heirs, and Successors, by these Presents, GRANT and agree, that the said Thomas Hanham, and Ralegh Gilbert, William Parker, and George Popham, and all others of the Town of Plimouth in the County of Devon, or elsewhere, which are, or shall be, joined unto them of that Colony, shall be called the second Colony, And that they shall and may begin their said Plantation and Seat of their first Abode and Habitation, at any Place upon the said Coast of Virginia and America, where they shall think fit and convenient, between eight and thirty Degrees of the said Latitude, and five and forty Degrees of the same Latitude; And that they shall have all the Lands, Soils, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Marshes, Waters, Fishings, Commodities, and Hereditaments, whatsoever from the first Seat of their Plantation and Habitation by the Space of fifty like English Miles as is aforesaid, all alongst the said Coast of Virginia and America, towards the West and Southwest, or towards the South, as the Coast lyeth, and all the Islands within one hundred Miles, directly over against the said Sea Coast; And also all the Lands, Soils, Grounds, Havens, Ports, Rivers, Mines, Minerals, Woods, Marshes, Waters, Fishings, Commodities, and Hereditaments, whatsoever, from the said Place of their first Plantation and Habitation for the Space of fifty like Miles, all alongst the said Coast of Virginia and America, towards the East and Northeast, or towards the North, as the Coast lyeth, and all the Islands also within one hundred Miles directly over against the same Sea Coast; And also all the Lands, Soils, Grounds, Havens, Ports, Rivers, Woods, Mines, Minerals, Marshes, Waters, Fishings, Commodities, and Hereditaments, whatsoever, from the same fifty Miles every way on the Sea Coast, directly into the main Land, by the Space of one hundred like English Miles; And shall and may inhabit and remain there; and shall and may also build and fortify within any the same for their better Safeguard, according to their best Discretion, and the Discretion of the Council of that Colony; And that none of our Subjects shall be permitted, or suffered, to plant or inhabit behind, or on the back of them, towards the main Land, without the express License of the Council of that Colony, in Writing thereunto first had and obtained.

VI. Provided always, and our Will and Pleasure herein is, that the Plantation and Habitation of such of the said Colonies, as shall last plant themselves, as aforesaid, shall not be made within one hundred like English Miles of the other of them, that first began to make their Plantation, as aforesaid.

VII. And we do also ordain, establish, and agree, for Us, our Heirs, and Successors, that each of the said Colonies shall have a Council, which shall govern and order all Matters and Causes, which shall arise, grow, or happen, to or within the same several Colonies, according to such Laws, Ordinances, and Instructions, as shall be, in that behalf, given and signed with Our Hand or Sign Manual, and pass under the Privy Seal of our Realm of England, Each of which Councils shall consist of thirteen Persons, to be ordained, made, and removed, from time to time, according as shall be directed, and comprised in the same instructions; And shall have a several Seal, for all Matters that shall pass or concern the same several Councils;

Each of which Seals shall have the King's Arms engraven on the one Side thereof, and his Portraiture on the other; And that the Seal for the Council of the said first Colony shall have engraven round about, on the one side, these Words; Sigillum Regis Magna Britannia, Francia, & Hibernia; on the other Side this Inscription, round about; Pro Concilia prima Colonia Virginia. And the seal for the Council of the said second Colony shall also have engraven, round about the one Side thereof, the aforesaid Words; Sigillum Regis Magna, Britannia, Francia & Hibernia, and on the other Side; Pro Concilio secunda Colonia Virginia:

VIII. And that also there shall be a Council established here in England, which shall, in like Manner, consist of thirteen Persons, to be, for that Purpose, appointed by Us, our Heirs and Successors, which shall be called our Council of Virginia, And shall, from time to time, have the superior Managing and Direction, only of and for all Matters, that shall or may concern the Government, as well of the said several Colonies, as of and for any other Part or Place, within the aforesaid Precincts of four and thirty and five and forty Degrees, abovementioned; Which Council shall, in like manner, have a Seal, for Matters concerning the Council of Colonies, with the like Arms and Portraiture as aforesaid, with this Inscription, engraven round about on the one Side; Sigillum Regis Magna Britannia, Francia, & Hibernia; and round about the other side, Pro Concilio suo Virginia.

IX. And moreover, we do GRANT and agree, for Us, our Heirs and Successors, that the said several Councils, of and for the said several Colonies, shall and lawfully may, by Virtue hereof, from time to time, without any Interruption of Us, our Heirs, or Successors, give and take Order, to dig, mine, and search for all Manner of Mines of Gold, Silver, and Copper, as well within any part of their said several Colonies, as for the said main Lands on the Backside of the same Colonies; And to HAVE and enjoy the Gold, Silver, and Copper, to be gotten thereof, to the Use and Behoof of the same Colonies, and the Plantations thereof; YIELDING therefore, to Us, our Heirs and Successors, the fifth Part only of all the same Gold and Silver, and the fifteenth Part of all the same Copper, so to be gotten or had, as is aforesaid, without any other Manner or Profit or Account, to be given or yielded to Us, our Heirs, or Successors, for or in Respect of the same:

X. And that they shall, or lawfully may, establish and cause to be made a Coin; to pass current there between the People of those several Colonies, for the more Ease of Traffick and Bargaining between and amongst them and the Natives there, of such Metal, and in such Manner and Form, as the said several Councils there shall limit and appoint.

XI. And we do likewise, for Us, our Heirs, and Successors, by these Presents, give full Power and Authority to the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, Edward-Maria Wingfield, Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, and to every of them, and to the said several Companies,

Plantations, and Colonies, that they, and every of them, shall and may, at all and every time and times hereafter, have, take, and lead in the said Voyage, and for and towards the said several Plantations and Colonies, and to travel thitherward, and to abide and inhabit there, in every the said Colonies and Plantations, such and so many of our Subjects, as shall willingly accompany them, or any of them, in the said Voyages and Plantations; With sufficient Shipping and Furniture of Armour, Weapons, Ordinance, Powder, Victual, and all other things, necessary for the said Plantations, and for their Use and Defence there: PROVIDED always, that none of the said Persons be such, as shall hereafter be specially restrained by Us, our Heirs, or Successors.

XII. Moreover, we do, by these Presents, for Us, our Heirs, and Successors, GIVE AND GRANT Licence unto the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, Edward-Maria Wingfield, Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, and to every of the said Colonies, that they, and every of them, shall and may, from time to time, and at all times for ever hereafter, for their several Defences, encounter, expulse, repel, and resist, as well by Sea as by Land, by all Ways and Means whatsoever, all and every such Person and Persons, as without the especial Licence of the said several Colonies and Plantations, shall attempt to inhabit within the said several Precincts and Limits of the said several Colonies and Plantations, or any of them, or that shall enterprise or attempt, at any time hereafter, the Hurt, Detriment, or Annoyance, of the said several Colonies or Plantations.

XIII. Giving and granting, by these Presents, unto the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, Edward-Maria Wingfield, and their Associates of the said first Colony, and unto the said Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, and their Associates of the said second Colony, and to every of them, from time to time, and at all times for ever hereafter, Power and Authority to take and surprise, by all Ways and Means whatsoever, all and every Person and Persons, with their Ships, Vessels, Goods and other Furniture, which shall be found trafficking, into any Harbour or Harbours, Creek or Creeks, or Place, within the Limits or Precincts of the said several Colonies and Plantations, not being of the same Colony, until such time, as they, being of any Realms or Dominions under our Obedience, shall pay, or agree to pay, to the Hands of the Treasurer of that Colony, within whose Limits and Precincts they shall so traffick, two and a half upon every Hundred, of any thing, so by them trafficked, bought, or sold; And being Strangers, and not Subjects under our Obeysance, until they shall pay five upon every Hundred, of such Wares and Merchandise, as they shall traffick, buy, or sell, within the Precincts of the said several Colonies, wherein they shall so traffick, buy, or sell, as aforesaid, WHICH Sums of Money, or Benefit, as aforesaid, for and during the Space of one and twenty Years, next ensuing the Date hereof, shall be wholly emploied to the Use, Benefit, and Behoof of the said several Plantations, where such Traffick

shall be made; And after the said one and twenty Years ended, the same shall be taken to the Use of Us, our Heirs, and Successors, by such Officers and Ministers, as by Us, our Heirs, and Successors, shall be thereunto assigned or appointed.

XIV. And we do further, by these Presents, for Us, our Heirs, and Successors, GIVE AND GRANT unto the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, and Edward-Maria Wingfield, and to their Associates of the said first Colony and Plantation, and to the said Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, and their Associates of the said second Colony and Plantation, that they, and every of them, by their Deputies, Ministers and Factors, may transport the Goods, Chattels, Armour, Munition, and Furniture, needful to be used by them, for their said Apparel, Food, Defence, or otherwise in Respect of the said Plantations, out of our Realms of England and Ireland, and all other our Dominions, from time to time, for and during the Time of seven Years, next ensuing the Date hereof, for the better Relief of the said several Colonies and Plantations, without any Custom, Subsidy, or other Duty, unto Us, our Heirs, or Successors, to be yielded or paid for the same.

XV. Also we do, for Us, our Heirs, and Successors, DECLARE, by these Presents, that all and every the Persons, being our Subjects, which shall dwell and inhabit within every or any of the said several Colonies and Plantations, and every of their children, which shall happen to be born within any of the Limits and Precincts of the said several Colonies and Plantations, shall HAVE and enjoy all Liberties, Franchises, and Immunities, within any of our other Dominions, to all Intents and Purposes, as if they had been abiding and born, within this our Realm of England, or any other of our said Dominions.

XVI. Moreover, our gracious Will and Pleasure is, and we do, by these Presents, for Us, our Heirs, and Successors, declare and set forth, that if any Person or Persons, which shall be of any of the said Colonies and Plantations, or any other, which shall traffick to the said Colonies and Plantations, or any of them, shall, at any time or times hereafter, transport any Wares, Merchandises, or Commodities, out of any of our Dominions, with a Pretence to land, sell, or otherwise dispose of the same, within any the Limits and Precincts of any the said Colonies and Plantations, and yet nevertheless, being at Sea, or after he hath landed the same within any of the said Colonies and Plantations, shall carry the same into any other Foreign Country, with a Purpose there to sell or dispose of the same, without the Licence of Us, our Heirs, and Successors, in that Behalf first had and obtained; That then, all the Goods and Chattels of such Person or Persons, so offending and transporting, together with the said Ship or Vessel, wherein such Transportation was made, shall be forfeited to Us, our Heirs, and Successors.

XVII. Provided always, and our Will and Pleasure is, and we do hereby declare to all Christian Kings, Princes, and States, that if any Person or Persons, which shall hereafter be of any of the said several Colonies and Plantations, or any other, by his, their or any of their Licence and Appointment, shall, at any time or times hereafter, rob or spoil, by Sea or by Land, or do any Act of unjust and unlawful Hostility, to any the Subjects of Us, our Heirs, or Successors, or any the Subjects of any King, Prince, Ruler, Governor, or State, being then in League or Amity with Us, our Heirs, or Successors, and that upon such Injury, or upon just Complaint of such Prince, Ruler, Governor, or State, or their Subjects, We, our Heirs, or Successors, shall make open Proclamation, within any of the Ports of our Realm of England, commodious for that Purpose, That the said Person or Persons, having committed any such Robbery or Spoil, shall, within the Term to be limited by such Proclamations make full Restitution or Satisfaction of all such Injuries done, so as the said Princes, or others, so complaining, may hold themselves fully satisfied and contented; And that, if the said Person or Persons, having committed such Robbery or Spoil, shall not make, or cause to be made, Satisfaction accordingly, within such Time so to be limited, That then it shall be lawful to Us, our Heirs, and Successors, to put the said Person or Persons, having committed such Robbery or Spoil, and their Procurers, Abetters, or Comforters, out of our Allegiance and Protection; And that it shall be lawful and free, for all Princes and others, to pursue with Hostility the said Offenders, and every of them, and their and every of their Procurers, Aiders, Abetters, and Comforters, in that Behalf.

XVIII. And finally, we do, for Us, our Heirs, and Successors, GRANT and agree, to and with the said Sir Thomas Gates, Sir George Somers, Richard Hackluit, and Edward-Maria Wingfield, and all others of the said first Colony, that We, our Heirs, and Successors, upon Petition in that Behalf to be made, shall, by Letters-patent under the Great Seal of England, GIVE and GRANT unto such Persons, their Heirs, and Assigns, as the Council of that Colony, or the most Part of them, shall, for that Purpose nominate and assign, all the Lands, Tenements, and Hereditaments, which shall be within the Precincts limited for that Colony, as is aforesaid, To BE HOLDEN of Us, our Heirs, and Successors, as of our Manor at East-Greenwich in the County of Kent, in free and common Soccage only, and not in Capite:

XIX. And do, in like Manner, Grant and Agree, for Us, our Heirs, and Successors, to and with the said Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, and an others of the said second Colony, That We, our Heirs, and Successors, upon Petition in that Behalf to be made, shall by Letters-patent under the Grant Seal of England, GIVE and GRANT unto such Persons, their Heirs, and Assigns, as the Council of that Colony, or the most Part of them, shall, for that Purpose, nominate and assign, all the Lands, Tenements, and Hereditaments, which shall be within the Precincts limited for that Colony, as is aforesaid To BE HOLDEN OF US, our Heirs, and Successors, as of our Manour of East-Greenwich in the County of Kent, in free and common Soccage only, and not in Capite.

XX. All which Lands, Tenements, and Hereditaments, so to be passed by the said several Letters-patent, shall be sufficient Assurance from the said Patentees, so distributed and divided amongst the Undertakers for the Plantation of the said several Colonies, and such as shall make their Plantations in either of the said several Colonies, in such Manner and Form, and for such Estates, as shall be ordered and set down by the Council of the said Colony, or the most Part of them, respectively, within which the same Lands, Tenements, and Hereditaments shall lye or be; Although express Mention of the true yearly Value or Certainty of the Premises, or any of them, or of any other Gifts or Grants, by Us or any of our Progenitors or Predecessors, to the aforesaid Sir Thomas Gates, Knt. Sir George Somers, Knt. Richard Hackluit, Edward-Maria Wingfield, Thomas Hanham, Ralegh Gilbert, William Parker, and George Popham, or any of them, heretofore made, in these Presents, is not made; Or any Statute, Act, Ordinance, or Provision, Proclamation, or Restraint, to the contrary hereof had, made, ordained, or any other Thing, Cause, or Matter whatsoever, in any wise notwithstanding. In Witness whereof we have caused these our Letters to be made Patents; Witness Ourself at Westminster, the tenth Day of April, in the fourth Year of our Reign of England, France, and Ireland, and of Scotland the nine and thirtieth.

26. John Smith, The Settlement at Jamestown, 1607

Introduction

Captain John Smith (1580–1631) was part of the first expedition to colonize Virginia in 1607. The son of a tenant farmer, he became a professional soldier. As such, he did not get along with the upperclass gentlemen of the expedition. Smith spent much of his time in Virginia exploring the countryside, forging a relationship with the native peoples, and mapping the coastal waterways. The native peoples consisted of the Algonquian inhabitants of some 30 villages who accepted the leadership of their chieftain, Powhatan. Ongoing power struggles propelled Smith to the presidency of the colony after the first two presidents were discredited. Unlike the previous leaders, Smith imposed discipline and forced the gentlemen to work for the survival of the colony. Nevertheless, they faced months of starvation and many fell ill and died. Smith left Virginia in 1609 and returned home to recuperate from an injury. He returned to North America and mapped the coast of New England in 1614. After his final return to England, Smith wrote an account of his adventures. Here he describes the colonists' landfall, their construction of the fort, early relations with the Powhatan Indians, power struggles among the colonists, and loss of lives to illness.

Primary Source

Kinde Sir, commendations remembred &c. You shall understand that after many crosses in the downes by tempests, wee arrived safely uppon the Southwest part of the great Canaries: within foure or five daies after we set saile for Dominica, the 26. Of Aprill: the first land we made, wee fell with Cape Henry, the verie mouth of the Bay of Chissiapiacke, which at that present we little expected, having by a cruell storme bene put to the Northward: anchoring in this Bay, twentie or thirtie went a shore with the Captain, and in comming aboard, they were assalted with certaine Indians, which charged them within Pistoll shot: in which conflict, Captaine Archer and Mathew Morton were shot: whereupon, Captaine Newport seconding them, made a shot at them, which the Indians little respected, but having spent their arrowes retyred without harme, and in that place was the Box opened, wherin the Counsell for Virginia was nominated: and arriving at the place where wee are now seated, the Counsell was sworne, the President elected, which for that yeare was Maister Edm. Maria Wingfield, where was made choice for our scituation a verie fit place for the erecting of a great cittie, about which some contention passed betwixt Captaine Wingfield and Captaine Gosnold, notwithstanding all our provision was brought a shore, and with as much speede as might bee wee went about our fortification.

The two and twenty day of Aprill, Captain Newport and my selfe with divers others, to the other number of twenty two persons, set forward to discover the River, some fiftie or sixtie miles, finding it in some places broader, & in some narrower, the Countrie (for the moste part) on each side plaine high ground, with many fresh Springes, the people in all places kindely intreating us, daunsing and feasting us with Strawberries, Mulberries, Bread, Fish, and other their Countrie provisions wherof we had plenty: for which Captaine Newport kindely requited their least favours with Bels, Pinnes, Needles, beades, or Glassas, which so contented them that his liberallitie made them follow us from place to place, ever kindely to respect us. In the midway staying to refresh our selves in a little Ile foure or five savages came unto us which described unto us the course of the River, and after in our journey, they often met us, trading with us for such provision as wee had, and ariving at Arsatecke, hee whom we supposed to bee the chiefe King of all the rest, moste kindely entertained us, giving us in a guide to go with us up the River to Powhatan, of which place their great Emperor taketh his name, where he that they honored for King used us kindely. But to finish this discoverie, we passed on further, where within an mile we were intercepted with great craggy stones in the midst of the river, where the water falleth so rudely, and with such a violence, as not any boat can possibly passe, and so broad disperseth the streame, as there is not past five or sixe Foote at a low water, and to the shore scarce passage with a barge, the water floweth foure foote, and the freshes by reason of the Rockes have left markes of the inundations 8. or 9. foote: The south side is plaine low ground, and the north side high mountaines, the rockes being of gravelly nature, interlaced with many vains of glistring spangles.

That night we returned to Powhatan: the next day (being Whitsunday after dinner) we returned to the fals, leaving a mariner in pawn with the Indians for a guide of theirs, hee that they honoured for King followed us by the river (further he would not goe) so there we erected a crosse, and that night taking our man at Powhatans, Captaine Newport congratulated his kindenes with a Gown and a Hatchet: returning to Arsetecke, and stayed there the next day to observe the height therof, & so with many signes of love we departed. The next day the Queene of Apamatuck kindely intreated us, her people being no lesse contented then the rest, and from thence we went to another place, (the name wherof I doe not remember) where the people shewed us the manner of their diving of Mussels, in which they finde Pearles.

That night passing by Weanock some twentie miles from our Fort, they according to their former churlish condition, seemed little to affect us, but as wee departed and lodged at the point of Weanocke, the people the next morning seemed kindely to content us, yet we might perceive many signs of a more Jealousie in them then before, and also the Hinde that the King of Arseteck had given us, altered his resolution in going to our Fort, and with many kinde circumstances left us there. This gave us some occasion to doubt some mischiefe at the Fort, yet Captaine Newport intended to have visited Paspahegh and Tappahanocke, but the instant change of the winde being faire for our return we repaired to the fort with all speed, where the first we heard was that 400. Indians the day before assalted the fort, & surprised it; had not God (beyond al their expectations) by meanes of the shippes at whom they shot with their Ordinances and Muskets), caused them to retire, they had entred the fort with our own men, which were then busied in setting Corne, their armes beeing then in driefats & few ready but certain Gentlemen of their own, in which conflict, most of the Counsel was hurt, a boy slaine in the Pinnas, and thirteene or fourteene more hurt. With all speede we pallisadoed our Fort: (each other day) for sixe or seaven daies we had alarums by ambuscadoes, and foure or five cruelly wounded by being abroad: the Indians losse wee know not, but as they report three were slain and divers hurt.

Captaine Newport having set things in order, set saile for England the 22 of June, leaving provision for 13. or 14 weeks. The day before the Ships departure, the king of Pamaunke sent the Indian that had met us before in our discoverie, to assure us peace, our fort being then palisadoed round, and all our men in good health and comfort, albeit, that throgh some discontented humors, it did not so long continue, for the President and Captaine Gosnold, with the rest of the Counsell being for the moste part discontented with one another, in so much, that things were neither carried with that discretion nor any busines effected in such good sort as wisdome would, nor our owne good and safetie required thereby, and through the hard dealings of our President, the rest of the counsell being diverslie affected through his audacious commaund, and for Captaine Martin, (albeit verie honest) and wishing the best good,

yet so sicke and weake, and my selfe disgrac'd through others mallice, through which disorder God (being angrie with us) plagued us with such famin and sicknes, that the living were scarce able to bury the dead: our want of sufficient and good victualls, with continuall watching foure or five each night at three Bulwarkes, being the chiefe cause: onely of Sturgion wee had great store, whereon our men would so greedily surfet, as it cost manye their lives: the Sack, Aquavitie, and other preservatives for our health, being kept onely in the Presidents hands, for his owne diet, and his few associates: shortly after Captaine Gosnold fell sicke, and within three weeks died, Captaine Ratcliffe being then also verie sicke and weake, and my selfe having also tasted of the extremitie therof, but by Gods assistance being well recovered.

27. Relation of a Voyage to Sagadahoc, 1608

Introduction

The charter granted by King James I in 1606 provided for both a southern and a northern colony in Virginia. Virginia at that time referred to the entire coastal region from the Carolinas to Maine. Among the charter's recipients were Sir Ferdinando Gorges and Sir John Popham, who were most keenly interested in a northern colony. They sent an initial exploratory expedition which reached the coast of Maine. Based on the report of navigator Martin Pring, the investors sent two vessels with colonists to Maine in June 1607. Among the colonists were Popham's nephew and Raleigh Gilbert, the son of the late Sir Humphrey Gilbert. Arriving in mid-August, the colonists selected a site at the mouth of the Sagadahoc (presentday Kennebec) River. This colony failed because an exceptionally harsh winter and the death of one of the leaders discouraged the settlers. They did succeed, however, in building a fort and a vessel, establishing cordial relations with the Indians, and acquiring valuable furs and sassafras logs. On arrival of a supply ship in the spring of 1608, the colonists returned to England with their trade goods and the ship they had built, called the Virginia. This anonymous account was probably written by the navigator of one of the two original vessels that carried the colonists to Maine.

Primary Source

Mundays beinge the 17th Auguste Capt. popham in his shallop with 30 others and Capt. Gilbert in his shipes bott accompanied with 18 other persons depted early in the morninge from thear ships and sailled up the Ryver of Sagadehock for to vew the Ryver and also to See whear they might fynd the most convenient place for thear plantation my Selffe beinge with Capt. Gilbert. So we Sailled up into this ryver near 14 Leags and found ytt to be a most gallant ryver very brod

and of a good depth. We never had Lesse Wattr then 3 fethan when we had Least and abundance of great fyshe in ytt Leaping above the Wattr on eatch Syd of us as we Sailled. So the nyght aprochinge after a whill we had refreshed our Selves upon the shore about 9 of the Cloke we sett backward to retorn and Cam abourd our shipes the next day followinge about 2 of the Clok in the afternoon. We fynd this ryver to be very pleasant with many goodly Illands in ytt and to be both Large and deepe Wattr havinge many branches in ytt. that which we tooke bendeth ytt Selffe towards the northest.

Tuesdaye beinge the 18th after our retorn we all went to the shore and thear mad Choies of a place for our plantation which ys at the very mouth or entry of the Ryver of Sagadehocke on the West Syd of the Ryver beinge almoste an Illand of a good bygness. whylst we wear uppon the shore thear Cam in three Cannoos as by us but they wold not Com near us but rowed up the Ryver and so past away.

Wensday beinge the 19th Auguste we all went to the shore whear we mad Choise for our plantation and thear we had a Sermon delyvred unto us by our precher and after the Sermon our pattent was red with the orders and Lawes thearin prescrybed and then we retorned abord our ships again.

Thursdaye beinge the 20th of Auguste all our Companyes Landed and thear began to fortefye. our presedent Capt. popham Sett the fryst spytt of ground unto ytt and after hem all the rest followed and Labored hard in the trenches about ytt.

Frydaye the 21th of Auguste all hands Labored hard about the fort Som in the trentch Som for fagetts and our ship Carpenters about the buildinge of a small penis or shallop.

Satterdaye the 22th Auguste Capt. popham early in the morninge depted in his shallop to go for the ryver of pashipskoke. thear they had parle with the Salvages again who delyvred unto them that they had ben att wars wtb Sasanoa and had slain his Soone in fyght. skid wares and Dehanada wear in this fyght.

Sondaye the 23th our presedent Capt. popham retorned unto us from the ryver of pashipscoke.

The 24th all Labored about the fort.

Tuesdaye the 25th Capt. Gilbert imbarked hem Selffe with 15 other with hem to go to the Westward uppon Som Discovery but the Wynd was contrary and forsed hem backe again the Sam daye.

The 26th and 27th all Labored hard about the fort.

Frydaye the 28th Capt. Gilbert with 14 others my Selffe beinge on Imbarked hem to go to the westward again. So the wynd Servinge

we Sailled by many gallant Illands and towards nyght the winde Cam Contrary against us So that we wear Constrained to remain that nyght under the head Land called Semeamis whear we found the Land to be most fertill. The trees growinge thear doth exceed for goodnesse and Length being the most pt of them ocke and wallnutt growinge a great space assoonder on from the other as our parks in Ingland and no thickett growinge under them. hear wee also found a gallant place to fortefye whom Nattuer ytt Selffe hath already framed with out the hand of man with a runynge stream of wattr hard adjoyninge under the foott of ytt.

Satterdaye the 29th Auguste early in the mornynge we depted from thence and rowed to the westward for that the wind was againste us but the wynd blew so hard that forsed us to remain under an Illand 2 Leags from the place we remayned the night beffore. whilst we remayned under this Illand thear passed to Cannoos by us but they wold nott Com neare us after mydnyght we put from this Illand in hope to have gotten the place we dessyered but the wind arose and blew so hard at Southwest Contrary for us that forsed us to retorn.

Sondaye beinge the 30th Auguste retornynge beffore the wynd we sailled by many goodly Illands for betwixt this head Land called Semeamis and the ryver of Sagadehock ys a great baye in the which Lyeth So many Illands and so thicke and neare together that yo Cannott well desern to Nomber them yet may yo go in betwixt them in a good ship for yo shall have never Lesse Wattr then 8 fethams these Illands ar all overgrowen with woods very thicke as ocks wallnut pyne trees and many other things growinge as Sarsaperilla hassell nuts and whorts in aboundance. So this day we retorned to our fort att Sagadehock.

Munday being the Last of Auguste nothinge hapened but all Labored for the buildinge of the fort and for the storehouse to resea ve our vyttuall.

Tuesday the first of September thear Cam a Canooa unto us in the wch was 2 greatt kettells of brasse. Som of our Company did parle with them but they did rest very doutfull of us and wold nott Suffer mor then on att a tyme to Com near unto them. So he depted. The Second daye third and $4^{\rm th}$ nothinge hapened worth the wryttinge but that eatch man did his beste endevour for the buildinge of the fort.

Satterdaye beinge the 5th of Septembr thear Cam into the entraunce of the ryver of Sagadehocke nine Canoos in the which was Dehanada and skidwarres with many others in the wholl near fortye persons men women and Children they Cam and parled with us and we aggain ussed them in all frindly maner We Could and gave them vyttaills for to eatt. So skidwarres and on more of them stayed with us untill nyght the rest of them withdrew them in thear Canooas to the farther Syd of the ryver but when nyght Cam for that skidwares woold needs go to the rest of his Company Capt. Gilbert acompaned with James Davis and Capt. ellis best took them into our bott and

Caryed them to thear Company on the farther syd the ryver and thear remained amongst them all the nyght and early in the mornynge the Sallvages depted in thear Canooas for the ryver of pemaquid promyssinge Capt. Gilbert to accompany hem in thear Canooas to the ryver of penobskott whear the bashabe remayneth.

The 6th nothinge happened the 7th our ship the *Mary ana John* began to discharge her vyttualls.

Tuesday beinge the 8th Septembr Capt. Gilbert acompaned with xxii others my Selffe beinge on of them depted from the fort to go for the ryver of penobskott takinge with hem divers Sorts of M'chandise for to trad with the Bashabe who ys the Cheeffe Comander of those parts but the wind was Contrary againste hem so that he could nott Com to dehanada and skidwares at the time apointed for ytt was the xith daye beffor he Could gett to the ryver of pemaquid Whear they do make thear abbod.

Frydaye beinge the xith in the mornynge early we Cam into the ryver of pemaquyd thear to Call nahanada and skidwares as we had promyste them. but beinge thear aryved we found no Lyvinge Creatuer. they all wear gon from thence. the wch we perseavinge presently depted towards the ryver of penobskott Saillinge all this daye and the xiith and xiiith the Lyke yett by no means Could we fynd ytt. So our vitall beinge spent we hasted to retorn. So the wynd Cam faier for us and we Sailled all the 14th and 15th dayes in retornynge the Wind blowinge very hard att north and this mornynge the15th daye we pseaved a blassing star in the northest of us.

The 16th 17th 18th 19th 20th 21th 22th nothinge hapened but all Labored hard about the fort and the store house for to Land our wyttaills.

The 23th beinge Wensdaye Capt. Gilbert acompaned with 19 others my Selffe on of them depted from the fort to go for the head of the ryver of Sagadehock. we Sailled all this daye. So did we the Lyke the 24th untill the evenynge. then we Landed thear to remain that Nyght. hear we found a gallant Champion Land and exceeddinge fertill. So hear we remained all nyght.

The 25th beinge frydaye early in the mornynge we depted from hence and sailled up the ryver about eyght Leags farther untill we Cam unto an Illand beinge Lo Land and flatt. att this Illand ys a great down Fall of watt" the wch runeth by both Sydes of this Illand very swyfte and shallow. in this Illand we found greatt store of grapes exceedinge good and sweett of to Sorts both red butt the on of them ys a mervellous deepe red. By both the syds of this ryver the grapes grow in abundance and also very good Hoppes and also Chebolls and garleck. and for the goodnesse of the Land ytt doth so far abound that I Cannott allmost expresse the Sam. hear we all went ashore and with a stronge Rope made fast to our bott and on man

in her to gyde her aggainst the Swyfte stream we pluckt her up throwe ytt pforce. after we had past this down-Fall we all went into our bott again and rowed near a Leage farther up into the ryver and nyght beinge att hand we hear stayed all nyght, and in the fryst of the night about ten of the Cloke thear Cam on the farther syd of the ryver sartain Salvages Callinge unto us in broken inglyshe. we answered them aggain. So for this time they depted.

The 26th beinge Satterdaye thear Cam a Canooa unto us and in hear fower salvages those that had spoken unto us in the nyght beffore. his name that Came unto us ys Sabenoa. he macks hemselffe unto us to be Lord of the ryver of Sagadehock.

End: The relation of Whole Voyage to Virginia, New England, 1607

(The remainder of the narration is taken from the" Historie of Travaile into Virginia," by William Strachey.)

They entertayned him friendly, and tooke him into their boat and presented him with some triffiing things, which he accepted; howbeyt, he desired some one of our men to be put into his canoa as a pawne of his safety, whereupon Captain Gilbert sent in a man of his, when presently the canoa rowed away from them with all the speed they could make up the ryver. They followed with the shallop, having great care that the Sagamo should not leape overbourd. The canoa quickly rowed from them and landed, and the men made to their howses, being neere a league on the land from the ryver's side, and carried our man with them. The shallop making good waye, at length came to another downefall, which was so shall owe and soe swift, that by noe meanes they could passe any further, for which, Captain Gilbert, with nine others, landed and tooke their fare, the salvadge Sagamo, with them, and went in search after those other salvages, whose howses, the Sagamo told Captain Gilbert, were not farr off; and after a good tedious march, they came indeed at length unto those salvages' howses wheere found neere fifty able men very strong and tall, such as their like before they had not seene; all newly painted and armed with their bowes and arrowes. Howbeyt, after that the Sagamo had talked with them, they delivered back again the man, and used all the rest very friendly, as did ours the like by them, who shewed them their comodities of beads, knives, and some copper, of which they seemed very fond; and by waye of trade, made shew that they would come downe to the boat and there bring such things as they had to exchange them for ours. Soe Captain Gilbert departed from them, and within half an howre after he had gotten to his boat, there came three canoas down unto them, and in them some sixteen salvages, and brought with them some tobacco and certayne small skynes, which where of no value; which Captain Gilbert perceaving, and that they had nothing ells wherewith to trade, he caused all his men to come abourd, and as he would have putt from the shore; the salvadges perceiving so much, subtilely devised how they might put out the fier in the shallop, by which meanes they sawe they should be free from the danger of our men's pieces, and to performe the same, one of the salvadges came into the shallop and taking the fier brand which one of our company held in his hand thereby to light the matches, as if he would light a pipe of tobacco, as sone as he had gotten yt into his hand he presently threw it into the water and leapt out of the shallop. Captain Gilbert seeing that, suddenly commanded his men to betake them to their musketts and the targettiers too, from the head of the boat, and bad one of the men before, with his targett on his arme, to stepp on the shore for more fier; the salvages resisted him and would not suffer him to take any, and some others holding fast the boat roap that the shallop could not pott off. Captain Gilbert caused the musquettiers to present their peeces, the which, the salvages seeing, presently let go the boatroap and betooke them to their bowes and arrowes, and ran into the bushes, nocking their arrowes, but did not shoot, neither did ours at them. So the shallop departed from them to the further side of the ryver, where one of the canoas came unto them, and would have excused the fault of the others. Captain Gilbert made shew as if he were still friends, and entertayned them kindlye and soe left them, returning to the place where he had lodged the night before, and there came to an anchor for that night. The head of the ryver standeth in 45 degrees and odd mynutts. Upon the continent they found aboundance of spruse trees such as are able to maast the greatest ship his majestie hath, and many other trees, oake, walnutt, pineaple; fish, aboundance; great store of grapes, hopps, chiballs, also they found certaine codds in which they supposed the cotton wooll to grow, and also upon the bancks many shells of pearle.

27. Here they sett up a crosse and then returned homeward, in the way seeking the by ryver of some note called Sasanoa. This daye and the next they sought yt, when the weather turned fowle and full of fog and raine, they made all hast to the fort before which, the 29th, they arrived.

30. and 1 and 2 of October, all busye about the fort.

- 3. There came a canoa unto some of the people of the fort as they were fishing on the sand, in which was Skidwares, who badd them tell their president that Nahanada, with the Bashabaes brother, and others, were on the further side of the ryver, and the next daie would come and visitt him.
- 4. There came two canoas to the fort, in which were Nahanada and his wife, and Skidwares, and the Basshabaes brother, and one other called Amenquin, a Sagamo; all whome the president feasted and entertayned with all kindnes, both that day and the next, which being Sondaye, the president carried them with him to the place of publike prayers, which they were at both morning and evening, attending yt with great reverence and silence.
- 6. The salvadges departed all except Amenquin the Sagamo, who would needes staye amongst our people a longer tyme.

Upon the departure of the others, the president gave unto everyone of them copper beades, or knives, which contented them not a little, as also delivered a present unto the Basshabae's brother, and another for his wife, giving him to understand that he would come unto his court in the ryver of Penobscot, and see him very shortly, bringing many such like of his country commodityes with him.

You maie please to understand how, whilst this business was thus followed here, soone after their first arrivall, that had dispatch't away Capt. Robert Davies, in the *Mary and John*, to advertise of their safe arrival and forwardness of their plantacion within this ryver of Sachadehoc, with letters to the Lord Chief Justice, importuninge a supply for the most necessary wants to the subsisting of a colony, to be sent unto them betymes the next yeare.

After Capt. Davies' departure they fully finished the fort, trencht and fortefied yt with twelve pieces of ordinaunce, and built fifty howses, therein, besides a church and a storehowse; and the carpenters framed a pretty Pynnace of about some thirty tonne, which they called *Virginia*; the chief ship wright beinge one Digby of London.

Many discoveries likewise had been made both to the mayne and unto the neghbour ryvers, and the frontier nations fully discovered by the diligence of Capt. Gilbert, had not the wynter proved soe extreame unseasonable and frosty; for yt being in the yeare 1607, when the extraordinary frost was felt in most parts of Europe, yt was here likewise as vehement, by which noe boat could stir upon any busines. Howbeyt, as tyme and occasyon gave leave, there was nothing omitted which could add unto the benefitt or knowledg of the planters, for which when Capt. Davies arrived there in the yeare following (sett out from Topsam, the port towne of Exciter, with a shipp laden full of vitualls, armes, instruments and tooles, etc.,) albeyt he found Mr. George Popham, the president, and some other dead, yet he found all things in good forwardness, and many kinds of funs obteyned from the Indians by way of trade; good store of sarsaparilla gathered, and the new pynnace all finished. But by reason that Capt. Gilbert received letters that his brother was newly dead, and a faire portion of land fallen unto his share, which required his repaier home, and noe mynes discovered, nor hope thereof, being the mayne intended benefit expected to uphold the charge of this plantacion, and the feare that all other winters would prove like the first, the company by no means would stay any longer in the country, especyally Capt. Gilbert being to leave them, and Mr. Popham, as aforesaid, dead; wherefore they all ymbarqued in this new arrived shipp, and in the new pynnace, the Virginia, and sett saile for England. And this was the end of that north erne colony uppon the ryver Sachadehoc.

28. Samuel de Champlain, Account of the Foundation of Quebec, 1608

Introduction

Giovanni da Verrazano's 1524 voyage formed the basis of France's claims to land in North America. Jacques Cartier sailed to North America 10 years later and explored the Gulf of Saint Lawrence. Cartier returned to the Saint Lawrence a year later and reached present-day Quebec and Montreal. His party spent a brutal winter at Quebec and many died. When spring came, Cartier abducted several Iroquois chiefs and returned to France. This second voyage established the first French presence in Canada and made lasting enemies of the Iroquois. The king ordered another expedition in 1541 to establish a more lasting colony in the face of Spanish claims. After another brutal winter, Cartier again abandoned Quebec. France lost interest in the region until Samuel de Champlain returned decades later. Champlain was the son of a ship captain and soldier in the French Army. He first commanded a transatlantic voyage in 1599, and first sailed to Canada in 1603. From 1604 to 1606, Champlain explored the coast and waterways of eastern Canada and New England with an eye to finding a site for a French colony. He again sailed to Canada in 1608 and founded a trading post and settlement at Quebec. While building the post, Champlain foiled a plot to kill him and sell the post to the Spanish.

Primary Source

From the Island of Orleans to Quebec the distance is a league. I arrived there on the 3d of July, when I searched for a place suitable for our settlement, but I could find none more convenient or better situated than the point of Quebec, so called by the savages, which was covered with nut-trees. I at once employed a portion of our workmen in cutting them down, that we might construct our habitation there: one I set to sawing boards, another to making a cellar and digging ditches, another I sent to Tadoussac with the barque to get supplies. The first thing we made was the storehouse for keeping under cover our supplies, which was promptly accomplished through the zeal of all, and my attention to the work.

Some days after my arrival at Quebec, a locksmith conspired against the service of the king. His plan was to put me to death, and, getting possession of our fort, to put it into the hands of the Basques or Spaniards, then at Tadoussac, beyond which vessels cannot go, from not having a knowledge of the route, nor of the banks and rocks on the way.

In order to execute his wretched plan, by which he hoped to make his fortune, he suborned four of the worst characters, as he supposed, telling them a thousand falsehoods, and presenting to them prospects of acquiring riches. These four men, having been won over, all promised to act in such a manner as to gain the rest over to their side; so that, for the time being, I had no one with me in whom I could put confidence, which gave them still more hope of making their plan succeed: for four or five of my companions, in whom they knew that I put confidence, were on board of the barques, for the purpose of protecting the provisions and supplies necessary for our settlement.

In a word, they were so skilful in carrying out their intrigues with those who remained, that they were on the point of gaining all over to their cause, even my lackey, promising them many things which they could not have fulfilled.

Being now all agreed, they made daily different plans as to how they should put me to death, so as not to be accused of it, which they found to be a difficult thing. But the devil blindfolding them all and taking away their reason and every possible difficulty, they determined to take me while unarmed and strangle me; or to give a false alarm at night, and shoot me as I went out, in which manner they judged that they would accomplish their work sooner than otherwise. They made a mutual promise not to betray each other, on penalty that the first one who opened his mouth should be poniarded. They were to execute their plan in four days, before the arrival of our barques, otherwise they would have been unable to carry out their scheme.

On this very day, one of our barques arrived, with our pilot, Captain Testu, a very discreet man. After the barque was unloaded, and ready to return to Tadoussac, there came to him a locksmith, named Natel, an associate of Jean du Val, the head of the conspiracy, who told him that he had promised the rest to do just as they did; but that he did not in fact desire the execution of the plot, yet did not dare to make a disclosure in regard to it, from fear of being poniarded.

Antoine Natel made the pilot promise that he would make no disclosure in regard to what he should say, since, if his companions should discover it, they would put him to death. The pilot gave him his assurance in all particulars, and asked him to state the character of the plot which they wished to carry out. This Natel did at length, when the pilot said to him: "My friend, you have done well to disclose such a malicious design, and you show that you are an upright man, and under the guidance of the Holy Spirit. But these things cannot be passed by without bringing them to the knowledge of Sieur de Champlain, that he may make provision against them; and I promise you that I will prevail upon him to pardon you and the rest. And I will at once," said the pilot, "go to him without exciting any suspicion; and do you go about your business, listening to all they may say, and not troubling yourself about the rest."

The pilot came at once to me, in a garden which I was having prepared, and said that he wished to speak to me in a private place, where we could be alone. I readily assented, and we went into the

wood, where he related to me the whole affair. I asked who had told it to him. He begged me to pardon him who had made the disclosure, which I consented to do, although he ought to have addressed himself to me. He was afraid, he replied, that you would become angry, and harm him. I told him that I was able to govern myself better than that, in such a matter; and desired him to have the man come to me, that I might hear his statement. He went, and brought him all trembling with fear lest I should do him some harm. I reassured him, telling him not to be afraid; that he was in a place of safety, and that I should pardon him for all that he had done, together with the others, provided he would tell me in full the truth in regard to the whole matter, and the motive which had impelled them to it. "Nothing," he said, "had impelled them, except that they had imagined that, by giving up the place into the hands of the Basques or Spaniards, they might all become rich, and that they did not want to go back to France." He also related to me the remaining particulars in regard to their conspiracy.

After having heard and questioned him, I directed him to go about his work. Meanwhile, I ordered the pilot to bring up his shallop, which he did. Then I gave two bottles of wine to a young man, directing him to say to these four worthies, the leaders of the conspiracy, that it was a present of wine, which his friends at Tadoussac had given him, and that he wished to share it with them. This they did not decline, and at evening were on board the barque where he was to give them the entertainment. I lost no time in going there shortly after; and caused them to be seized, and held until the next day.

Then were my worthies astonished indeed. I at once had all get up, for it was about ten o'clock in the evening, and pardoned them all, on condition that they would disclose to me the truth in regard to all that had occurred; which they did, when I had them retire.

The next day I took the depositions of all, one after the other, in the presence of the pilot and sailors of the vessel, which I had put down in writing; and they were well pleased, as they said, since they had lived only in fear of each other, especially of the four knaves who had ensnared them. But now they lived in peace, satisfied, as they declared, with the treatment which they had received.

The same day I had six pairs of handcuffs made for the authors of the conspiracy: one for our surgeon, named Bonnerme, one for another, named La Taille, whom the four conspirators had accused, which, however, proved false, and consequently they were given their liberty.

This being done, I took my worthies to Tadoussac, begging Pont Gravé to do me the favor of guarding them, since I had as yet no secure place for keeping them, and as we were occupied in constructing our places of abode. Another object was to consult with him, and others on the ship, as to what should be done in the premises. We suggested that, after he had finished his work at Tadoussac, he should come to

Quebec with the prisoners, where we should have them confronted with their witnesses, and, after giving them a hearing, order justice to be done according to the offence which they had committed.

I went back the next day to Quebec, to hasten the completion of our storehouse, so as to secure our provisions, which had been misused by all those scoundrels, who spared nothing, without reflecting how they could find more when these failed; for I could not obviate the difficulty until the storehouse should be completed and shut up.

Pont Gravé arrived some time after me, with the prisoners, which caused uneasiness to the workmen who remained, since they feared that I should pardon them, and that they would avenge themselves upon them for revealing their wicked design.

We had them brought face to face, and they affirmed before them all which they had stated in their depositions, the prisoners not denying it, but admitting that they had acted in a wicked manner, and should be punished, unless mercy might be exercised towards them; accusing, above all, Jean du Val, who had been trying to lead them into such a conspiracy from the time of their departure from France. Du Val knew not what to say, except that he deserved death, that all stated in the depositions was true, and that he begged for mercy upon himself and the others, who had given in their adherence to his pernicious purposes.

After Pont Gravé and I, the captain of the vessel, surgeon, mate, second mate, and other sailors, had heard their depositions and face to face statements, we adjudged that it would be enough to put to death Du Val, as the instigator of the conspiracy; and that he might serve as an example to those who remained, leading them to deport themselves correctly in future, in the discharge of their duty; and that the Spaniards and Basques, of whom there were large numbers in the country, might not glory in the event. We adjudged that the three others be condemned to be hung, but that they should be taken to France and put into the hands of Sieur de Monts, that such ample justice might be done them as he should recommend; that they should be sent with all the evidence and their sentence, as well as that of Jean du Val, who was strangled and hung at Quebec, and his head was put on the end of a pike, to be set up in the most conspicuous place on our fort.

29. Johan de Laet, Account of Henry Hudson's Voyage, 1609

Introduction

The Dutch East India Company (formed in the Netherlands in 1602) hired the English navigator Henry Hudson to search for a

northeast passage to China. In 1609, Hudson set out in the Half-Moon, but failing to find a northeastern way through the Arctic ice, he defied his orders to return to port and sailed westward across the Atlantic Ocean. After exploring the American coast from Maine to the Chesapeake Bay, Hudson sailed up the river that would later bear his name. He followed it to the limit of navigation—about 150 miles—and turned back at the site of presentday Albany, New York. In preparing this account, the author, a director of the Dutch West India Company (formed in 1621) may have used and then destroyed Hudson's journal. On his return voyage, Hudson made landfall in England and was prevented by the authorities from going on to the Netherlands. He succeeded, however, in sending on the log of his voyage. Hudson's 1609 voyage resulted in the establishment of a trading post on the Hudson River in 1614 and of New Netherland in 1624. His next and final voyage, in the pay of England in 1610–1611, led to the discovery of Hudson's Bay. His crew mutinied and set him adrift, never to be seen again.

Primary Source

As to the first discovery, the Directors of the authorized East India Company, in the year 1609, dispatched the yacht, Half-Moon, under the command of Henry Hudson, captain and super-cargo, to seek a passage to China by the north-east. But he changed his course and stood over towards New France, and having passed the banks of New Foundland in latitude 43° 23', he made the land in latitude 44° 15', with a west-north-west and north-west course, and went on shore at a place where there were many of the natives with whom, as he understood, the French came every year to trade. Sailing hence, he bent his course to the south, until running south-southwest and south-west by south, he again made land in latitude 41° 43', which he supposed to be an island, and gave it the name of New Holland, but afterwards discovered that it was Cape Cod, and that according to his observation, it lay two hundred and twentyfive miles to the west of its place on all the charts. Pursuing his course to the south, he again saw land in latitude 37° 15'; the coast was low, running north and south, and opposite to it lay a bank or shoal, within which there was a depth of eight, nine, ten, eleven, seven, and six and a half fathoms, with a sandy bottom. Hudson called this place Dry Cape.

Changing his course to the northward, he again discovered land in lat. 38° 9', where there was a white sandy shore, and within appeared a thick grove of trees full of green foliage. The direction of the coast was north-north-east and south-south-west for about twenty-four miles; then north and south for twenty-one miles, and afterwards south-east and north-west for fifteen miles. They continued to run along the coast to the north, until they reached a point from which the land stretches to the west and north-west, where several rivers discharge into an open bay. Land was seen to the east-north-east, which Hudson at first took to be an island, but it proved to be the main land, and the second point of

the bay, in latitude 38° 54'. Standing in upon a course north-west by east, they soon found themselves embayed, and encountering many breakers, stood out again to the south-southeast. Hudson suspected that a large river discharged into the bay, from the strength of the current that set out and caused the accumulation of sands and shoals.

Continuing their course along the shore to the north, they observed a white sandy beach and drowned land within, beyond which there appeared a grove of wood; the coast running north-east by east and south-west by south. Afterwards the direction of the coast changed to north by east, and was higher land than they had yet seen. They at length reached a lofty promontory or head-land, behind which was situated a bay, which they entered and run up into a road-stead near a low sandy point, in lat. 40° 18'. There they were visited by two savages clothed in elk-skins, who showed them every sign of friendship. On the land they found an abundance of blue plums and magnificent oaks, of a height and thickness that one seldom beholds; together with poplars, linden trees, and various other kinds of wood useful in ship-building. Sailing hence in a northeasterly direction, they ascended a river to nearly 43° north latitude, where it became so narrow and of so little depth, that they found it necessary to return.

From all that they could learn, there had never been any ship or Christians in that quarter before, and they were the first to discover the river and ascend it so far. Henry Hudson returned to Amsterdam with this report; and in the following year, 1610, some merchants again sent a ship thither, that is to say, to the second river discovered, which was called Manhattes, from the savage nation that dwelt at its mouth. And subsequently their High Mightinesses the States General granted to these merchants the exclusive privilege of navigating this river and trading there; whereupon, in the year 1615, a redoubt or fort was erected on the river, and occupied by a small garrison, of wich we shall hereafter speak. Our countrymen have continued to make voyages thither from year to year for the purpose of trafficking with the natives, and on this account the country has very justly received the name of New-Netherlands.

Henry Hudson, who first discovered this river, and all that have since visited it, express their admiration of the noble trees growing upon its banks; and Hudson has himself described the manners and appearance of the people that he found dwelling within the bay, in the following terms:

"When I came on shore, the swarthy natives all stood around, and sung in their fashion; their clothing consisted of the skins of foxes and other animals, wich they dress and make the skins into garments of various sorts. Their food is Turkish wheat, (maize or Indian corn), which they cook by baking, and it is excellent eating. They all came on board one after another in their canoes, which

are made of a single hollowed tree; their weapons are bows and arrows, pointed with sharp stones, which they fasten with hard resin. They had no houses, but slept under the blue heavens, sometimes on mats of bulrushes interwoven, and sometimes on the leaves of trees. They always carry with them all their goods, such as their food and green tobacco, which is strong and good for use. They appear to be a friendly people, but have a great propensity to steal, and are exceedingly adroit in carrying away whatever they take a fancy to."

In latitude 40° 48', where the savages brought very fine oysters to the ship, Hudson describes the country in the following manner: "It is as pleasant a land as one need tread upon; very abundant in all kinds of timber suitable for shipbuilding, and for making large casks or vats. The people had copper tobacco pipes, from which I inferred that copper might naturally exist there; and iron likewise according to the testimony of the natives, who, however, do not understand preparing it for use.

Hudson also states that they caught in the river all kinds of freshwater fish with seines, and young salmon and sturgeon. In latitude 42° 18' he landed: "I sailed, to the shore," he says, "in one of their canoes, with an old man, who was the chief of a tribe, consisting of forty men and seventeen women; these I saw there in a house well constructed of oak-bark, and circular in shape, so that it had the appearance of being well built, with an arched roof. It contained a great quantity of maize or Indian corn, and beans of the last year's growth, and there lay near the house for the purpose of drying, enough to load three ships, besides what was growing in the fields. On our coming into the house, two mats were spread out to sit upon, and immediately some food was served in well made red wooden bowls; two men were also despatched at once with bows and arrows in quest of game, who soon after brought in a pair of pigeons which they had shot. They likewise killed a fat dog, and skinned it ill great haste with shells which they had got out of the water. They supposed that I would remain with them for the night, but I returned after a short time on board the ship. The land is the finest for cultivation that I ever in my life set foot upon, and it also abounds in trees of every description. The natives are a very good people, for when they saw that I would not remain, they supposed that I was afraid of their bows, and taking the arrows, they broke them in pieces, and threw them into the fire, etc."

He found there also vines and grapes, pumpkins, and other fruits; from all of which there is sufficient reason to conclude that it is a pleasant and fruitful country and that the natives are well disposed, if they are only well treated; although they are very changeable, and of the same general character as all the savages in the north.

30. Samuel de Champlain, Image of the 1609 Battle of Ticonderoga, 1613

Introduction

In 1534, Jacques Cartier sailed to North America and explored the Gulf of Saint Lawrence. He returned to the Saint Lawrence a year later and reached present-day Quebec and Montreal. His party spent a difficult, cold winter at Quebec and many died. When spring came, Cartier abducted several Iroquois chiefs and returned to France. This second voyage established the first French presence in Canada and earned the enmity of the Iroquois. The king ordered another expedition in 1541 to establish a more lasting colony in the face of Spanish claims. After yet another brutal winter, Cartier again abandoned Quebec. France lost interest in the region until Samuel de Champlain sailed to Canada in 1603. From 1604 to 1606, he explored the coast and waterways of eastern Canada and New England with an eye to finding a site for a French colony. He again sailed to Canada in 1608 and founded a trading post and settlement at Quebec. In 1609 Champlain joined the Montagnais Indians on an incursion into Iroquois territory, during which he entered and named Lake Champlain. This illustration of the resulting battle on the shore of the lake appeared in Champlain's 1613 book. Champlain shot two chiefs and helped defeat the Iroquois, who remained lasting enemies of the French.

31. Diego de Molina, Account of the English in Virginia, 1613 [Excerpt]

Introduction

Under the 1494 Treaty of Tordesillas, Spain laid claim to much of the Americas. However, the other European powers did not recognize this claim. The English, French, and Dutch all explored the coast of North America and made plans to establish colonies. The Spanish dealt ruthlessly with a French colony in Florida in 1565, and planned to destroy the English colony on Roanoke Island in 1589. Although at peace with England since 1604, Spain jealously guarded its interests in North America. In 1611, the king of Spain sent a ship to investigate the English colony at Jamestown, Virginia. Three men went ashore to ask for a pilot, and the colonists seized them as spies and imprisoned them. One died in captivity. The two survivors, in response to Spanish protests, were sent back to Europe in 1616. But before he had any hope of repatriation, one survivor, Don Diego de Molina, wrote this letter to the Spanish ambassador to England in 1613 and contrived to have it smuggled across the Atlantic hidden in the shoe of a "Venetian gentleman" (perhaps a sailor). Molina warns that the English would continue to expand their colony if left unchecked, and describes the colony's location, resources, and vulnerability to a Spanish attack.

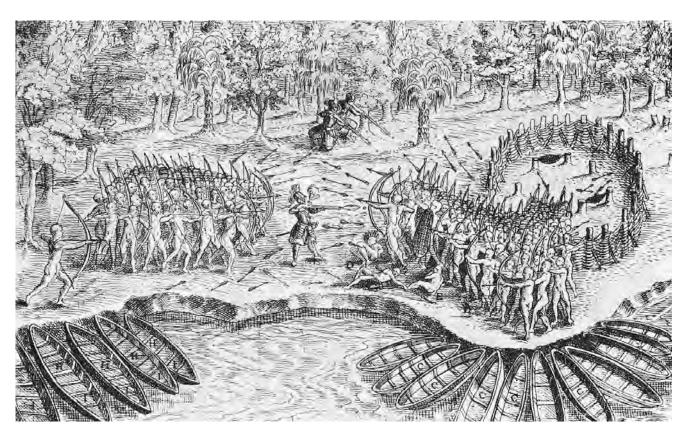

Image of the 1609 Battle of Ticonderoga. This illustration of the battle on the shore of the lake appeared in French explorer Samuel de Champlain's 1613 book. In the battle, Champlain shot two chiefs and helped defeat the Iroquois, who remained lasting enemies of the French. (Library of Congress)

Primary Source

THE person who will give this to Your Lordship is very trustworthy and Your Lordship can give credence to everything he will say, so I will not be prolix in this but will tell in it what is most important. Although with my capture and the extraordinary occurrences following it His Majesty will have opened his eyes and seen this new Algiers of America, which is coming into existence here, I do not wonder that in all this time he has not remedied it because to effect the release would require an expedition, particularly as he lacks full information for making a decision. However I believe that with the aid of Your Lordship's intelligence and with the coming of the caravel to Spain, His Majesty will have been able to determine what is most important and that that is to stop the progress of a hydra in its infancy, because it is clear that its intention is to grow and encompass the destruction of all the West, as well by sea as by land and that great results will follow I do not doubt, because the advantages of this place make it very suitable for a gathering-place of all the pirates of Europe, where they will be well received. For this nation has great thoughts of an alliance with them. And this nation by itself will be very powerful because as soon as an abundance of wheat shall have been planted and there shall be enough cattle, there will not be a man of any sort whatever who will not alone or in. company with others fit out a ship to come here and join the rest, because as Your Lordship knows this Kingdom abounds in poor people who abhor peace—and of necessity because in peace they perish—and the rich arc so greedy and selfish that they even cherish a desire for the Indies and the gold and silver there—notwithstanding that there will not be much lack of these here, for they have discovered some mines which are considered good, although they have not yet been able to derive profit from them. But when once the preliminary steps are taken there are many indications that they will find a large number in the mountains. So the Indians say and they offer to show the locations that they know and they say that near the sources of the rivers, as they come down from the mountain, there is a great quantity of grains of silver and gold, but, as they do not set any value on these but only on copper which they esteem highly, they do not gather them.

As yet these men have not been able to go to discover these although they greatly desire it, nor to pass over this range to New Mexico and from there to the South Sea where they expect to establish great colonies and fit out fleets with which to become lords of that sea as well as of this, by colonizing certain islands among those to the cast of the channel of Bahama and even to conquer others, as Puerto Rico, Santo Domingo and Cuba. And although this would be difficult at the least, we have already seen signs of these purposes in the colonizing of Bermuda where they are said to have strong fortifications, because the lay of the land is such that a few can defend themselves against a great number and prevent disembarking and landing. The depth as I have understood is not enough for ships of a hundred tons, but I believe that they make it out less than it is, for that island has already been described in the relation of Captain

Diego Ramirez who was stranded there, and it seems to me that larger vessels can enter. I do not recall it well but the description is in the house of Don Rodrigo de Aguiar of the Council of the Indies and the register is in Seville in the house of the licentiate Antonio Moreno, cosmographer of the Council. But above all this captain will give enough information of the island, and it is very important for the military actions which may have to take place in it. Its fertility is great, there is abundance of fish and game, and pork as much as they can want, and so they get along very well in that colony because they have little need of England, for they are likewise rich in amber and pearl of which in a very few months it is said they have sent to that kingdom more than fifty thousand ducats in value, reckoning the ounce at a moderate price. Four days ago a vessel arrived here that brought them men and provisions and they do not cease talking of the excellence of that island and its advantages.

The soil in this place is very fertile for all species, only not for those which require much heat, because it is cold. There is much game and fish, but as they have not begun to get profit from the mines, but only from timber, the merchants have not been able to maintain this colony with as much liberality as was needed and so the people have suffered much want, living on miserable rations of oats or maize and dressing poorly. For which reason, if today three hundred men should come, this same year would destroy more than one hundred and fifty, and there is not a year when half do not die. Last year there were seven hundred people and not three hundred and fifty remain, because little food and much labor on public works kills them and, more than all, the discontent in which they live seeing themselves treated as slaves with cruelty. Wherefore many have gone over to the Indians, at whose hands some have been killed, while others have gone out to sea, being sent to fish, and those who remain have become violent and are desirous that a fleet should come from Spain to take them out of their misery. Therefore they cry to God of the injury that they receive and they appeal to His Majesty in whom they have great confidence, and should a fleet come to give them passage to that kingdom, not a single person would take up arms. Sooner would they forfeit their respect and obedience to their rulers who think to maintain this place till death.

And although it is understood there that the merchants are deserting this colony, this is false for it is a strategem with which they think to render His Majesty careless, giving him to understand that this affair will settle itself, and that thus he will not need to go to the expense of any fleet whatever to come here. With eight hundred or one thousand soldiers he could reduce this place with great ease, or even with five hundred, because there is no expectation of aid from England for resistance and the forts which they have are of boards and so weak that a kick would break them down, and once arrived at the ramparts those without would have the advantage over those within because its beams and loopholes are common to both parts—a fortification without skill and made by unskilled men. Nor are they efficient soldiers, although the rulers and captains

make a great profession of this because of the time they have served in Flanders on the side of Holland, where some have companies and castles. The men are poorly drilled and not prepared for military action.

However they have placed their hope on one of two settlements, one which they have founded twenty leagues up the river in a bend on a rugged peninsula with a narrow entrance by land and they are persuaded that there they can defend themselves against the whole world. I have not seen it but I know that it is similar to the others and that one night the Indians entered it and ran all over the place without meeting any resistance, shooting their arrows through all the doors, so that I do not feel that there would be any difficulty in taking it or the one in Bermuda, particularly if my advice be taken in both matters as that of a man who has been here two years and has considered the case with care. I am awaiting His Majesty's decision and am desirous of being of some service and I do not make much of my imprisonment nor of the hardships which I have suffered in it, with hunger, want and illness, because one who does a labor of love holds lightly all his afflictions. The ensign Marco Antonio Perez died fifteen months ago, more from hunger than illness, but assuredly with the patience of a saint and the spirit of a good soldier. I have not fared very ill, but tolerably so, because since I arrived I have been in favor with these people and they have shown me friendship as far as their own wretchedness would allow, but with genuine good-will. The sailor who came with me is said to be English and a pilot. He declares that he is from Aragon and in truth no one would take him for a foreigner.

32. Pierre Biard, Account of the English Attack on the French in Maine, May 26, 1614

Introduction

Spain laid claim to much of the Americas. However, the other European powers did not recognize this claim. The major European powers—Spain, France, England, and the Netherlands—all explored the North American coast and vied for a toehold at the edge of the continent. Whether or not they were at war or nominally at peace in Europe, they dealt harshly with one another in America. The Spanish dealt ruthlessly with a French colony in Florida in 1565, and planned to destroy the English colony on Roanoke Island in 1589. The English at Jamestown feared that the Spanish would attack them and captured three spies in 1611. In 1613 the English colonists deployed their limited resources against the French, tar-

geting their small settlements at Maine and Nova Scotia. The governor of the Virginia colony placed Samuel Argall, the deputy governor, in command of the expedition against the French. Argall burned a French Jesuit mission on Mt. Desert Island off present-day Maine and took 15 prisoners back to Virginia. The governor again dispatched Argall to burn the French settlements at Sainte Croix and Port Royal, Nova Scotia. Father Pierre Biard was compelled to accompany the expedition and show the way to the settlements. He was eventually returned to France after nine months of captivity.

TO THE VERY REVEREND FATHER CLAUDE ACQUAVIVA, GENERAL OF THE SOCIETY OF JESUS, AT ROME, MAY 26, 1614

Very Reverend Father in Christ: The peace of Christ be with you.

Both affection and duty urge me, fresh from such multiplied and mighty perils, from which I have been rescued by the surpassing favor of the Lord and by the prayers of your Paternity, to send you my greetings; and, in so far as it is possible, I throw myself at your knees and embrace you, assuredly with the utmost gratitude and devotion. And indeed I am bound, as it were, to contemplate myself, both to do penance, as I hope, and to express my gratitude; so great are the perils out of which I now marvel to see myself delivered. But, as it may at this time be wearisome to weave a long story of all these things, and as it is probable that Your Paternity has already learned many of them from Father Enemond Massé, I shall pass over all the rest, and confine myself for the present to this one matter: in what manner, after our violent capture by the English in New France, we were taken from place to place, and at last restored to this our native land.

There were, as Your Paternity knows, only four of our society in New France in the last year, 1613. Then, too, we first began to build in a convenient place a new settlement, a new colony, etc. But most unexpectedly, by some hazard or other (for a hazard it certainly was, and not a premeditated plan), some English from Virginia were driven upon our shores, who attacked our ships with the utmost fury, at a time when nearly all its defenders were occupied on land. Resistance was nevertheless made for a time, but we were soon obliged to surrender. In the struggle, two of the French were killed, four were wounded; and in addition our brother Gilbert Duthet received a mortal wound. He made a most Christian end, the following day, under my ministration.

Our ships having been captured and everything pillaged, it was a great concession to us, —that is, to us priests and Jesuits,—that we were not killed. And yet this sparing of our lives, if considered in itself only, would have been worse than any death. For what were we to do in an absolutely desert and barren region, despoiled and destitute of everything? The savages, indeed, used to come to us

stealthily and by night; and with great generosity and devotion commiserated our misfortune, and promised us whatever they could. Truly the condition of things was such that either death itself, or a more calamitous misfortune, everywhere threatened us. There were in all thirty of us in these distressing circumstances. One consideration rendered the English less severe, namely, that one of our boats had escaped, in spite of their watchfulness; and as they had no doubt that it would bear witness to the violence done us, they were obliged to spare our lives, for they feared reprisals and dreaded our king. Therefore they finally offered (a great favor, forsooth) to leave for our thirty survivors a single boat, in which we might coast along the seashore, on the chance of finding some French vessel to take us back to our own country. It was shown that this boat could not hold over fifteen men; but nothing further could be obtained, even from among our own boats. To be brief: in this perplexity each of us took counsel as he could. Father Enemond Massé embarked with fourteen companions in the boat I have mentioned, and the Lord favored him, as Your Paternity has already learned. I went to the English captain and obtained a promise from him that I and Father Jacques Quentin, my companion, and also John Dixon who had been admitted into the Society—and one servant, should be transported to the neighboring islands where the English usually fish, and that we should there be recommended to these English fishermen; so that, having been carried by them to England, we might easily return thence into France. I obtained, as I say, a promise to this effect, but there was no good faith in this promise. For they carried us off, together with the Frenchmen who remained, fifteen in all, straight to their own country, Virginia, distant from the place in which we had been captured at least two hundred and fifty leagues. In Virginia however a new peril arose; for the governor there I wished to hang us all, and especially the Jesuits. But the captain who had taken us resisted, alleging his promise to us. Finally this promise, or their fear of our king, prevailed.

After this episode the captain who had taken us was commissioned to return to that part of New France where he had plundered us, and to plunder any French ships he might find, and burn all the houses and settlements. There remained two French settlements there, that of Sainte Croix and that of Port Royal, where I had remained for two years. Three ships were equipped for this expedition,—two which they had taken from us, and a third and larger one, the man-of-war, as they call it, which had taken us. So eight of us Frenchmen were taken in this vessel, in view of any opportunity that might arise of sending us back to our own country. These vessels returned first to the place where we had been captured, and all the crosses that we had set up they overthrew. But not unavenged! On the same spot, before our departure, they hanged one of their number whom they had apprehended in some plot. Thus one cross took the place of many.

Here a new peril arose. The English, as I have previously stated, wished to go to the settlement of Sainte Croix, although it had at this time no inhabitants. Some salt, however, had been left there. No one

except myself knew the way; and the English knew that I had been there formerly. They accordingly demand that I lead them. I do all I can to evade and refuse this proposal; but it avails me nothing. They perceive clearly that I am unwilling to obey. At this the captain grows very angry, and my peril becomes imminent; when suddenly they find the place without my help, and plunder and burn it. They moreover on this occasion captured a savage, who guided them to Port Royal. Although this had delivered me from one great danger, it nevertheless involved me in another greater one. For after they had plundered and burnt Port Royal (which by some inexplicable chance they had found abandoned by its inhabitants), some Frenchman, one of those very men who had deserted Port Royal, brought an accusation against me, which was nothing less than this: that I was a genuine, native Spaniard; and that, on account of certain crimes committed in France, I dared not return there. Hereupon the captain, already incensed against me, having found a fine pretext for his wrath, asked his followers whether they did not think it would be just to cast me forth on the shore and abandon me there. The opinion of the majority prevailed, who thought it better to take me back to Virginia, and there to return me to that unlucky tree which, in accordance with law and justice, I had escaped. Thus I escaped death for the moment: and so we soon after started on our return voyage to Virginia. But two days later so fearful a tempest arose that the ships were separated, and none of us knew what became of the others. The captain of our ship, after he had endured the storm for three weeks, and had begun to run short of various necessaries, particularly of fresh water, concluding that there was no hope of getting back to Virginia for a long time, decided to run to the Portuguese islands called Terceras [Azores]. Through this decision I, who appeared to have escaped from the death by hanging that awaited me, again found myself in a greater peril; greater I may truly call it, since I had here companions in my danger. The sixteen Englishmen, on approaching these islands, began to reflect that they were lost if we priests and Jesuits appeared, for we would be set at liberty on the instant by these Portuguese Catholics, and they, on the contrary, would be punished as pirates and persecutors of priests. This anxiety troubled them. But what were they to do? Should they throw us overboard, or would it suffice to conceal us? In this embarrassment and uncertainty, the captain sent for me, and laid the matter before me. I said to him that death itself was not a greater evil, in my estimation, than to be the occasion of misfortune to others. I promised, in case he chose to conceal us, that I would lend myself to this scheme in good faith. With what idea did God inspire him, to make him believe me? I know not, truly; but this I know—that if he had foreseen the dangers into which he subsequently fell, he would not have trusted me. Accordingly he hid us in the hold of the vessel; during three weeks we did not behold the sun; but the captain encountered so many difficulties in the port of the island of Faal, and the vessel was visited so frequently during this space of three weeks, that it seems marvellous that we escaped detection. But this also God purposed for the greater glory of the Society; for the English clearly saw that if we had wished to show

ourselves, and to expose them, it would frequently have been in our power to do so. They themselves afterwards, when in England, often eulogized our good faith in the presence of their ministers, and to the admiration even of the enemies of truth. Escaping from these perils, our captors decided to return to England rather than to Virginia, which was so much farther distant, and which was to be reached only by a long voyage for which they lacked all the necessaries. Accordingly we set sail for England. Our voyage was a long one, and was marked by many vicissitudes: finally, losing our bearing in the fog and the cloudy weather, we deviated from the right course and were carried to Wales, not far from Ireland. In Wales our captain, having landed near the town of Pembroke to lay in provisions, was seized and detained as a pirate, because of certain appearances pointing that way. He, however, to recover his liberty, denied being a pirate; and, as a proof of his innocence, he adduced the fact that he had in his vessel two Jesuits from whose own lips they could learn the truth, if they pleased to summon them. Oh skillful hand of divine Providence! Winter was then fully upon us, and in the ship we were in want of everything. Thus, had we not been provided for, we should have died of cold and hardships. But what need of a long story? The Jesuits are at once summoned, and, gazed at by all, are led into the town. We are ordered to give our evidence. We, of course, attest what was perfectly true,—that our captain was a royal officer and not a pirate, and that what he had done to us had been done in obedience to orders, rather than from his own free will. Accordingly, our captain was set at liberty; and in company with him we were detained in the town, and very well used, while awaiting orders from London. These were long delayed; and in the interval we frequently engaged in arguments with the ministers, and more frequently still with others, for nearly everyone was permitted to have access to us, although we were not allowed to go out. In every other respect, as I have said, we were very kindly treated. Finally we received orders to sail from Pembroke to London. But the voyage proved a long one. Protracted delays intervened; to avoid a long enumeration of these, let it suffice to say that by order of the English king we were landed at Dover, and thence sent to Calais in France. At Calais we were hospitably received by the governor and the dean of the city, and rested three days; thence we came to Amiens, where we now are.

We remained in captivity during nine months and a half. We were in the ship all the time, except when we landed at Pembroke, as related. There were three months during which we daily received only about two ounces of bread, and a small quantity of salt fish, with water that was nearly always fetid; so that we marvel at not having fallen sick. Few of the English escaped illness, and some of them even died as the result. But God doubtless watched over us in answer to the prayer of Your Paternity and of all our Society; may He grant in his goodness that it result to his own greater glory and in my salvation and better life. This I hope for, through the prayers and the blessing of Your Paternity, which, with all possible humility and affection, I solicit on my knees. May the Lord Jesus ever

watch over Your Paternity and may our Father with utmost goodness and favor increasingly bestow upon you his Most Holy grace.

Your Paternity's Obedient son and unworthy servant, PIERRE BIARD. Amiens, May 26, 1614

33. John Smith, Letter to Queen Anne about Pocahontas [Excerpt]

Introduction

John Smith was the only English witness to his legendary first encounter with Pocahontas, the 11-year-old daughter of Powhatan. Smith left Jamestown frequently to explore and trade with the Indians. On one such journey, a group of Indians captured him and killed his companions. According to Smith, his captors were about to execute him when Pocahontas threw herself down next to him and pleaded for his life. Powhatan spared his life, called him a friend and, a few days later, released him. Regardless of whether or not the events took place exactly as Smith described them, Pocahontas became a frequent visitor to Jamestown after Smith's release. At Jamestown, Pocahontas learned to speak English, converted to Christianity, and was renamed Rebecca. Her 1614 wedding to the Englishman John Rolfe brought about a period of peace between the colonists and Pocahontas's people. The couple and their infant son visited England in 1616, where Pocahontas met King James I. Before the Rolfes could return to Virginia, she fell ill and died in 1617, at the age of 21. Her young son, Thomas Rolfe, grew up to found a long line of Virginians. Smith wrote this letter to Queen Anne (wife of King James I) asking the royal family to treat her well in gratitude for all she had done for the Jamestown colonists. The letter also contains Smith's first account of his rescue by Pocahontas.

[

the power of *Powhatan* their chiefe King, I received from this great Salvage exceeding great courtesie, especially from his sonne *Nantaquaus*, the most manliest, comeliest, boldest spirit, I ever saw in a Salvage, and his sister Pocahontas, the Kings most deare and welbeloved daughter, being but a childe of twelve or thirteene yeeres of age, whose compassionate pitifull heart, of my desperate estate, gave me much cause to respect her: I being the first Christian this proud King and his grim attendants ever saw: and thus inthralled in their

barbarous power, I cannot say I felt the least occasion of want that was in the power of those my mortall foes to prevent, notwithstanding all their threats. After some six weeks fatting amongst those Salvage Courtiers, at the minute of my execution, she hazarded the beating out of her owne braines to save mine, and not onely that, but so prevailed with her father, that I was safely conducted to James towne, where I found about eight and thirtie miserable poore and sicke creatures, to keepe possession of all those large territories of Virginia, such was the weaknesse of this poore common-wealth, as had the Salvages not fed us, we directly had starved.

And this reliefe, most gracious Queene, was commonly brought us by this Lady Pocahontas, notwithstanding all these passages when inconstant Fortune turned our peace to warre, this tender Virgin would still not spare to dare to visit us, and by her our jarres have beene oft appeased, and our wants still supplied; were it the policie of her father thus to imploy her, or the ordinance of God thus to make her his instrument, or her extraordinarie affection to our Nation, I know not: but of this I am sure; when her father with the utmost of his policie and power, sought to surprize mee, having but eighteen with mee, the darke night could not affright her from comming through the irksome woods, and with watered eies gave me intelligence, with her best advice to escape his furie; which had hee knowne, hee had surely slaine her. James towne with her wild traine she as freely frequented, as he fathers habitation; and during the time of two or three yeeres, she next under God, was still the instrument to preserve this Colonie from death, famine and utter confusion, which if in those times had once beene dissolved, Virginia might have line as it was at our first arrivall to this day. Since then, the businesse having beene turned and varied by many accidents from that I left it at: it is most certaine, after a long and troublesome warre after my departure, betwixt her father and our Colonie, all which time shee was not heard of, about two yeeres after she her selfe was taken prisoner, being so detained neere two yeeres longer, the Colonie by that meanes was relieved, peace concluded, and at last rejecting her barbarous condition, was married to an English Gentleman, with whom at this present she is in England; the first Christian ever of that Nation, the first Virginian ever spake English, or had a childe in marriage by an Englishman, a matter surely, if my meaning bee truly considered and well understood, worthy a Princes understanding.

Thus most gracious Lady, I have related to your Majestie, what at your best leasure our approved Histories will account you at large, and done in the time of your Majesties life, and however this might bee presented you from a more worthy pen, it cannot come from a more honest heart, as yet I never begged anything of the state, or any, and it is my want of abilitie and her exceeding desert, your birth, meanes and authoritie, her birth, virtue, want and simplicite, doth make mee thus bold, humbly to beseech your Majestie to take this knowledge of her, though it be from one so unworthy to be the reporter, as my selfe, her husbands estate not being able to make

her fit to attend your Majestie: the most and least I can doe, is to tell you this, because none so oft hath tried it as my selfe, and the rather being of so great a spirit, how ever he stature: if she should not be well received, seeing this Kingdome may rightly have a Kingdome by her meanes; her present love to us and Christianitie, might turne to such scorne and furie, as to divert all this good to the worst of evill, where finding so great a Queene should doe her some honour more than she can imagine, for being so kinde to your servants and subjects, would so ravish her with content, as endeare her dearest bloud to effect that, your Majestie and all the Kings honest subjects more earnestly desire: And so I humbly kisse your gracious hands.

Being about this time preparing to set saile for New-England, I could not stay to doe her that service I desired, and she well deserved; but hearing she was at Branford with divers of my friends, I went to see her: After a modest salutation, without any word, she turned about, obscured her face, as not seeming well contented; and in that humour her husband, with divers others, we all left her two or three houres, repenting my selfe to have writ she could speake English. But not long after, she began to talke, and remembred mee well what courtesies she had done: saying, You did promise Powhatan what was yours should bee his, and he the like to you; you called him father being in his land a stranger, and by the same reason so must I doe you: which though I would have excused, I durst not allow of that title, because she was a Kings daughter; with a well set countenance she said, Were you not afraid to come into my fathers Countrie, and caused feare in him and all his people (but mee) and feare you here I should call you father; I tell you then I will, and you shall call mee childe, and so I will bee for ever and ever your Countrieman. They did tell us alwaies you were dead, and I knew no other till I came to Plimoth; yet Powhatan did command Uttamatomakkin to seeke you, and know the truth, because your Countriemen will lie much.

This Salvage, one of Powhatans Councell, being amongst them held an understanding fellow; the King purposely sent him, as they say, to number the people here, and informe him well what wee were and our state. Arriving at Plimoth, according to his directions, he got a long sticke, whereon by notches hee did thinke to have kept the number of all the men hee could see, but he was quickly wearie of that taske: Comming to London, where by chance I met him, having renewed our acquaintance, where many were desirous to heare and see his behaviour, hee told me Powhatan did bid him to finde me out, to shew shim our God, the King, Queene, and Prince, I so much had told them of: Concerning God, I told him the best I could, the King I heard he had seene, and the rest hee should see when he would; he denied ever to have seene the King, till by circumstances he was satisfied he had: Then he replyed very sadly, You gave Powhatan a white Dog, which Powhatan fed as himselfe, but your King gave me nothing, and I am better than your white Dog.

The small time I staid in *London*, divers Courtiers and others, my acquaintances, hath gone with mee to see her, that generally

concluded, they did thinke God had a great hand in her conversion, and they have seene many *English* Ladies worse favoured, proportioned and behavioured, and as since I have heard, it pleased both the King and Queenes Majestie honourably to esteeme her, accompanied with the honourable Lady the Lady *De la Ware*, and that honourable Lord her husband, and divers other persons of good qualities, both publikely at the maskes and otherwise, to her great satisfaction and content, which doubtlesse she would have deserved, had she lived to arrive in *Virginia*.

34. Mayflower Compact, 1620

Introduction

Brief as it is, the Mayflower Compact of 1620 set an important precedent. It established the idea that a just government originates in the consent of those it is to govern. This idea influenced later governing documents written in the United States. Unlike the Puritans, who expected to reform the Anglican Church from within, the Pilgrims were separatists. In response to harassment in England, some separatists fled to the Netherlands. Among them was a group led by William Bradford. In 1620, Bradford and 34 other Pilgrims left the Netherlands aboard the Mayflower. The ship stopped at the English port of Plymouth and took on additional passengers. The Mayflower arrived at the coast of Massachusetts in late November. The Pilgrims had intended to settle much farther south, on land owned by the Virginia Company, but rough water and dangerous currents convinced them to go no further. The approval they had been issued in England had no legal effect in Massachusetts. Fearing that some in their group would use that circumstance as an excuse to ignore all authority, 41 men agreed among themselves to sign the Mayflower Compact onboard ship on the night of November 21, 1620. The agreement stated that the signers would unite to form a government, and that they would live by the laws that the future government would establish.

35. William Bradford, *Of Plymouth Plantation*, 1648 [Excerpt]

Introduction

Unlike the Puritans, who expected to reform the Anglican Church from within, the Pilgrims were separatists. In response to harassment in England, some separatists fled to the Netherlands. Among them was a group led by William Bradford. In 1620, Bradford and 34 other Pilgrims left the Netherlands aboard the Mayflower. The ship stopped at the English port of Plymouth and took on additional passengers. The Mayflower arrived at the coast of Massachusetts in late November. The Pilgrims had intended to settle much farther south, on land owned by the Virginia Company, but rough water and dangerous currents convinced them to go no further. Bradford published this detailed history of the Pilgrims' settlement at Plymouth Plantation in 1648. The work encouraged more settlers to journey to the New World and served as an invaluable source of information for historians of colonial Massachusetts. This excerpt recounts the earliest days of Plymouth, including the signing of the Mayflower Compact, the sickness and deaths of half the colonists during the first winter, the first peace treaty with the native people, and the assistance rendered by Squanto.

 $[\ldots]$

I shall a litle returne backe and begine with a combination [the Mayflower Compact] made by them before they came a shore, being the first foundation of their governmente in this place; occasioned partly by the discontented & mutinous speeches that some of the strangers amongst them had let fall from them in the ship—That when they came a shore they would use their owne libertie; for none had power to command them, the patente they had being for Virginia, and not for New-england, which belonged to an other Government, with which the Virginia Company had nothing to doe. And partly that shuch an acte by them done (this their condition considered) might be as firme as any patent, and in some respects more sure. . . .

After this they chose, or rather confirmed, Mr. John Carver (a man godly & well approved amongst them) their Governour for that year. And after they had provided a place for their goods, or comone store, (which were long in unlading for want of boats, foulnes of winter weather, and sicknes of diverce,) and begune some small cottages for their haitation, as time would admitte, they mette and consulted of lawes & orders, both for their civill & military Governmente, as the necessitie of their condition did require, still adding therunto as urgent occasion in severall times, and as cases did require.

In these hard & difficulte beginings they found some discontents & murmurings arise amongst some, and mutinous speeches & carriags in other; but they were soone quelled & overcome by the wisdome, patience, and just & equall carrage of things by the Governor and better part, which clave faithfully togeather in the maine. But that which was most sadd & lamentable was, that in 2. or 3. moneths time halfe of their company dyed, espetialy in Jan: & February, being the depth of winter, and wanting houses & other comforts; being infected with the scurvie & other diseases, which this long vioage & their inacomodate condition had brought upon them; so as ther dyed some times 2. or 3. of a day, in the foresaid time; that of 100. & odd persons, scarce 50. remained. And of these in the time of most distres, ther was but 6. or 7. sound persons, who, to their great comendations be it spoken, spared no pains, night nor day, but with abundance of toyle and hazard of their owne health, fetched them woode, made them fires, drest them meat, made their beads, washed their lothsome cloaths, cloathed & uncloathed them: in a word, did all the homly and necessarie offices for them which dainty and quesie stomacks cannot endure to hear named; and all this willingly and cherfully, without any grudging in the least, shewing herein their true love unto their friends and bretheren. A rare example and worthy to be remembred. Tow of these 7. were Mr. William Brewster, ther reverend Elder, & Myles Standish, ther Captein & military commander, unto whom my selfe, & many others, were much beholden in our low & sicke condition. And yet the Lord so upheld these persons, as in this generall calamity they were not at all infected either with sicknes, or lamnes. And what I have said of these, I may say of many others who dyed in this generall vissitation, & others yet living, that whilst they had health, yea, or any strength continuing, they were not wanting to any that had need of them. And I doute not but their recompence is with the Lord.

But I may not hear pass by an other remarkable passage not to be forgotten. As this calamitie fell among the passengers that were to be left here to plant, and were hasted a shore and made to drinke water, that the sea-men might have the more bear, and one (which was this author himselfe) in his sicknes desiring but a small cann of beere, it was answered, that if he were their owne father he should have none; the disease begane to fall amongst them also, so as allmost halfe of their company dyed before they went away, and many of their officers and lustyest men, as the boatson, gunner, 3. quartermaisters, the cooke, & others. At which the master was something strucken and sent to the sick a shore and tould the Governor he should send for beer

for them that had need of it, though he drunke water homward bound. But now amongst his company ther was farr another kind of carriage in this miserie then amongst the passengers; for they that before had been boone companions in drinking & joyllity in the time of their health & wellfare, begane now to deserte one another in this calamitie, saing they would not hasard ther lives for them, they should be infected by coming to help them in their cabins, and so, after they came to dye by it, would doe litle or nothing for them, but it they dyed let them dye. But shuch of the passengers as were yet abord shewed them what mercy they could, which made some of their harts relente, as the boatson (& some others), who was a prowd yonge man, and would often curse & scofe at the passengers; but when he grew weak, they had compassion on him and helped him; then he confessed he did not deserve it at their hands, he had abused them in word & deed. O! saith he, you, I now see, shew your love like Christians indeed one to another, but we let one another lye & dye like doggs. Another lay cursing his wife, saing if it had not ben for her he had never come this unlucky viage, and anone cursing his felows, saing he had done this & that, for some of them, he had spente so much, & so much, amongst them, and they were now weary of him, and did not help him, having need. Another gave his companion all he had, if he died, to help him in his weaknes; he went and got a litle spise & made him a mess of meat once or twise, and because he dyed not so soone as he expected, he went amongst his fellows, & swore the rogue would cousen him, he would see him choaked before he made him any more meate; and yet the pore fellow dyed before morning.

All this while the Indians came skulking about them, and would sometimes show them selves aloofe of, but when any aproached near them, they would rune away. And once they stoale away their tools wher they had been at worke, & were gone to diner. But about the 16. of March a certaine Indian came bouldly amongst them, and spoke to them in broken English, which they could well understand, but marvelled at it. At length they understood by discourse with him, that he was not of these parts, but belonged to the eastrene parts, wher some English-ships came to fhish, with whom he was aquainted, & could name sundrie of them by their names, amongst whom he had gott his language. He became profitable to them in aquainting them with many things concerning the state of the cuntry in the east-parts wher he live, which was afterwards profitable unto them; as also of the people hear, of their names, number, & strength; of their situation & distance from this place, and who was cheefe amongst them. His name was Samaset; he tould them also of another Indian whos name was *Squanto*, a native of this place, who had been in England & could speake better English then him selfe. Being, after some time of entertainmente & gifts, dismist, a while after he came againe, & 5. more with him, & they brought againe all the tooles that were stolen away before, and made way for the coming of their great Sachem, called Massasoyt; who, about 4. or 5. days after, came with the cheefe of his freinds & other attendance, with the aforesaid Squanto. With whom, after frendly entertainment, & some gifts given him, they made a peace with him (which hath now continued this 24. years) in these terms.

- 1. That neither he nor any of his, should injurie or doe hurte to any of their peopl.
- 2. That if any of his did any hurte to any of theirs, he should send the offender, that they might punish him.
- 3. That if any thing were taken away from any of theirs, he should cause it to be restored; and they should doe the like to his.
- 4. If any did unjustly warr against him, they would aide him; if any did warr against them, he should aide them.
- 5. He should send to his neighbours confederats, to certifie them of this, that they might not wrong them, but might be likewise comprised in the conditions of peace.
- That when ther men came to them, they should leave their bows & arrows behind them.

After these things he returned to his place caled *Sowams*, some 40. mile from this place, but *Squanto* continued with them, and was their interpreter, and was a spetiall instrument sent of God for their good beyond their expectation. He directed them how to set their corne, wher to take fish, and to procure other comodities, and was also their pilott to bring them to unknowne places for their profitt, and never left them till he dyed. . . .

36. Dutch West India Company Charter, 1621 [Excerpt]

Introduction

Traders from the Netherlands had formed the Dutch East India Company in 1602, to conduct trade with Asia and the South Pacific. In 1609 the company hired English navigator Henry Hudson to explore for a northeast passage to China. When, in defiance of orders, Hudson sailed to America, he explored the river that later bore his name. In 1621, Dutch traders formed the Dutch West India Company to coordinate the Netherlands' ventures in the New World, including its holdings in the West Indies. At this time, the Netherlands was at war, fighting for independence from Spain. This conflict was part of the Thirty Years' War (1618–1648). The Dutch hoped to use their new American outpost as a base for raiding Spain's American colonies. The Dutch West India Company established New Netherland in 1624 and eventually controlled territory extending from the Connecticut River to the Delaware River. The Dutch surrendered New Netherland to the English in 1664 during the Anglo-Dutch Wars, briefly recaptured it in 1673, and surrendered it again the following year. The Dutch West India Company dissolved in 1674.

Primary Source

The States-General of the United Netherlands, to all who shall see these Presents, or hear them read, Greeting.

Be it known, that we knowing the prosperity of these countries, and the welfare of their inhabitants depends principally on navigation and trade, which in all former times by the said Countries were carried on happily, and with a great blessing to all countries and kingdoms; and desiring that the aforesaid inhabitants should not only be preserved in their former navigation, traffic, and trade, but also that their trade may be encreased as much as possible in special conformity to the treaties, alliances, leagues and covenants for traffic and navigation formerly made with other princes, republics and people, which we give them to understand must be in all parts punctually kept and adhered to: And we find by experience, that without the common help, assistance, and interposition of a General Company, the people designed from hence for those parts cannot be profitably protected and mantained in their great risque from pirates, extortion and otherwise, which will happen in so very long a voyage. We have, therefore, and for several other important reasons and considerations as thereunto moving, with mature deliberation of counsel, and for highly necessary causes, found it good, that the navigation, trade, and commerce, in the parts of the West-Indies, and Africa, and other places hereafter described, should not henceforth be carried on any otherwise than by the common united strength of the merchants and inhabitants of these countries; and for that end there shall be erected one General Company, which we out of special regard to their common well-being, and to keep and preserve the inhabitants of those places in good trade and welfare, will maintain and strengthen with our Help, Favour and assistance as far as the present state and condition of this Country will admit: and moreover furnish them with a proper Charter, and with the following Priveleges and Exemptions, to wit, That for the Term of four and twenty Years, none of the Natives or Inhabitants of these countries shall be permitted to sail to or from the said lands, or to traffic on the coast and countries of Africa from the *Tropic of Cancer* to the *Cape of Good Hope*, nor in the countries of America, or the West-Indies, beginning at the fourth end of Terra Nova, by the streights of Magellan, La Maire, or any other streights and passages situated thereabouts to the straights of Anian, as well on the north sea as the south sea, nor on any islands situated on the one side or the other, or between both; nor in the western or southern countries reaching, lying, and between both the meridians, from the Cape of Good Hope, in the East, to the east end of New Guinea, in the West, inclusive, but in the Name of this United Company of these United Netherlands. And whoever shall presume without the consent of this Company, to sail or to traffic in any of the Places within the aforesaid Limits granted to this Company, he shall forfeit the ships and the goods which shall be found for sale upon the aforesaid coasts and lands; the which being actually seized by the aforesaid Company, shall be by them kept for their own Benefit and Behoof. And in case such ships or goods shall be sold either in other countries or havens they may touch at, the owners and partners must be fined for the value of those ships and goods: Except only, that they who before the date of this charter, shall have sailed or been sent out of these or any other countries, to any of the aforesaid coasts, shall be able to continue their trade for the sale of their goods, and cosine back again, or otherwise, until the expiration of this charter, if they have had any before, and not longer: Provided, that after the first of July sixteen hundred and twenty one, the day and time of this charters commencing, no person shall be able to send any ships or goods to the places comprehended in this charter, although that before the date hereof, this Company was not finally incorporated: But shall provide therein as is becoming, against those who knowingly by fraud endeavour to frustrate our intention herein for the public good: Provided that the salt trade at Ponte del Re may be continued according to the conditions and instructions by us already given, or that may be given respecting it, any thing in this charter to the contrary notwithstanding.

II. That, moreover, the aforesaid Company may, in our name and authority, within the limits herein before prescribed, make contracts, engagements and alliances with the limits herein before prescribed, make contracts, engagements and alliances with the princes and natives of the countries comprehended therein, and also build any forts and fortifications there, to appoint and discharge Governors, people for war, and officers of justice, and other public officers, for the preservation of the places, keeping good order, police and justice, and in like manner for the promoting of trade; and again, others in their place to put, as they from the situation of their affairs shall see fit: Moreover, they must advance the peopling of those fruitful and unsettled parts, and do all that the service of those countries, and the profit and increase of trade shall require: and the Company shall successively communicate and transmit to us such contracts and alliances as they shall have made with the aforesaid princes and nations; and likewise the situation of the fortresses, fortifications, and settlements by them taken.

III. Saving, that they having chosen a governor in chief, and prepared instructions for him, they shall be approved, and a commission given by us, And that further, such governor in chief, as well as other deputy governors, commanders, and officers, shall be held to take an oath of allegiance to us and also to the Company.

IV. And if the aforesaid Company in and of the aforesaid places shall be cheated under the appearance of friendship, or badly treated, or shall suffer loss in trusting their money or Goods, without having restitution, or receiving payment for them, they may use the best methods in their power, according to the situation of their affairs, to obtain satisfaction.

V. And if it should be necessary for the establishment, security and defence of this trade, to take any troops with them, we will, according to the constitution of this country, and the situation of affairs furnish the said Company with such troops, provided they be paid and supported by the Company.

VI. Which troops, besides the oath already taken to us and to his excellency, shall swear to obey the commands of the said Company,

and to endeavour to promote their interest to the utmost of their ability.

VII. That the provosts of the Company on shore may apprehend any of the military, that have inlisted in the service of the aforesaid company, and may confine them on board the ships in whatever city, place, or jurisdiction they may be found; provided, the provosts first inform the officers and magistrates of the cities and places where this happens.

VIII. That we will not take any ships, ordnance, or ammunition belonging to the company, for the use of this country, without the consent of the said company.

IX. We have moreover incorporated this company, and favoured them with privileges, and we give them a charter besides this, that they may pass freely with all their ships and goods without paying any toll to the United Provinces; and that they themselves may use their liberty in the same manner as the free inhabitants of the cities of this country enjoy their freedom, notwithstanding any person who is not free may be a member of this company.

X. That all the goods of this company during the eight next ensuing years, be carried out of this country to the parts of the West Indies and Africa, and other places comprehended within the aforesaid limits, and those which they shall bring into this country, shall be from outward and home convoys; provided, that if at the expiration of the aforesaid eight years, the state and situation of these Countries will not admit of this Freedom's continuing for a longer time, the said goods, and the merchandises coming from the places mentioned in this Charter, and exported again out of these countries, and the outward convoys and licenses, during the whole time of this Charter, shall not be rated higher by us than they have formerly been rated, unless we should be again engaged in a war, in which case, all the aforesaid goods and merchandises will not be rated higher by us than they were in the last list in time of war.

XI. And that this company may be strengthened by a good government, to the greatest profit and satisfaction of all concerned, we have ordained, that the said government shall be vested in five chambers of managers; one at Amsterdam,—this shall have the management of four-ninths parts; one chamber in Zealand, for two-ninth parts; one chamber at the Maeze, for one-ninth part; one chamber in North Holland, for one-ninth-part; and the fifth chamber in Friesland, with the city and country, for one-ninth part; upon the condition entered in the record of our resolutions, and the Act past respecting it. And the Provinces in which there are no chambers shall be accommodated with so many managers, divided among the respective chambers, as their hundred thousand guilders in this company shall entitle them to.

XII. That the chamber of Amsterdam shall consist of twenty managers; the chamber of Zealand of twelve; the chambers of Maeze and of the North Part, each of fourteen, and the chamber of Friesland, with the city and country, also of fourteen managers; if it shall hereafter appear, that this work cannot be carried on without a greater number of persons; in that case, more may be added,

with the knowledge of nineteen, and our approbation, but not otherwise.

 $[\ldots]$

XLII. We have moreover ordained, that in case of a war, all the prizes which shall be taken from enemies and pirates within the aforesaid limits, by the Company or their assistants; also the goods which shall be seized by virtue of our proclamation, after deducting all expenses and the damage which the Company shall suffer in taking each prize, together with the just part of his excellency the admiral, agreeable to our resolution of the first of April sixteen hundred and two; and the tenth part for the officers, sailors and soldiers, who have taken the prize, shall await the disposal of the managers of the aforesaid Company; Provided that the account of them shall be kept separate and apart from the account of trade and commerce; and that the nett proceeds of the said prizes shall be employed in fitting our ships, paying the troops, fortifications, garrisons, and like matters of war and defence by sea and land; but there shall be no distribution unless the said nett proceeds shall amount to so much that a notable share may be distributed without weakening the said defence, and after paying the expenses of the war, which shall be done separate and apart from the distributions on account of Trade: And the distribution shall be made one-tenth part for the use of the United Netherlands, and the remainder for the members of this Company, in exact proportion to the capital they have advanced.

XLIII. Provided nevertheless, that all the prizes and goods, taken by virtue of our proclamation, shall be brought in, and the right laid before the judicature of the counsellors of the admirality for the part to which they are brought, that they may take cognizance of them, and determine the legality or illegality of the said prizes: the process of the administration of the goods brought in by the Company remaining nevertheless pending, and that under a proper inventory; and saving a revision of what may be done by the sentence of the admirality, agreeable to the instruction given the admiralty in that behalf. Provided that the vendue-masters and other officers of the Admiralty shall not have or pretend to any right to the prizes taken by this Company, and shall not be employed respecting them.

XLIV. The managers of this Company shall solemnly promise and swear, that they will act well and faithfully in their administration, and make good and just accounts of their trade: That they in all things will consult the greatest profit of the Company, and as much as possible prevent their meeting with losses: That they will not give the principal members any greater advantage in the payments or distribution of money than the least: That they, in getting in and receiving outstanding debts, will not favour one more than another: that they for their own account will take, and, during the continuance of their administration, will continue to take such sum of money as by their charter is allotted to them; and moreover, that they will, as far as concerns them, to the utmost of their power, observe and keep, and cause to be observed and kept, all and every the particulars and articles herein contained.

37. John Smith, *The General History* of Virginia, 1624 [Excerpt]

Introduction

Captain John Smith (1580-1631) was part of the first expedition to colonize Virginia in 1607. The son of a tenant farmer, he became a professional soldier. Smith spent much of his time in Virginia exploring the countryside, forging a relationship with the native peoples, and mapping the coastal waterways. The native peoples consisted of the Algonquian inhabitants of some 30 villages who accepted the leadership of their chieftain, Powhatan. After a period as president of the struggling colony, Smith left Virginia in 1609 and returned home to recuperate from an injury. He returned to North America in 1614 and mapped the coast of New England. After his final return to England, Smith wrote an account of his adventures as well as a general history of the colony in Virginia. Here he recounts the coordinated surprise attacks of March 22, 1622, and the resulting massacre of 347 men, women, and children, more than one third of Virginia's English population. The deaths of Pocahontas in 1617 and of Powhatan the following year doomed the fragile peace between their people and the colonists. Powhatan's half-brother Opechancanough planned the operation to drive the English from his land. The colony survived and launched a brutal, all-out war of extermination.

Primary Source

The massacre upon the two and twentieth of March.

The Prologue to this Tragedy, is supposed was occasioned by Nemattanow, otherwise called Jack of the Feather, because hee commonly was most strangely adorned with them; and for his courage and policy, was accounted amongst the Salvages their chiefe Captaine, and immortall from any hurt could bee done him by the English. This Captaine comming to one Morgans house, knowing he had many commodities that hee desired, perswaded Morgan to goe with him to Pamaunke to trucke, but the Salvage murdered him by the way; and after two or three daies returned againe to Morgans house, where he found two youths his Servants, who asked for their Master: Jack replied directly he was dead; the Boyes suspecting as it was, by seeing him weare his Cap, would have had him to Master Thorp: But Jack so moved their patience, they shot him, so he fell to the ground, put him in a Boat to have him before the Governor, then seven or eight miles from them. But by the way Jack finding the pangs of death upon him, desired of the Boyes two things; the one was, that they would not make it knowne hee was slaine with a bullet; the other, to bury him amongst the English. At the losse of this Salvage Opechankanough much grieved and repined, with great threats of revenge; but the English returned him such terrible answers, that he cunningly dissembled his intent, with the greatest signes he could of love and peace, yet within foureteene daies after he acted what followeth.

Sir Francis Wyat at his arrivall was advertised, he found the Countrey setled in such a firme peace, as most men there thought sure and unviolable, not onely in regard of their promises, but of a necessitie. The poore weake Salvages being every way bettered by us, and safely sheltred and defended, whereby wee might freely follow our businesse: and such was the conceit of this conceited peace, as that there was seldome or never a sword, and seldomer a peece, except for a Deere or Fowle, by which assurances the most plantations were placed straglingly and scatteringly, as a choice veine of rich ground invited them, and further from neighbours the better. Their houses generally open to the Salvages, who were alwaies friendly fed at their tables, and lodged in their bed-chambers, which made the way plaine to effect their intents, and the conversion of the Salvages as they supposed.

Having occasion to send to Opechankanough about the middle of March, hee used the Messenger well, and told him he held the peace so firme, the sky should fall or he dissolved it; yet such was the treachery of those people, when they had contrived our destruction, even but two daies before the massacre, they guided our men with much kindnesse thorow the woods, and one Browne that lived among them to learne the language, they sent home to his Master; yea, they borrowed our Boats to transport themselves over the River, to consult on the devillish murder that insued, and of our utter extirpation, which God of his mercy (by the meanes of one of themselves converted to Christianitie) prevented, and as well on the Friday morning that fatall day, being the two and twentieth of March, as also in the evening before as at other times they came unarmed into our houses, with Deere, Turkies, Fish, Fruits, and other provisions to sell us, yea in some places sat downe at breakfast with our people, whom immediatly with their owne tooles they slew most barbarously, not sparing either age or sex, man woman or childe, so sudden in their execution, that few or none discerned the weapon or blow that brought them to destruction: In which

manner also they slew many of our people at severall works in the fields, well knowing in what places and quarters each of our men were, in regard of their familiaritie with us, for the effecting that great master-peece of worke their conversion; and by this meanes fell that fatall morning under the bloudy and barbarous hands of that perfidious and inhumane people, three hundred forty seven men, women and children, most by their owne weapons, and not being content with their lives, they fell againe upon the dead bodies, making as well as they could a fresh murder, defacing, dragging, and mangling their dead carkases into many peeces, and carying some parts away in derision, with base and brutish triumph.

Neither yet did these beasts spare those amongst the rest well knowne unto them, from whom they had daily received many benefits, but spightfully also massacred them without any remorse or pitie; being in this more fell then Lions and Dragons, as Histories record, which have preserved their Benefactors; such is the force of good deeds, though done to cruell beasts, to take humanitie upon them, but these miscreants put on a more unnaturall brutishnesse then beasts, as by those instances may appeare.

[…]

Thus have you heard the particulars of this massacre, which in those respects some say will be good for the Plantation, because now we have just cause to destroy them by all meanes possible: but I thinke it had beene much better it had never happened, for they have given us an hundred times as just occasions long agoe to subject them, (and I wonder I can heare of none but Master Stockam and Master Whitaker of my opinion). Moreover, where before we were troubled in cleering the ground of great Timber, which was to them of small use: now we may take their owne plaine fields and Habitations, which are the pleasantest places in the Countrey. Besides, the Deere, Turkies, and other Beasts and Fowles will exceedingly increase if we beat the Salvages out of the Countrey, for at all times of the yeare they never spare Male nor Female, old nor young, egges nor birds, fat nor leane, in season or out of season with them, all is one. The like they did in our Swine and Goats, for they have used to kill eight in tenne more then we, or else the wood would most plentifully abound with victuall; besides it is more easie to civilize them by conquest then faire meanes; for the one may be made at once, but their civilizing will require a long time and much industry. The manner how to suppresse them is so often related and approved, I omit it here: And you have twenty examples of the Spaniards how they got the West-Indies, and forced the treacherous and rebellious Infidel's to doe all manner of drudgery worke and slavery for them, themselves living like Souldiers upon the fruits of their labours. This will make us more circumspect, and be an example to posteritie: (But I say, this might as well have beene put in practise sixteene, yeares agoe as now).

38. John Martin, *The Manner Howe to Bringe the Indians into Subjection*, December 15, 1622

Introduction

On March 22, 1622, coordinated surprise Indian attacks on the English settlements of Virginia resulted in the massacre of 347

men, women, and children, more than one third of Virginia's English population. The deaths of Pocahontas in 1617 and of Powhatan the following year had doomed the fragile peace between their people and the colonists. Powhatan's half-brother Opechancanough began planning the operation to drive the English from his land. The colony survived and launched a brutal all-out war of extermination. They burned the Indians' villages and crops, and even went so far as to poison Indian peace negotiators. Some nine months after the opening of the war, a colonist wrote this proposal suggesting how to subdue and conquer the Indians without exterminating them. Among his suggestions: burn their villages, destroy their stored food, patrol the rivers to prevent them from fishing and trading, and seize their trade goods, thus making them dependent on the colonists for their survival. He also argues that the Indians should not be exterminated because they are needed as laborers and their presence provides a buffer between the colonists and wild animals.

Primary Source

The manner howe to bringe in the Indians into subjection without makinge an utter exterpation of them together with the reasons.

First By disablinge the mayne bodie of the Enemye from haveinge the Sinnewes of all expedicons. As namely by Corne and all manner of victualls of anye worth.

This is to be acted two manner of wayes.

First by keepeinge them from settinge Corne at home and fishinge. Secondly by keepeinge them from their accustomed tradinge for Corne.

This first course I assure myselfe if they take it wthout the other, will make a tedious Warr.

For The first it is p'formed by haveinge some 200 Souldiers on foote, Contynuallie harrowinge and burneinge all their Townes in wynter, and spoileinge their weares. By this meanes o' people seacurely may followe their worke. And yet not to be negligent in keepeinge watch.

For The seacond there must provided some 10 Shallopps, that in May, June, Julye and August may scoure the Baye and keepe the Rivers yt are belonginge to Opichankanoe.

By this ariseth two happie ende

First the assured takeinge of great purchases in skynnes and Prisoners.

Seacondly in keepinge them from tradinge for Corne on the Easterne shore and from ye Southward from whence they have five tymes more then they sett them selves. This Course being taken they have noe meanes, but must yield to obedience, or flye to borderinge Neighbors who neither will receive them Nor indeede are able, for they have but groune Cleared for their owne use.

At the North west end of his dominions the Monecans are their enymies, On the Norther most side the Patomecks and other nations are their enemies.

The keepinge of them from tradeinge with the Easterne shore p'duceth two worthie effecte to or exceedinge profit First or assurance of Corne att all, tymes.

Seacondly the ventinge of much, Cloth.

My Aunchiant & servante have seene in trade at one tyme 40 greate Canowes laden wth these commodities.

For the Certentye of Corne it is best knowne to my selfe for yt by sendinge, & discoueringe those places, First I have not onely reaped the benefitt, but all the whole Collonye since; whoe had perished had it not bene discouered before Sr George Yardley came in by my Aunchient Thomas Savage & servantt, besides necessitie hath made those Savages more industrious then any other Indians in or Baye, wch followeth to appeare in this seacond p'fitt.

For the assured ventinge of Cloth it followeth Consequently two wayes. First by Varringe them of trade for skinns they haveinge none them selves.

Seacondly by the necessite of haveinge clothinge wch by us shall & may be tendered att all Convenyent tymes.

Reasons why it is not fittinge utterlye to make an exterpation of the Savages yett.

My reasons are grounded two foulde.

First uppon holy writt and my owne experience.

Seacondly other necessarie uses and p'fitte that maye retorne by the same.

Holy writt sayeth That god would not yt the Children of Israell though they were of farr greater numbrs., then wee are yet in many ages like to be, and came into a Countrie where weare walled townes, not to utterly distroy the heathen, least the woode and wilde beaste should over runn them

My owne observacon hath bene such as assureth me yt if the Indians inhabitt not amongst us under obedience And as they have ever kept downe ye woode and slayne the wolves, beares, and other beaste, (wch are in greate numbr.) we shalbe more opressed in short tyme by their absence, then in their hveing by us both for or owne securitie as allso for or Cattle.

They by experience willing and able are to worke in the heate of ye day wch or sexe are not.

Seacondly when as by ye meanes before spoken of, they shalbe brought into subjection and shalbe made to deliver hostriges for theire obediance, there is no doubt by gods grace but of the saveinge of many of their soules And then beinge natives are apter for worke then yet or English are, knowinge howe to attayne greate quantitie of silke, hempe, and flax, and most exquisite in the dressinge thereof For or uses fitt for guides uppon discou'ye into other Countries adiacent to ours, fitt to rowe in Gallies & friggetts and many other pregnant uses too tedious to sett downe.

Nowe for avoydinge future daynger in or Collonye that may growe Two especiall er vocable lawes are to be made uppon seaveare penallties.

First ye none of what ranke soeuer doe ever trinke or trade wth in the late prcinct of Opichankanoe nor any borderinge neighbors that ayded him in this last disaster.

Seacondly for or owne people to sett & sowe a sufficient proporcon of corne for their owne uses, and yearely to lay upp into a granary a p:porcon for wch if they have noe use for them selves the next yeare then to be sould and every man to have his dewe payd him.

My reason for the first is yt by this meanes the Savages shalbe frustrated of all meanes of buyinge any manner of victualls, and clothinge, but what they shall have from us for their labor and industrie As alsoe beinge disabled from hireinge anye Auxiliaries if at any tyme they would rebell.

The infinate trade they have had in this 4 years of securitie enabled Opichankanoe to hyer many auxiliaries wch in former tymes I knowe for want hereof Pohatan was never able to act the like.

For the seacond howe benifitiall the settinge and sowinge of Come and layinge upp thereof for store, will luculently appeare by their nowe endureinge want being disturbed by theis Savages at this tyme, And likewise other unexpected accedente may happen both by forrayne and domesticke enymies hereafter.

Two Storehowses or Granaries to be erected and placed for this purpose fittest for salftie, and then for Convenience wch I Will leave to demonstrate to yor [honor] untill you Come to the Mapp of the Countrie As alsoe a neare passage to the Southward River and where the most necessarie places are for fortificadon against a forren Enemye.

Jho. Martin.

39. Massachusetts Bay Company Charter, 1629 [Excerpt]

Introduction

In England during the early 1600s, a group of Christians called Puritans sought to purify the Church of England (Anglican Church). The Puritans also believed that individual churches should have the power to control their own membership, and that the members, in turn, should control their local leaders. In this way the Puritan church could dominate local government and society as a whole. After the separatist Pilgrims founded a colony at Plymouth, Massachusetts, in 1620, a mix of Puritans and non-Puritans from England founded settlements along the New England coast. King Charles I granted the Massachusetts Bay Company a charter for a New England colony in 1629. The following year, John Winthrop and about 1,000 English Puritans came to Massachusetts to settle around Boston Bay. Winthrop believed he could better create a truly Puritan society in America than in England. The new settlement was called the Massachusetts Bay Colony. The colony grew rapidly. By 1635, about 2,000 immigrants were coming to the colony each year, most of them Puritans. The newcomers settled all along the coast from Maine to Long Island. Under Governor Winthrop's leadership, the Puritans organized an efficient government that controlled many aspects of society. Initially, only church members had the right to vote.

AND FURTHER, That the said Governour and Companye, and their Successors, maie have forever one comon Seale, to be vsed in all Causes and Occasions of the said Company, and the same Seale may alter, chaunge, breake, and newe make, from tyme to tyme, at their pleasures. And our Will and Pleasure is, and Wee doe hereby for Vs, our Heires and Successors, ordeyne and graunte, That from henceforth for ever, there shalbe one Governor, one Deputy Governor, and eighteene Assistants of the same Company, to be from tyme to tyme constituted, elected and chosen out of the Freemen of the saide Company, for the tyme being, in such Manner and Forme as hereafter in theis Presents is expressed, which said Officers shall applie themselves to take Care for the best disposeing and ordering of the generall buysines and Affaires of, for, and concerning the said Landes and Premisses hereby mencoed, to be graunted, and the Plantacion thereof, and the Government of the People there. AND FOR the better Execucon of our Royall Pleasure and Graunte in this Behalf, WEE doe, by theis presents, for Vs, our Heires and Successors, nominate, ordevne, make, & constitute; our welbeloved the saide Mathewe Cradocke, to be the first and present Governor of the said Company, and the saide Thomas Goffe, to be Deputy Governor of the saide Company, and the saide Sir Richard Saltonstall, Isaack Johnson, Samuell Aldersey, John Ven, John Humfrey, John Endecott, Simon Whetcombe, Increase Nowell, Richard Pery, Nathaniell Wright, Samuell Vassall, Theophilus Eaton, Thomas Adams, Thomas Hutchins, John Browne, George Foxcrofte, William Vassall, and William Pinchion, to be the present Assistants of the saide Company, to continue in the saide several Offices respectivelie for such tyme, and in such manner, as in and by theis Presents is hereafter declared and appointed.

AND FURTHER, Wee will, and by theis Presents, for Vs, our Heires and Successors, doe ordoyne and graunte, That the Governor of the saide Company for the tyme being, or in his Absence by Occasion of Sicknes or otherwise, the Deputie Governor for the tyme being, shall have Authoritie from tyme to tyme vpon all Occasions, to give order for the assembling of the saide Company, and calling them together to consult and advise of the Bussinesses and Affaires of the saide Company, and that the said Governor, Deputie Governor, and Assistants of the saide Company, for the tyme being, shall or maie once every Moneth, or oftener at their Pleasures, assemble and houlde and keepe a Courte or Assemblie of themselves, for the better ordering and directing of their Affaires, and that any seaven or more persons of the Assistants, togither with the Governor, or Deputie Governor soe assembled, shalbe saide, taken, held, and reputed to be, and shalbe a full and sufficient Courte or Assemblie of the said Company, for the handling, ordering, and dispatching of all such Buysinesses and Occurrents as shall from tyme to tyme happen, touching or concerning the said Company or Plantacon; and that there shall or maie be held and kept by the Governor, or Deputie Governor of the said Company, and seaven or more of the said Assistants for the tyme being, vpon every last Wednesday in Hillary, Easter, Trinity, and Michas Termes respectivelie forever, one grease generall and solempe assemblie, which foure generall assemblies shalbe stiled and called the foure grease and generall Courts of the saide Company; IN all and every, or any of which saide grease and generall Courts soe assembled, WEE DOE for Vs, our Heires and Successors, give and graunte to the said Governor and Company, and their Successors, That the Governor, or in his absence, the Deputie Governor of the saide Company for the tyme being, and such of the Assistants and Freeman of the saide Company as shalbe present, or the greater nomber of them so assembled, whereof the Governor or Deputie Governor and six of the Assistants at the least to be seaven shall have full Power and authoritie to choose, nominate, and appointe, such and soe many others as they shall thinke fitt, and that shall be willing to accept the same, to be free of the said Company and Body, and them into the same to admits; and to elect and constitute such Officers as they shall thinke fitt and requisite, for the ordering, mannaging, and dispatching of the Affaires of the saide Govenor and Company, and their Successors; And to make Lawes and Ordinnces for the Good and Welfare of the saide Company, and for the Government and ordering of the saide Landes and Plantacon, and the People inhabiting and to inhabite the same, as to them from tyme to tyme shalbe thought meete, soe as such Lawes and Ordinances be not contrarie or repugnant to the Lawes and Statuts of this our Reaime of England. AND, our Will and Pleasure is, and Wee doe hereby for Vs, our Heires and Successors, establish and ordeyne, That yearely once in the yeare, for ever hereafter, namely, the last Wednesdav in Easter Tearme, yearely, the Governor, Deputy-Governor, and Assistants of the saide Company and all other officers of the saide Company shalbe in the Generall Court or Assembly to be held for that Day or Tyme, newly chosen for the Yeare ensueing by such greater parse of the said Company, for the Tyme being, then and there present, as is aforesaide. AND, yf it shall happen the present governor, Deputy Governor, and assistants, by theis presents appointed, or such as shall hereafter be newly chosen into their Roomes, or any of them, or any other of the officers to be appointed for the said Company, to dye, or to be removed from his or their severall Offices or Places before the saide generall Day of Eleccon (whome Wee doe hereby declare for any Misdemeanor or Defect to be removeable by the Governor, Deputie Governor, Assistants, and Company, or such greater Parte of them in any of the publique Courts to be assembled as is aforesaid) That then, and in every such Case, it shall and maie be lawfull, to and for the Governor, Deputie Governor, Assistants, and Company aforesaide, or such greater Parte of them soe to be assembled as is aforesaide, in any of their Assemblies, to proceade to a new Eleccon of one or more others of their Company in the Roome or Place, Roomes or Places of such Officer or Officers soe dyeing or removed according to their Discrecons, And, Mediately vpon and after such Eleccon and Eleccons made of such Governor, Deputie Governor, Assistant or Assistants, or any other officer of the saide Company, in Manner and Forme aforesaid, the Authoritie, Office, and Power, before given to the former Governor, Deputie Governor, or other Officer and Officers soe removed, in whose Steade and Place newe shabe soe chosen, shall as to him and them, and everie of them, cease and determine.

PROVIDED alsoe, and our Will and Pleasure is, That aswell such as are by theis Presents appointed to be the present Governor, Deputie Governor, and Assistants of the said Company, as those that shall Succeed them, and all other Officers to be appointed and chosen as aforesaid, shall, before they undertake the Execucon of their saide Offices and Places respectivelie, take their Corporal Oathes for the due and faithfull Performance of their Duties in their severall Offices and Places, before such Person or Persons as are by theis Presents hereunder appointed to take and receive the same; That is to saie, the saide Mathewe Cradock, whoe is hereby nominated and appointed the present Governor of the saide Company, shall take the saide Oathes before one or more of the Masters of our Courte of Chauncery for the Tyme being, vnto which Master or Masters of the Chauncery, Wee doe by theis Presents give full Power and Authoritie to take and administer the said Oathe to the said Governor accordinglie: And after the saide Governor shalbe soe sworne, then the said Deputy Governor and Assistants, before by theis Presents nominated and appointed, shall take the said severall Oathes to their Offices and Places respectivelie belonging, before the said

Mathew Cradock, the present Governor, soe formerlie sworne as aforesaide. And every such person as shall be at the Tyme of the annuall Eleccon, or otherwise, vpon Death or Removeall, be appointed to be the newe Governor of the said Company, shall take the Oathes to that Place belonging, before the Deputy Governor, or two of the Assistants of the said Company at the least, for the Tyme being: And the newe elected Deputie Governor and Assistants, and all other officers to be hereafter chosen as aforesaide from Tyme to Tyme, to take the Oathes to their places respectivelie belonging, before the Governor of the said Company for the Tyme being, vnto which said Governor, Deputie Governor, and assistants, Wee doe by theis Presents Give full Power and Authoritie to give and administer the said Oathes respectively, according to our true Meaning herein before declared, without any Comission or further Warrant to be had and obteyned of our Vs, our Heires or Successors, in that Behalf. AND, Wee doe further, of our especial Grace, certen Knowledge, and meere mocon, for Vs, our Heires and Successors, give and graunte to the said Governor and Company, and their Successors for ever by theis Presents, That it shalbe lawfull and free for them and their Assignes, at all and every Tyme and Tymes hereafter, out of any our Realmes or Domynions whatsoever, to take, leade, carry, and transport, for in and into their Voyages, and for and towardes the said Plantacon in Newe England, all such and soe many of our loving Subjects, or any other strangers that will become our loving Subjects, and live under our Allegiance, as shall willinglie accompany them in the same Voyages and Plantacon; and also Shippmg, Armour, Weapons, Ordinance, Municon, Powder, Shott, Come, Victualls, and all Manner of clothing, Implements, Furniture, Beastes, Cattle, Horses, Mares, Merchandizes, and all other Thinges necessarie for the saide Plantacon, and for their Vse and Defence, and for Trade with the People there, and in passing and returning to and fro, any Lawe or Statute to the contrarie hereof in any wise notwithstanding; and without payeing or yeilding any Custome or Subsidie, either inward or outward, to Vs, our Heires or Successors, for the same, by the Space of seaven Yeares from the Day of the Date of theis Presents. PROVIDED, that none of the saide Persons be such as shalbe hereafter by especiall Name restrayned by Vs, our Heires or Successors. AND, for their further Encouragement, of our especiall Grace and Favor, Wee doe by theis Presents, for Vs, our Heires and Successors, yeild and graunt to the saide Governor and Company, and their Successors, and every of them, their Factors and Assignes, That they and every of them shalbe free and quits from all Taxes, Subsidies, and Customes, in Newe England, for the like Space of seaven Yeares, and from all Taxes and Imposicons for the Space of twenty and one Yeares, vpon all Goodes and Merchandizes at any Tyme or Tymes hereafter, either vpon Importacon thither, or Exportacon from thence into our Realme of England, or into any other our Domynions by the said Governor and Company, and their Successors, their Deputies, Factors, and Assignes, or any of them; EXCEPT onlie the five Pounds per Centum due for Custome vpon all such Goodes and Merchandizes as after the saide seaven Yeares shalbe expired, shalbe brought or imported into our

Realme of England, or any other of our Dominions, according to the auncient Trade of Merchants, which five Poundes per Centum onlie being paide, it shall be thenceforth lawfull and free for the said Adventurers, the same Goodes and Merchandizes to export and carry out of our said Domynions into forraine Partes, without any Custome, Tax or other Dutie to be paid to Vs, our Heires or Successors, or to any other Officers or Ministers of Vs, our Heires and Successors. PROVIDED, that the said Goodes and Merchandizes be shipped out within thirteene Monethes, after their first Landing within any Parte of the saide Domynions.

AND, Wee doe for Vs, our Heires and Successors, give and graunte vnto the saide Governor and Company, and their Successors, That whensoever, or soe often as any Custome or Subsedie shall growe due or payeable vnto Vs our Heires, or Successors, according to the Lymittacon and Appointment aforesaide, by Reason of any Goodes, Wares, or Merchandizes to be shipped out, or any Retorne to be made of any Goodes, Wares, or Merchandize vnto or from the said Partes of Newe England hereby moncoed to be graunted as aforesaid, or any the Landes or Territories aforesaide, That then, and soe often, and in such Case, the Farmors, Customers, and Officers of our Customes of England and Ireland, and everie of them for the Tyme being, vpon Request made to them by the saide Governor and Company, or their Successors, Factors or Assignes, and vpon convenient Security to be given in that Behalf, shall give and allowe vnto the said Governor and Company, and their Successors, and to all and everie Person and Persons free of that Company, as aforesaide, six Monethes Tyme for the Payement of the one halfe of all such Custome and Subsidy as shalbe due and payeable unto Vs, our Heires and Successors, for the same; for which their our Letters patent, or the Duplicate, or the inrollemt thereof, shalbe vnto our saide Officers a sufficient Warrant and Discharge. NEVERTHE-LESS, our Will and Pleasure is, That yf any of the saide Goodes, Wares, and Merchandize, which be, or shalbe at any Tyme hereafter landed or exported out of any of our Realmes aforesaide, and shalbe shipped with a Purpose not to be carried to the Partes of Newe England aforesaide, but to some other place, That then such Payment, Dutie, Custome, Imposicon, or Forfeyfure, shalbe paid, or belonge to Vs, our Heires and Successors, for the said Goodes, Wares, and Merchandize, soe fraudulently sought to be transported, as yf this our Graunte had not been made nor graunted. AND, Wee doe further will, and by theis Presents, for Vs, our Heires and Successors, firmlie enioine and comaunde, as well the Treasorer, Chauncellor and Barons of the Exchequer, of Vs, our Heires and Successors, as also all and singuler the Customers, Farmors, and Collectors of the Customes, Subsidies, and Imposts and other the Officers and Ministers of Vs our Heires and Successors whatsoever, for the Tyme Being, That they and every of them, vpon the strewing forth vnto them of theis Letters patents, or the Duplicate or exemplificacon of the same, without any other Writt or Warrant whatsoever from Vs, our Heires or Successors, to be obteyned or sued forth, doe and shall

make full, whole, entire, and due Allowance, and cleare Discharge vnto the saide Governor and Company, and their Successors, of all Customes, Subsidies, Imposicons, Taxes and Duties whatsoever, that shall or maie be claymed by Vs, our Heires and Successors, of or from the said Governor and Company, and their Successors, for or by Reason of the said Goodes, Chattels, Wares, Merchandizes, and Premises to be exported out of our saide Domynions, or any of them, into any Parte of the saide Landes or Premises hereby mencoed, to be given, graunted, and confirmed, or for, or by Reason of any of the saide Goodes, Chattells, Wares, or Merchandizes to be imported from the said Landes and Premises hereby mencoed, to be given, graunted, and confirmed into any of our saide Dominions, or any Parte thereof as aforesaide, excepting onlie the saide five Poundes per Centum hereby reserved and payeable after the Expiracon of the saide Terme of seaven Yeares as aforesaid, and not before: And theis our Letters-patents, or the Inrollment, Duplicate, or Exemplificacon of the same shalbe for ever hereafter, from time to tyme, as well to the Treasorer, Chauncellor and Barons of the Exchequer of Vs, our Heires and Successors, as to all and singuler the Customers, Farmors, and Collectors of the Customes, Subsidies, and Imposts of Vs, our Heires and Successors, and all Searchers, and other the Officers and Ministers whatsoever of Vs, our Heires and Successors, for the Time being, a sufficient Warrant and Discharge in this Behalf.

AND, further our Will and Pleasure is, and Wee doe hereby for Vs, our Heires and Successors, ordeyne and declare, and graunte to the saide Governor and Company, and their Successors, That all and every the Subiects of Vs, our Heires or Successors, which shall goe to and inhabite within the saide Landes and Premisses hereby mencoed to be graunted, and every of their Children which shall happen to be borne there, or on the Seas in goeing thither, or returning from thence, shall have and enjoy all liberties and Immunities of free and naturall Subjects within any of the Domynions of Vs, our Heires or Successors, to all Intents, Construccons, and Purposes whatsoever, as yf they and everie of them were borne within the Realme of England. And that the Governor and Deputie Governor of the said Company for the Tyme being, or either of them, and any two or more of such of the saide Assistants as shalbe therevnto appointed by the saide Governor and Company at any of their Courts or Assemblies to be held as aforesaide, shall and maie at all Tymes, and from tyme to tyme hereafter, have full Power and Authoritie to minister and give the Oathe and Oathes of Supremacie and Allegiance, or either of them, to all and everie Person and Persons, which shall at any Tyme or Tymes hereafter goe or passe to the Landes and Premisses hereby mencoed to be graunted to inhabite in the same. AND, Wee doe of our further Grace, certen Knowledg and meere Mocon, give and graunte to the saide Governor and Company, and their Successors, That it shall and male be lawfull, to and for the Governor or Deputie Governor, and such of the Assistants and Freemen of the said Company for the Tyme being as shalbe assembled in any of their generall Courts aforesaide, or in any other Courtes to be specially sumoned and assembled for that Purpose, or the greater Parte of them (whereof the Governor or Deputie Governor, and six of the Assistants to be alwaies seaven) from tyme to tyme, to make, ordeine, and establishe all Manner of wholesome and reasonable Orders, Lawes, Statutes, and Ordilmces, Direccons, and Instruccons, not contrairie to the Lawes of this our Realme of England, aswell for selling of the Formes and Ceremonies of Governmt and Magistracy fitt and necessary for the said Plantacon, and the Inhabitants there, and for nameing and setting of all sorts of Officers, both superior and inferior, which they shall finde needefull for that Governement and Plantacon, and the distinguishing and setting forth of the severall duties, Powers, and Lymytts of every such Office and Place, and the Formes of such Oathes warrantable by the Lawes and Statutes of this our Realme of England, as shalbe respectivelie ministred vnto them for the Execucon of the said severall Offices and Places; as also, for the disposing and ordering of the Eleccons of such of the said Officers as shalbe annuall, and of such others as shalbe to succeede in Case of Death or Remove all and ministering the said Oathes to the newe elected Officers, and for Imposicons of lawfull Fynes, Mulcts, Imprisonment, or other lawfull Correccon, according to the Course of other Corporacons in this our Realme of England, and for the directing, ruling, and disposeing of all other Matters and Thinges, whereby our said People, Inhabitants there, may be soe religiously, peaceablie, and civilly governed, as their good Life and orderlie Conversacon, maie wynn and incite the Natives of Country, to the Knowledg and Obedience of the onlie true God and Saulor of Mankinde, and the Christian Fayth, which in our Royall Intencon, and the Adventurers free Profession, is the principall Ende of this Plantacion. WILLING, comaunding, and requiring, and by theis Presents for Vs, our Heiress Successors, ordoyning and appointing, that all such Orders, Lawes, Statuts and Ordinnees, Instruccons and Direccons, as shalbe soe made by the Governor, or Deputie Governor of the said Company, and such of the Assistants and Freemen as aforesaide, and published in Writing, under their comon Seale, shalbe carefullie and duly observed, kept, performed, and putt in Execucon, according to the true Intent and Meaning of the same; and theis our Letters-patents, or the Duplicate or exemplificacon thereof, shalbe to all and everie such Officers,-superior and inferior, from Tyme to Tyme, for the putting of the same Orders, Lawes, Statutes, and Ordinuces, Instruccons, and Direccons, in due Execucon against Vs, our Heires and Successors, a sufficient Warrant and Discharge.

AND WEE DOE further, for Vs, our Heires and Successors, give and graunt to the said Governor and Company, and their Successors by theis Presents, that all and everie such Chiefe Comaunders, Captaines, Governors, and other Officers and Ministers, as by the said Orders, Lawes, Statuts, Ordinnces, Instruccons, or Direccons of the said Governor and Company for the Tyme being, shalbe from Tyme to Tyme hereafter vmploied either in the Government of the saide

Inhabitants and Plantacon, or in the Waye by Sea thither, or from thence, according to the Natures and Lymitts of their Offices and Places respectively, shall from Tyme to Tyme hereafter for ever, within the Precincts and Partes of Newe England hereby mencoed to be graunted and confirmed, or in the Waye by Sea thither, or from thence, have full and Absolute Power and Authoritie to correct, punishe, pardon, governe, and rule all such the Subiects of Vs, our Heires and Successors, as shall from Tyme to Tyme adventure themselves in any Voyadge thither or from thence, or that shall at any Tyme hereafter, inhabite within the Precincts and Partes of Newe England aforesaid, according to the Orders, Lawes, Ordinnces, Instruccons, and Direccons aforesaid, not being repugnant to the Lawes and Statutes of our Realme of England as aforesaid. AND WEE DOE further, for Vs, our Heires and Successors, give and graunte to the said Governor and Company, and their Successors, by theis Presents, that it shall and maie be lawfull, to and for the Chiefe Comaunders, Governors, and officers of the said Company for the Time being, who shalbe resident in the said Parte of Newe England in America, by theis presents graunted, and others there inhabiting by their Appointment and Direccon, from Tyme to Tyme, and at all Tymes hereafter for their special Defence and Safety, to incounter, expulse, repell, and resist by Force of Armes, aswell by Sea as by Lande, and by all fitting Waies and Meanes whatsoever, all such Person and Persons, as shall at any Tyme hereafter, attempt or enterprise the Destruccon, Invasion, Detriment, or Annoyaunce to the said Plantation or Inhabitants, and to take and surprise by all Waies and Meanes whatsoever, all and every such Person and Persons, with their Shippes, Armour, Municons and other Goodes, as shall in hostile manner invade or attempt the defeating of the said Plantacon, or the Hurt of the said Company and Inhabitants: NEVERTHELESS, our Will and Pleasure is, and Wee doe hereby declare to all Christian Kinges, Princes and States, that yf any Person or Persons which shall hereafter be of the said Company or Plantacon or any other by Lycense or Appointment of the said Governor and Company for the Tyme being, shall at any Tyme or Tymes hereafter, robb or spoyle, by Sea or by Land, or doe any Hurt, Violence, or vnlawful Hostilitie to any of the Subjects of Vs, our Heires or Successors, or any of the Subjects of any Prince or State, being then in League and Amytie with Vs, our Heires and Successors, and that upon such injury don and vpon iust Complaint of such Prince or State or their Subjects, WEE, our Heires and Successors shall make open Proclamacon within any of the Partes within our Realme of England, comodious for that purpose, that the Person or Persons haveing comitted any such Roberie or Spoyle, shall within the Terme lymytted by such a Proclamacon, make full Restitucon or Satisfaccon of all such Iniureis don, soe as the said Princes or others so complayning, maie hould themselves fullie satisfied and contented; and that yf the said Person or Persons, haveing comitted such Robbery or Spoile, shall not make, or cause to be made Satisfaccon accordinglie, within such Tyme soe to be lymytted, that then it shalbe lawfull for Vs, our Heires and Successors, to

putt the said Person or Persons out of our Allegiance and Proteccon, and that it shalbe lawfull and free for all Princes to prosecute with Hostilitie, the said Offendors, and every of them, their and every of their Procurers, Ayders, Abettors, and Comforters in that Behalf: PROVIDED also, and our expresse Will and Pleasure is, And Wee doe by theis Presents for Vs, our Heires and Successors ordeyne and appoint That theis Presents shall not in any manner envre, or be taken to abridge, barr, or hinder any of our loving subjects whatsoever, to vse and exercise the Trade of Fishing vpon that Coast of New England in America, by theis Presents mencoed to be graunted. But that they, and every, or any of them shall have full and free Power and Liberty to continue and vse their said Trade of Fishing vpon the said Coast, in any the Seas therevnto adioyning, or any Armes of the Seas or Saltwater Rivers where they have byn wont to fishe, and to build and sett vp vpon the Landes by theis Presents graunted, such Wharfes, Stages, and Workehouses as shalbe necessarie for the salting, drying, keeping, and packing vp of their Fish, to be taken or gotten vpon that Coast; and to cutt down, and take such Trees and other Materialls there groweing, or being, or shalbe needefull for that Purpose, and for all other necessarie Easements, Helpes, and Advantage concerning their said Trade of Fishing there, in such Manner and Forme as they have byn heretofore at any tyme accustomed to doe, without making any wilfull Waste or Spoyle, any Thing in theis Presents conteyned to the contrarie notwithstanding. AND WEE DOE further, for Vs, our Heires and Successors, ordeyne and graunte to the said Governor and Company, and their Successors by theis Presents that theis our Letters-patents shalbe firme, good, effectuall, and availeable in all Thinges, and to all Intents and Construccons of Lawe, according to our true Meaning herein before declared, and shalbe construed, reputed, and adjudged in all Cases most favourablie on the Behalf, and for the Benefist and Behoofe of the saide Governor and Company and their Successors: ALTHOUGH expresse mencon of the true yearely Value or certenty of the Premisses or any of them; or of any other Guiftes or Grauntes, by Vs, or any of our Progenitors or Predecessors to the foresaid Governor or Company before this tyme made, in theis-Presents is not made; or any Statute, Acte, Ordinnce, Provision, Proclamacon, or Restrainte to the contrarie thereof, heretofore had, made, published, ordeyned, or provided, or any other Matter, Cause, or Thinge whatsoever to the contrarie thereof in any wise notwithstanding.

IN WITNES whereof, Wee have caused their our Letters to be made Patents.

WITNES ourself, at Westminster, the fourth day of March, in the fourth Yeare of our Raigne.

Per Breve de Privato Sigillo,

Wolseley.

40. John Cotton, *God's Promise* to *His Plantation*, 1630 [Excerpt]

Introduction

In England during the early 1600s, a group of Christians called Puritans sought to purify the Church of England (Anglican Church). The Puritans also believed that individual churches should have the power to control their own membership, and that the members, in turn, should control their local leaders. In this way the Puritan church could dominate local government and society as a whole. After the separatist Pilgrims founded a colony at Plymouth, Massachusetts, in 1620, a mix of Puritans and non-Puritans from England founded settlements along the New England coast. King Charles I granted the Massachusetts Bay Company a charter for a New England colony in 1629. The following year, John Winthrop and a group of Puritans prepared to depart for Massachusetts. Before their departure, John Cotton preached a sermon, excerpted here, in which he asserted that it was God's will that the Puritans spread their way of life throughout the world. Cotton argued that they had a right to occupy land by casting out the previous occupants, living peacefully among them, or by finding the land vacant. The Massachusetts Bay colonists could find justification in this sermon for any action they might take regarding the native peoples of America. Facing prosecution in England for his religious practices, Cotton immigrated to Massachusetts in 1633.

Moreover I will appoint a place for my People Israel, and I will plant them, that they may dwell in a place of their Own, and Move No More [II Sam. 7:10]

The placing of a people in this or that Countrey is from the Appointment of the Lord

Quest. Wherein doth this work of God stand in appointing a place for a people.

- 1. When God espies or discovers a Land for a people, as in Ezek 20:6. He brought them into a land that He had espied for them: And, that is, when either he gives them to discover it themselves, or hears of it discovered by others, and fitting them.
- 2. After he hath espied it, when he carries them along to it, so that they plainly see a providence of God leading them from one Countrey to another, as in Exod. 19:4: *You have seen how I have borne you as on Eagles wings, and brought you unto myself.* So that though they met with many difficulties, yet he carried them high above them all, like an Eagle, flying over Seas and Rocks, and all hindrances.
- 3. When he makes room for a People to dwell there, as in Psal. 80.9: *Thou preparest room for them.*

[…]

Now, God makes room for a People three wayes.

- 1. When he casts out the Enemies of a people before them by lawful War with the Inhabitants, which God calls them unto, as in Psal. 44:2: *Thou didst drive out the Heathen before them.* But this course of Warring against others and driving them out without provocation depends upon special Commission from God; or else it is not imitable.
- 2. When he gives a *foreign* People favour in the eyes of any *native* People to come and sit down with them; either by way of purchase, as Abraham did obtain the field of Machpelah; or else when they give it in courtesy, as Pharaoh did the land of Goshen unto the sons of Jacob.
- 3. When he makes a Countrey, though not altogether void of Inhabitants, yet void in that place where they reside. Where there is a vacant place, there is liberty for the sons of Adam or Noah to come and inhabit, though they neither buy it nor ask their leaves. . . . So that it is free from that common Grant for any to take possession of vacant Countries. Indeed, no Nation is to drive out another without special Commission from Heaven, such as the Israelites had; unless the Natives do unjustly wrong them, and will not recompence the wrongs done in a peaceable fort, and then they may right themselves by lawful War and subdue the country unto themselves.

[...]

This may teach us all where we now dwell, or where after we may dwell. Be sure you look at every place appointed to you from the hand of God. We may not rush into any place and never say to God, By Your leave; but we must discern how God appoints us this place. There is poor comfort in sitting down in any place that you cannot say, This place is appointed me of God. Canst thou say, that God spied out this place for thee, and there hath settled thee above all hindrances? Didst thou find that God made room for thee, either by lawful Descent, or Purchase, or gift, or other warrantable Right? Why, then this is the place God hath appointed thee; here He hath made room for thee. He hath placed thee in Rehoboth, in a peaceable place. This we must discern or else we are but intruders upon God. And when we do withal discern, that God give the us these outward Blessings from his Love in Christ; and maketh comfortable provision as well for our Souls as for our Bodies by the means of Grace; then do we enjoy our present possessions as well by gracious promise as by the common, and just, and bountiful providence of the Lord. Or, if a man do remove, he must see that God hath espied out such a Countrey for him.

Though there be many difficulties, yet he hath given us hearts to overlook them all, as if we were carried upon Eagles wings.

See God making room for us by some lawful means.

Quest. But how shall I know whether God hath appointed me such a place? If I be well where I am, what may warrant my removal?

Answ. There be four or five good things, for procurement of any of which, I may remove. Secondly, There be some evil things, for avoiding of any of which we may transplant ourselves. Thirdly, if withal we find some special providence of God concurring in either of both concerning our selves, and applying general grounds of removal to personal estate.

- 1. We may remove for the gaining knowledge. . . .
- 2. Some remove and travil for Merchandise and Gainsake: *Daily bread may be sought from far*: Prov. 31:14)....

[...]

- 4. God alloweth a man to remove *When he may employ his Talents and Gifts better elsewhere*, especially when where he is, he is not bound by any special engagement. . . .
- 5. For the liberty of the ordinances.... This case was of seasonable use to our fathers in the day of Queen Mary, who removed to France and Germany as the beginning of her reign, upon proclamation of alteration of religion, before any persecution began.

Secondly, There be Evils to be avoided, that may warrant Removal.

- 1. When some grievous sins overspread a country that threaten desolation. . . .
- 2. If men be overburdened with Debts and Miseries. . . .
- 3. In case of persecution. . . .

Thirdly, As these general cases, where any of them do fall out, do warrant removal in general; so there be come special Providences or particular Cases which may give warrant unto such or such a person to transplant himself, and which apply the former general grounds to particular persons.

- 1. If sovereign authority command and encourage such plantations, by giving way to subjects to transplant themselves and set up a new Commonwealth. This is a lawful and expedient case for such particular persons as He designed and sent; Mat. 8:9: and for such as they who are sent have power to command.
- 2. When some special providence of God leads a man unto such a course. . . .

41. John Winthrop, *A Modell* of Christian Charity, 1630

Introduction

In England during the early 1600s, a group of Christians called Puritans sought to purify the Church of England (Anglican Church). The Puritans also believed that individual churches should have the power to control their own membership, and that the members, in turn, should control their local leaders. In this way the Puritan church could dominate local government and society as a whole. King Charles I granted the Massachusetts Bay Company a charter for a New England colony in 1629. The following year, John Winthrop—governor of the new Massachusetts Bay Colony—and a group of some 400 Puritan colonists prepared to depart for Massachusetts. Leaving England on four ships in March 1630, they arrived at Salem, Massachusetts, in June. Before disembarking, Winthrop delivered his sermon, A Modell of Christian Charity aboard the ship Arabella. In it he set forth his expectations for a Puritan society in America. Winthrop stressed the importance of social bonds over individualism. In proclaiming that the colony would be like "a City upon a Hill," Winthrop indicated that it would be the focus of attention in England and elsewhere. He hoped that awareness of that scrutiny would encourage his fellow passengers to build an exemplary society.

Primary Source

CHRISTIAN CHARITIE.

A Modell hereof.

GOD ALMIGHTY in his most holy and wise providence, hath soe disposed of the condition of mankind, as in all times some must be rich, some poore, some high and eminent in power and dignitie; others mean and in submission.

The Reason hereof.

1 Reas. First to hold conformity with the rest of his world, being delighted to show forth the glory of his wisdom in the variety and difference of the creatures, and the glory of his power in ordering all these differences for the preservation and good of the whole; and the glory of his greatness, that as it is the glory of princes to have many officers, soe this great king will have many stewards, Counting himself more honoured in dispensing his gifts to man by man, than if he did it by his owne immediate hands.

2 Reas. Secondly that he might have the more occasion to manifest the work of his Spirit: first upon the wicked in moderating and restraining them: soe that the riche and mighty should not eate upp the poore nor the poore and dispised rise upp against and shake off theire yoake. 2ly In the regenerate, in exerciseing his graces in them, as in the grate ones, theire love, mercy, gentleness, temperance &c., in the poore and inferior sorte, theire faithe, patience, obedience &c.

3 *Reas*. Thirdly, that every man might have need of others, and from hence they might be all knitt more nearly together in the Bonds of brotherly affection. From hence it appears plainly that noe man

is made more honourable than another or more wealthy &c., out of any particular and singular respect to himselfe, but for the glory of his creator and the common good of the creature, man. Therefore God still reserves the propperty of these gifts to himself as Ezek. 16. 17. he there calls wealthe, his gold and his silver, and Prov. 3. 9. he claims theire service as his due, honor the Lord with thy riches &c.— All men being thus (by divine providence) ranked into two sorts, riche and poore; under the first are comprehended all such as are able to live comfortably by their own meanes duely improved; and all others are poore according to the former distribution. There are two rules whereby we are to walk one towards another: Justice and Mercy. These are always distinguished in their act and in their object, yet may they both concurre in the same subject in eache respect; as sometimes there may be an occasion of showing mercy to a rich man in some sudden danger or distresse, and alsoe doeing of meere justice to a poor man in regard of some perticular contract &c. There is likewise a double Lawe by which wee are regulated in our conversation towardes another; in both the former respects, the lawe of nature and the lawe of grace, or the morrall lawe or the lawe of the gospell, to omitt the rule of justice as not propperly belonging to this purpose otherwise than it may fall into consideration in some perticular cases. By the first of these lawes man as he was enabled soe withall is commanded to love his neighbour as himself. Upon this ground stands all the precepts of the morrall lawe, which concernes our dealings with men. To apply this to the works of mercy; this lawe requires two things. First that every man afford his help to another in every want or distresse. Secondly, that hee performe this out of the same affection which makes him carefull of his owne goods, according to that of our Savior, (Math.) Whatsoever ye would that men should do to you. This was practised by Abraham and Lot in entertaining the angells and the old man of Gibea. The lawe of Grace or of the Gospell hath some difference from the former; as in these respects, First the lawe of nature was given to man in the estate of innocency; this of the Gospell in the estate of regeneracy. 2ly, the former propounds one man to another, as the same flesh and image of God; this as a brother in Christ allsoe, and in the communion of the same Spirit, and soe teacheth to put a difference between christians and others. Doe good to all, especially to the household of faith; upon this ground the Israelites were to putt a difference betweene the brethren of such as were strangers though not of the Canaanites. 3ly. The Lawe of nature would give no rules for dealing with enemies, for all are to be considered as friends in the state of innocency, but the Gospell commands love to an enemy. Proofe. If thine Enemy hunger, feed him; Love your Enemies, doe good to them that hate you. Math. 5. 44.

This lawe of the Gospell propounds likewise a difference of seasons and occasions. There is a time when a christian must sell all and give to the poor, as they did in the Apostles times. There is a time allsoe when christians (though they give not all yet) must give beyond their abillity, as they of Macedonia, Cor. 2, 6. Likewise community of perills calls for extraordinary liberality, and soe doth community in some speciall service for the churche. Lastly, when there is no other means whereby our christian brother may be

relieved in his distress, we must help him beyond our ability rather than tempt God in putting him upon help by miraculous or extraordinary meanes.

This duty of mercy is exercised in the kinds, Giueving, lending and forgiving.—

Quest. What rule shall a man observe in giueving in respect of the measure?

Ans. If the time and occasion be ordinary he is to give out of his abundance. Let him lay aside as God hath blessed him. If the time and occasion be extraordinary, he must be ruled by them; taking this withall, that then a man cannot likely doe too much, especially if he may leave himselfe and his family under probable means of comfortable subsistence.

Object. A man must lay upp for posterity, the fathers lay upp for posterity and children, and *he is worse than an infidell that provideth not for his owne.*

Ans. For the first, it is plaine that it being spoken by way of comparison, it must be meant of the ordinary and usuall course of fathers, and cannot extend to times and occasions extraordinary. For the other place the Apostle speaks against such as walked inordinately, and it is without question, that he is worse than an infidell who through his owne sloathe and voluptuousness shall neglect to provide for his family.—

Object. The wise man's Eies are in his head, saith Solomon, and foreseeth the plague; therefore he must forecast and lay upp against evill times when hee or his may stand in need of all he can gather.

Ans. This very Argument Solomon useth to persuade to liberallity, Eccle.: Cast thy bread upon the waters, and for thou knowest not what evill may come upon the land. Luke 26. Make you friends of the riches of iniquity; you will ask how this shall be? very well. For first he that gives to the poore, lends to the lord and he will repay him even in this life an hundredfold to him or his. — The righteous is ever mercifull and lendeth and his seed enjoyeth the blessing; and besides wee know what advantage it will be to us in the day of account when many such witnesses shall stand forth for us to witnesse the improvement of our tallent. And I would know of those whoe pleade soe much for laying up for time to come, whether they holde that to be Gospell, Math. 16. 19. Lay not upp for yourselves Treasures upon Earth &c. If they acknowledge it, what extent will they allowe it? if only to those primitive times, let them consider the reason whereopon our Saviour groundes it. The first is that they are subject to the moathe, the rust, the theife. Secondly, They will steale away the hearte; where the treasure is there will ye heart be allsoe. The reasons are of like force at all times. Therefore the exhortation must be generall and perpetuall, withallwayes in respect of the love and affection to riches and in regard of the things themselves when any speciall service for the churche or perticular Distresse of our brother doe call for the use of them; otherwise it is not only lawfull but necessary to lay upp as Joseph did to have ready uppon such occasions, as the Lord (whose stewards wee are of them) shall call for them from us; Christ gives us an Instance of the first, when hee sent his disciples for the Ass, and bidds them answer the owner thus, the Lord hath need of him: soe when the Tabernacle was to be built, he sends to his people to call for their silver and gold, &c; and yeildes noe other reason but that it was for his worke. When Elisha comes to the widow of Sareptah and findes her preparing to make ready her pittance for herselfe and family, he bids her first provide for him, he challengeth first God's parte which she must first give before shee must serve her owne family. All these teache us that the Lord lookes that when hee is pleased to call for his right in any thing wee have, our owne interest wee have, must stand aside till his turne be served. For the other, wee need looke noe further then to that of John 1. he whoe hath this world's goodes and seeth his brother to neede and shutts upp his compassion from him, how dwelleth the love of God in him, which comes punctually to this conclusion; if thy brother be in want and thou canst help him, thou needst not make doubt, what thou shouldst doe; if thou lovest God thou must help him.

Quest. What rule must wee observe in lending?

Ans. Thou must observe whether thy brother hath present or probable or possible means of repaying thee, if there be none of those, thou must give him according to his necessity, rather then lend him as he requires; if he hath present means of repaying thee, thou art to look at him not as an act of mercy, but by way of Commerce, wherein thou arte to walk by the rule of justice; but if his means of repaying thee be only probable or possible, then is hee an object of thy mercy, thou must lend him, though there be danger of losing it, Deut. 15. 7. If any of thy brethren be poore &c., thou shalt lend him sufficient. That men might not shift off this duty by the apparent hazzard, he tells them that though the yeare of Jubile were at hand (when he must remitt it, if hee were not able to repay it before) yet he must lend him and that chearefully. It may not greive thee to give him (saith hee) and because some might object, why soe I should soone impoverishe myself and my family, he adds with all thy worke &c; for our Saviour, Math. 5. 42. From him that would borrow of thee turne not away.

Quest. What rule must we observe in forgiving?

Ans. Whether thou didst lend by way of commerce or in mercy, if he hath nothing to pay thee, must forgive, (except in cause where thou hast a surety or a lawfull pleadge) Deut. 15. 2. Every seaventh yeare the Creditor was to quitt that which he lent to his brother if he were poore as appears ver. 8. Save when there shall be no poore with thee. In all these and like cases, Christ was a generall rule, Math. 7. 22. Whatsoever ye would that men should doe to you, doe yee the same to them allsoe.

Quest. What rule must wee observe and walke by in cause of community of perill?

Ans. The same as before, but with more enlargement towards others and lesse respect towards ourselves and our owne right. Hence it was that in the primitive Churche they sold all, had all things in common, neither did any man say that which he possessed was his owne. Likewise in theire returne out of the captivity, because the worke was greate for the restoring of the church and the danger of enemies was common to all, Nehemiah directs the Jews to liberallity and readiness in remitting theire debts to theire brethren, and disposing liberally to such as wanted, and stand not upon their owne dues which they might have demanded of them. Thus did some of

our Forefathers in times of persecution in England, and soe did many of the faithful of other churches, whereof wee keepe an honorable remembrance of them; and it is to be observed that both in Scriptures and latter stories of the churches that such as have beene most bountiful to the poore saintes, especially in those extraordinary times and occasions, God hath left them highly commended to posterity, as Zacheus, Cornelius, Dorcas, Bishop Hooper, the Cuttler of Brussells and divers others. Observe againe that the Scripture gives noe caussion to restraine any from being over liberall this way; but all men to the liberall and cherefull practise hereof by the sweeter promises; as to instance one for many, Isaiah 58. 6. Is not this the fast I have chosen to loose the bonds of wickedness, to take off the heavy burdens, to lett the oppressed go free and to breake every yoake, to deale thy bread to the hungry and to bring the poore that wander into thy house, when thou seest the naked to cover them; and then shall thy light brake forth as the morning and thy healthe shall growe speedily, thy righteousness shall goe before God, and the glory of the Lord shalt embrace thee; then thou shall call and the Lord shall answer thee &c., Ch. 2. 10. If thou power out thy soule to the hungry, then shall thy light spring out in darkness, and the Lord shall guide thee continually, and satisfie thy soule in draught, and make falt thy bones, thou shalt be like a watered garden, and they shalt be of thee that shall build the old wast places &c. On the contrary most heavy cursses are layed upon such as are straightened towards the Lord and his people, Judg. 5. Cursse the Meroshe because he came not to help the Lord. Hee whoe shutteth his eares from hearing the cry of the poore, he shall cry and shall not be heard; Math. 25. Goe ye curssed into everlasting fire &c. I was hungry and ye fedd mee not, Cor. 2. 9. 16. He that soweth sparingly shall reape sparingly. Haveing already sett forth the practice of mercy according to the rule of God's lawe, it will be useful to lay open the groundes of it allsoe, being the other parte of the Commandment and that is the affection from which this exercise of mercy must arise, the Apostle tells us that this *love is the fullfilling of the lawe*, not that it is enough to love our brother and soe noe further; but in regard of the excellency of his partes giveing any motion to the other as the soule to the body and the power it hath to sett all the faculties on worke in the outward exercise of this duty; as when wee bid one make the clocke strike, he doth not lay hand on the hammer, which is the immediate instrument of the sound, but setts on worke the first mover or maine wheele; knoweing that will certainely produce the sound which he intends. Soe the way to drawe men to the workes of mercy, is not by force of Argument from the goodness or necessity of the worke; for though this cause may enforce, a rationall minde to some present act of mercy, as is frequent in experience, yet it cannot worke such a habit in a soule, as shall make it prompt upon all occasions to produce the same effect, but by frameing these affections of love in the hearte which will as naturally bring forthe the other, as any cause doth produce the effect.

The deffinition which the Scripture gives us of love is this. *Love is the bond of perfection*, first it is a bond or ligament. 2ly it makes the worke perfect. There is noe body but consists of partes and that which knitts these partes together, gives the body its perfection, because it

makes eache parte soe contiguous to others as thereby they doe mutually participate with each other, both in strengthe and infirmity, in pleasure and paine. To instance in the most perfect of all bodies; Christ and his Church make one body; the severall partes of this body considered a parte before they were united, were as disproportionate and as much disordering as soe many contrary quallities or elements, but when Christ comes, and by his spirit and love knitts all these partes to himselfe and each to other, it is become the most perfect and best proportioned body in the world, Eph. 4. 16. Christ, by whome all the body being knitt together by every joint for the furniture thereof, according to the effectuall power which is in the measure of every perfection of partes, a glorious body without spott or wrinkle; the ligaments hereof being Christ, or his love, for Christ is love, 1 John 4. 8. Soe this definition is right. Love is the bond of perfection.

From hence we may frame these conclusions. 1. First of all, true Christians are of one body in Christ, 1 Cor. 12. 12. 13. 17. Ye are the body of Christ and members of their parte. All the partes of this body being thus united are made soe contiguous in a speciall relation as they must needes partake of each other's strength and infirmity; joy and sorrowe, weale and woe. 1 Cor. 12. 26. If one member suffers, all suffer with it, if one be in honor, all rejoyce with it. 2ly. The ligaments of this body which knitt together are love. 3ly. Noe body can be perfect which wants its proper ligament. 5ly. This sensibleness and sympathy of each other's conditions will necessarily infuse into each parte a native desire and endeavour, to strengthen, defend, preserve and comfort the other. To insist a little on this conclusion being the product of all the former, the truthe hereof will appeare both by precept and patterne. 1 John 3. 10. Yee ought to lay doune your lives for the brethren. Gal. 6. 2. beare ye one another's burthen's and soe fulfill the lawe of Christ. For patterns wee have that first of our Saviour whoe out of his good will in obedience to his father, becomeing a parte of this body and being knitt with it in the bond of love, found such a native sensibleness of our infirmities and sorrowes as he willingly yielded himselfe to deathe to ease the infirmities of the rest of his body, and soe healed theire sorrowes. From the like sympathy of partes did the Apostles and many thousands of the Saintes lay doune theire lives for Christ. Againe the like wee may see in the members of this body among themselves. 1 Rom. 9. Paule could have been contented to have been separated from Christ, that the Jewes might not be cutt off from the body. It is very observable what hee professeth of his affectionate partaking with every member; whoe is weake (saith hee) and I am not weake? whoe is offended and I burne not; and againe, 2 Cor. 7. 13. therefore wee are comforted because yee were comforted. Of Epaphroditus he speaketh, Phil. 2. 30. that he regarded not his owne life to do him service. Soe Phebe and others are called *the servants of the churche*. Now it is apparent that they served not for wages, or by constrainte, but out of love. The like we shall finde in the histories of the churche, in all ages; the sweete sympathie of affections which was in the members of this body one towards another; theire chearfullness in serveing and suffering together; how liberall they were without repineing, harbourers without grudgeing, and helpfull without reproaching; and all from hence, because they had fervent love amongst them; which onely makes the practise of mercy constant and easie.

The next consideration is how this love comes to be wrought. Adam in his first estate was a perfect modell of mankinde in all their generations, and in him this love was perfected in regard of the habit. But Adam, rent himselfe from his Creator, rent all his posterity allsoe one from another; whence it comes that every man is borne with this principle in him to love and seeke himselfe onely, and thus a man continueth till Christ comes and takes possession of the soule and infuseth another principle, love to God and our brother, and this latter haveing continuall supply from Christ, as the head and roote by which he is united, gets the predomining in the soule, soe by little and little expells the former. 1 John 4. 7. love cometh of God and every one that loveth is borne of God, soe that this love is the fruite of the new birthe, and none can have it but the new creature. Now when this quallity is thus formed in the soules of men, it workes like the Spirit upon the drie bones. Ezek. 39. bone came to bone. It gathers together the scattered bones, or perfect old man Adam, and knitts them into one body againe in Christ, whereby a man is become againe a living soule.

The third consideration is concerning the exercise of this love, which is twofold, inward or outward. The outward hath beene handled in the former preface of this discourse. From unfolding the other wee must take in our way that maxime of philosophy. Simile simili gaudet, or like will to like; for as of things which are turned with disaffection to eache other, the ground of it is from a dissimilitude or ariseing from the contrary or different nature of the things themselves; for the ground of love is an apprehension of some resemblance in the things loved to that which affects it. This is the cause why the Lord loves the creature, soe farre as it hathe any of his Image in it; he loves his elect because they are like himselfe, he beholds them in his beloved sonne. So a mother loves her childe, because shee throughly conceives a resemblance of herselfe in it. Thus it is betweene the members of Christ; eache discernes, by the worke of the Spirit, his oune Image and resemblance in another, and therefore cannot but love him as he loves himself. Now when the soule, which is of a sociable nature, findes anything like to itselfe, it is like Adam when Eve was brought to him. She must be one with himselfe. This is flesh of my flesh (saith he) and bone of my bone. Soe the soule conceives a greate delighte in it; therefore shee desires nearness and familiarity with it. Shee hath a greate propensity to doe it good and receives such content in it, as fearing the miscarriage of her beloved, shee bestowes it in the inmost closett of her heart. Shee will not endure that it shall want any good which shee can give it. If by occasion shee be withdrawne from the company of it, shee is still looking towardes the place where shee left her beloved. If shee heard it groane, shee is with it presently. If shee finde it sadd and disconsolate, shee sighes and moanes with it. Shee hath noe such joy as to see her beloved merry and thriving. If shee see it wronged, shee cannot hear it without passion. Shee setts noe boundes to her affections, nor hath any thought of reward. Shee findes recompense enough in the exercise of her love towardes it.

Wee may see this acted to life in Jonathan and David. Jonathan a valiant man endued with the spirit of love, soe soone as he discovered the same spirit in David had presently his hearte knitt to him by this ligament of love; soe that it is said he loved him as his owne soule, he takes soe great pleasure in him, that hee stripps himselfe to adorne his beloved. His father's kingdome was not soe precious to him as his beloved David, David shall have it with all his hearte. Himself desires noe more but that hee may be neare to him to rejoyce in his good. Hee chooseth to converse with him in the wildernesse even to the hazzard of his oune life, rather than with the greate Courtiers in his father's Pallace. When hee sees danger towards him, hee spares neither rare paines nor perill to direct it. When injury was offered his beloved David, hee would not beare it, though from his oune father. And when they must parte for a season onely, they thought theire heartes would have broake for sorrowe, had not theire affections found vent by abundance of teares. Other instances might be brought to showe the nature of this affection; as of Ruthe and Naomi, and many others; but this truthe is cleared enough. If any shall object that it is not possible that love shall he bred or upheld without hope of requitall, it is graunted; but that is not our cause; for this love is alluayes under reward. It never giues, but it alluayes receives with advantage; First in regard that among the members of the same body, love and affection are reciprocall in a most equal and sweete kinde of commerce.

2nly. In regard of the pleasure and content that the exercise of love carries with it, as wee may see in the naturall body. The mouth is at all the paines to receive and mince the foode which serves for the nourishment of all the other partes of the body; yet it hath noe cause to complaine; for first the other partes send backe, by severall passages, a due proportion of the same nourishment, in a better forme for the strengthening and comforting the mouthe. 2ly the laboure of the mouthe is accompanied with such pleasure and content as farre exceedes the paines it takes. Soe is it in all the labour of love among Christians. The partieloving, reapes love again, as was showed before, which the soule covetts more then all the wealthe in the world. 3ly. Nothing yeildes more pleasure and content to the soule then when it findes that which it may love fervently; for to love and live beloved is the soule's paradise both here and in heaven. In the State of wedlock there be many comforts to learne out of the troubles of that Condition; but let such as have tryed the most, say if there be any sweetness in that Condition comparable to the exercise of mutual love.

From the former Considerations arise these Conclusions.—1. First, This love among Christians is a reall thing, not imaginarie. 2ly. This love is as absolutely necessary to the being of the body of Christ, as the sinews and other ligaments of a naturall body are to the being of that body. 3ly. This love is a divine, spirituall, nature; free, active, strong, couragious, permanent; undervaluing all things beneathe its propper object and of all the graces, this makes us nearer to resemble the virtues of our heavenly father. 4thly It rests in the love and wellfare of its beloved. For the full certain knowledge of those truthes concerning the nature, use, and excellency of this grace, that which the holy ghost hath left recorded, 1 Cor. 13, may

give full satisfaction, which is needful for every true member of this lovely body of the Lord Jesus, to worke upon theire heartes by prayer, meditation continuall exercise at least of the speciall of this grace, till Christ be formed in them and they in him, all in eache other, knitt together by this bond of love.

It rests now to make some application of this discourse, by the present designe, which gave the occasion of writing of it. Herein are 4 things to he propounded; first the persons, 2ly the worke, 3ly the end, 4thly the meanes. 1. For the persons. Wee are a company professing ourselves fellow members of Christ, in which respect onely though wee were absent from each other many miles, and had our imployments as farre distant, yet wee ought to account ourselves knitt together by this bond of love, and, live in the exercise of it, if wee would have comforte of our being in Christ. This was notorious in the practise of the Christians in former times; as is testified of the Waldenses, from the mouth of one of the adversaries Aeneas Sylvius "mutuo ament pere antequam norunt," they use to love any of theire owne religion even before they were acquainted with them. 2nly for the worke wee have in hand. It is by a mutuall consent, through a speciall overvaluing providence and a more than an ordinary approbation of the Churches of Christ, to seeke out a place of cohabitation and Consorteshipp under a due forme of Government both civill and ecclesiasticall. In such cases as this, the care of the publique must oversway all private respects, by which, not only conscience, but meare civill pollicy, dothe binde us. For it is a true rule that particular Estates cannot subsist in the ruin of the publique. 3ly The end is to improve our lives to doe more service to the Lord; the comforte and encrease of the body of Christe, whereof we are members; that ourselves and posterity may be the better preserved from the common corruptions of this evill world, to serve the Lord and worke out our Salvation under the power and purity of his holy ordinances. 4thly for the *meanes* whereby this must be effected. They are twofold, a conformity with the worke and end wee aime at. These wee see are extraordinary, therefore wee must not content ourselves with usuall ordinary meanes. Whatsoever wee did, or ought to have, done, when wee lived in England, the same must wee doe, and more allsoe, where wee goe. That which the most in theire churches mainetaine as truthe in profession onely, wee must bring into familiar and constant practise; as in this duty of love, wee must love brotherly without dissimulation, wee must love one another with a pure hearte fervently. Wee must beare one anothers burthens. We must not looke onely on our owne things, but allsoe on the things of our brethren. Neither must wee thinke that the Lord will beare with such faileings at our hands as he dothe from those among whome wee have lived; and that for these 3 Reasons; 1. In regard of the more neare bond of mariage between him and us, wherein hee hath taken us to be his, after a most strickt and peculiar manner, which will make them the more jealous of our love and obedience. Soe he tells the people of Israell, you onely have I knowne of all the families of the Earthe, therefore will I punishe you for your Transgressions. 2ly, because the Lord will be sanctified in them that come neare him. We know that there were many that corrupted the service of the Lord;

some setting upp altars before his owne; others offering both strange fire and strange sacrifices allsoe; yet there came noe fire from heaven, or other sudden judgement upon them, as did upon Nadab and Abihu, whoe yet wee may think did not sinne presumptuously. 31y When God gives a speciall commission he lookes to have it strictly observed in every article; When he gave Saule a commission to destroy Amaleck, Hee indented with him upon certain articles, and because hee failed in one of the least, and that upon a faire pretense, it lost him the kingdom, which should have beene his reward, if hee had observed his commission. Thus stands the cause betweene God and us. We are entered into Covenant with Him for this worke. Wee haue taken out a commission. The Lord hath given us leave to drawe our own articles. Wee haue professed to enterprise these and those accounts, upon these and those ends. Wee have hereupon besought Him of favour and blessing. Now if the Lord shall please to heare us, and bring us in peace to the place we desire, then hath hee ratified this covenant and sealed our Commission, and will expect a strict performance of the articles contained in it; but if wee shall neglect the observation of these articles which are the ends wee have propounded, and, dissembling with our God, shall fall to embrace this present world and prosecute our carnall intentions, seeking greate things for ourselves and our posterity, the Lord will surely breake out in wrathe against us; be revenged of such a people and make us knowe the price of the breache of such a covenant.

Now the onely way to avoyde this shipwracke, and to provide for our posterity, is to followe the counsell of Micah, to doe justly, to love mercy, to walk humbly with our God. For this end, wee must be knitt together, in this worke, as one man. Wee must entertaine each other in brotherly affection. Wee must be willing to abridge ourselves of our superfluities, for the supply of other's necessities. Wee must uphold a familiar commerce together in all meekeness, gentlenes, patience and liberality. Wee must delight in eache other; make other's conditions our oune; rejoice together, mourne together, labour and suffer together, allwayes haueving before our eyes our commission and community in the worke, as members of the same body. Soe shall wee keepe the unitie of the spirit in the bond of peace. The Lord will be our God, and delight to dwell among us, as his oune people, and will command a blessing upon us in all our wayes. Soe that wee shall see much more of his wisdome, power, goodness and truthe, than formerly wee haue been acquainted with. Wee shall finde that the God of Israell is among us, when ten of us shall be able to resist a thousand of our enemies; when hee shall make us a prayse and glory that men shall say of succeeding plantations, "the Lord make it likely that of New England." For wee must consider that wee shall be as a citty upon a hill. The eies of all people are uppon us. Soe that if wee shall deale falsely with our God in this worke wee haue undertaken, and soe cause him to withdrawe his present help from us, wee shall be made a story and a by-word through the world. Wee shall open the mouthes of enemies to speake evill of the wayes of God, and all professors for God's sake. Wee shall shame the faces of many of God's worthy servants, and cause theire prayers to be turned into curses upon us till wee be consumed out of the good land whither wee are a goeing.

I shall shutt upp this discourse with that exhortation of Moses, that faithfull servant of the Lord, in his last farewell to Israell, Deut. 30. Beloved there is now sett before us life and good, Death and evill, in that wee are commanded this day to love the Lord our God, and to love one another, to walke in his wayes and to keepe his Commandements and his Ordinance and his lawes, and the articles of our Covenant with him, that wee may live and be multiplied, and that the Lord our God may blesse us in the land whither wee goe to possesse it. But if our heartes shall turne away, soe that wee will not obey, but shall be seduced, and worshipp and serve other Gods, our pleasure and proffitts, and serue them; it is propounded unto us this day, wee shall surely perishe out of the good land whither wee passe over this vast sea to possesse it;

Therefore lett us choose life that wee, and our seede may liue, by obeyeing His voyce and cleaveing to Him, for Hee is our life and our prosperity.

42. David Pietersz De Vries, Account of the Swanendael Massacre, 1632 [Excerpt]

Introduction

In 1629 a group of Dutch investors bought land from the Lenni Lenape Indians and built a trading post called Swanendael on the coast of Delaware. In 1631, David Pietersz De Vries sailed from Amsterdam and set down a number of men and their supplies. The following year, a Lenni Lenape man removed the metal coat of arms from its stake outside the Dutch trading post. The Dutch, seeing this as the theft of an important symbol of authority, vigorously protested. The resulting series of misunderstandings culminated in the slaughter of the traders by Indians. News of the massacre made its way via New Netherland to the Netherlands before the next planned expedition sailed. The investors abandoned their plan to send more settlers and recast the voyage as a whaling expedition. When the vessels arrived in December 1632, De Vries found the house burned down and the skeletons of 32 men and their animals. De Vries saw no point in trying to find the perpetrators and take revenge, so he made peace with the Indians and reestablished trade. The investors lost interest in Swanendael and sold the land to the Dutch West India Company by 1635. The existence of Swanendael and its episodic occupation by the Dutch during the period 1631 to 1633 permitted the Dutch to retain title to the area when challenged by the English of Maryland.

 $[\ldots]$

The 6th, we went with the boat into the river, well armed, in order to see if we could speak with any Indians, but coming by our house, which was destroyed, found it well beset with palisades in place of breastworks, but it was almost burnt up. Found lying here and there the skulls and bones of our people whom they had killed, and the heads of the horses and cows which they had brought with them, but perceived no Indians and, without having accomplished anything, returned on board, and let the gunner fire a shot in order to see if we could find any trace of them the next day.

The 7th, in the morning, we thought we saw some smoke near our destroyed house; we landed opposite the house, on the other side of the river, where there is a beach with some dunes. Coming to the beach, looked across the river towards the house where we had been the day before, and where we thought in the morning we had seen signs of smoke, but saw nothing. I had a cousin of mine with me from Rotterdam, named Heyndrick de Liefde, and as a flock of gulls was flying over our heads, I told him to shoot at it, as he had a fowling-piece with him, and he shot one on the wing, and brought it down. With it came a shout from two or three Indians, who were lying in the brush on the other side of the river by the destroyed house. We called to them to come over to us. They answered that we must come into the river with our boat. We promised to do so in the morning, as the water was then low, and that we would then talk with them, and we went back to the ship. Going aboard, we resolved to sail in the river with the yacht, as otherwise in an open boat we might be in danger of their arrows.

The 8th of December, we sailed into the river before our destroyed house, well on our guard. The Indians came to the edge of the shore, near the yacht, but dared not come in. At length, one ventured to come aboard the yacht, whom we presented with a cloth dress, and told him we desired to make peace. Then immediately more came running aboard, expecting to obtain a dress also, whom we presented with some trinkets, and told the one to whom we had given the cloth garment, that we had given it to him because he had most confidence in us—that he was the first one who came in the yacht, and should they come the next day with their chief called Sakimas, we would then make a firm peace, which they call rancontyn marenit. An Indian remained on board of the yacht at night, whom we asked why they had slain our people, and how it happened. He then showed us the place where our people had set up a column, to which was fastened a piece of tin, whereon the arms of Holland were painted. One of their chiefs took this off for the purpose of making tobacco-pipes, not knowing that he was doing amiss. Those in command at the house made such an ado about it, that the Indians, not knowing how it was, went away and slew the chief who had done it, and brought a token of the dead to the house to those in command, who told them that they wished they had not done it, that they should have brought him to them, as they wished to have forbidden him to do the like again. They then went away, and the friends of the murdered chief incited their friends—as they are a people like the Italians, who are very revengeful—to set about the work of vengeance. Observing our people out of the house, each one at his work, that there was not more than one inside, who was lying sick, and a large mastiff, who was chained—had he been loose they would not have dared to approach the house—and the man who had command, standing near the house, three of the bravest Indians, who were to do the deed, bringing a lot of beaver-skins with them to exchange, asked to enter the house. The man in charge went in with them to make the barter; which being done, he went down from the loft where the stores lay, and in descending the stairs, one of the Indians seized an axe, and cleft the head of our agent who was in charge so that he fell down dead. They also relieved the sick man of life; and shot into the dog, who was chained fast, and whom they most feared, twenty-five arrows before they could despatch him. They then proceeded towards the rest of the men, who were at their work, and going among them with pretensions of friendship, struck them down. Thus was our young colony destroyed, causing us serious loss.

The 9th, the Indians came to us with their chiefs, and sitting in a ring, made peace. Gave them some presents of duffels, bullets, hatchets, and various Nuremberg trinkets. They promised to make a present to us, as they had been out a-hunting. They then departed again with great joy of us, that we had not remembered what they had done to us...

43. Charter of Maryland, 1632 [Excerpt]

Introduction

George Calvert, First Lord Baltimore, was a prominent Catholic. He was on good terms with King Charles I at a time when England persecuted Catholics. Wishing to acquire land in America, Calvert invested in the Virginia Company, the New England Company, and the Avalon Peninsula of Newfoundland. Calvert first settled in Avalon, but found the winter too harsh. He and his wife then sailed to Virginia in 1628, but because the Virginia colonists were loyal Anglicans they would not let the Calverts leave their ship unless they took an oath renouncing Catholicism. The Calverts refused, returned to England, and asked the king for land on which to found a colony as a haven for Catholics. In 1632, the king granted Calvert about 12 million acres of land around the Chesapeake Bay, land which had once belonged to the now disbanded Virginia Company. George Calvert died in April 1632, and his 26-year-old son, Cecilius, inherited the grant. Two months later, Cecilius received a charter to settle the land. The land was called Maryland, after the king's Catholic wife, Henrietta Maria. The charter gave Calvert an unusual amount of power over his colony. As the colony's proprietor, he had absolute power over its government, defense, and land distribution.

Primary Source

Charles, by the Grace of God, of England, Scotland, France, and Ireland, king, Defender of the Faith, &c. To all to whom these Presents come, Greeting.

II. Whereas our Well beloved and Right trusty Subject Caecilius Calvert, Baron of Baltimore, in our Kingdom of Ireland, Son and Heir of George Calvert, Knight, late Baron of Baltimore, in our said Kingdom of Ireland, treading in the steps of his Father, being animated with a laudable, and pious Zeal for extending the Christian Religion, and also the Territories of our Empire, hath humbly besought Leave of Us, that he may transport, by his own Industry, and Expense, a numerous Colony of the English nation, to a certain Region, herein after described, in a Country hitherto uncultivated, in the Parts of America, and partly occupied by Savages, heaving no Knowledge of the Divine Being, and that all that Region, with some certain Privileges, and Jurisdiction, appertaining unto the wholesome Government, and State of his Colony and Region aforesaid, may by our Royal Highness be Given, Granted and confirmed unto Him, and his Heirs.

III. Know Ye therefore, that We, encouraging with our royal Favour, the pious and noble purpose of the aforesaid Barons of Baltimore, of our special Grace, certain knowledge, and mere Motion, have Given, Granted and confirmed, and by this our present Charter, for Us our Heirs, and Successors do Give, Grant and Confirm, unto the aforesaid Caecilius, now Baron of Baltimore, his Heirs, and Assigns, all that Part of the Peninsula, or Chersonese, lying in the Parts of America, between the Ocean on the East and the Bay of Chesapeake on the West, divided from the Residue thereof by a Right Line drawn from the Promontory, or Head-Land, called Watkin's Point, situate upon the Bay aforesaid, near the river Wigloo, on the West, unto the Ocean on the East; and between that boundary on the South, unto that Part of the Bay of Delaware on the North, which lieth under the Fortieth Degree of North Latitude from the Equinoctial, where New England is terminated; And all that Tract of Land within the Metes underwritten (that is to say) passing from the said Bay, called Delaware Bay, in a Right Line, by the Degree aforesaid, unto the true meridian of the first Fountain of the River of Pattowmack, thence verging toward the South, unto the further Bank of the said River, and following the same on the West and South, unto a certain Place, called Cinquack, situate near the mouth of the said River, where it disembogues into the aforesaid Bay of Chesapeake, and thence by the shortest Line unto the afore said Promontory of Place, called Watkin's Point; so that the whole tract of land, divided by the Line aforesaid, between the main Ocean and Watkin's Point, unto the Promontory called Cape Charles, and every the Appendages thereof, may entirely remain excepted for ever to Us, our Heirs and Successors.

V. And We do my these Presents, for Us, our Heirs, and Successors, Make, Create, and constitute Him, the now Baron of Baltimore, and his Heirs, the true and absolute Lords and Proprietaries of the Region aforesaid, and of all other Premises (except the before excepted) saving always the Faith and Allegiance and Sovereign Dominion due to Us, our Heirs, and Successors; to have, hold, possess, and enjoy the aforesaid Region, Islands, Islets, and other the Premises, unto the aforesaid now Baron of Baltimore, and to his Heirs and Assigns, to the sole and proper Behoof and Use of Him, the now Baron of Baltimore, his Heirs and Assigns, forever. To Hold of Us, our Heirs and Successors, Kings of England, as of our Castle of Windsor, in our County of Berks, in free and common Soccage, by Fealty only for all Services, and not in Capite, nor by Knight's Service, Yielding therefore unto Us, our Heirs and Successors Two Indian Arrows of these Parts, to be delivered at the said Castle of Windsor, every Year, on Tuesday in Easter Week: And also the fifth Part of all Gold and Silver Ore, which shall happen from Time to Time, to be found within the aforesaid Limits.

VI. Now, That the aforesaid Region, thus by us Granted and described, may be eminently distinguished above all other Regions of that Territory, and decorated with more ample Titles, Know Ye, that We, of our more special Grace, certain Knowledge, and mere Motion, have thought fit that the said Region and Islands be erected into a Province, as out of the plenitude of our royal Power and Prerogative, We do, for Us, our Heirs and Successors, erect and incorporate the same into a Province, and nominate the same Maryland, by which Name We will that it shall from henceforth be called.

$[\ldots]$

VIII. And forasmuch as, in the Government of so great a Province, sudden accidents may frequently happen, to which it will be necessary to apply a Remedy, before the Freeholders of the said Province, their Delegates, or Deputies, can be called together of the framing of Laws; neither will it be fit that so great a Number of People should immediately, on such emergent Occasion, be called together, We therefore, for the better Government of so great a Province, do Will and Ordain, and by these Presents, for Us, our Heirs and Successors, do Grant unto the said now Baron of Baltimore, and to his Heirs, that the aforesaid now Baron of Baltimore, and his Heirs, by themselves, or by their Magistrates and Officers, thereunto duly to be constituted as aforesaid, may, and can make and constitute fit and Wholesome Ordinances from Time to Time, to be Kept and observed within the Province aforesaid, as Well for the Conservation of the Peace, as for the better Government of the People inhabiting therin, and publicly to notify the same to all Persons whom the same in any wise do or may affect. Which Ordinances We will to be inviolably observed within the said Province, under the pans to be expressed in the same. So that the said Ordinances be consonant to Reason and be not, repugnant nor contrary, but (so far as conveniently may be done) agreeable to the Laws, Statutes, or Rights of our Kingdom of England: And so that the same Ordinances do not, in any Sort, extend to

oblige, bind, charge, or take away the Right or Interest of any Person or Persons, of, or in Member, Life, Freehold, Goods or Chattels.

IX. Furthermore, that the New Colony may more happily increase by a Multitude of People resorting thither, and at the same Time may be more firmly secured from the Incursions of Savages, or of other Enemies, Pirates, and Ravagers: We therefore, for Us, our Heirs and Successors, do by these Presents Give and Grant Power, License and Liberty, to all the Liege-Men and Subjects, present and future, of Us, our Heirs and Successors, except such to whom it shall be expressly forbidden, to transport themselves and their Families to the said Province with fitting Vessels, and suitable Provisions, and therin to settle, dwell and in habit; and to build and fortify Castles, Forts, and other Places of Strength, at the Appointment of the aforesaid now Baron of Baltimore, and his Heirs, for the Public and their own Defence; the Statute of Fugitives, or any other whatsoever to the contrary of the Premises in any wise notwithstanding.

[...]

XI. Furthermore, That our Subjects may be incited to undertake this Expedition with a ready and cheerful mind; Know Ye, that We of our especial Grace, certain Knowledge, and mere Motion, do, by the Tenor of these Presents, Give and Grant, as Well as to the aforesaid Baron of Baltimore, and to his Heirs, as to all other Persons who shall from Time to Time repair to the said Province, either for the Sake of Inhabiting, or of Trading with the In Inhabitants of the Province aforesaid, full License to Ship and Lade in any the Ports of Us, our Heirs and Successors, all and singular their goods, as Well movable, as immovable, Wares and merchandizes, likewise Grain of what Sort soever, and other Things whatsoever necessary for Food and Clothing, by the Laws and Statutes of our Kingdoms and Dominions, not prohibited to be transported out of the said Kingdoms; and the same to transport, by themselves, or their Servants or Assigns, into the said Province, without the Impediment or Molestation of Us, our Heirs or Successors, or any Officers of Us, our Heirs or Successors, (Saving unto Us, our Heirs and Successors, the Impositions, Subsidies, Customs, and other Dues payable for the same goods and Merchandizes) any Statute, Act, Ordinance, or other Things whatsoever to be contrary notwithstanding.

XII. But because, that in so remote a Region, placed among so many barbarous Nations, the Incursions as Well of the Barbarians themselves, as of other Enemies, Pirates and Ravagers, probably will be feared. Therefore We have Given, and for Us, our Heirs, and Successors, do Give by these Presents, as full and unrestrained Power, as any Captain-General of an Army ever hath had, unto the aforesaid now Baron of Baltimore, and to his Heirs and Assigns, by themselves, or by their Captains, or other Officers to summon to their Standards, and to array all men, of whatsoever Condition, or wheresoever born, for the Time being, in the said Province of Maryland, to wage War, and to pursue, even beyond the Limits of their Province, the Enemies and Ravagers aforesaid, infesting those Parts by Land

and by Sea, and (if God shall Grant it) to vanquish and captivate them, and the Captives to put to Death, or, according to their Discretion, to save, and to do all other and singular the Things which appertain, or have been accustomed to appertain unto the Authority and Office of a Captain-General of an Army.

XIII. We also will, and by this our Charter, do Give unto the aforesaid now Baron of Baltimore, and to his Heirs and Assigns, Power, Liberty, and Authority, that, in Case of Rebellion, sudden Tumult, or Sedition, if any (which God forbid) should happen to arise, whether upon Land within the Province aforesaid, or upon the High Sea in making a voyage to the said Province of Maryland, or in returning thence, they may, by themselves, or by their Captain, or other Officers, thereunto deputed under their Seals (to whom We, for Us, our Heirs and Successors, by these Presents, do Give and Grant the fullest Power and Authority) exercise martial Law as freely, and in as ample Manner and Form, as any Captain-General of an Army, by virtue of his Office may, or hath accustomed to Use the same, drawing themselves from the Government of Him or them, refusing to serve in War, flying over to the enemy, exceeding their Leave of Absence, Deserters, or otherwise howsoever offending against the Rule, Law, or Discipline of War.

 $[\ldots]$

XVII. Moreover, We will, appoint, and Ordain, and by these Presents, for Us, our Heirs and Successors, do Grant unto the aforesaid now Baron of Baltimore, his Heirs and Assigns, that the same Baron of Baltimore, his Heir and Assigns, from Time to Time, forever, shall have, and enjoy the Taxes and Subsidies payable, or arising within the Ports, Harbors, and other Creeks and Places aforesaid., within the Province aforesaid, for Wares bought and sold, and Things there to be laden, or unladen, to be reasonably assessed by them, and the People there as aforesaid, on emergent Occasion; to whom We Grant Power by these Presents, for Us, our Heirs and Successors, to assess and impose the said Taxes and Subsidies there, upon just Cause and in due proportion.

 $[\ldots]$

XIX. We also, by these Presents, do Give and Grant License to the same Baron of Baltimore, and to his Heirs, to erect any Parcels of Land within the Province aforesaid, into Manors, and in every of those manors, to have and to hold a Court-Baron, and all Things which to a Court Baron do belong; and to have and to Keep View of Frank-Pledge, for the Conservation of the Peace and better Government of those Parts, by themselves and their Stewards, or by the Lords, for the Time being to be deputed, of other of those Manors when they shall be constituted, and in the same to exercise all Things to the View of Frank Pledge belong.

[…]

XXII. And if, peradventure, hereafter it may happen, that any Doubts or Questions should arise concerning the true Sense and Meaning of any Word, Cause, or Sentence, contained in this our present Charter, We will charge and command, That Interpretation to be applied always, and in all Things, and in all Courts and Judicatories whatsoever, to obtain which shall be judged to be the more beneficial, profitable, and favorable to the aforesaid now Baron of Baltimore, his Heirs and Assigns: Provided always, that no Interpretation thereof be made, whereby God's holy and true Christian Religion, or the Allegiance due to Us, our Heirs and Successors, may in any wise suffer by Change, Prejudice, or Diminution; although express Mention be not made in these Presents of the true Yearly Value or Certainty of the Premises, or of any Part thereof; or of other Gifts and Grants made by Us, our Heirs and Successors, unto the said now Lord Baltimore, or any Statute, Act, Ordinance, Provision, Proclamation or Restraint, heretofore had, made, published, Ordained or provided, or any other thing, Cause, or Matter whatsoever, to the Contrary thereof in any wise notwithstanding.

XXIII. In witness Whereof We have Caused these our Letters to be made Patent. Witness Ourself at Westminster, the Twentieth Day of June, in the Eighth Year of our Reign.

44. Eyewitness Accounts of the Pequot War, 1638 [Excerpts]

Introduction

A series of violent confrontations between New England colonists and the Pequots led to the colonists' decision to make war on the Pequots, who stood in the way of their expansion. An English war party from Massachusetts raided and looted Pequot villages, and the Pequots attacked the English fort at Saybrook and settlers at Wethersfield. In May 1637, Connecticut—joined by the Massachusetts Bay and Plymouth colonies, along with the Narragansetts and the Mohegans—planned its revenge for the attack on Saybrook. Captain John Mason and Captain John Underhill led English troops in a surprise pre-dawn attack against the main Pequot village. They surrounded the sleeping village, set it on fire, and then killed everyone who tried to flee from the flames. No one knows for certain, but probably more than 400 Pequot men, women, and children died in just 30 minutes. So brutal was the wholesale slaughter that even the Pequots' enemies, English and Indian alike, expressed their horror. However, the New England Puritans believed that they had God on their side, and these accounts articulate this view. These two eyewitness accounts, taken together, illustrate how history can be distorted. Mason's account of the attack minimizes Underhill's role. Underhill protests that "the other Booke" did not do him justice.

Primary Source

A Brief History of the Pequot War John Mason

 $[\ldots]$

Whereupon Captain Mason seeing no Indians, entered a Wigwam; where he was beset with many Indians, waiting all opportunities to lay Hands on him, but could not prevail. At length William Heydon espying the Breach in the Wigwam, supposing some English might be there, entred but in his Entrance fell over a dead Indian; but speedily recovered himself, the Indians some fled, others crept under their Beds: The Captain going out of the Wigwam saw many Indians in the Lane or Street; he making toward them, they fled, were pursued to the End of the Lane, where they were met by Edward Pattison, Thomas Barber, with some others; where seven of them were Slain, as they said. The Captain facing about, marched a slow Pace up the Lane he came down, perceiving himself very much out of Breath; and coming to the other End near the Place where he first entred, saw two Soldiers standing close to the Pallizado with their Swords pointed to the Ground: The Captain told them that We should never kill them after that manner: The Captain also said, WE MUST BURN THEM; and immediately stepping into the Wigwam where he had been before, bought out a Fire Brand, and putting it in to the matts with which they were covered, set the Wigwams on Fire. Leiutenant Thomas Bull and Nicholas Omsted beholding, camp up; and when it was thoroughly kindled, the Indians ran as Men most dreadfully Amazed.

And indeed such a dreadful Terror did the ALMIGHTY let fall upon their Spirits, that they would fly from us and run into the very Flames, where many of them perished. And when the *Fort* was thoroughly Fired, Command was given, that all should fall off and surround the *Fort*; which was readily attended by all; only one *Arthur Smith* being so wounded that he could not move out of the Place, who was happily espied by Lieutenant *Bull*, and by him rescued.

The Fire was kindled on the *North East Side* to windward; which did swiftly over run the Fort, to the extream Amazement of the Enemy, and great Rejoycing of ourselves. Some of them climbing to the Top of the Palizado; others of them running into the very Flames; many of them gathering to winward, lay pelting at us with their Arrows, and we repayed them with our small Shot: Others of the Stoutest issued forth, as we did guess to the Number of *Forty*, who perished by the Sword.

What I have formerly said, is according to my own Knowledge, there being sufficient living Testimony to every Particular.

But in reference to Captain *Underhill* and his Parties acting in this Assault, I can only intimate as we were informed by some of themselves immediately after the Fight, Thus *They* marching up to the *Entrance* on the *South West Side*, there made some Pause; a valiant,

resolute Gentleman, one Mr HEDGE, stepping towards the *Gate, saying, If we may not Enter, wherefore case we hear:* and immediately endeavoured to Enter; but was opposed by a sturdy Indian which did impede his Entrance: but the Indian being slain by himself and Serjrant *Davis*, Mr. *Hodge* Entered the *Fort* with some others; but the *Fort* being on Fire, the Smoak and Flames were so violent that they were constrained to desert the *Fort*.

Thus were they not at their Wits End, who no many Hours before exalted themselves in their great Pride, threatening and resolving the utter Ruin and Destruction of all the *English*, Exulting and Rejoycing with Songs and Dances: But GOD was above them, who laughed his Enemies and the Enemies of his People to Scorn, making them as a fiery Oven: Thus were the Stout Hearted spoiled, having slept their last Sleep, and none of their Men could find their Hands: Thus did the LORD judge among the Heathen, filling the Place with dead Bodies!

And here we may see the just Judgment of GOD, in sending even the very *Night before* this Assault, *One Hundred and fifty Men* from their other *Fort*, to join with them of that Place, who were designed as some of themselves reported to go forth against the *English*, at that very Instant when this heavy Stroak came upon them, where they perished with their Fellows. So that the Mischief they intended to us, came upon their own Pate: They were taking in their own Snare, and we through Mercy escaped. And thus in *a little more than one Hour's space* was their impregnable *Fort* with themselves utterly Destroyed, to the Number of *six or seven Hundred*, as some of themselves confessed. There were only *seven* taken *Captive* & about *seven escaped*.

Of the English, there were two Slain outright, and about twenty Wounded: Some Fainted by reason of the sharpness of the Weather, it being a cool Morning & the want of such Comforts & Necessaries as were needful in such a Case; especially our Chyrurgeon was much wanting, whom we left with our Barks in Narragansett Bay, who had Order there to remain until the Night before out intended Assault.

And thereupon grew many *Difficulties*: Our provision and Munition near spent; we in the Enemies Country, who did far exceed us in Number, being much inraged; all our *Indians*, except ONKOS, deserting us; our *Pinnaces* at a great distance from us, and when they would come we were uncertain.

But as were consulting what Course to take, it pleased God to discover our *Vessels* to us before a fair Gale of Wind failing into *Pequot Harbour*, to our great Rejoicing.

We had no sooner discovered our *Vessels*, but immediately came up the *Enemy* from the OTHER FORT; *Three Hundred or more* as we conceived. The *Captain* lead out a *File* or two of Men to Skirmish with them, chiefly to try what Temper they were of, who put them

to a stand: we being much encouraged thereat, presently prepared to march towards our Vessels: Four or Five of our Men were so wounded that they must be carried with the Arms of twenty more. We also being faint, were constrained to put four to one Man, with the Arms of the rest that were wounded to others; so that we had not above forty Men free: at length we hired several Indians, who eased us that Burthen in carrying of our wounded Men. And marching about *one quarter of a Mile*; the Enemy coming up to the Place where the Fort was, and beholding what was done, stamped and tore the Hair from their Heads: And after a little space, came mounting down the Hill upon us, in a full career, as if they would over run us: But when they came within Shot, the Rear faced about, giving Fire upon them: Some of them being Shot, made the rest more wary: Yet they held on running to and fro, and shooting their Arrows at Random. There was at the Foot of the Hill a small Brook, where we rested and refreshed our selves, having by that time taught them a little more Manners than to disturb us.

[...]

A New and Experimentall Discoverie of New England John Underhill

Worthy Reader, let mee intreate you to have a more charitable opinion of me (though unworthy to be better thought of) then is reported in the other Booke: you may remember there is a passage unjustly laid upon mee, that when wee should come to the entrance, I should put forth this question: shall wee enter? others should answer againe; What came we hither for else? It is well knowne to many, it was never my practise in time of my command, when we are in garrison, much to consult with a private souldier, or to aske his advise in point of Warre, much lesse in a matter of so great a moment as that was, which experience had often taught mee, was not a time to put forth such a question, and therefore pardon him that hath given the wrong information: having our swords in our right hand, our Carbins or Muskets in our left hand, we approched the Fort. Master Hedge being shot thorow both armes, and more wounded; though it bee not commendable for a man to make mention of any thing that might tend to his owne honour; yet because I would have the providence of God observed, and his Name magnified, as well for my selfe as others, I dare not omit, but let the world know, that deliverance was given to us that command, as well as to private souldiers. Captaine Mason and my selfe entring into the Wigwams, hee was shot, and received many Arrowes against his headpeece, God preserved him from any wounds; my selfe received a shone in the left hippe, through a sufficient Buffe coate, that if I had not beene supplyed with such a garment, the Arrow would have pierced through me; another I received betweene necke and shoulders, hanging in the linnen of my Head-peece, others of our souldiers were shot some through the shoulders, some in the face, some in the head, some in the legs: Captaine Mason and my selfe losing each of us a man, and had neere twentie wounded: most couragiously

these Pequeats behaved themselves: but seeing the Fort was to hotte for us, wee devised a way how wee might save our selves and prejudice them, Captaine Mason entring into a Wigwam, brought out a fire-brand, after hee had wounded many in the house, then hee set fire on the West-side where he entred, my selfe set fire on the South end with a traine of Powder, the fires of both meeting in the center of the Fort blazed most terribly, and burnt all in the space of halfe an houre; many couragious fellowes were unwilling to come out, and fought most desperately through the Palisadoes, so as they were scorched and burnt with the very flame, and were deprived of their armes, in regard the fire burnt their very bowstrings, and so perished valiantly: mercy they did deserve for their valour, could we have had opportunitie to have bestowed it; many were burnt in the Fort, both men, women, and children, others forced out, and came in troopes to the Indians, twentie, and thirtie at a time, which our souldiers received and entertained with the point of the sword; downe fell men, women, and children, those that scaped us, fell into the hands of the Indians, that were in the reere of us; it is reported by themselves, that there were about foure hundred soules in this Fort, and not above five of them escaped out of our hands. Great and dolefull was the bloudy sight to the view of young souldiers that never had beene in Warre, to see so many soules lie gasping on the ground so thicke in some places, that you could hardly passe along. It may bee demanded, Why should you be so furious (as some have said) should not Christians have more mercy and compassion? But I would referre you to Davids warre, when a people is growne to such a height of bloud, and sinne against God and man, and all confederates in the action, there hee hath no respect to persons, but harrowes them, and sawes them, and puts them to the sword, and the most terriblest death that may bee: sometimes the Scripture declareth women and children must perish with their parents; some-time the case alters: but we will not dispute it now. We had sufficient light from the word of God for our proceedings.

Having ended this service, wee drew our forces together to battallia, being ordered, the Perueats came upon us with their prime men, and let flye at us, my selfe fell on scarce with twelve or fourteene men to encounter with them; but they finding our bullets to outreach their arrowes, forced themselves often to retreate: when we saw wee could have no advantage against them in the open field, wee requested our Indians for to entertaine fight with them, our end was that we might see the nature of the Indian warre: which they granted us and fell out; the Pequeats, Narragansets, and Mohigeners changing a few arrowes together after such a manner, as I dare boldly affirme, they might fight seven yeares and not kill seven men: they came not neere one another, but shot remote, and not point blanke, as wee often doe with our bullets, but at rovers, and then they gaze up in the skie to see where the Arrow falls, and not untill it is fallen doe they shoot againe, this fight is more for pastime, then to conquer and subdue enemies. But spending a little time this way, wee were forced to cast our eyes upon our poore maimed souldiers, many of them lying upon the ground, wanting food and such nourishable things as might refresh them in this faint estate: but we were not supplyed with any such things whereby wee might relieve them, but only were constrained to looke up to God, and to intreate him for mercy towards them: most were thirsty but could find no water; the provision wee had for food was very little; many distractions seized upon us at the present, a Chirurgion wee wanted, our Chirurgion not accustomed to warre, durst not hazard himselfe where we ventured our lives, but like a fresh-water souldier kept aboord, and by this meanes our poore maimed souldiers were brought to a great straite and faintnesse, some of them swounding away for want of speedy helpe, but yet God was pleased to preserve the lives of them, though not without great miserie, and paine to themselves for the present. Distractions multiplying, strength and courage began to faile with many. Our Indians that had stood close to us hitherto, were fallen into consultation, and were resolved for to leave us in a land wee knew not which way to get out: suddenly after their resolution, fiftie of the Narraganset Indians fell off from the rest returning home. The Pequeats spying them pursued after them: then

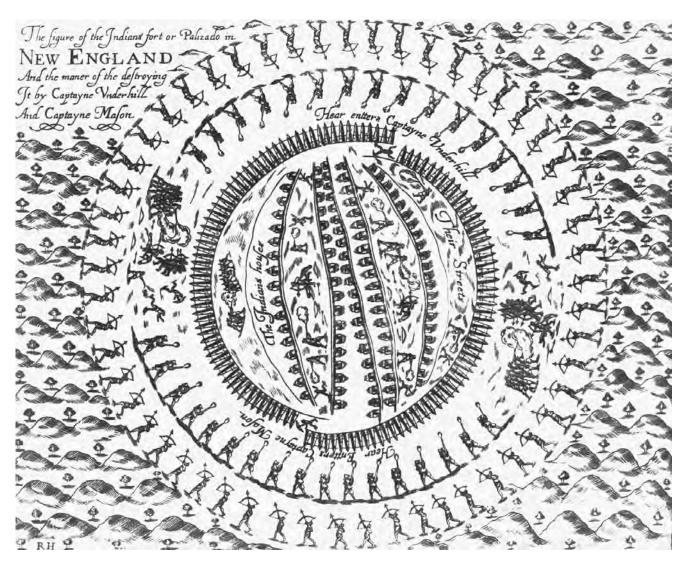

came the Narragansets to Captaine Mason, and my selfe, crying, oh helpe us now, or our men will bee all slaine. . . .

45. Engraving of the Attack on the Pequot Fort, 1638

Introduction

A series of violent confrontations between New England colonists and the Pequots led to the colonists' decision to make war on the Pequots, who stood in the way of their expansion. An English war party from Massachusetts raided and looted Pequot villages, and the Pequots attacked the English fort at Saybrook and settlers at

Contemporary engraving of the colonial attack on the Pequot village of Mystic Fort in May 1637. Of approximately 400–700 Pequot inhabitants of the village, only 7 were taken alive. Reportedly another 7 escaped. (Library of Congress)

Wethersfield. In May 1637, Connecticut—joined by the Massachusetts Bay and Plymouth colonies, along with the Narragansetts and the Mohegans—planned its revenge for the attack on Saybrook. Captain John Mason of Connecticut and Captain John Underhill of Massachusetts led English troops in a surprise pre-dawn attack against the main Pequot village. They surrounded the sleeping village set it on fire, and then killed everyone who tried to flee from the flames. No one knows for certain, but probably more than 400 Pequot men, women, and children died in just 30 minutes. Underhill's eyewitness account, published in 1638, included this stylized diagram of the action, showing English soldiers and Indian warriors surrounding the fort. So brutal was the episode that even the Pequots' enemies, English and Indian alike, protested in horror. However, the New England Puritans believed that they had God on their side, and Underhill's account articulates this view. Underhill later fell afoul of Puritan authority and moved to New Netherland, where he also led attacks on the Indians.

46. Lion Gardiner, Relation of the Pequot Wars, 1660

Introduction

The Pequots were the most powerful Indians in Connecticut and were feared by the other native peoples. They had moved into the area during the late 1500s, occupying land that had belonged to rival Indians. By the year 1600, at least 2,000 Pequots lived along the Connecticut coast and the border with Rhode Island. The other major tribe in Connecticut was the Mohegan, whose sachem, Uncas, remained loyal to the English for more than four decades. A group of English businessmen received a patent to occupy Connecticut. In 1635 they hired an English military engineer, Lion Gardiner, to supervise construction of settlements and defenses in Connecticut. Gardiner sailed to New England, where he designed and built a fort at Saybrook and laid out a town. From 1636, he lived there as commander of the fort for the duration of his four-year contract. Fearing for his family and the other settlers under his protection, Gardiner tried to dissuade New England authorities from their plan to go to war against the Pequots. When the New Englanders launched their attack from his fort, the settlers could no longer venture safely outside its walls. Gardiner later recounted what his men suffered at the hands of the Pequots, as well as his initial unwillingness to trust Uncas.

Primary Source

In the year 1635, I, Lion Gardiner, engineer and master of works of fortification in the legers of the Prince of Orange, in the Low Countries, through the persuasion of Mr. John Davenport, Mr. Hugh Peters with some other well-affected Englishmen of Rotterdam, I made an agreement with the forenamed Mr. Peters for £100 per annum, for four years, to serve the company of patentees, namely,

the Lord Say, the Lord Brooks [Brooke], Sir Arthur Hazilrig [Haslerigge], Sir Mathew Bonnington [Boynton], Sir-Richard Saltingstone [Saltonstall], Esquire [George] Fenwick, and the rest of their company. I was to serve them only in the drawing, ordering and making of a city, towns or forts of defence.

And so I came from Holland to London, and from thence to New England, where I was appointed to attend such orders as Mr. John Winthrop, Esquire, at the present Governor of Conectecott, was to appoint, whether at Pequit [Pequot] river, or Conectecott, and that we should choose a place both for the convenience of a good harbour, and also for capableness and fitness for fortification.

But I landing at Boston the latter end of November, the afore said Mr. Winthrop had sent before one Lieut. Gibbons, Sergeant Willard, with some carpenters, to take possession of the river's mouth, where they began to build houses against the spring; we expecting, according to promise, that there would have come from England to us 300 able men, whereof 200 should attend fortification, 50 to till the ground, and 50 to build houses.

But our great expectation at the river's mouth came only to two men, viz. Mr. Fenwick, and his man, who came with Mr. Hugh Peters, and Mr. Oldham and Thomas Stanton, bringing with them some otter-skin coats, and beaver, and skeins of wampum, which the Pequits [Pequots] had sent for a present, because the English had required those Pequits that had killed a Virginean [Virginian], one Capt. Stone, with his barks' crew, in Conectecott river, for they said they would have their lives and not their presents; then I answered, "seeing you will take Mr. Winthrop to the Bay to see his wife, newly brought to bed of her first child, and though you say he shall return, yet I know if you make war with these Pequits, he will not come hither again, for I know you will keep yourselves safe, as you think, in the Bay, but myself, with these few, you will leave at the stake to be roasted, or for hunger to be starved, for Indian corn is now 12s. per bushel, and we have but three acres planted, and if they will not make war for a Virginian and expose us to the Indians, whose mercies are cruelties, they, I say, love the Virginians better than us: for, have they stayed these four or five years, and will they begin now, we being so few in the river, and have scarce holes to put our heads in?"

—I pray ask the magistrates in the Bay if they have forgot what I said to them when they returned from Salem? For Mr. Winthrop, Mr. Haines, Mr. Dudley, Mr. Ludlow, Mr. Humfry, Mr. Belingam [Bellingham], Mr. Coddington, and Mr. Nowell;—these entreated me to go with Mr. Humfry and Mr. Peters to view the country, to see how fit it was for fortification. And I told them that nature had done more than half the work already, and I thought no foreign potent enemy would do them any hurt, but one that was near. They asked me who that was, and I said it was Capt. Hunger that threatened them most, for, said I, "war is like a three-footed stool, want

one foot and down comes all; and these feet are men, victuals, and munition, therefore, seeing in peace you are like to be famished, what will or can be done if war? Therefore I think," said I, "it will be best only to fight against Capt. Hunger, and let fortification alone awhile; and if need hereafter require it, I can come to do you any service:" and they all liked my saying well.—

Entreat them to rest awhile, till we get more strength here about us, and that we hear where the seat of war will be, may approve of it, and provide for it, for I had but twenty-four in all, men, women, and boys and girls, and not food for them for two months, unless we saved our corn-field, which could not possibly be if they came to war, for it is two miles from our home.

Mr. Winthrop, Mr. Fenwick, and Mr. Peters promised me that they would do their utmost endeavour to persuade the Bay-men to desist from war a year or two, till we could be better provided for it; and then the Pequit Sachem was sent for, and the present returned, but full sore against my will.

So they three returned to Boston, and two or three days after came an Indian from Pequit, whose name was Cocommithus, who had lived at Plimoth, and could speak good English; he desired that Mr. Steven [Stephen] Winthrop go to Pequit with an £100 worth of trucking cloth and all other trading ware, for they knew that we had a great cargo of goods of Mr. Pincheon's, and Mr. Steven Winthrop had the disposing of it. And he said that if he would come he might put off all his goods, and the Pequit Sachem would give him two horses that had been there a great while. So I sent the shallop with Mr. Steven Winthrop, Sergeant Tille [Tilly], whom we called afterward Sergeant Kettle, because he put the kettle on his head and Thomas Hurlbut and three men more, charging them that they should ride in the middle of the river, and not go ashore until they had done all their trade, and that Mr. Steven Winthrop should stand in the hold of the boat, having their guns by them, and swords by their sides, the other four to be, two in the fore cuddie, and two in aft, being armed in like manner, that so they out of the loop-holes might clear the boat, if they were by the Pequits assaulted; and that they should let but one canoe come aboard at once, with no more but four Indians in her, and when she had traded then another; and that they should lie no longer there than one day, and at night to go out of the river; and if they brought the two horses, to take them in a clear piece of land at the mouth of the river, two of them to go ashore to help the horses in, and the rest to stand ready with their guns in their hands, if need were, to defend them from the Pequits, for I durst not trust them. So they went and found but little trade, and they having forgotten what I charged them, Thomas Hurlbut and one more went ashore to boil the kettle, and Thomas Hurlbut stepping into the Sachem's wigwam, not far from the shore, enquiring for the horses, the Indians went out of the wigwam, and Wincumbone, his mother's sister, was then the great Pequit Sachem's wife, who made signs to him that he should be gone, for they would

cut off his head; which, when he perceived, he drew his sword and ran to the others, and got aboard, and immediately came abundance of Indians to the waterside and called them to come ashore, but they immediately set sail and came home, and this caused me to keep watch and ward, for I saw they plotted our destruction.

And suddenly after came Capt. Endecott, Capt. Turner, and Capt. Undrill [Underhill], with a company of soldiers, well fitted, to Seabrook, and made that place their rendezvous or seat of war, and that to my great grief, for, said I, "you come hither to raise these wasps about my ears, and then you will take wing and flee away;" but when I had seen their commission I wondered, and made many allegations against the manner of it, but go they did to Pequit, and as they came without acquainting any of us in the river with it, so they went against our will, for I knew that I should loose our corn-field; then I entreated them to hear what I would say to them, which was this: "sirs, seeing you will go, I pray you, if you don't load your barks with Pequits, load them with corn, for that is now gathered with them, and dry, ready to put into their barns, and both you and we have need of it, and I will send my shallop and hire this Dutchman's boat, there present, to go with you, and if you cannot attain your end of the Pequits, yet you may load your barks with corn, which will be welcome to Boston and to me:" But they said they had no bags to load them with, then said I, "here is three dozen of new bags, you shall have thirty of them, and my shallop to carry them, and six of them my men shall use themselves, for I will with the Dutchmen send twelve men well provided;" and I desired them to divide the men into three parts, viz. two parts to stand without the corn, and to defend the other one-third part, that carried the corn to the water-side, till they have loaded what they can. And the men there in arms, when the rest are aboard, shall in order go aboard, the rest that are aboard shall with their arms clear the shore, if the Pequits do assault them in the rear, and then, when the General shall display his colours, all to set sail together. To this motion they all agreed, and I put the three dozen of bags aboard my shallop, and away they went, and demanded the Pequit Sachem to come into parley. But it was returned for answer, that he was from home, but within three hours he would come; and so from three to six, and thence to nine, there came none. But the Indians came without arms to our men, in great numbers, and they talked with my men, whom they knew; but in the end, at a word given, they all on a sudden ran away from our men, as they stood in rank and file, and not an Indian more was to be seen: and all this while before, they carried all their stuff away, and thus was that great parley ended. Then they displayed their colorus, and beat their drums, burnt some wigwams and some heaps of corn, and my men carried as much aboard as they could, but the army went aboard, leaving my men ashore, which ought to have marched aboard first. But they all set sail, and my men were pursued by the Indians, and they hurt some of the Indians, two of them came home wounded. The Bay-men killed not a man, save that one Kichomiquim, and Indian Sachem of the Bay, killed a Pequit; and thus began the war between the Indians and us in these parts.

So my men being come home, and having brought a pretty quantity of corn with them, they informed me, both Dutch and English, of all passages. I was glad of the corn.

After this I immediately took men and went to our corn-field, to gather our corn, appointing others to come about with the shallop and fetch it, and left five lusty men in the strong-house, with long guns, which house I had built for the defence of the corn. Now these men not regarding the charge I had given them, three of them went a mile from the house a fowling; and having loaded themselves with fowl they returned. But the Pequits let them pass first, till they had loaded themselves, but at their return they arose out of their ambush, and shot them all three; one of them escaped through the corn, shot through the leg, the other two they tormented. Then the next day I sent the shallop to fetch the five men, and the rest of the corn that was broken down, and they found but three, as is above said, and when they had gotten that they left the rest; and as soon as they had gone a little way from shore they saw the house on fire.

Now so soon as the boat came home, and brought us this bad news, old Mr. Mitchell was very urgent with me to lend him the boat to fetch hay home from the Six-mile Island, but I told him they were too few men, for his four men could but carry the hay aboard, and one must stand in the boat to defend them, and they must have two more at the foot of the rock, with their guns, to keep the Indians from running down upon them. And in the first place, before they carry any of the cocks of hay, to scour the meadow with their three dogs,—to march all abreast from the lower end up to the rock, and if they found the meadow clear, then to load their hay; but his was also neglected, for they all went ashore and fell to carrying off their hay, and the Indians presently rose out of the long grass, and killed three, and took the brother of Mr. Mitchell, who is the minister of Cambridge, and roasted him alive; and so they served a shallop of his, coming down the river in the Spring, having two men, one whereof they killed at Six-mile island, the other came down drowned to us ashore at our doors, with an arrow shot into his eye through his head.

In the 22d of February [1636–37], I went out with ten men and three dogs, half a mile from the house, to burn the weeds, leaves and reeds, upon the neck of land, because we had felled twenty timbertrees, which we were to roll to the water-side to bring home, every man carrying a length of match with brimstone-matches with him to kindle the fire withal, but when we came to the small of the Neck, the weeds burning, I having before this set two sentinels on the small of the Neck, I called to the men that were burning the reeds to come away, but they would not until they had burnt up the rest of their matches. Presently there starts up four Indians out of the fiery reeds, but ran away, I calling to the rest of our men to come away out of the marsh. Then Robert Chapman and Thomas Hurlbut, being sentinels, called to me, saying there came a number of Indians out of the other side of the marsh. Then I went to stop them,

that they should not get the wood-land; but Thomas Hurlbut cried out to me that some of the men did not follow me, for Thomas Rumble and Arthur Branch, threw down their two guns and ran away; then the Indians shot two of them that were in the reeds, and sought to get between us and home, but durst not come before us, but kept us in a half-moon, we retreating and exchanging many a shot, so that Thomas Hurlbut was shot almost through the thigh, John Spencer in the back, into his kidneys, myself into the thigh, two more were shot dead. But in our retreat I keep Hurlbut and Spencer still before us, we defending ourselves with our naked swords, or else they had taken us all alive. So that the two sore wounded men, by our slow retreat, got home with their guns, when our two sound men ray away and left their guns behind them. But when I saw the cowards that left us, I resolved to let them draw lots which of them should be hanged, for the articles did hang up in the hall for them to read, and they knew they had been published long before. But at the intercession of old Mr. Mitchell, Mr. Higgisson [John Higginson, chaplain], and Mr. [Thomas] Pell [surgeon], I did forbear.

Within a few days after, when I had cured myself of my wound, I went out with eight men to get some fowl for our relief, and found that guns that were thrown away, and the body of one man shot through, the arrow going in at the right side, the head sticking fast, half through a rib on the left side, which I took out and cleansed it, and presumed to send to the Bay, because they had said that the arrows of the Indians were of no force.

Anthony Dike, master of a bark, having his bark at Rhode Island in the winter, was sent by Mr. [Henry] Vane, then Governor. Anthony came to Rhode Island by land, and from thence he came with his bark to me with a letter, wherein was desired that I should consider and prescribe the best way I could to quell these Pequits, which I also did, and with my letter sent the man's rib as a token.

A few days after came Thomas Stanton down the river, and staying for a wind, while he was there came a troop of Indians within musket shot, laying themselves and their arms down behind a little rising hill and two great trees; which I perceiving, called the carpenter whom I had shewed how to charge and level a gun, and that he should put two cartridges of musket bullets into two sackers guns that lay about; and we leveled them against the place, and I told him that he must look towards me, and when he saw me wave my hat above my head he should give fire to both the guns; then presently came three Indians, creeping out and calling to us to speak with us: and I was glad that Thomas Stanton was there, and I sent six men down by the Garden Pales to look that none should come under the hill behind us; and having placed the rest in places convenient closely, Thomas and I with my sword, pistol and carbine, went ten or twelve poles without the gate to parley with them. And when the six men came to the Garden Pales, at the corner, they found a great number of Indians creeping behind the fort, or betwixt us and home, but they ran away. Now I had said to Thomas Stanton, whatsoever they say to you, tell me first, for we will not answer them directly to anything, for I know not the mind of the rest of the English. So they came forth, calling us nearer to them, and we them nearer to us. But I would not let Thomas go any further than the great stump of a tree, and I stood by him; then they asked who we were, and he answered, "Thomas and Lieutenant." But they said he lied, for I was shot with many arrows; and so I was, but my buff coat preserved me, only one hurt me. But when I spake to them they knew my voice, for one of them had dwelt three months with us, but ran away when the Bay-men came first. Then they asked us if we would fight with Niantecut Indians, for they were our friends and came to trade with us. We said we knew not the Indians one from another, and therefore would trade with none. Then they said, have you fought enough? We said we knew not yet. Then they asked if we did use to kill women and children? We said that they should see that hereafter. So they were silent a small space, and then they said, We are Pequits, and have killed Englishmen, and can kill them as mosquetoes, and we will go to Conectecott and kill men, women, and children, and we will take away the horses, cows and hogs. When Thomas Stanton had told me this, he prayed me to shoot that rogue, for, said he, he hath and Englishman's coat on, and saith that he hath killed three, and these other four have their cloathes on their backs. I said, "no, it is not the manner of a parley, but have patience and I shall fit them ere they go." "Nay, now or never," said he; so when he could get no other answer but this last, I bid him tell them that they should not go to Conectecott, for if they did kill all the men, and take all the rest as they said, it would do them no good, but hurt, for Englishwomen are lazy, and can't do their work; horses and cows will spoil your corn-fields, and the hogs their clam-banks, and so undo them; then I pointed to our great house, and bid them tell them there lay twenty pieces of trucking cloth, of Mr. Pincheon's, with hoes, hatchets, and all manner of trade, they were better fight still with us, and so get all that, and then go up the river after they had killed all us. Having heard this, they were mad as dogs, and ran away; then when they came to the place from whence they came, I waved my hat about my head, and the two great guns went off, so that there was a great hubbub amongst them.

Then two days after came down Capt. Mason, and Sergeant Seely, with five men more, to see how it was with us; and whilst they were there, came down a Dutch boat, telling us the Indians had killed fourteen English, for by that boat I had sent up letters to Conectecott, what I heard, and what I thought, and how to prevent that threatened danger, and received back again rather a scoff, than nay thanks for my care and pains. But as I wrote, so it fell out to my great grief and theirs, for the next, or second day after, as major Mason well knows, came down a great many canoes, going down the creek beyond the marsh, before the fort, many of them having white shirts; then I commanded the carpenter whom I had shewed to level great guns, to put in two round shot in the two sackers, and we leveled them at a certain place, and I stood to bid him give fire, when I thought the canoe would meet the bullet, and one of them took off the nose of a great canoe wherein the two maids were, that were

taken by the Indians, whom I redeemed and clothed, for the Dutchmen, whom I sent to fetch them, brought them away almost naked from Pequit, they putting on their own linen jackets to cover their nakedness; and though the redemption cost me ten pounds, I am yet to have thanks for my care and charge about them; these things are known to Major Mason.

Then came from the Bay Mr. Tille [John Tilly], with a permit to go up to Harford [Hartford], and coming ashore he saw a paper nailed up over the gate, whereon was written that no boat or bark should pass the fort, but that they come to an anchor first, that I might see whether they were armed and manned sufficiently, and they were not to land any where after they passed the fort till they came to Wethersfield; and this I did because Mr. Michell had lost a shallop before coming down from Wethersfield, with three men well armed. This Mr. Tille gave me ill language for my presumption, as he called it, with other expressions too long here to write. When he had done I bid him go to his warehouse, which he had built before I came, to fetch his goods from thence, for I would watch no longer over it. So he, knowing nothing, went and found his house burnt, and one of Mr. Plum's with others, and he told me to my face that I had caused it to be done; but Mr. Higgisson, Mr. Pell, Mr. Thomas Hurlbut and John Green can witness that the same day that our house was burnt at Cornfield-point I went with Mr. Higgisson, Mr. Pell, and four men more, broke open a door and took a note of all that was in the house and gave it to Mr. Higgisson to keep, and so brought all the goods to our house, and delivered it all to them again when they came for it, without any penny of charge. Now the very next day after I had taken the goods out, before the sun was quite down, and we all together in the great hall, all them houses were on fire in one instant. The Indians ran away, but I would not follow them. Now when Mr. Tille had received all his goods, I said unto him, I thought I had deserved for my honest care both for their bodies and goods of those that passed by here, at the least better language, and am resolved to order such malepert persons as you are; there I wish you and also charge you to observe that which you have read at the gate, 'tis my duty to God, my masters, and my love I bear to you all which is the ground of this, had you but eyes to see it; but you will not till you feel it. So he went up the river, and when he came down again to his place which I call Tille's folly, now called Tille's point, in our sight in despite, having a fair wind he came to an anchor, and with one man more went ashore, discharged his gun, and the Indians fell upon him, and he killed the other, and carried him alive over the river in our sight, before my shallop could come to them; for immediately I sent seven men to fetch the Pink down, or else it had been taken and three men more. So they brought her down, and I sent Mr. Higgisson and Mr. Pell aboard to take and invoice of all that was in the vessel, that nothing might be lost.

Two days after came to me, as I had written to Sir Henerie Vane, then governor of the Bay, I say came to me Capt. Undrill [Underhill], with twenty lusty men, well armed, to stay with me two months, or 'till something should be done about the Pequits. He came at the charge of my masters.

Soon after came down from Hartford Maj. Mason, Lieut. Seely, accompanied with Mr. Stone and eight Englishmen, and eighty Indians, with a commission from Mr. Ludlow and Mr. Steel, and some others; these came to go fight with the Pequits. But when Capt. Undrill and I had seen their commission, we both said they were not fitted for such a design, and we aid to Maj. Mason, we wondered he would venture himself, being no better fitted; and he said the Magistrates could not or would not send better: then we said that none of our men should go with them, neither should they go unless we, that were bred soldiers from our youth, could see some likelihood to do better than the Bay-men with their strong commission last year.

Then I asked them how they durst trust the Mohegin Indians, who had but that year come from the Pequits. They said they would trust them, for they could not well go without them for want of guides. Yea, said I, but I will try them before a man of ours shall go with you or them; and I called for Uncas and said unto him, "you say you will help Maj. Mason, but I will first see it, therefore spend you not twenty men to the Bass river, for there went yester-night six Indians in a canoe thither; fetch them now dead or alive, and then you shall go with Maj. Mason, else not." So he sent his men who killed four, brought one a traitor to us alive, whose name was Kiswas, and one ran away. And I gave him fifteen yards of trading cloth on my own charge, to give unto his men according to their desert. And having staid there five or six days before we could agree, at last we old soldiers agreed about the way and act, and took twenty insufficient men from the eighty that came from Harford and sent them up again in a shallop, and Capt. Undrill with twenty of the lustiest of our men went in their room, and I furnished them with such things as they wanted, and sent Mr. Pell, the surgeon with them; and the Lord God blessed their design and way, so that they returned with victory to the glory of God, and honour of our nation, having slain three hundred, burnt their fort, and taken many prisoners.

Then came to me an Indian called Wequash, and I by Mr. Higgission inquired of him, how many of the Pequits were yet alive that had helped to kill Englishmen; and he declared them to Mr. Higgisson, and he writ them down, as may appear by his own hand here enclosed, and I did as therein is written.

Then three days after the fight came Waiandance, next brother to the old Sachem of Long Island, and having been recommended to me by Maj. Gibbons, he came to know if we were angry will all Indians. I answered "no, but only with such as had killed Englishmen." He asked me whether they that lived upon Long-Island might come to trade with us? I said "no, nor we with them, for if I should send my boat to trade for corn, and you have Pequits with you, and if my boat should come to some creek by reason of bad weather, they might kill my men, and I shall think that you of Long-Island have

done it, and so we may kill all you for the Pequits; but if you will kill all the Pequits that come to you, and send me their heads, then I will give to you as to Weakwash [Wequash], and you shall have trade with us." Then, said he, I will go to my brother, for he is the great Sachem of Long-Island, and if we may have peace and trade with you, we will give you tribute as we did the Pequits. Then I said, "If you have any Indians that have killed English, you must bring their heads also." He answered not any one, and said that Gibbons, my brother would have told you if it had been so; so he went away and did as I had said, and sent me five heads, three and four heads, for which I paid them that brought them as I had promised.

Then came Capt. Stoton [Stoughton] with an army of 300 men, from the Bay, to kill the Pequits; but they were fled beyond New Haven to a swamp. I sent Wequash after them, who went by night to spy them out, and the army followed him, and found them at the great swamp, who killed some and took others, and the rest fled to the Mowhakues with their Sachem. Then the Mohaws cut off his head and sent it to Harford, for then they all feared us, but now it is otherwise, for they say to our faces that our Commissioner's meeting once a year, and speak a great deal, or write a letter, and other's all for they dare not fight. But before they went to the Great Swamp they sent Thomas Stanton over to Long Island and Shelter island, to find Pequits there, but there was none, for Sachem Waiandance, that was at Plimoth when the commissioners were there, and set there last, I say, that they durst not come there; and he and his men went with the English to the Swamp, and thus the Pequits were quelled at that time.

But there was like to be a great broil between Miantenomie [Miantonomoh] and Unchus [Uncas] who should have the rest of the Pequits, but we mediated between them and pacified them; also Unchus challenged the Narraganset Sachem out to a single combat, but he wound not fight without all his men; but they were pacified, thought the grudge remained still, as it doth appear.

Thus far I had written in a book, that all men and posterity might know how and why so many honest men had their blood shed, yea, and some flayed alive, others cut in pieces, and some roasted alive, only because Kichamokin, a Bay Indian killed one Pequit; and thus far of the Pequit war, which was but a comedy in comparison of the tragedies which hath been here threatened since, and may yet come, if God do not open the eyes, ears, and hearts of some that I think are willfully deaf and blind, and think because there is no change that the vision fails, and put the evil threatened-day far off, for say they, we are to twenty to one to what we were then, and none dare meddle with us. Oh! wo be to the pride and security which hath been the ruin of many nations, as woful experience has proved.

But I wonder, and so doth many more with me, that the Bay doth not better revenge the murdering of Mr. Oldham, an honest man of their own, seeing they were at such cost for a Virginian. The Narraganset's there were at Block-Island killed him, and had £50 of gold of his, for

I saw it when he had five pieces of me, and put it up into a clout and tied it up altogether, when he went away from me to Block-Island; but the Narragansets had it and punched holes into it, and put it about their necks for jewels; and afterwards I saw the Dutch have some of it, which they had of the Narraganset at a small rate.

And now I find that to be true which our friend Waiandance told me many years ago, that was this; seeing that all the plots of the Narraganset were always discovered, he said they would let us alone till they had destroyed Uncas, and him, and then they, with the Mowaukes and Mowhaukes and the Indians beyond the Dutch, and all the Northern and Eastern Indians would easily destroy us, man and mother's son. This have I informed the Governors of these parts, but all in vain, for I see they have done as those of Wethersfield, not regarding till they were impelled to it by blood; and thus we may be sure of the fattest of the flock are like to go first, if not altogether, and then it will be too late to read. Jer. XXV.—for drink we shall if the Lord be not the more meriful to us for our extreme pride and base security, which cannot but stink before the Lord; and we may expect this, that if there should be war again between England and Holland, our friends at the Dutch and our Dutch Englishmen would prove as true to us now, as they were when the fleet came out of England; but no more of that, a word to the wise is enough.

47. The Trial of Anne Hutchinson, November 1637 [Excerpt]

Introduction

Puritanism, which grew out of dissent against the established Church of England, became the new establishment in New England. Those who disagreed with the Puritan establishment of Massachusetts were accused of heresy. Anne Hutchinson, the daughter of a dissenting clergyman in England, departed for America in 1634, accompanied by her husband and 15 children. She did not find the religious freedom she expected in Massachusetts. She conducted religious discussion groups for women and gathered followers. Her outspoken views on religion and her assertion that she had received divine revelations, coupled with the fact that she was a woman in a world where women were not expected to have opinions on important matters, led to her arrest and trial for heresy in 1637. Her banishment was inevitable, and she moved to Rhode Island. She lived there until her husband's death, then moved with family and friends to Dutch-controlled Long Island in 1642. The following year, Indians killed Hutchinson and several of her children and servants in revenge for the Dutch governor's massacre of a defenseless Indian village. One of her descendants, great-great-grandson Thomas Hutchinson, served as royal governor of Massachusetts just prior to the American Revolutionary War.

Primary Source

The Examination of Mrs. Ann Hutchinson at the court a Newtown.

Mr. Winthrop, governor. Mrs. Hutchinson, you are called here as one of those that have troubled the peace of the commonwealth and the churches here; you are known to be a woman that hath had a great share in the promoting and divulging of those opinions that are causes of this trouble, and to be nearly joined not only in affinity and affection with some of those the court had taken notice of and passed censure upon, but you have spoken divers things as we have been informed very prejudicial to the honour of the churches and ministers thereof, and you have maintained a meeting and an assembly in your house that hath been condemned by the general assembly as a thing not tolerable nor comely in the sight of God nor fitting for your sex, and notwithstanding that was cried down you have continued the same, therefore we have thought good to send for you to understand how things are, that if you be in an erroneous way we may reduce you that so you may become profitable member here among us, otherwise if you be obstinate in your course that then the court may take such course that you may trouble us no further, therefore I would intreat you to express whether you do not hold and assent in practice to those opinions and factions that have been handled in court already, that is to say, whether you do not justify Mr. Wheelwright's sermon and the petition.

Mrs. Hutchinson. I ma called here to answer before you but I hear no things laid to my charge.

Gov. I have told you some already and more I can tell you.

(Mrs. H.) Name one Sir.

Gov. Have I not named some already?

Mrs. H. What have I said or done?

Gov. Why for your doings, this you did harbour and countenance those that are parties in this faction that you have heard of.

(Mrs. H.) That's matter of conscience, Sir.

Gov. Your conscience you must keep or it must be kept for you. *Mrs. H.* Must not I ten entertain the saints because I must keep by conscience.

Gov. Say that one brother should commit felony or treason and come to his other brother's house, if he knows him guilty and conceals him he is guilty of the same. It is his conscience to entertain him, but if his conscience comes into act in giving countenance and entertainment to him that hath broken the law he is guilty too. So if you do countenance those that are transgressor of the law you are in the same fact.

Mrs. H. What law do they transgress?

Gov. The law of God and of the state.

Mrs. H. In what particular?

Gov. Why in this among the rest, whereas the Lord doth say honour they father and they mother.

Mrs. H. Ey Sir in the Lord. (*Gov.*) This honour you have broke in giving countenance to them.

Mrs. H. In entertaining those did I entertain them against any act (for there is the thing) or what god hath appointed?

Gov. You knew that Mr. Wheelwright did preach this sermon and those that countenance him in this do break a law.

Mrs. H. What law have I broken?

Gov. Why the fifth commandment.

Mrs. H. I deny that for he saith in the Lord.

Gov. You have joined with them in the faction.

Mrs. H. In what faction have I joined with them?

Gov. In presenting the petition.

Mrs. H. Suppose I had set my hand to the petition what then? (*Gov.*) You saw that case tried before.

Mrs. H. But I had not my hand to the petition.

Gov. You have councelled them. (Mrs. H.) Wherein?

Gov. Why in entertaining them.

Mrs. H. What breach of law if that Sir?

Gov. Why dishonouring of parents.

Mrs. H. But put the case Sir that I do fear the Lord and my parents, may I not entertain them that fear the Lord because my parents will not give me leave?

Gov. If they be the fathers of the commonwealth, and they of another religion, if you entertain them then you dishonour your parents and are justly punishable.

 $[\ldots]$

Mr. Weld. I then said to Mrs. Hutchinson when it was come to this issue, why did you let us go thus long and never tell us of it?

Gov. I should wonder why the elders should move the elders of our congregation to have dealth with her if they saw not some cause.

Mr. Cotton. Brother Weld and brother Shepard, I did then clear myself unto you that I understood her speech in expressing herself to you that you did hold forth some matter in your preaching that was not pertinent to the seal of the spirit—*Two lines defaced.*

Dep. Gov. They affirm that Mrs. Hutchinson did say they were not able ministers of the new testament.

Mr. Cotton. I do not remember it.

Mrs. H. If you please to give me leave I shall give you the ground of what I know to be true. Being much troubled to see the falseness of the constitution of the church of England, I had like to have turned separatist; whereupon I kept a day of solemn humiliation and pondering of the thing; this scripture was brought unto me—he that denies Jesus Christ to become in the flesh is antichrist—This I considered of and in considering found the papists did not deny him to become in the flesh, nor we did not deny him-who then was antichrist? Was the Turk antichrist only? The Lord knows that I could not open scripture; he must by his prophetical office open it unto me. So after that being unsatisfied in the thing, the Lord was pleased to bring this scripture out of the Hebrews. He that denies the testament denies the testator, and in this did open unto me and give me to see that those which did not teach the new covenant had the spirit of antichrist, and upon this he did discover the ministry unto me and ever since, I bless the Lord, he hath let me see which was the clear ministry and which the wrong. Since that time I confess I have

been more choice and he hath let me to distinguish between the voice of my beloved and the voice of Moses, the voice of John Baptist and the voice of antichrist, for all those voices are spoken of in scripture. Now if you do condemn me for speaking what in my conscience I know to be the truth I must commit myself unto the Lord.

Mr. Nowell. How do you know that that was the spirit?

Mrs. H. How did Abraham know that it was God that bid him offer his son, being a breach of the sixth commandment?

Dep. Gov. By an immediate voice.

Mrs. H. So to me by an immediate revelation.

Dep. Gov. How! An immediate revelation.

Mrs. H. By the voice of his own spirit to my soul. I will give you another scripture, Jer. 46. 27, 28—out of which the Lord shewed me what he would do for me and the rest of his servants.—But after he was pleased to reveal himself to me I did presently like Abraham run to Hagar. And after that he did let me see the atheism of my own heart, for which I begged of the Lord that it might not remain in my heart, and being thus, he did shew me this (a twelvemonth after) which I told you of before. Ever since that time I have been confident of what he hath revealed unto me.

48. Thomas Morton, *New English Canaan*, 1637 [Excerpt]

Introduction

Thomas Morton was a well-connected Anglican lawyer in England when he decided to undertake a colonial venture in New England. In 1624, he and a partner settled with a group of indentured servants about 25 miles from Plymouth Colony. When Morton's partner abandoned Massachusetts for Virginia, Morton freed the servants and established a society based on a mix of Anglicanism, paganism, and the ways of the neighboring Indians. The settlement, renamed Merrymount, became infamous among the Pilgrims of Plymouth for its maypole and the men's dalliances with native women. Worse, Merrymount prospered by trading with the Indians, selling them guns and liquor. In 1627, Myles Standish and a force of Pilgrims attacked Merrymount, cut down the maypole, and marooned Morton on an island. Morton escaped to England, then returned to Merrymount and was re-arrested in 1630. Banished to England, his Massachusetts property confiscated and destroyed, Morton nearly succeeded in convincing King Charles I to revoke the Massachusetts Bay charter. In 1637 Morton published the story of his colonial experiences in the satirical and well-received New English Canaan, excerpted here. On Morton's return to Massachusetts in 1643, he was again arrested and banished to Maine, where he ended his days.

CHAP. XIV. Of the Revells of New Canaan.

The Inhabitants of Pasonagessit (having translated the name of their habitation from that ancient Salvage name to Ma-re Mount; and being resolved to have the new name confirmed for a memorial to after ages) did devise amongst themselves to have it performed in a solemne manner with Revels, & merriment after the old English custome: prepared to sett up a Maypole upon the festivall day of Philip and Iacob; & therefore brewed a barrell of excellent beare, & provided a case of bottles to be spent, with other good cheare, for all commers of that day. And because they would have it in a compleat forme, they had prepared a song fitting to the time and present occation. And upon Mayday they brought the Maypole to the place appointed, with drumes, gunnes, pistols, and other fitting instruments, for that purpose; and there erected it with the help of Salvages, that came thether of purpose to see the manner of our Revels. A goodly pine tree of 80. foote longe, was reared up, with a peare of buckshorns nayled one, somewhat neare unto the top of it: where it stood as a faire sea marke for directions; how to finde out the way to mine Host of Ma-re Mount.

[…]

The setting up of his Maypole was lamentable spectacle to the precise seperatists: that lived at new Plimmouth. They termed it an Idoll; yea they called it the Calfe of Horeb: and stood at defiance with the place naming it Mount Dagon; threatning to make it a woefull mount and not a merry mount.

 $[\ldots]$

This harmeles mirth made by younge men (that lived in hope to have wifes brought over to them, that would save them a laboure to make a voyage to fetch any over) was much distasted, of the precise Seperatists: that keepe much a doe, about the tyth of Muit and Cummin; troubling their braines more then reason would require about things that are indifferent: and from that time sought occasion against my honest Host of Ma-re Mount to overthrow his ondertakings, and to destroy his plantation quite and cleane. . . .

 $[\ldots]$

CHAP. XV. Of a great Monster supposed to be at Ma-re-Mount; and the preparation made to destroy it.

The Seperatists envying the prosperity, and hope of the Plantation at Ma-re Mount (which they perceaved beganne to come forward, and to be in a good way for gaine in the Beaver trade) conspired together against mine Host especially, (who was the owner of that Plantation) and made up a party against him; and mustred up what aide they could; accounting of him, as of a great Monster.

Many threatening speeches were given out both against his person, and his Habitation, which they divulged should be consumed with fire: And taking advantage of the time when his company (which seemed little to regard, theire threats) were gone up into the Inlands, to trade with the Salvages for Beaver.

They set upon my honest host at a place, called Wessaguscus, where (by accident) they found him. The inhabitants there were in good hope, of the subvertion of the plantation at Mare Mount, (which they principally aymed at;) and the rather, because mine host was a man that indeavoured to advance the dignity of the Church of England; which they (on the contrary part) would laboure to vilifie; with uncivile termes: enveying against the sacred booke of common prayer, and mine host that used it in a laudable manner amongst his family, as a practise of piety.

There hee would be a meanes to bringe sacks to their mill (such is the thrist after Beaver) and helped the conspiratores to. Surprisee mine host, (who was there all alone) and they chardged him, (because they would seeme to have some reasonable cause against him (to sett a glosse upon their malice) with criminall things which indeede had beene done by such a person but was of their conspiracy; mine host demaunded of the conspirators who it was, that was author of that information, that seemed to be their ground for what they now intended. And because they answered, they would not tell him, hee as peremptorily replyed, that hee would not stay, whether he had, or he had not done as they had bin informed.

The answere made no matter (as it seemed) whether it had bin negatively, or affirmatively made) for they had resolved what hee should suffer, because (as they boasted,) they were now become the greater number: they had shaked of their shackles of servitude, and were become Masters, and masterles people.

It appeares, they were like beares whelpes in former time, when mine hosts plantation was of as much strength as theirs, but now (their being stronger,) the (like overgrowne beares) seemed monsterous. In breife, mine host must indure to be their prisoner, untill they could contrive it so, that they might send him for England, (as they said,) there to suffer according to the merrit of the fact, which they intended to father upon him; supposing (belike) it would proove a hainous crime.

Much rejoycing was made that they had gotten their cappitall enemy (as they concluded him) whome they purposed to hamper is such sort, that hee should not be able to uphold his plantation at Ma-re Mount.

The Conspirators sported themselves at my honest host, that meant them no hurt; & were so joccund that they feasted their bodies, and fell to tippeling, as if they had obtained a great prize; like the Trojans when they had the custody of Hippeus pinetree horse.

Mine host fained greefe: and could not be perswaded either to eate, or drinke, because hee knew emptines would be a meanes to make him as watchfull, as the Geese kept in the Roman Cappitall: whereon the contrary part, the conspirators would be so drowsy, that hee might have an opportunity to give them a slip, insteade of a tester. Six persons of the conspiracy were set to watch him at Wessaguscus: But hee kept waking; and in the dead of night (one lying on the bed, for further suerty,) up gets mine Host and got to the second dore that hee was to passe which (notwithstanding the lock) hee got open: and shut it after him with such violence, that it affrighted some of the conspirators.

The word which was given with an alarme, was, ô he's gon, he's gon, what shall wee doe he's gon? the rest (halfe a sleepe) start up in a maze, and like rames, ran theire heads one at another full butt in the darke.

Their grand leader Captaine Shrimp tooke on most furiously, and tore his clothes for anger, to see the empty nest, and their bird gone.

The rest were eager to have torne theire haire from theire heads, but it was so short, that it would give them no hold; Now Captaine Shrimp thought in the losse of this prize (which hee accoumpted his Master peece,) all his honor would be lost for ever.

In the meane time mine Host was got home to Ma-re Mount through the woods, eight miles, round about the head of the river Monatoquit, that parted the two Plantations: finding his way by the helpe of the lightening (for it thundred as hee went terribly) and there hee prepared powther three pounds dried, for his present imployment, and foure good gunnes for him, and the two assistants left at his howse, with bullets of severall sizes three hounderd, or thereabouts; to be used if the conspirators should pursue him thether: and these two persons promised theire aides in the quarrell, and confirmed that promise with a health in good rosa solis.

Now Captaine Shrimp, the first Captaine in the Land (as hee supposed,) must doe some new act to repaire this losse, and to vindicate his reputation, who had sustained blemish, by this oversight. Begins now to study, how to repaire or survive his honor in this manner; callinge of Councell: they conclude.

Hee takes eight persons more to him, and (like the nine Worthies of New Canaan) they imbarque with preparation against Ma-re-Mount, where this Monster of a man (as theire phrase was) had his denne; the whole number, (had the rest not bin from home, being but seaven,) would have given Captaine Shrimpe (a quondam Drummer,) such a wellcome, as would have made him wish for a Drume as bigg as Diogenes tubb, that hee might have crept into it out of sight.

Now the nine Worthies are approached; and mine Host prepared: having intelligence by a Salvage, that hastened in love from Wessaguscus, to give him notice of their intent.

One of mine Hosts men prooved a craven: the other had prooved his wits to purchase a little valoure, before mine Host had observed his posture.

The nine worthies comming before the Denne of this supposed Monster, (this seaven headed hydra, as they termed him) and began like Don Quixote against the Windmill to beate a party, and to offer quarter (if mine Host would yeald) for they resolved to send him for England, and bad him lay by his armes.

But hee (who was the Sonne of a Souldier) having taken up armes in his just defence, replyed, that hee would not lay by those armes, because they were so needfull at Sea, if hee should be sent over. Yet (to save the effusion of so much worthy bloud, as would haue issued, out of the vaynes of these 9. worthies of New Canaan, if mine Host should have played upon them out at his port holes (for they came within danger like a flocke of wild geese, as if they had bin tayled one another, as coults to be sold at a faier) mine Host was content to yeelde upon quarter; and did capitulate with them: in what manner it should be more certainety, because hee knew what Captaine Shrimpe was.

Hee expressed, that no violence should be offered to his person, none to his goods, nor any of his Howsehold: but that hee should have his armes, and what els was requisit for the voyage, (which their Herald retornes,) it was agreed upon, and should be performed.

But mine Host no sooner had set open the dore and issued out: but instantly Captaine Shrimpe, and the rest of the worties stepped to him, layd hold of his armes; and had him downe, and so eagerly was every man bent against him (not regarding any agreement made with such a carnall man,) that they fell upon him, as if they would have eaten him: some of them were so violent, that they would have a slice with scabbert and all for haste, until an old Souldier (of the Queenes as the Proverbe is) that was there by accident, clapt his gunne under the weapons, and sharply rebuked these worthies for their unworthy practises. So the matter was taken into more deliberate consideration.

Captaine Shrimpe and the rest of the nine worthies, made themselves (by this outragious riot) Masters of mine Hoste of Marre Mount, and disposed of what hee had at his plantation.

This they knew (in the eye of the Salvages) would add to their glory; and diminish the reputation of mine honest Host, whome they practised to be ridd of, upon any termes, as willingly as if hee had bin the very Hidra of the time.

CHAP. XVI. How the 9. worthies put mine Host of Ma-re-Mount into the inchaunted, Castle at Plimmouth, and terrified him with the Monster Briareus.

[...]

A conclusion was made, and sentence given, that mine Host should be sent to England a prisoner. But when hee was brought to the shipps for that purpose, no man durst be so foole hardy as to undertake carry him. So these Worthies set mine Host upon an Island, without gunne, powther, or shot, or dogge, or so much as a knife, to get any thinge to feede upon or any other cloathes to shelter him with at winter then a thinne suite which hee had one at that time. Home hee could not get to Ma-re-Mount upon this Island. Hee stayed a moneth at least, and was releeved by the Salvages that tooke notice that mine Host was a Sachem of Passonagessit, and would bring bottles of strong liquor to him, and unite themselves into a league of brother hood with mine Host; so full of humanity are these infidels before these Christians.

From this place for England, sailed mine Host in a Plimmouth shipp, (that came into the Land to fish upon the Coast,) that landed him safe in England at Plimmouth, and hee stayed in England untill the ordinary time for shipping to set forth for these parts; and then retorned: Noe man being able to taxe him of any thinge.

49. Leonard Calvert, Letter to Lord Baltimore, 1638 [Excerpt]

Introduction

From the time Cecilius Calvert, Second Lord Baltimore, received a charter to establish a colony in Maryland, he faced challenges on multiple fronts. After overcoming interference by Virginians who saw the new colony as an encroachment on their territory, the first colonists finally sailed to Maryland late in 1633. Leonard Calvert, the lord proprietor's brother, accompanied the colonists as lieutenant-governor. Maryland confronted border disputes on all sides—first with Virginia, then later with Delaware and Pennsylvania. A Virginia colonist, William Claiborne, had claimed and occupied Kent Island, located in the Chesapeake Bay within the borders of Maryland. Claiborne had been conducting a lucrative trade with the Indians from this well-placed island and did not wish to submit to Lord Baltimore. Because Claiborne and the island's other English residents refused to cooperate with Maryland authorities, in 1638 Calvert led an armed expedition to take control of the island. Once he arrested the leading resistors the rest of the inhabitants accepted Maryland's sovereignty. Claiborne returned to reclaim the island in 1644 while Calvert was in England. The Calvert family temporarily lost control of Maryland for about two years, but on regaining control again ejected Claiborne.

Good Brother: I have endeavored this last winter to bring the Inhabitants of the Ile of Kent willingly to submit themselves to your governement and to incourage them thereunto I wrote unto them a letter in November, where amongst other motives I used to perswade them, I promised to free them from all question of any former contempts they had committed against you, so that they would from thence forward desist from the like and submit themselves to the government and to shew them greater favor I gave them the choice to name whom they would of the Inhabitants of the Ileand to be theire commaunder; but one Jhon Butler Cleybornes brother in law and one Tho: Smith an agent of Cleybornes upon Kent was of such power amongst them that they perswaded them still to continue in theire former contumacie. Upon notice given me hereof, presently appointed Capt. Evelin Commander of the Ileand which formerly I purposely omitted because he was had in a generall dislike amongst them, him they contemned and committed many Insolencies against; wherefore findeing all faire meanes I could use to be in vaine, and that no way but compulsion was left, I gathered togeather about twenty musketteers out of the Colony of St. Maries and appointing the command of them to Capt. Cornewallis whome I tooke as my assistant with me, I sat saile from St. Maries towards Kent about the latter end of November, intending to apprehend Smith and Butler if I could, and by the example of theire punishment to reduce the rest to obedience, but it beeing then farre in the winter, the windes were so cross and the weather so fowle in the bay, that after I had remayned a week upon the water I was foret to returne back and deferre that expedition untill some fitter tyme. Two months affter in the beginning of februarie I was given to understand that the Indians at the head of the bay, called the Sasquahannoughs, intended in the spring following to make warre upon us at St. Maries pretending revenge for our assisting of our neighbors Indians against them two yeares before (which we never did though they will needs thinck so) and that they were incouraged much against us by Thomas Smith who had transplanted himselfe with other English from the Ile of Kent the last summer to an Ileand at the head of the bay fower miles below the falls called Palmers Ileand and understanding likewise that they had planted and fortified themselves there by directions from Capt. Cleybourne with intent to live there independent of you (because they supposed it out of the limits of your Province) and that the Smith and Mr. Botler whom I have formerly mentioned was then preparing to carrie a farther supply from Kent both of men and necessaries to the said Ileand; I thought it expedient to stop theire proceedings in the beginnings, and for that purpose haveing advised with the councell about the busines I sat forth from St. Maries for the Ile of Kent with thirtie choice musketteers takeing Capt. Cornewalleis and Capt. Evelin in my company. To Capt. Cornew: I appointed the command of those Soldiers I carried with me, and afterward arriving at the said Ileand I landed with my company a little before sunne rise, at the southermost end thereof where Capt. Cleybornes howse is seated wthin a small ffort of Pallysadoes, but findeing the gate towards the sea at my comeing fast barred in the inside one of my company being acquainted with the place quickly found passage in at an othergate and commeing to the gate which I was at opened unto me, so that I was arrived and entered the fort without notice taken by any of the Ileand which I did desire, the easilier to apprehend Boteler and Smith the cheife incenduaries of the former seditions and mutinies upon the Ileand, before they should be able to make head against me, and understanding that Boteler and Smith were not then at the fort but at theire severall plantations I sent to all the lodgeings in the fort and caused all the persons that were fownd in them to be brought unto me thereby to prevent theire giving untymely notice unto Boteler and Smith of my commeing, and takeing them all alongst with me I marched with my company from thence with what speed I could towards Botelers dwelling called the great thicket some five miles from the fort and appointed my Pinnass to meet me at an other Place called Craford, and makeing a stand about halfe a mile short of the place, I sent my Ensigne one Mr. Clerck (that came once with Mr. Copley from England) with tenne musketteires to Butler to acquaint him that I was come upon the Ileand to settle the government thereof and commaund his present repaire unto me at Craford two miles distant from thence, which the Ensigne accordingly did and brought Boteler unto me before I removed from where he left me. After I had thus possessed myselfe of him I sent my Serjeant one Robert Vaugham with six musketteires to Thomas Smiths who lived at a place called beaver neck right against Boteler on the other side of a Creeck with like commands as I had formerly given for Boteler, and then marching forward with your Ensigne displayed to Craford by the tyme I was come thither Smith was brought unto me where haveing both the cheife delinquents against you I first charged them with theire crimes and afterward committed them Prisoners aboard the Pinnass. I came in and appointed a gard over them, after I caused a proclamation to be made of a generall pardon to all other the Inhabitants of the Ileand excepting Boteler and Smith for all former contempts against you that should with in fower and twenty howers after the proclaiming of the same come in and submit themselves to your government where upon wthin the time appointed the whole Ileand came in and submitted themselves. Haveing received theire submission, I exorted them to a faith full continuance of the same, and encouraged them thereto by assureing them how ready you would be alwayes upon theire deserts to condescend to any thing for theire goods. Afterward I gave order for the carrieing of Boteler and Smith to St. Maries in the Pinnass I came in, and with them sent most of the Soldiers as a gard upon them commaunding them to be delivered into the custody of the sheriffe at St. Maries untill my returne and my Pinnass to returne to the Ileand to me, where till my Pinnasses returne I held a court and heard and determined diverse causes between the Inhabitants. At the end of the said court I assembled all the Inhabitants to make choise of theire

delegates to be present for them at a generall assembly then held at St. Maries for the makeing of Lawes which they accordingly did, and before my departure from them I gave them to understand that every man that held or desired to hold any land in the Ileand, it was necessarie they should take pattents of it under the seale of the Province as holding it of you which they were all very desireous of, so that some tyme this summer I promised to come to the Ileand and bring Mr. Lewger with me to survay and layout theire lands for them and then to pass grants unto them of it, reserveing onely such rents and services to you as the law of the Province should appoint. There is upon the Ileand about one hundred and twentie men able to beare armes as neer as I could gather; of the women and children I can make no estimate. In conclusion appointing the command of the Ileand to three of them vist: to Mr. Robert Philpot as commaunder and William Cox and Tho: Allen joynt commissioners with him I departed for St. Maries, where after my arrivall I called a grand inquest upon Smith who fownd a bill against him for Pyracie, whereupon he was arraigned before the assembly and by them condemned to suffer death and forfeit, as by a particular act for that purpose assented unto by the whole howse and sent unto you, you will perceive; I have omitted as yet to call Mr. Boteler to his tryall, because I am in hopes by shewing favor unto him to make him a good member, but I have not as yet released him, though I have taken him out of the sheriffes custody into my owne howse where I intend to have him remayne untill I have made farther experience of his disposition and if I can win him to a good inclination to your Service, I shall thinck him fittest to take the commaund of the Ile of Kent; for those others which have now that charge from me are very unable for it, nor is there better to be found upon the Ileand, but least (Boteler demeaning himselfe otherwise then well and that I should finde cause to thinck him fitter to be punished then pardoned) there should want meanes to give him condigne punishment for all his former offences, I desire you would send over an act the next yeare with your assent thereto, to be proposed to an assembly in Maryland for theire assent censureing Boteler as Smith was for Pyracie which he committed at the head of the bay neer Palmers Ileand in the yeare 1635 upon a Pinnasse belonging to St. Maries by takeing and a great quantitie of trucking commodities from Jhon Tomkins and serjeant Robert Vaughan who had the charge of her and togeather with the said Pinnass and goodes carried the said Tomkins and Vaughan prisoners to Kent. Smith hath solicited you I suppose by his letters for his pardon but I shall desire you that you would leave it to me to do as I shall finde him to deserve; whereby (if it be possible he should be the better for it) it will take better effect with him when he shall continue at my mercie under whose eye he is. Palmers Ileand beeing already seated and fortifyed and a good stock of cattle to the number of thirteen head put upon it, I thought not good to supplant but understanding there were five men inhabiting it servants to Capt. Cleyborne and formerly under the command of Smith I sent serjeant Robert Vaugham and two others with him from St. Maries to set downe there and to the said: Vaugham gave the commaund of all the rest, and by reason Capt Cleyborne

hath been attainted of ffelony in the last assembly at St Maries by particular act and sentenced to forfeit all his estate in the Province. I gave Vaugham authoritie to take the servants and other goodes and chattles belonging to Cleyborne upon the Ileand into his charge, and to have them forth commeing when they shall be demaunded of him togeather wth what profitt shall be made by the serjeants labors. I am informed that upon occasion of discourse given before Sir Jhon Harvey Mr. Kempe and Mr. Hawley by Mr. Boteler whether Palmers Ile were within the Province of Maryland or no Mr. Hawley did so weackly defend your title to it that Boteler grew more confident of proceeding in planting it for his Brother Cleyborne and I have some reason to thinck that Mr Hawley did willingly let your title fall for some designe sake of his owne upon trade with the Sasquahannoughs weh he might conceive better hopes to advance by its depenice on Virginia then on Maryland for when I sat in counsell at St. Maries about the expedition I made to Kent to stop the proceedings of that designe of Boteler and Smiths planting it, he earnestly diswaded it by suggesting all the reasons he could to make your title doubtfull to it the Ileand and then how unlawfull an act it would be to hinder theire planting it, and though it was made appeare that theire seating there was most dangerous to the Colony at St. Maries by reason that they had incouraged the Indians to set upon us and might hereafter furnish them with gunns to our further harme if we should suffer them to proceed, whereas otherwise Boteler and Smith beeing removed we might hope to make a peace with those Indians yet it seemed some designe he had upon theire setting downe there was so deare unto him that he preferred it before the safetie of all us and his owne family beeing included in the daunger, and would needs have perswaded it to be in Virginia though the express words of your pattent limits the Province to the northward where New England ends but it is apparent that the Iland is within your Province for the line of fortie by Smiths map by which the Lords Refferies lade out the bonds lyeth right over the first falls and this Ileand is fowre miles to the sowtherd below those falls. . . .

50. Exeter Compact, 1639

Introduction

In 1638, Massachusetts Bay Colony banished Rev. John Wheel-wright and his congregation, accusing them of Antinomianism. Antinomians believed that people could have a direct relationship with God, heresy in the eyes of the Puritans. Wheelwright's group founded the town of Exeter, in modern-day New Hampshire, and established their own government based on the Exeter Compact. The compact embraced many of the same democratic principles of self-government championed in the Pilgrims' Mayflower Compact

of 1620. Massachusetts authorities, however, grew concerned that New Hampshire would become a refuge for all sorts of undesirables, and complained that the New Hampshire settlers should not have allowed Wheelwright's group to settle among them. The Puritans' complaints fell on deaf ears, as most New Hampshire settlers were Anglicans. By 1640, about 1,000 English people lived in and around four towns in New Hampshire. More than half of them had come from Massachusetts Bay Colony. Massachusetts extended its authority over New Hampshire in 1651 but each town still had its own government and control over its own affairs. In 1680, English authorities made New Hampshire a separate colony despite the wish of its Puritans to remain part of Massachusetts.

51. Fundamental Orders of Connecticut, 1639 [Excerpt]

Introduction

With the permission of Massachusetts authorities, groups of Puritans in need of land began expanding into Connecticut. In 1633, settlers from Plymouth bought land from the Indians and built a settlement that became Windsor, Connecticut. In 1634, settlers from Watertown established the town of Wethersfield in Connecticut. In 1636, Thomas Hooker of Newtown (later Cambridge) led his congregation to build a new settlement at Hartford. Following the

Pequot War, in 1637 the town of New Haven was established as a colony independent of the rest of Connecticut. In 1639, men from the towns of Hartford, Windsor, and Wethersfield drew up a governing document for Connecticut called the Fundamental Orders. The Fundamental Orders served as Connecticut's governing document for the first 50 years of its existence. Although the orders provided for elected representatives, the right to vote was limited to Puritan men. The government was designed to extend Puritan authority over Connecticut. The orders also served as the basis for the colony's charter in 1662 and the state's constitution of 1776. New Haven was forced to join Connecticut when it received its royal charter in 1662.

- 1. It is Ordered, sentenced, and decreed, that there shall be yearly two General Assemblies or Courts, the one the second Thursday in April, the other the second Thursday in September following; the first shall be called the Court of Election, wherein shall be yearly chosen from time to time, so many Magistrates and other public Officers as shall be found requisite: Whereof one to be chosen Governor for the year ensuing and until another be chosen, and no other Magistrate to be chosen for more than one year: provided always there be six chosen besides the Governor, which being chosen and sworn according to an Oath recorded for that purpose, shall have the power to administer justice according to the Laws here established, and for want thereof, according to the Rule of the Word of God; which choice shall be made by all that are admitted freemen and have taken the Oath of Fidelity, and do cohabit within this Jurisdiction having been admitted Inhabitants by the major part of the Town wherein they live or the major part of such as shall be then present.
- 2. It is Ordered, sentenced, and decreed, that the election of the aforesaid Magistrates shall be in this manner: every person present and qualified for choice shall bring in (to the person deputed to receive them) one single paper with the name of him written in it whom he desires to have Governor, and that he that hath the greatest number of papers shall be Governor for that year. And the rest of the Magistrates or public officers to be chosen in this manner: the Secretary for the time being shall first read the names of all that are to be put to choice and then shall severally nominate them distinctly, and every one that would have the person nominated to be chosen shall bring in one single paper written upon, and he that would not have him chosen shall bring in a blank; and every one that hath more written papers than blanks shall be a Magistrate for that year; which papers shall be received and told by one or more that shall be then chosen by the court and sworn to be faithful therein; but in case there should not be six chosen as aforesaid. besides the Governor, out of those which are nominated, than he or they which have the most writen papers shall be a Magistrate or Magistrates for the ensuing year, to make up the aforesaid number.

- 3. It is Ordered, sentenced, and decreed, that the Secretary shall not nominate any person, nor shall any person be chosen newly into the Magistracy which was not propounded in some General Court before, to be nominated the next election; and to that end it shall be lawful for each of the Towns aforesaid by their deputies to nominate any two whom they conceive fit to be put to election; and the Court may add so many more as they judge requisite.
- 4. It is Ordered, sentenced, and decreed, that no person be chosen Governor above once in two years, and that the Governor be always a member of some approved Congregation, and formerly of the Magistracy within this Jurisdiction; and that all the Magistrates, Freemen of this Commonwealth; and that no Magistrate or other public officer shall execute any part of his or their office before they are severally sworn, which shall be done in the face of the court if they be present, and in case of absence by some deputed for that purpose.
- 5. It is Ordered, sentenced, and decreed, that to the aforesaid Court of Election the several Towns shall send their deputies, and when the Elections are ended they may proceed in any public service as at other Courts. Also the other General Court in September shall be for making of laws, and any other public occasion, which concerns the good of the Commonwealth.
- 6. It is Ordered, sentenced, and decreed, that the Governor shall, either by himself or by the Secretary, send out summons to the Constables of every Town for the calling of these two standing Courts one month at least before their several times: And also if the Governor and the greatest part of the Magistrates see cause upon any special occasion to call a General Court, they may give order to the Secretary so to do within fourteen days' warning: And if urgent necessity so required, upon a shorter notice, giving sufficient grounds for it to the deputies when they meet, or else be questioned for the same; And if the Governor and major part of Magistrates shall either neglect or refuse to call the two General standing Courts or either of them, as also at other times when the occasions of the Commonwealth require, the Freemen thereof, or the major part of them, shall petition to them so to do; if then it be either denied or neglected, the said Freemen, or the major part of them, shall have the power to give order to the Constables of the several Towns to do the same, and so may meet together, and choose to themselves a Moderator, and may proceed to do any act of power which any other General Courts may.
- 7. It is Ordered, sentenced, and decreed, that after there are warrants given out for any of the said General Courts, the Constable or Constables of each Town, shall forthwith give notice distinctly to the inhabitants of the same, in some public assembly or by going or sending from house to house, that at a place and time by him or them limited and set, they meet and assemble themselves together

to elect and choose certain deputies to be at the General Court then following to agitate the affairs of the Commonwealth; which said deputies shall be chosen by all that are admitted Inhabitants in the several Towns and have taken the oath of fidelity; provided that none be chosen a Deputy for any General Court which is not a Freeman of this Commonwealth. The aforesaid deputies shall be chosen in manner following: every person that is present and qualified as before expressed, shall bring the names of such, written in several papers, as they desire to have chosen for that employment, and these three or four, more or less, being the number agreed on to be chosen for that time, that have the greatest number of papers written for them shall be deputies for that Court; whose names shall be endorsed on the back side of the warrant and returned into the Court, with the Constable or Constables' hand unto the same.

8. It is Ordered, sentenced, and decreed, that Windsor, Hartford, and Wethersfield shall have power, each Town, to send four of their Freemen as their deputies to every General Court; and Whatsoever other Town shall be hereafter added to this Jurisdiction, they shall send so many deputies as the Court shall judge meet, a reasonable proportion to the number of Freemen that are in the said Towns being to be attended therein; which deputies shall have the power of the whole Town to give their votes and allowance to all such laws and orders as may be for the public good, and unto which the said Towns are to be bound.

9. It is Ordered, sentenced, and decreed, that the deputies thus chosen shall have power and liberty to appoint a time and a place of meeting together before any General Court, to advise and consult of all such things as may concern the good of the public, as also to examine their own Elections, whether according to the order, and if they or the greatest part of them find any election to be illegal they may seclude such for present from their meeting, and return the same and their reasons to the Court; and if it be proved true, the Court may fine the party or parties so intruding, and the Town, if they see cause, and give out a warrant to go to a new election in a legal way, either in part or in whole. Also the said deputies shall have power to fine any that shall be disorderly at their meetings, or for not coming in due time or place according to appointment; and they may return the said fines into the Court if it be refused to be paid, and the Treasurer to take notice of it, and to escheat or levy the same as he does other fines.

10. It is Ordered, sentenced, and decreed, that every General Court, except such as through neglect of the Governor and the greatest part of the Magistrates the Freemen themselves do call, shall consist of the Governor, or some one chosen to moderate the Court, and four other Magistrates at least, with the major part of the deputies of the several Towns legally chosen; and in case the Freemen, or major part of them, through neglect or refusal of the Governor and major part of the Magistrates, shall call a Court, it shall consist of the major part of Freemen that are present or their deputies, with a Modera-

tor chosen by them: In which said General Courts shall consist the supreme power of the Commonwealth, and they only shall have power to make laws or repeal them, to grant levies, to admit of Freemen, dispose of lands undisposed of, to several Towns or persons, and also shall have power to call either Court or Magistrate or any other person whatsoever into question for any misdemeanor, and may for just causes displace or deal otherwise according to the nature of the offense; and also may deal in any other matter that concerns the good of this Commonwealth, except election of Magistrates, which shall be done by the whole body of Freemen. In which Court the Governor or Moderator shall have power to order the Court, to give liberty of speech, and silence unseasonable and disorderly speakings, to put all things to vote, and in case the vote be equal to have the casting voice. But none of these Courts shall be adjourned or dissolved without the consent of the major part of the Court.

11. It is Ordered, sentenced, and decreed, that when any General Court upon the occasions of the Commonwealth have agreed upon any sum, or sums of money to be levied upon the several Towns within this Jurisdiction, that a committee be chosen to set out and appoint what shall be the proportion of every Town to pay of the said levy, provided the committee be made up of an equal number out of each Town.

14th January 1639 the 11 Orders above said are voted. [January 14, 1639]

52. New England Confederation Charter, 1643 [Excerpt]

Introduction

Established in 1643 by the Puritan colonies of Massachusetts Bay, Plymouth, Connecticut, and New Haven, the New England Confederation, also known as the United Colonies of New England, was an attempt to cooperate against common enemies. Although concerned primarily with the potential for Native American attacks, the confederation also called for mutual defense against Dutch, French, or Spanish incursions. The confederation also helped foster the spread of Puritan beliefs among English settlers and allowed the various colonial governments a common forum in which to address their problems with one another. Rhode Island and Maine were excluded from the confederation because they welcomed non-Puritans. Cooperation among the member colonies broke down in 1653 when Massachusetts declined to participate in a proposed action against the Dutch. The united colonies successfully collaborated during King

Philip's War in 1675–1676. The organization formally existed until 1684, when the British government reorganized all of the New England colonies into a single entity, the Dominion of New England. The confederation is considered the earliest forerunner to the cooperation among the colonies that made the American Revolutionary War possible.

Primary Source

[…]

Whereas we all came into these parts of America with one and the same end and aim, namely, to advance the Kingdom of our Lord Jesus Christ and to enjoy the liberties of the Gospel in purity with peace; and whereas in our settling (by a wise providence of God) we are further dispersed upon the sea coasts and rivers than was at first intended, so that we can not according to our desire with convenience communicate in one government and jurisdiction; and whereas we live encompassed with people of several nations and strange languages which hereafter may prove injurious to us or our posterity. And forasmuch as the natives have formerly committed sundry Insolence and outrages upon several Plantations of the English and have of late combined themselves against us: and seeing by reason of those sad distractions in England which they have heard of, and by which they know vie are hindered from that humble way of seeking advice, or reaping those comfortable fruits of protection, which at other times we might well expect. We therefore do conceive it our bounder duty, without delay to enter into a present Consociation amongst ourselves, for mutual help and strength in all our future concernments: That, as in nation and religion, so in other respects, we be and continue one according to the tenor and true meaning of the ensuing articles: Wherefore it is fully agreed and concluded by and between the parties or Jurisdictions above named, and they jointly and severally do by these presents agree and conclude that they all be and henceforth be called by the name of the United Colonies of New England.

- 2. The said United Colonies for themselves and their posterities do jointly and severally hereby enter into a firm and perpetual league of friendship and amity for offence and defence, mutual advice and succor upon all just occasions both for preserving and propagating the truth and liberties of the Gospel and for their own mutual safety and welfare.
- 3. It is further agreed that the Plantations which at present are or hereafter shall be settled within the limits of the Massachusetts shall be forever under the Massachusetts and shall have peculiar jurisdiction among themselves in all cases as an entire body, and that Plymouth, Connecticut, and New Haven shall each of them have like peculiar jurisdiction and government within their limits; and in reference to the Plantations which already are settled, or shall hereafter be erected, or shall settle within their limits respectively; provided no other Jurisdiction shall hereafter be taken in as a distinct head or member of this Confederation, nor shall any other Plantation or Jurisdiction in present being, and not already in com-

bination or under the jurisdiction of any of these Confederates, be received by any of them; nor shall any two of the Confederates join in one Jurisdiction without consent of the rest, which consent to be interpreted as is expressed in the sixth article ensuing.

- 4. It is by these Confederates agreed that the charge of all just wars, whether offensive or defensive, upon what part or member of this Confederation soever they fall, shall both in men, provisions and all other disbursements be borne by all the parts of this Confederation in different proportions according to their different ability in manner following, namely, that the Commissioners for each Jurisdiction from time to time, as there shall be occasion, bring a true account and number of all their males in every Plantation, or any way belonging to or under their several Jurisdictions, of what quality or condition soever they be, from sixteen years old to threescore, being inhabitants there. And that according to the different numbers which from time to time shall be found in each Jurisdiction upon a true and just account, the service of men and all charges of the war be borne by the poll: each Jurisdiction or Plantation being left to their own just course and custom of rating themselves and people according to their different estates with due respects to their qualities and exemptions amongst themselves though the Confederation take no notice of any such privilege: and that according to their different charge of each Jurisdiction and Plantation the whole advantage of the war (if it please God so to bless their endeavors) whether it be in lands, goods, or persons, shall be proportionately divided among the said Confederates.
- 5. It is further agreed, that if any of these Jurisdictions or any Plantation under or in combination with them, be invaded by any enemy whomsoever, upon notice and request of any three magistrates of that Jurisdiction so invaded, the rest of the Confederates without any further meeting or expostulation shall forthwith send aid to the Confederate in danger but in different proportions; namely, the Massachusetts an hundred men sufficiently armed and provided for such a service and journey, and each of the rest, fortyfive so armed and provided, or any less number, if less be required according to this proportion. But if such Confederate in danger may be supplied by their next Confederates, not exceeding the number hereby agreed, they may crave help there, and seek no further for the present: the charge to be borne as in this article is expressed: and at the return to be victualled and supplied with powder and shot for their journey (if there be need) by that Jurisdiction which employed or sent for them; but none of the Jurisdictions to exceed these numbers until by a meeting of the Commissioners for this Confederation a greater aid appear necessary. And this proportion to continue till upon knowledge of greater numbers in each Jurisdiction which shall be brought to the next meeting, some other proportion be ordered. But in any such case of sending men for present aid, whether before or after such order or alteration, it is agreed that at the meeting of the Commissioners for this Confederation, the cause of such war or invasion be duly considered: and if it appear that the fault lay in the parties so invaded then that Jurisdiction or Plantation make just satisfaction, both to the invaders whom they have injured, and bear all

the charges of the war themselves, without requiring any allowance from the rest of the Confederates towards the same. And further that if any Jurisdiction see any danger of invasion approaching, and there be time for a meeting, that in such a case three magistrates of the Jurisdiction may summon a meeting at such convenient place as themselves shall think meet, to consider and provide against the threatened danger; provided when they are met they may remove to what place they please; only whilst any of these four Confederates have but three magistrates in their Jurisdiction, their requests, or summons, from any two of them shall be accounted of equal force with the three mentioned in both the clauses of this article, till there be an increase of magistrates there.

6. It is also agreed, that for the managing and concluding of all Stairs and concerning the whole Confederation two Commissioners shall be chosen by and out of each of these four Jurisdictions: namely, two for the Massachusetts, two for Plymouth, two for Connecticut, and two for New Haven, being all in Church-fellowship with us, which shall bring full power from their several General Courts respectively to hear, examine, weigh, and determine all affairs of our war, or peace, leagues, aids, charges, and numbers of men for war, division of spoils and whatsoever is gotten by conquest, receiving of more Confederates for Plantations into combination with any of the Confederates, and all things of like nature, which are the proper concomitants or consequents of such a Confederation for amity, offense, and defence: not intermeddling with the government of any of the Jurisdictions, which by the third article is preserved entirely to themselves. But if these eight Commissioners when they meet shall not all agree yet it concluded that any six of the eight agreeing shall have power to settle and determine the business in question. But if six do not agree, that then such propositions with their reasons so far as they have been debated, be sent and referred to the four General Courts; namely, the Massachusetts, Plymouth, Connecticut, and New Haven; and if at all the said General Courts the business so referred be concluded, then to be prosecuted by the Confederates and all their members. It is further agreed that these eight Commissioners shall meet once every year besides extraordinary meetings (according to the fifth article) to consider, treat, and conclude of all affairs belonging to this Confederation, which meeting shall ever be the first Thursday in September. And that the next meeting after the date of these presents, which shall be accounted the second meeting, shall be at Boston in the Massachusetts, the third at Hartford, the fourth at New Haven, the fifth at Plymouth, the sixth and seventh at Boston; and then Hartford, New Haven, and Plymouth, and so n course successively, if in the meantime some middle place be not found out and agreed on, which may be commodious for all the Jurisdictions.

7. It is further agreed that at each meeting of these eight Commissioners, whether ordinary or extraordinary, they or six of them agreeing as before, may choose their President out of themselves whose office work shall be to take care and direct for order and a comely carrying on of all proceedings in the present meeting: but he shall be invested with no such power or respect, as by which he

shall hinder the propounding or progress of any business, or any way cast the scales otherwise than in the precedent article is agreed.

8. It is also agreed that the Commissioners for this Confederation hereafter at their meetings, whether ordinary or extraordinary, as they may have commission or opportunity, do endeavor to frame and establish agreements and orders in general cases of a civil nature, wherein all the Plantations are interested, for preserving of peace among themselves, for preventing as much as may be all occasion of war or differences with others, as about the free and speedy passage of justice in every Jurisdiction, to all the Confederates equally as to their own, receiving those that remove from one Plantation to another without due certificate, how all the Jurisdictions may carry it towards the Indians, that they neither grow insolent nor be injured without due satisfaction, lest war break in upon the Confederates through such miscarriages. It is also agreed that if any servant run away from his master into any other of these confederated Jurisdictions, that in such case, upon the ceritficate of one magistrate in the Jurisdiction out of which the said servant fled, or upon other due proof; the said servant shall be delivered, either to his master, or any other that pursues and brings such certificate or proof. And that upon the escape of any prisoner whatsoever, or fugitive for any criminal cause, whether breaking prison, or getting from the officer, or otherwise escaping, upon the certificate of two magistrates of the Jurisdiction out of which the escape is made, that he was a prisoner, or such an offender at the time of the escape, the magistrates, or some of them of that Jurisdiction where for the present the said prisoner or fugitive abideth, shall forthwith grant such a warrant as the case will bear, for the apprehending of any such person, and the delivery of him into the hands of the officer or other person who pursues him. And if there be help required, for the safe returning of any such offender, then it shall be granted to him that craves the same, he paying the charges thereof.

9. And for that the justest wars may be of dangerous consequence, especially to the smaller Plantations in these United Colonies, it is agreed that neither the Massachusetts, Plymouth, Connecticut, nor New Haven, nor any of the members of them, shall at any time hereafter begin, undertake, or engage themselves, or this Confederation, or any part thereof in any war whatsoever (sudden exigencies, with the necessary consequents thereof excepted), which are also to be moderated as much as the case will permit, without the consent and agreement of the forementioned eight Commissioners, or at least six of them, as in the sixth article is provided: and that no charge be required of any of the Confederates, in case of a defensive war, till the said Commissioners have met, and approved the justice of the war, and have agreed upon the sum of money to be levied, which sum is then to be paid by the several Confederates in proportion according to the fourth article.

10. That in extraordinary occasions, when meetings are summoned by three magistrates of any Jurisdiction, or two as in the fifth article, ii) any of the Commissioners come not, due warning being given or sent, it is agreed that four of the Commissioners shall have power to direct a war which cannot be delayed, and to send for due proportions of men out of each Jurisdiction, as well as six might do

if all met; but not less than six shall determine the justice of the war, or allow the demands or bills of charges, or cause any levies to be made for the same.

11. It is further agreed that if any of the Confederates shall hereafter break any of these present articles, or be any other ways injurious to any one of the other Jurisdictions; such breach of agreement or injury shall be duly considered and ordered by the Commissioners for the other Jurisdictions, that both peace and this present Confederation may be entirely preserved without violation.

12. Lastly, this perpetual Confederation, and the several articles and agreements thereof being read and seriously considered, both by the General Court for the Massachusetts, and by the Commissioners for Plymouth, Connecticut, and New Haven, were fully allowed and confirmed by three of the forenamed Confederates, namely, the Massachusetts, Connecticut, and New Haven; only the Commissioners for Plymouth having no commission to concludes desired respite until they might advise with their General Court; whereupon it was agreed and concluded by the said Court of the Massachusetts, and the Commissioners for the other two Confederates, that, if Plymouth consent, then the whole treaty as it stands in these present articles is, and shall continue, firm and stable without alteration: but if Plymouth come not in yet the other three Confederates do by these presents confirm the whole Confederation, and all the articles thereof; only in September next when the second meeting of the Commissioners is to be at Boston, new consideration may be taken of the sixth article, which concerns number of Commissioners for meeting and concluding the affairs of this Confederation to the satisfaction of the Court of the Massachusetts, and the Commissioners for the other two Confederates, but the rest to stand unquestioned.

53. Rev. Johannes Megapolensis, "A Short Account of the Mohawk Indians," 1644 [Excerpt]

Introduction

The Dutch West India Company established New Netherland in 1624, and eventually controlled territory extending from the Connecticut River to the Delaware River. At first, the Dutch took great care to avoid conflict with the Indians. They purchased all the land on which they settled, and refused to be drawn into the trade rivalry between the Algonquian-speaking Mahicans and the Iroquoian Mohawks. When the Mohawks decisively defeated the Mahicans in 1628, the Dutch West India Company formally recognized the

Mohawks as their trading partners. Johannes Megapolensis the Younger was a minister of the Dutch Reformed Church who came to New Netherland in 1643 as the preacher for Rensselaerswyck, a settlement near present-day Albany, New York. He remained there about five years. He soon began preaching to the Mohawks, one of the five Iroquois nations. This account describes in detail their appearance, diet, customs, religion, government, and their manner of conducting warfare against the Indians of Canada. Megapolensis left Rensselaerswyck and served a New Amsterdam church for many years. He became influential in the town, and convinced Petrus Stuyvesant of the wisdom of surrendering to the English in 1664 during the Anglo-Dutch Wars.

Primary Source

THE country here is in general like that in Germany. The land is good, and fruitful in everything which supplies human needs, except clothes, linen, woollen, stockings, shoes, etc., which are all dear here. The country is very mountainous, partly soil, partly rocks, and with elevations so exceeding high that they appear to almost touch the clouds. Thereon grow the finest fir trees the eye ever saw. There are also in this country oaks, alders, beeches, elms, willows, etc. In the forests, and here and there along the water side, and on the islands, there grows an abundance of chestnuts, plums, hazel nuts, large walnuts of several sorts, and of as good a taste as in the Netherlands, but they have a somewhat harder shell. The ground on the hills is covered with bushes of bilberries or blueberries; the ground in the flat land near the rivers is covered with strawberries, which grow here so plentifully in the fields, that one can lie down and eat them. Grapevines also grow here naturally in great abundance along the roads, paths, and creeks, and wherever you may turn you find them. I have seen whole pieces of land where vine stood by vine and grew very luxuriantly, climbing to the top of the largest and loftiest trees, and although they are not cultivated, some of the grapes are found to be as good and sweet as in Holland. Here is also a sort of grapes which grow very large, each grape as big as the end of one's finger, or an ordinary plum, and because they are somewhat fleshy and have a thick skin we call them Speck Druyven. If people would cultivate the vines they might have as good wine here as they have in Germany or France. I had myself last harvest a boat-load of grapes and pressed them. As long as the wine was new it tasted better than any French or Rhenish Must, and the color of the grape juice here is so high and red that with one wine-glass full you can color a whole pot of white wine. In the forests is great plenty of deer, which in autumn and early winter are as fat as any Holland cow can be. I have had them with fat more than two fingers thick on the ribs, so that they were nothing else than almost clear fat, and could hardly be eaten. There are also many turkies, as large as in Holland, but in some years less than in others. The year before I came here, there were so many turkies and deer that they came to feed by the houses and hog pens, and were taken by the Indians in such numbers that a deer was sold to the Dutch for a loaf of bread, or a knife, or even for a tobacco pipe; but now one commonly has

to give for a good deer six or seven guilders. In the forests here there are also many partridges, heath-hens and pigeons that fly together in thousands, and sometimes ten, twenty, thirty and even forty and fifty are killed at one shot. We have here, too, a great number of all kinds of fowl, swans, geese, ducks, widgeons, teal, brant, which sport upon the river in thousands in the spring of the year, and again in the autumn flyaway in flocks, so that in the morning and evening anyone may stand ready with his gun before his house and shoot them as they fly past. I have also eaten here several times of elks, which were very fat and tasted much like venison; and besides these profitable beasts we have also in this country lions, bears, wolves, foxes, and particularly very many snakes, which are large and as long as eight, ten, and twelve feet. Among others, there is a sort of snake, which we call rattlesnake, from a certain object which it has back upon its tail, two or three fingers breadth long, and has ten or twelve joints, and with this it makes a noise like the crickets. Its color is variegated much like our large brindled bulls. These snakes have very sharp teeth in their mouth, and dare to bite at dogs; they make way for neither man nor beast, but fall on and bite them, and their bite is very poisonous, and commonly even deadly too.

[...]

As for the temperature in this country, and the seasons of the year, the summers are pretty hot, so that for the most of the time we are obliged to go in just our shirts, and the winters are very cold. The summer continues long, even until All Saints' Day; but when the winter does begin, just as it commonly does in December, it freezes so hard in one night that the ice will bear a man. Even the rivers, in still weather when there is no strong current running, are frozen over in one night, so that on the second day people walk over it. And this freezing continues commonly three months; for although we are situated here in 42 degrees of latitude, it always freezes so. And although there come warm and pleasant days, the thaw does not continue, but it freezes again until March. Then, commonly, the rivers first begin to open, and seldom in February. We have the greatest cold from the northwest, as in Holland from the northeast. The wind here is very seldom east, but almost always south, southwest, northwest, and north; so also the rain.

$[\ldots]$

The inhabitants of this country are of two kinds: first, Christians—at least so called; second, Indians. Of the Christians I shall say nothing; my design is to speak of the Indians only. These among us are again of two kinds: first, the Mahakinbas, or, as they call themselves, *Kajingahaga*; second, the Mahakans, otherwise called *Agotzagena*. These two nations have different languages, which have no affinity with each other, like Dutch and Latin. These people formerly carried on a great war against each other, but since the Mahakanders were subdued by the Mahakobaas, peace has subsisted between them, and the conquered are obliged to bring a yearly contribution to the oth-

ers. We live among both these kinds of Indians; and when they come to us from their country, or we go to them, they do us every act of friendship. The principal nation of all the savages and Indians hereabouts with which we have the most intercourse, is the Mahakuaas, who have laid all the other Indians near us under contribution. This nation has a very difficult language, and it costs me great pains to learn it, so as to be able to speak and preach in it fluently. There is no Christian here who understands the language thoroughly; those who have lived here long can use a kind of jargon just sufficient to carry on trade with it, but they do not understand the fundamentals of the language. I am making a vocabulary of the Mahakuaas' language, and when I am among them I ask them how things are called; but as they are very stupid, I sometimes cannot make them understand what I want. Moreover when they tell me, one tells me the word in the infinitive mood, another in the indicative; one in the first, another in the second person; one in the present, another in the preterit. So I stand oftentimes and look, but do not know how to put it down. And as they have declensions and conjugations also, and have their augments like the Greeks, I am like one distracted, and frequently cannot tell what to do, and there is no one to set me right. I shall have to speculate in this alone, in order to become in time an Indian grammarian. When I first observed that they pronounced their words so differently, I asked the commissary of the company what it meant. He answered me that he did not know, but imagined they changed their language every two or three years; I argued against this that it could never be that a whole nation should change its language with one consent; —and, although he has been connected with them here these twenty years, he can afford me no assistance.

The people and Indians here in this country are like us Dutchmen in body and stature; some of them have well formed features, bodies and limbs; they all have black hair and eyes, but their skin is yellow. In summer they go naked, having only their private parts covered with a patch. The children and young folks to ten, twelve and fourteen years of age go stark naked. In winter, they hang about them simply an undressed deer or bear or panther skin; or they take some beaver and otter skins, wild cat, raccoon, martin, otter, mink, squirrel or such like skins, which are plenty in this country, and sew some of them to others, until it is a square piece, and that is then a garment for them; or they buy of us Dutchmen two and a half ells of duffel, and that they hang simply about them, just as it was tom off, without sewing it, and walk away with it. They look at themselves constantly, and think they are very fine. They make themselves stockings and also shoes of deer skin, or they take leaves of their corn, and plait them together and use them for shoes. The women, as well as the men, go with their heads bare. The women let their hair grow very long, and tie it together a little, and let it hang down their backs. The men have a long lock of hair hanging down, some on one side of the head, and some on both sides. On the top of their heads they have a streak of hair from the forehead to the neck, about the breadth of three fingers, and this they shorten until it is about two or three fingers long, and it stands right on end like

a cock's comb or hog's bristles; on both sides of this cock's comb they cut all the hair short, except the aforesaid locks, and they also leave on the bare places here and there small locks, such as are in sweeping-brushes, and then they are in fine array.

They likewise paint their faces red, blue, etc., and then they look like the Devil himself. They smear their heads with bear's-grease, which they all carry with them for this purpose in a small basket; they say they do it to make their hair grow better and to prevent their having lice. When they travel, they take with them some of their maize, a kettle, a wooden bowl, and a spoon; these they pack up and hang on their backs. Whenever they are hungry, they forthwith make a fire and cook; they can get fire by rubbing pieces of wood against one another, and that very quickly.

They generally live without marriage; and if any of them have wives, the marriage continues no longer than seems good to one of the parties, and then they separate, and each takes another partner. I have seen those who had parted, and afterwards lived a long time with others, leave these again, seek their former partners, and again be one pair. And, though they have wives, yet they will not leave off whoring; and if they can sleep with another man's wife, they think it a brave thing. The women are exceedingly addicted to whoring; they will lie with a man for the value of one, two, or three *schillings*, and our Dutchmen run after them very much.

The women, when they have been delivered, go about immediately afterwards, and be it ever so cold, they wash themselves and the young child in the river or the snow. They will not lie down (for they say that if they did they would soon die), but keep going about. They are obliged to cut wood, to travel three or four leagues with the child; in short, they walk, they stand, they work, as if they had not lain in, and we cannot see that they suffer any injury by it; and we sometimes try to persuade our wives to lie-in so, and that the way of lyingin in Holland is a mere fiddle-faddle. The men have great authority over their concubines, so that if they do anything which does not please and raises their passion, they take an axe and knock them in the head, and there is an end of it. The women are obliged to prepare the land, to mow, to plant, and do everything; the men do nothing, but hunt, fish, and make war upon their enemies. They are very cruel towards their enemies in time of war; for they first bite off the nails of the fingers of their captives, and cut off some joints, and sometimes even whole fingers; after that, the captives are forced to sing and dance before them stark naked; and finally, they roast their prisoners dead before a slow fire for some days, and then eat them up. The common people eat the arms, buttocks and trunk, but the chiefs eat the head and the heart.

[...]

The Mohawk Indians are divided into three tribes, which are called *Ochkari, Anaware, Oknaho*, that is, the Bear, the Tortoise and the

Wolf. Of these, the Tortoise is the greatest and most prominent; and they boast that they are the oldest descendants of the woman before mentioned. These have made a fort of palisades, and they call their castle Asserue. Those of the Bear are the next to these, and their castle is called by them *Banagiro*. The last are a progeny of these, and their castle is called Thenondiogo. These Indian tribes each carry the beast after which they are named (as the arms in their banner) when they go to war against their enemies, and this is done as well for the terror of their enemies, as for a sign of their own bravery. Lately one of their chiefs came to me and presented me with a beaver, an otter, and some cloth he had stolen from the French, which I must accept as a token of good fellowship. When he opened his budget he had in it a dried head of a bear, with grinning teeth. I asked him what that meant? He answered me that he fastened it upon his left shoulder by the side of his head, and that then he was the devil, who cared for nothing, and did not fear any thing.

The government among them consists of the oldest, the most intelligent, the most eloquent and most warlike men. These commonly resolve, and then the young and warlike men execute. But if the common people do not approve of the resolution, it is left entirely to the judgment of the mob. The chiefs are generally the poorest among them, for instead of their receiving from the common people as among Christians, they are obliged to give to the mob; especially when anyone is killed in war, they give great presents to the next of kin of the deceased; and if they take any prisoners they present them to that family of which one has been killed, and the prisoner is then adopted by the family into the place of the deceased person. There is no punishment here for murder and other villainies, but everyone is his own avenger. The friends of the deceased revenge themselves upon the murderer until peace is made by presents to the next of kin. But although they are so cruel, and live without laws or any punishments for evil doers, yet there are not half so many villainies or murders committed amongst them as amongst Christians; so that I oftentimes think with astonishment upon all the murders committed in the Fatherland, notwithstanding their severe laws and heavy penalties. These Indians, though they live without laws, or fear of punishment, do not (at least, they very seldom) kill people, unless it may be in a great passion, or a hand-to-hand fight. Wherefore we go wholly unconcerned along with the Indians and meet each other an hour's walk off in the woods, without doing any harm to one another.

54. Johan Printz, Report from New Sweden, 1644 [Excerpt]

Introduction

Swedish government officials and Dutch merchants formed the New Sweden Company in 1637, and the first colonists arrived in present-day Delaware the following year. New Sweden had a tenuous existence, challenged by encroaching neighbors and virtually abandoned by Sweden. During his 10 years as governor (1643-1653), the former Swedish Army officer Johan Printz imposed strict rule on the colony, purchased additional land, improved crop and livestock production, and presided over construction of forts and settlements. He wrote home pleading for more settlers to no avail. The population fell to under 200, in no small part due to settlers deserting to neighboring colonies. New Sweden under Printz endured other setbacks, including poor harvests and official neglect. No ships or communication from Sweden arrived between 1647 and 1653, and the colony's fur trade collapsed from lack of trade goods. New Sweden survived as long as it did thanks to Printz's negotiating skills. He maintained peace with the native peoples and with New Netherland and the English. However, he could not prevent the Dutch from establishing a fort on New Swedish territory. This 1644 report to Sweden touches on economic, diplomatic, and military matters.

Primary Source

 $[\ldots]$

7. I planted last year maize al over, thinking, according to the representations of Peter Hollander, to receive yearly food for nine men from the planting of one man, but I received, as well on the one place as on the other, from the work of nine men hardly a year's nourishment for one man. Immediately I sent the sloop to Manathans and caused to be bought there for the company seven oxen, one cow, and 75 bushels of winter rye. And although they arrived a little late in the year yet I have caused three places to be sown with rye, also a little barley in the spring. It looks very fine. In addition to this, maize can be bought cheaply from the savages here in the river, so that I hope that the nourishment of the people shall not be so expensive hereafter as it has been before. And therefore I have appointed the people to plant tobacco on all places and have engaged a special master or tobacco planter for a monthly wage of 35 florins; who made good proof of his competence last year. How this will turn out will depend on God and the weather; one must hope, with the help of God, for the best. But as concerns salt-making, oil manufactories, whale-catching, minerals, or silk worms, I must report that I have not been able to find an opportunity for these things, as is reported in my former letters.

8. The places which we now possess and occupy are: 1. Elfsborg, which now (especially on the one side) is so secure that there is no need to fear any attack (if it is not entirely too severe); 2. Christina; 3. Tinnakongh; these two places are also in like manner made so strong that those who are therein need not fear for any savages, even if they were several thousands; 4. Upland; 5. Schylenkyll; these two places are now open, yet strong wooden houses are built upon them with small stone-cannon. In the Schylenkyll there have now been bought, since we received a cargo, three hundred beavers for the Honorable

Company, yet with such discretion that the Hollanders are not in any manner offended, and although they do not gladly see us here, but always protest and in the meantime loosen the tongue, yet they have nevertheless since I came here kept and yet keep with us good friendship, especially their commander in Manathans, Willem Kiefft, who often and in most cases, when he has been able, has written to me and advised me about what has happened in Sweden, Holland, and other European places. He reminded me indeed in the beginning in his letters about the pretension of the Dutch West India Company to this entire river, but since I answered him with as good reasons as I could and knew how, he has now for a time relieved me of this protesting. Now a new commander is about to arrive and in that case probably a new action may follow. But how hard the Puritans have lain upon my neck and yet do lay can be seen from the acts which are enclosed here. I believe that I shall hardly get rid of them in a peaceful manner because they have sneaked into New Netherland also with their Pharisean practices. Now they are so strong there that they have chased the Hollanders from that place called Fort River, and now keep it with violence although it is the land of the Hollanders. And now neither protest nor good words will avail, but if the Hollanders wish to obtain the place again it must be done with other and stronger means. I look at least a hundred times a day in this mirror, God knows with what meditation, for I am here alone and there are hardly thirty men, of all that are here, upon whom I can rely in such cases.

In a like manner I have also in my former writings spoken about the English knight, how he last year wished to go from Heckemak in Virginia to Kikathans with a bark and his people, about sixteen persons, and when they came into the Virginian bay the skipper, who had conspired beforehand with the knight's people to destroy him, took his course, not towards Kikathanss but to Cape Henry. When they had passed this place and had come close to an island in the big ocean called Smeed's Island, they counselled together how they should kill him and they found it advisable not to kill him with their own hands but to put him on the said island without clothes and guns, where there were no people nor any other animals but where only wolves and bears lived, which they also did, but two young pages of the nobility, whom the knight had brought up and who did not know of this conspiracy, when they saw the misfortune of their master, threw themselves out of the bark into the sea and swam ashore and remained with their master. On the fourth day after that an English sloop sailed near by Smeed's Island, so that these young pages could call to it. This sloop took the knight (who was half dead and black as earth) on board and brought him to Haakemak where he recovered again. But the people belonging to the knight, and the bark, came to our Fort Elfsborgh on May 6, 1643, and asked for ships to Old England. Then I asked for their passport and whence they came, and since I immediately observed that they were not right in their designs I took them with me (with their own consent, however) to Christina in order to buy flour and other provisions from them, and I examined them until a servant maid (who had been employed as washerwoman by the knight) confessed and betrayed them. Then I caused all the goods they had on hand to be inventoried in their presence, and I kept the people prisoners until the same English sloop which had saved the knight arrived here with the knight's letter, written not only to me but to an the governors and commanders of the whole coast from Florida northwards. Then I delivered the people unto him, bark and goods all together, according to the inventory, and he paid me my expenses, which amounted to 425 rix-dollars. The principal men among these traitors the knight has caused to be shot, but he himself is yet in Virginia and (as he represents) is expecting ships and people out of Ireland and England. He gives free commission to all sloops and barks which come from there to trade here in the river with the savages, but I have not allowed anyone to pass by and will not do it, until I receive a command and order from Her Royal Majesty, my Most Gracious Queen.

The savages here in West India set themselves up against the Christians in one place after another. The Hollanders have fought the whole year with the savages around Manathans, as they are still doing, and although they have chased them from the one place to the other, yet the Hollanders have lost more than a thousand men at it and the company has received so great a damage from it that (as they themselves admit) it cannot be repaired with a few barrels of gold. In Virginia more than a thousand savages banded themselves together about six weeks ago and attacked and fearfully murdered over six hundred Christians. The Marylanders have also suffered great damage from the Minquas and have lost two cannon and some people. Our savages also become very proud here in the river. I have told them the whole year that we shall receive much people with our ships, but three days after the ship arrived and they observed that there was only one ship and no people they fell in between Tinnakungh and Uplandh and murdered a man and a woman on their bed, and they killed a few days afterwards two soldiers and a servant. When their commanders found out that I drew the people together in order to prevent a future and a greater damage, then they feared and came together from all places excusing themselves in the highest manner, and said that this had happened without their knowledge, and asked for peace, which was granted them on the following conditions: that in case they hereafter practised the smallest hostilities against our people then we would not let a soul of them live, upon which they gave their writing and all their sachems signed their names to it and (according to their custom) gave us twenty beavers and some sewant1 and we presented them with a piece of cloth. But yet they do not trust us and we trust them much less.

Nothing would be better than that a couple of hundred soldiers should be sent here and kept here until we broke the necks of all of them in the river, especially since we have no beaver trade with them but only the maize trade. They are a lot of poor rascals. Then each one could be secure here at his work, and feed and nourish himself unmolested without their maize, and also we could take possession of the places (which are the most fruitful) that the savages now possess; and then, when we have not only bought this river but also won it with the

sword, then no one whether he be Hollander or Englishman could pretend in any manner to this place either now or in coming times, but we should then have the beaver trade with the black and white Minquas alone, four times as good as we have had it, now or at any past time. And if there is some delay in this matter it must nevertheless in the end come to this and it cannot be a voided; the sooner the better, before they do us more harm. They are not to be trusted, as both example and our own experience show, but if I should receive a couple of hundred good soldiers and in addition necessary means and good officers, then with the help of God not a single savage would be allowed to live in this river. Then one would have a passage free from here unto Manathans, which lies at a distance of three small days' journeys from here across the country, beginning at Zachikans.

9. The Honorable Company is also not ignorant of the fact that if sevant is not always on hand here, together with the other cargoes for the savages, it is difficult to trade with the savages; but half or at least the one-third part of the cargoes must be sold for *sevant* (which also does not happen without profit to the Company). Now, as has been stated, our savages are poor, so that one can secure from them only little or hardly any sevant, hence we must buy sevant from Manathans and of the North English, where sevant is made, and it can be bought cheaply there from the savages. If we now had among the North English or at Manathans a faithful man stationed year out and year in, who could buy up sevant for us there so that sevant would not be lacking here in the river for the Swedish trade, the Company would have yearly a great profit. Likewise one can secure beavers for gold and rix-dollars in Manathans as well as here in the river of the Dutch freemen, at the rate of seven florins apiece for the good ones, and the small profit would help to increase the capital at home without noticeable cost.

10. We have not been able to put into execution our plans concerning the keel-boat which we had in mind to build here, the reason being that two of the carpenters have been sick almost the whole year and one man alone has not been able to do such heavy work. Then the savages set a fire on the island in the night and burnt part of the material which had been sawed and cut for the boat. Yet the one carpenter who has been well has not been idle. He has built two fine gates, one at Elfsborgh the other one at Tinnakungh. But since the carpenters have recovered somewhat they have built two beautiful large boats, one to be at Elfsborg, the other at Christina, and they have likewise repaired and made ready both sloops. No pains shall be spared hereafter, to have them accomplish whatever they can. But the cordage, which was sent here for the keel-boat, since we do not need it so soon, would be good merchandise to sell for beavers and tobacco, but I do not know the price, therefore I have sold, for a test, a piece of it weighing 597 pounds, according to Holland weight, for 26 beavers, less two florins, paying seven florins apiece, or nine stivers a pound, according to Holland weight. I will not sell any more before I have been informed if I have done well or ill in this.

55. Roger Williams, *The Bloudy Tenent of Persecution*, 1644 [Excerpt]

Introduction

Although Puritans came to America to gain religious liberty for themselves, most were not willing to extend such liberty to others. The English clergyman Roger Williams came to America in 1631. Massachusetts Bay Colony banished him, in part for his view that civil authorities had no right to extend their control over religious matters. In 1636, Williams founded Providence Plantation in present-day Rhode Island on land purchased from the Narragansetts. The new settlement welcomed settlers of all religions. Williams wrote The Bloudy Tenent of Persecution (excerpted below) in 1644 while in England to petition for a charter for Rhode Island. The charter, granted that same year, provided legal protection against the hostile Puritan colonies that bordered Rhode Island. With a clear view of the toll that religious persecution had taken in human lives, Williams's essay is one of the earliest arguments for the separation of church and state. It states that religious beliefs should not be forced on people, and that churches should confine their authority strictly to religious matters. In 1663, King Charles II gave Rhode Island a new charter that continued the traditions of religious tolerance and self-government. More than a century later, similar arguments influenced the First Amendment of the U.S. Constitution.

Primary Source

First, that the blood of so many hundred thousand souls of Protestants and Papists, spilt in the wars of present and former ages, for their respective consciences, is not required nor accepted by Jesus Christ the Prince of Peace.

Secondly, pregnant scriptures and arguments are throughout the work proposed against the doctrine of persecution for cause of conscience.

Thirdly, satisfactory answers are given to scriptures, and objections produced by Mr. Calvin, Beza, Mr. Cotton, and the ministers of New English churches and others former and late, tending to prove the doctrine of persecution for cause of conscience.

Fourthly, the doctrine of persecution for cause of conscience is proved guilty of all the blood of the souls crying for vengeance under the altar.

Fifthly, all civil states with their officers of justice in their respective constitutions and administrations are proved essentially civil, and therefore not judges, governors, or defenders of the spiritual or Christian state and worship.

Sixthly, it is the will and command of God that (since the coming of his Son the Lord Jesus) a permission of the most paganish, Jewish, Turkish, or antichristian consciences and worships, be granted to all men in all nations and countries; and they are only to be fought against with that sword which is only (in soul matters) able to conquer, to wit, the sword of God's spirit, the Word of God.

Seventhly, the state of the Land of Israel, the kings and people thereof in peace and war, is proved figurative and ceremonial, and no pattern nor president for any kingdom or civil state in the world to follow.

Eighthly, God requireth not a uniformity of religion to be enacted and enforced in any civil state; which enforced uniformity (sooner or later) is the greatest occasion of civil war, ravishing of conscience, persecution of Christ Jesus in his servants, and of the hypocrisy and destruction of millions of souls.

Ninthly, in holding an enforced uniformity of religion in a civil state, we must necessarily disclaim our desires and hopes of the Jew's conversion to Christ.

Tenthly, an enforced uniformity of religion throughout a nation or civil state, confounds the civil and religious, denies the principles of Christianity and civility, and that Jesus Christ is come in the flesh.

Eleventhly, the permission of other consciences and worships than a state professeth only can (according to God) procure a firm and lasting peace (good assurance being taken according to the wisdom of the civil state for uniformity of civil obedience from all forts).

Twelfthly, lastly, true civility and Christianity may both flourish in a state or kingdom, notwithstanding the permission of divers and contrary consciences, either of Jew or Gentile. . . .

[...]

First, the proper means whereby the civil power may and should attain its end are only political, and principally these five.

[...]

First, the erecting and establishing what form of civil government may seem in wisdom most meet, according to general rules of the world, and state of the people.

Secondly, the making, publishing, and establishing of wholesome civil laws, not only such as concern civil justice, but also the free passage of true religion; for outward civil peace ariseth and is maintained from them both, from the latter as well as from the former.

Civil peace cannot stand entire, where religion is corrupted (2 Chron. 15. 3. 5. 6; and Judges 8). And yet such laws, though conversant about religion, may still be counted civil laws, as, on the contrary, an oath doth still remain religious though conversant about civil matters.

Thirdly, election and appointment of civil offices to see execution to those laws. Fourthly, civil punishments and rewards of transgressors and observers of these laws.

Fifthly, taking up arms against the enemies of civil peace.

 $[\ldots]$

Secondly, the means whereby the church may and should attain her ends are only ecclesiastical, which are chiefly five.

[...]

First, setting up that form of church government only of which Christ hath given them a pattern in his Word.

Secondly, acknowledging and admitting of no lawgiver in the church but Christ and the publishing of His laws.

Thirdly, electing and ordaining of such officers only, as Christ hath appointed in his Word.

Fourthly, to receive into their fellowship them that are approved and inflicting spiritual censures against them that offend.

Fifthly, prayer and patience in suffering any evil from them that be without, who disturb their peace.

[…]

So that magistrates as magistrates, have no power of setting up the form of church government, electing church officers, punishing with church censures, but to see that the church does her duty herein. And on the other side, the churches as churches, have no power (though as members of the commonwealth they may have power) of erecting or altering forms of civil government, electing of civil officers, inflicting civil punishments (not on persons excommunicate) as by deposing magistrates from their civil authority, or withdrawing the hearts of the people against them, to their laws, no more than to discharge wives, or children, or servants, from due obedience to their husbands, parents, or masters; or by taking up arms against their magistrates, though he persecute them for conscience: for though members of churches who are public officers also of the civil state may suppress by force the violence of usurpers, as Iehoiada did Athaliah, yet this they do not as members of the church but as officers of the civil state.

56. The Westminster Confession of Faith, 1646 [Excerpt]

Introduction

The English Civil War (1642–1649) ended with the overthrow and execution of King Charles I. Suspicion that Charles was moving the Church of England (Anglican Church) in the direction of Catholicism had contributed to his unpopularity. During the civil war, Parliament ordered 121 Puritan clergymen—who convened in London's West-

minster Abbey in 1643—to produce documents that would govern the reformation of the Church of England. The reforms were intended, in part, to appease Scottish Presbyterians so that they would join Parliament's war against the king. The so-called Westminster Confession of Faith was completed in 1647. England's parliament adopted part of the confession in 1648, and Scotland's parliament ratified the entire document in 1649. Beginning in 1649, Parliament ruled the nation as a Puritan Commonwealth under the leadership of Oliver Cromwell. Puritan-dominated Massachusetts and Connecticut rejoiced in the establishment of the Commonwealth and adopted most of the confession in 1648. When Cromwell died in 1658, his son was unable to hold power. Charles II regained the English throne in 1660, and the confession was nullified. The document consists of 33 chapters. Chapter 20, reproduced here, defines liberty of conscience.

Primary Source

 $[\ldots]$

Of Christian Liberty, and Liberty of Conscience

I. The liberty which Christ has purchased for believers under the Gospel consists in their freedom from the guilt of sin, and condemning wrath of God, the curse of the moral law; and, in their being delivered from this present evil world, bondage to Satan, and dominion of sin; from the evil of afflictions, the sting of death, the victory of the grace, and everlasting damnation; as also, in their free access to God, and their yielding obedience unto Him, not out of slavish fear, but a child-like love and willing mind. All which were common also to believers under the law. But, under the New Testament, the liberty of Christians is further enlarged, in their freedom from the yoke of the ceremonial law, to which the Jewish Church was subjected; and in greater boldness of access to the throne of grace, and in fuller communications of the free Spirit of God, than believers under the law did ordinarily partake of.

II. God alone is Lord of the conscience, and has left it free from the doctrines and commandments of men, which are, in any thing, contrary to His Word; or beside it, if matters of faith, or worship. So that, to believe such doctrines, or to obey such commands, out of conscience, is to betray true liberty of conscience: and the requiring of an implicit faith, and an absolute and blind obedience, is to destroy liberty of conscience, and reason also.

III. They who, upon pretence of Christian liberty, do practice any sin, or cherish any lust, do thereby destroy the end of Christian liberty, which is, that being delivered out of the hands of our enemies, we might serve the Lord without fear, in holiness and righteousness before Him, all the days of our life.

IV. And because the powers which God has ordained, and the liberty which Christ has purchased are not intended by God to destroy, but mutually to uphold and preserve one another, they who, upon pretence of Christian liberty, shall oppose any lawful power, or the

lawful exercise of it, whether it be civil or ecclesiastical, resist the ordinance of God. And, for their publishing of such opinions, or maintaining of such practices, as are contrary to the light of nature, or to the known principles of Christianity (whether concerning faith, worship, or conversation), or to the power of godliness; or, such erroneous opinions or practices, as either in their own nature, or in the manner of publishing or maintaining them, are destructive to the external peace and order which Christ has established in the Church, they may lawfully be called to account, and proceeded against, by the censures of the Church, and by the power of the civil magistrate.

57. David Pietersz De Vries, Short Historical and Journal Notes, 1655 [Excerpt]

Introduction

The Dutch West India Company established New Netherland in 1624 and eventually controlled territory extending from the Connecticut River to the Delaware River. At first, the Dutch took great care to avoid conflict with the Indians. They purchased all the land on which they settled and refused to be drawn into the rivalry between the Algonquian and Iroquoian peoples. As the town of New Amsterdam grew, the colonists and the Algonquians came into increasing conflict. This account describes the massacre of an Indian village ordered by Director General Willem Kieft. David Pietersz De Vries, president of the ruling council, decried Kieft's action in ordering the February 25, 1643, massacre of some 80 defenseless Algonquians. The massacre spared neither women nor children. The period of war that followed ended with at least 1,000 Indians slaughtered and numerous colonial farms and settlements burned to the ground. Between 1655 and 1664, New Netherland, under Director General Petrus Stuyvesant, went to war against the Algonquians three more times.

Primary Source

 $[\ldots]$

The 24th of February, sitting at a table with the Governor, he began to state his intentions, that he had a mind to *wipe the mouths* of the savages; that he had been dining at the house of Jan Claesz. Damne, where Maryn Adrianensz. And Jan Claesz. Damen, together with Jacob Planek, had presented a petition to him to begin this work. I answered him that they were not wise to request this; that such work could not be done without the approbation of the *Twelve Men*; that it could not take place without my assent, who was one of the Twelve Men; that moreover I was the first patroon, and no one else

hitherto had risked there so many thousands, and also his person, as I was the first to come from Holland or Zeeland to plan a colony; and that he should consider what profit he could derive from this business, as he well knew that on account of trifling with the Indians we had lost our colony in the South River at Swanendael, in the Hoere-kil, with thirty-two men, who were murdered in the year 1630; and that in the year 1640, that cause of my people being murdered on Staten Island was a difficulty which he had brought on with the Raritaen Indians, where his soldiers had for some trifling thing killed some savages, and brought the brother of the chief a prisoner to the Mannates, who was ransomed there, as I have before more particularly related. But it appeared that my speaking was of no avail. He had, with his co-murderers, determined the commit the murder, deeming it a Roman deed, and to do it without warning the inhabitants in the open lands, that each one might take care of himself against the retaliation of the savages, for he could not kill all the Indians. When I had expressed all these things in full, sitting at the table, and the meal was over, he told me he wished me to go to the large hall, which he had been lately adding to his house. Coming to it, there stood all his soldiers ready to cross the river to Pavonia to commit the murder. Then spoke I again to Governor Willem Kieft: "Let this work alone; you wish to break the mouths of the Indians, but you will also murder our own nation, for there are none of the settlers in the open country who are aware of it. My own dwelling, my people, cattle, corn, and tobacco will be lost." He answered me, assuring me that there would be no danger; that some soldiers should go to my house to protect it. But that was not done. So was this business begun between the 25th and 26th of February in the year 1643. I remained that night at the Governor's, sitting up. I went and sat by the kitchen fire, when about midnight I heard a great shrieking, and I ran to the ramparts of the fort, and looked over to Pavonia. Saw nothing but firing, and heard the shrieks of the savages murdered in their sleep. I returned again to the house by the fire. Having sat there awhile, there came an Indian with his squaw, whom I knew well, and who lived about an hour's walk from my house, and told me that they two had fled in a small skiff, which they had taken from the shore at Pavonia; that the Indians from Fort Orange had surprised them; and that they had come to conceal themselves in the fort. I told them that they must go away immediately; that this was no time for them to come to the fort to conceal themselves; that they who had killed their people at Pavonia were not Indians, but the Swannekens, as they call the Dutch, had done it. They then asked me how they should get out of the forts. I took them to the door, and there was no sentry there, and so they betook themselves to the woods. When it was day the soldiers returned to the fort, having massacred or murdered eighty Indians, and considering they had done a deed of Roman valor, in murdering so many in their sleep; where infants were torn from the mother's breasts, and hacked to pieces in the presence of the parents, and the pieces thrown into the fire and in the water, and other sucklings, being bound to small boards, were cut, stuck, and pierced, and miserably massacred in a manner to move a heart of stone. Some were thrown into the river, and when the fathers and mothers endeavored to save them, the soldiers would not let them come on land but made both parents and children drown—children from five to six years of age, and also some old and decrepit persons. Those who fled from the onslaught, and concealed themselves in the neighboring sedge, and when it was morning, came out to bega piece of bread, and to be permitted to warm themselves, were murdered in cold blood and tossed into the fire or the water. Some came to our people in the country with their hands, some with their legs cut off, and some holding their entrails in their arms, and others had such horrible cuts and gashes, that worse than they were could never happen. And these poor simple creatures, as also many of our own people, did not know any better than they had been attacked by a part of other Indians—the Maquas. After this exploit, the soldiers were rewarded for their services, and Director Kieft thanked them by taking them by the hand and congratulating them. At another place, on the same night, on Corler's Hook near Corler's plantation, forty Indians were in the same manner attacked in their sleep, and massacred there in the same manner. Did the Duke of Alva in the Netherlands ever do anything more cruel? This is indeed a disgrace to our nation, who have so generous a governor in our Fatherland as the Prince of Orange, who has always endeavored in his wars to spill as little blood as possible. As soon as the savages understood that the Swannekens had so treated them, all the men whom they could surprise on the farm-lands, they killed; but we have never heard that they have ever permitted women or children to be killed. They burned all the houses, farms, barns, grain, haystacks, and destroyed everything they could get hold of. So there was an open destructive war begun. They also burnt my farm, cattle, corn, bar, tobacco-house, and all the tobacco. My people saved themselves in the house where I alone lived, which was made with embrasures, through which they defended themselves. Whilst my people were in alarm the savage whom I had aided to escape from the fort in the night came there, and told the other Indians that I was a good chief, that I had helped him out of the fort, and the killing of the Indians took place contrary to my wish. Then they all cried out together to my people that they would not shoot them; that if they had not destroyed my cattle they would not do it, nor burn my house; that they would let my little brewery stand, though they wished to get the copper kettle, in order to make darts for their arrows; but hearing now that it had been done contrary to my wish, they all went away, and left my house unbesieged. When now the Indians had destroyed so many farms and men in revenge for their people, I went to Governor Willem Kieft, and asked him if it was not as I had said it would be, that he would only effect the spilling of Christian blood. Who would not compensate us for our losses? But he gave me no answer. He said he wondered that no Indians came to the fort. I told him that I did not wonder as it; "why should the Indians come here where you have so treated them?"

58. Virginia Peace Treaty with the Indians, October 5, 1646 [Excerpt]

Introduction

The native peoples of Virginia, ruled by Powhatan's half brother Opechancanough, had attacked the colonists in 1622. By killing more than 300 Virginians they sealed their own destruction. On April 17, 1644, angered by continuing encroachments on Indian land, the now old and ailing Opechancanough launched a final, allout attack on the English. He sent his warriors against frontier settlements, killing more than 400 English men, women, and children. However, by 1644 the colony had grown to a population of nearly 10,000, so the death toll of Opechancanough's last attack did not have as great an effect as that of the earlier massacre. In fact, the colonists now outnumbered the Indians. Exposure to European diseases and long years of warfare had reduced the Indian population of Virginia to barely half of what it had been when the first Englishmen arrived. In 1646, the English finally captured Opechancanough, but before he could be transported to England for trial an English hothead murdered him at Jamestown. This treaty with his successor, Necotowance, ended the war with Powhatan's people. The native peoples' territory and freedom of movement were severely restricted. They had to pay an annual tribute and they could be shot on sight for trespassing on English territory.

Primary Source

ACT I.

Art 1. *Be it enacted by this Grand Assembly*, that the articles of peace foll: between the inhabitants of this colony, and Necotowance King of the Indians bee duely & inviolably observed upon the penaltie within mentioned as followeth:

Imp. That Necotowance do acknowledge to hold his kingdome from the King's Ma'tie of England, and that his successors be appointed or confirmed by the King's Governours from time to time, And on the other side, This Assembly on the behalfe of this collony, doth, undertake to protect him or them against any rebells or other enemies whatsoever, and as an acknowledgment and tribute for such protection, the said Necotowance and his successors are to pay unto the King's Govern'r. the number of twenty beaver skins att the goeing away of Geese yearely.

Art. 2. That it shall be free for the said Necotowance and his people, to inhabit and hunt on the northside of Yorke River, without any interruption from the English. *Provided* that if hereafter, It shall be thought fitt by the Governor and council to permitt any English to

inhabitt from Poropotanke downewards, that first Necotowance be acquainted therewith.

Art. 3. That Necotowance and his people leave free that tract of land betweene Yorke river and James river, from the falls of both the rivers to Kequotan, to the English to inhabitt on, and that neither he the said Necotowance nor any Indians do repaire to or make any abode upon the said tract of land, upon paine of death, and it shall be lawfull for any person to kill any such Indian, And in case any such Indian or Indians being seen upon the said tract of land shall made an escape, That the said Necotowance shall upon demand deliver the said Indian or Indians to the Englishmen, upon knowledge had of him or them, unless such Indian or Indians be sent upon a message from the said Necotowance.

And to the intent to avoid all injury to such a messenger, and that no ignorance may be pretended to such as shall offer any outrage, *It is thought fitt and herby enacted*, That the badge worne by a messenger, or, in case there shall be more than one, by one of the company, be a coate of striped stuffe which is to be left by the messenger from time to time so often as he shall returne at the places appointed for coming in.

Art. 4 And it is further enacted, That in case any English shall repaire contrary to the articles agrees upon, to the said north side of Yorke river, such persons so offending, being lawfully convicted, be adjudged as felons; Provided that this article shall not extend to such persons who by stresse of weather are forced upon the said land, Provided alsoe and it is agreed by the said Necotowance, that it may be lawfull for any Englishman to goe over to the said north side haveing occasion to fall timber trees or cut sedge, soe as the said persons have warr't for theyre soe doeing under the hand of the Gov. Provided also notwitstandinge any thing in this act to the contrary, That it shall bee free and lawfull for any English whatsoever between this present day and the first of March next to kill and bring away what cattle or hoggs that they can by any meanes kill or take upon the said north side of the said river.

Art. 5. And it is further enacted that neither for the said Necotowance nor any of his people, do frequent come in to hunt or make any abode nearer the English plantations then the lymits of Yapin the black water, and from the head of the black water upon a straite line to the old Monakin Towne, upon such paine and penaltie as aforesaid.

Art. 6. And it is further ordered enacted that if any English do entertain any Indian or Indians or doe conceale any Indian or Indians that shall come within the said limits, such persons being lawfully convicted thereof shall suffer death as in the case of felony, without benefit of clergy, excepted such as shall be authorized thereto by virtue of this act.

Art. 7. And it is further enacted that the said Necotowance and his people upon all occasions of messages to the Gov'r. for trade, doe

repaire unto the ffort Royall onely on the north side, at which place they are to receive the aforesaid badges, which shall shew them to be messengers, and therefore to be freed from all injury in their passage to the Governor, upon payne of death to any person or persons whatsoever that shall kill them, the badge being worn by one of the company, And in case of any other affront, the offence to be punished according to the quality thereof, and the trade admitted as aforesaid to the said Necotowance and his people with the commander of the said ffort onely on the north side.

Art. 8. And it is further thought fitt and enacted, that upon any occasion of message to the Gov'r. or trade, The said Necotowance and his people the Indians doe repair to fforte Henery *alias* Appamattucke fforte, or to the house of Capt. John ffloud, and to no other place or places of the south side of the river, at which places the aforesaid badges of striped stuffe are to be and remaine.

Art. 9. And it is further thought fitt and enacted, That Necotowance doe with all convenience bring in the English prisoners, And all such negroes and guns which are yet remaining either in the possession of himselfe or any Indians, and that there deliver upon demand such Indian servants as have been taken prisoners and shall hereafter run away, In case such Indian or Indians shall be found within the limits of his dominions; provided that such Indian or Indians be under the age of twelve years at theire running away.

Art. 10. And it is further enacted & consented, That such Indian children as shall or will freely and voluntarily come in and live with the English, may remain without breach of the articles of peace provided they be not above twelve years old.

Art. 11. And it is further thought fitt and enacted That the several commanders of the fforts and places as aforesaid unto which the said Indians as aforesaid are admitted to repaire, In case of trade or Message doe forthwith provide the said coats in manner striped as aforesaid.

59. Treaty of Westphalia, 1648 [Excerpt]

Introduction

The Treaty of Westphalia brought to a close the Thirty Years' War, which had raged between the major European powers sporadically from 1618 to 1648. The war was both religious and territorial in nature, as Catholic and Protestant powers opposed one another.

Much of the war was fought on German territory, as Spain, France, Sweden, and Denmark vied for control of the German states. The treaty undermined the power of Catholicism in the German states while recognizing Protestantism as an official state religion. During this war, the provinces encompassing the modern Netherlands aided by Sweden-fought for and achieved independence from Spain. The shifting alliances of Europe influenced England, France, Spain, and the Netherlands as they established outposts and sought to control territory in the New World. The founding of New Netherland, for example, was motivated primarily by the desire to have a base for raiding Spanish shipping. Dutch merchants participated with their allies in the founding of New Sweden. After the end of the Thirty Years' War, New Netherland forces began encroaching on New Sweden's territory. As a Protestant nation, England supported the aims of the Netherlands, but only four years after the signing of the Treaty of Westphalia, the First Anglo-Dutch War broke out in 1652.

Primary Source

Peace Treaty between the Holy Roman Emperor and the King of France and their respective Allies.

[...]

I. That there shall be a Christian and Universal Peace, and a perpetual, true, and sincere Amity, between his Sacred Imperial Majesty, and his most Christian Majesty; as also, between all and each of the Allies, and Adherents of his said Imperial Majesty, the House of Austria, and its Heirs, and Successors; but chiefly between the Electors, Princes, and States of the Empire on the one side; and all and each of the Allies of his said Christian Majesty, and all their Heirs and Successors, chiefly between the most Serene Queen and Kingdom of Swedeland, the Electors respectively, the Princes and States of the Empire, on the other part. That this Peace and Amity be observ'd and cultivated with such a Sincerity and Zeal, that each Party shall endeavour to procure the Benefit, Honour and Advantage of the other; that thus on all sides they may see this Peace and Friendship in the Roman Empire, and the Kingdom of France flourish, by entertaining a good and faithful Neighbourhood.

II. That there shall be on the one side and the other a perpetual Oblivion, Amnesty, or Pardon of all that has been committed since the beginning of these Troubles, in what place, or what manner soever the Hostilitys have been practis'd, in such a manner, that no body, under any pretext whatsoever, shall practice any Acts of Hostility, entertain any Enmity, or cause any Trouble to each other; neither as to Persons, Effects and Securitys, neither of themselves or by others, neither privately nor openly, neither directly nor indirectly, neither under the colour of Right, nor by the way of Deed, either within or without the extent of the Empire, notwithstanding all Covenants made before to the contrary: That they shall not act, or permit to be acted, any wrong or injury to any whatsoever; but

that all that has pass'd on the one side, and the other, as well before as during the War, in Words, Writings, and Outrageous Actions, in Violences, Hostilitys, Damages and Expences, without any respect to Persons or Things, shall be entirely abolish'd in such a manner that all that might be demanded of, or pretended to, by each other on that behalf, shall be bury'd in eternal Oblivion.

III. And that a reciprocal Amity between the Emperor, and the Most Christian King, the Electors, Princes and States of the Empire, may be maintain'd so much the more firm and sincere (to say nothing at present of the Article of Security, which will be mention'd hereafter) the one shall never assist the present or future Enemys of the other under any Title or Pretence whatsoever, either with Arms, Money, Soldiers, or any sort of Ammunition; nor no one, who is a Member of this Pacification, shall suffer any Enemys Troops to retire thro' or sojourn in his Country.

IV. That the Circle of Burgundy shall be and continue a Member of the Empire, after the Disputes between France and Spain (comprehended in this Treaty) shall be terminated. That nevertheless, neither the Emperor, nor any of the States of the Empire, shall meddle with the Wars which are now on foot between them. That if for the future any Dispute arises between these two Kingdoms, the abovesaid reciprocal Obligation of not aiding each others Enemys, shall always continue firm between the Empire and the Kingdom of France, but yet so as that it shall be free for the States to succour; without the bounds of the Empire, such or such Kingdoms, but still according to the Constitutions of the Empire.

 $[\ldots]$

XV. Secondly, that all the Lower Palatinate, with all and every the Ecclesiastical and Secular Lands, Rights and Appurtenances, which the Electors and Princes Palatine enjoy'd before the Troubles of Bohemia, shall be fully restor'd to him; as also all the Documents, Registers and Papers belonging thereto; annulling all that hath been done to the contrary. And the Emperor engages, that neither the Catholick King, nor any other who possess any thing thereof, shall any ways oppose this Restitution.

[...]

XLIX. And since for the greater Tranquillity of the Empire, in its general Assemblys of Peace, a certain Agreement has been made between the Emperor, Princes and States of the Empire, which has been inserted in the Instrument and Treaty of Peace, concluded with the Plenipotentiarys of the Queen and Crown of Swedeland, touching the Differences about Ecclesiastical Lands, and the Liberty of the Exercise of Religion; it has been found expedient to confirm, and ratify it by this present Treaty, in the same manner as the abovesaid Agreement has been made with the said Crown of Swedeland; also

with those call'd the Reformed, in the same manner, as if the words of the abovesaid Instrument were reported here verbatim.

60. Agreement Setting the Boundary Between New Haven and New Netherland, September 19, 1650

Introduction

Dutch traders built Fort Good Hope, near present-day Hartford, Connecticut, in 1633. Soon after, English traders from Plymouth, Massachusetts, defied them and built a post of their own a few miles upriver. Both New England and New Netherland maintained their posts and claimed the Connecticut River Valley. The Dutch asserted that New Netherland included all of Connecticut. Meanwhile, Puritans from Massachusetts founded new settlements in Connecticut. As the English and Dutch vied for the lucrative Indian fur trade, relations deteriorated among all parties, culminating in the outbreak of the Pequot War. In 1647, New Netherland governor Petrus Stuyvesant wrote to the English governor of New Haven Colony and addressed the letter to New Haven, New Netherland. The English governor found this insulting and refused to answer. In September 1650, Stuyvesant traveled to Hartford to confer with New England officials and establish a border between the Dutch and English colonies. The resulting agreement gave Connecticut to the English. Shortly thereafter, word arrived of the outbreak of the Anglo-Dutch War in Europe. The Dutch maintained their post at Fort Good Hope until July 1653, at which time a New England force ejected them.

Primary Source

Copy of the determination of arbitrators for settling the line between New-Haven and the Dutch, in 1650.

ARTICLES of agreement made and concluded at Hartford, upon Connecticut, Sept. 19, 1650, betwixt the delegates of the honored commissioners of the united Englishe colonies, and the delegates of Peter Stuyvesant, governor generall of Newe-Netherlands.

Concerning the bounds and limits betwixt the Englishe united Collonies and the Dutch Province of Newe-Netherlands, wee agree and determine as followeth.

THAT upon Long-island, a Line, run from the westernmost part of Oyster-bay, and so in a straight and direct line to the sea, shall be the bounds betweene the Englishe and Dutch there; the easterly part to belonge to the English, the westernmost part to the Dutch.

- 1. THE bounds, upon the maine, to begin upon the west side of Greenwich bay, being about four miles from Stamford, and so to run a westerly line 20 miles up into the country, and after, as it shall be agreed by the two governments of the Dutch and Newe-Haven, provided the said line runn not within tenn miles of Hudson's river. And it is agreed, that the Dutch shall not, at any tyme hereafter, build any house or habitation within six miles of the said line, the inhabitants of Greenwich to remain (till further consideration thereof be had) under the government of the Dutch.
- 2. That the Dutch shall hould and enjoy all the lands in Hartford, that they are actually in possession off, knowne or sett out by certaine merkes and boundes, and all the remainder of said lands, on both sides of Connecticut river, to be and remaine to the English there.

AND is agreed, that the aforesaid bounds and lymyts, both upon the island and maine, shall be observed and kept inviolable, both by the Englishe of the united collonies and all the Dutch nation, without any encroachment or molestation, until a full determination be agreed upon in Europe, by mutual consent of the two states of England and Holland.

AND in testimony of our joint consent to the several foregoing conditions, wee have hereunto sett our hands this 19th day of 7ber, 1650.

61. Exclusion of Jews from Military Service in New Amsterdam, 1655

Introduction

Like the home country, New Netherland tolerated people of various religions, although the Dutch Reformed Church enjoyed official favor. The authorities believed that welcoming all sorts of people was good for the colony and good for business. As a result, Jews and Protestants from other European countries such as Belgium and France settled in New Netherland. New Englanders fleeing the religious intolerance of the Puritans also found a haven in New Netherland. However, these minorities did not receive all the privileges of full citizenship. Under Director General Petrus Stuyvesant, New

Netherland went to war with the native Algonquians three times between 1655 and 1664. The Algonquians lost most of their land around New Amsterdam, but potential settlers feared to move there because of the nearly constant fighting. In 1655, a number of Jews living in New Amsterdam volunteered to join the city militia. New Amsterdam's council rejected them on the grounds that the other militiamen would object to their presence. However, the council ruled that Jewish men must pay for their "exemption" from service. The city could ill afford this exercise in prejudice. Only days later, the outnumbered militia struggled to repulse an Indian attack.

Primary Source

The captains and officers of the trainbands of this city, having asked the director general and Council whether the Jewish people who reside in this city should also train and mount guard with the citizens' bands, this was taken in consideration and deliberated upon. First, the disgust and unwillingness of these trainbands to be fellow soldiers with the aforesaid nation and to be on guard with them in the same guardhouse, and, on the other side, that the said nation was not admitted or counted among the citizens, as regards trainbands or common citizens' guards, neither in the illustrious city of Amsterdam nor (to our knowledge) in any city in Netherland. But in order that the said nation may honestly be taxed for their freedom in that respect, it is directed by the director general and Council, to prevent further discontent, that the aforesaid nation shall, according to the usages of the renowned city of Amsterdam, remain exempt from the general training and guard duty, on condition that each male person over sixteen and under sixty years contribute for the aforesaid freedom toward the relief of the general municipal taxes sixty-five stivers (one stiver equals two cents) every month. And the military council of the citizens is hereby authorized and charged to carry this into effect until our further orders, and to collect, pursuant of the above, the aforesaid contribution once in every month, and, in case of refusal, to collect it by legal process. Thus done in Council at Fort Amsterdam.

62. Roger Williams, Liberty of Conscience Letter, 1655

Introduction

The most ardent proponent of religious freedom in colonial America, Roger Williams often wrote publicly about the importance of allowing people the freedom of their beliefs. Although Puritans came to America to gain religious liberty for themselves, most were not willing to extend such liberty to others. Williams, an English clergyman, came to America in 1631. His religious views were so noncon-

formist that he could get along with neither the Pilgrims of Plymouth nor the Puritans. Massachusetts Bay Colony banished him in 1635, in part for his view that civil authorities had no right to extend their control over religious matters. In 1636, Williams founded Providence Plantation in present-day Rhode Island on land purchased from the Narragansetts. The new settlement welcomed settlers of all religions, including Quakers and Jews. When Rhode Islanders debated in 1655 whether religious freedom could coexist with a lawabiding society, Williams wrote this open letter to the people of Providence. He argued, as he had in his previous works, that as long as people respect the laws of society and behave in a civil and orderly manner, they should be free to practice whatever religion they wish. He also expressed the hope that people permitted such religious freedom might voluntarily embrace Christianity.

Primary Source

That ever I should speak or write a tittle, that tends to such an infinite liberty of conscience, is a mistake, and which I have ever disclaimed and abhorred. To prevent such mistakes, I shall at present only propose this case:

There goes many a ship to sea, with many hundred souls in one ship, whose weal or woe is common, and is a true picture of a commonwealth, or a human combination or society. It has fallen out sometimes that both Papists and Protestants, Jews and Turks, may be embarked in one ship; upon which supposal I affirm that all the liberty of conscience that ever I pleaded for turns upon these two hinges—that none of the Papists, Protestants, Jews, or Turks be forced to come to the ship's prayers or worship, nor compelled from their own particular prayers or worship, if they practice any.

I further add that I never denied that, notwithstanding this liberty, the commander of this ship ought to command the ship's course, yea, and also command that justice, peace, and sobriety be kept and practiced both among the seamen and all the passengers. If any of the seamen refuse to perform their services or passengers to pay their freight; if any refuse to help, in person or purse, towards the common charges or defense; if any refuse to obey the common laws and order of the ship concerning their common peace or preservation; if any shall mutiny and rise up against their commanders and officers; if any should preach or write that there ought to be no commanders or officers, because all are equal in Christ, therefore no masters nor officers, no laws nor orders, nor corrections nor punishments—I say, I never denied, but in such cases, whatever is pretended, the commander or commanders may judge, resist, compel, and punish such transgressors, according to their deserts and merits.

This if seriously and honestly minded, may, if it so please the Father of lights, let in some light to such as willingly shut not their eyes.

I remain studious of your common peace and liberty.

63. Johan Rising, Relation of the Surrender of New Sweden, 1655

Introduction

Swedish government officials and Dutch merchants formed the New Sweden Company in 1637, and the first colonists arrived in presentday Delaware the following year. New Sweden had a tenuous existence, challenged by encroaching neighbors and virtually abandoned by Sweden. When, after years of neglect, the Swedish government rekindled its interest in New Sweden, it sent Johan Rising and several hundred settlers to revive the colony. The expedition arrived in 1654. Rising's first act as governor, on May 21, 1654, was to capture nearby Fort Casimer from the Dutch. His rash act was contrary to his orders and gave Petrus Stuyvesant, governor of New Netherland, a rationale for invading New Sweden. Stuyvesant recaptured Fort Casimer on September 1, 1655, and then laid siege to Fort Christina. As he and Rising negotiated the terms for a Swedish surrender, news of an Indian uprising forced Stuyvesant to hurry back to New Netherland. He offered the Swedish a return to the situation as it had been before Rising had moved against Fort Casimer. Rising, however, cited various excuses and refused Stuyvesant's terms. Instead, he surrendered New Sweden to the Dutch on September 15, 1655, and embarked for Europe a few weeks later.

Primary Source

In the year 1655, on the 30th day of August, the Dutch from the North River, where Manhattan or New Amsterdam is situated, with seven ships or vessels, under command of the said P. Stüvesant, having on board 600 or 700 men, arrived in the South River, where N[ova] Suecia lieth, and anchored before the fortress of Elfsborg, which then lay in ruins; the next day, they passed Fort Casimir, and bringing to a little above, they landed, and immediately summoned Swen Sküthe, who was in command, to surrender the fort, enforcing their summons both with menaces and persuasion; and proceeded to throw up some works. And although some time before this, when we learned from the savages that the Dutch were about to assail us, we had caused Fort Casimir to be supplied with men and munitions to the best of our ability, and had drawn up a resolution in writing to defend the fort in case the Dutch should attack it, ordering Captain Schütte, the commandant, to send on board their ships, when they approached, and demand of them whether they came as friends, and in any case to warn them not to run by the said fort, upon pain of being fired upon, (which in such case they could not reckon an act of hostility); but if they were minded to treat with us as friends concerning our territory and boundaries, he should compliment them with a Swedish national salute, and assure them that we were well disposed to a fast friendship; nevertheless, Captain Swen Schüte not only suffered the Dutch ships to pass the fort without remonstrance or firing a gun, whereby they gained the command both of the fort and of the whole river, and cut off the communication between the forts, by posting troops between them, as high up as Christina Kill,

but also surrendered the fort to Stüvesant by a disadvantageous capitulation, in which he forgot to stipulate a place to which he, with his people and effects, might retire; he also subscribed the capitulation, not in the fort or in any indifferent place, but on board a Dutch ship, So Stüvesant detained the people, and transported most of them to Manahatans, whereby we were greatly reduced in strength and left destitute, and not even knowing as yet that Fort Casimir had so suddenly fallen into the enemy's hands, we had sent thither in the mean time, September 1, nine or ten of our best freemen to strengthen the garrison. This detachment, when they had crossed Christina Kill betimes in the morning, found the Dutch posted there, who immediately attacked them, fifty or sixty men strong, and summoned them to surrender; but they put themselves in posture of defence, and after a skirmish with the Dutch, were all taken prisoners, except two, who retreated to the boat, the Dutch firing many shots after them, but without hitting. Upon this we fired upon the Dutch from the sconce, with a gun, whereupon they retired into the woods, and afterwards treated harshly and cruelly such of our people as fell into their hands.

The same day the factor Hendr. Elzvii was sent down from Fort Christina to Stüvesant to obtain an explanation of his arrival and intention, and to dissuade him from further hostilities, as we could not be persuaded that he seriously purposed to disturb us in the lawful dominions of His Royal Majesty and our principals. But as Stüvesant had so cheaply obtained possession of Fort Casimir, whither we before had sent our best soldiers, thus depriving ourselves in a great measure both of men and munitions, he would give Elzvii no satisfaction, but claimed the whole river and all our territory, and had well nigh detained Elzvii as a spy. When we learned this we collected all the people we could for the defence of Fort Christina, and labored with all our might, by night and by day, on ramparts and gabions. The next day, being September 2, the Dutch shewed themselves in considerable strength on the upper bank of Christina Kill, but seemed to undertake nothing special. On the morning of the 3d, they hoisted a flag on our shallop, which lay drawn up on the beach, and appeared to be about establishing themselves in a house. We therefore sent over Lieutenant Swen Höök, with a drummer, to find out what they purposed, for what cause they posted themselves there, and for what we should hold them. When he had nearly crossed the creek, he asked them from the boat, whether he might freely go to them? They answered yes; and whether, after discharging his commission, he might freely return? to which also they answered yes, as we could all hear in Fort Christina, and can bear witness accordingly. So the drummer rowed the boat to the shore, without beat of drum, because the lieutenant already had their parole, and knowing no cause of hostility, he supposed this ceremony to be unnecessary. They then both went on shore, and an officer met them, and conducted them some distance to a house, where the enemy had already taken up a position. The Dutch then sent our lieutenant down to Stüvesant, pretending that he was a spy, and Stüvesant arrested him and threw him into the

ship's hold, but Captain Fridr. Könich detained the drummer and his drum in his own custody, and thus they treated our messengers, contrary to the laws and customs of all civilized nations.

On the night of the 4th they had planted gabions about the house on the opposite bank of Christina Kill, above [the fort], and afterwards threw up a battery under cover of them, and entrenched themselves there. Some of our people interpreted all this as indicating the purpose of the Dutch to be to claim and hold all our territory up to the creek, and to construct a fort there, not yet believing that they would, in contempt of public peace, and without any known cause, commence hostilities against us, until they had set up some claim, or promulgated some protest against us, whereas up to this time we had received from them neither message nor letter assigning any manner of cause or complaint.

On the 5th, the Dutch ships went up to Third Hook where they landed their men who then passed over to Timber Island, and thence over the great falls and so invested Fort Christina on all sides. They brought their ships into the mouth of the creek, and planted their great guns on the western side of the fort, and when we burnt a little powder in a couple of pieces to scale them, they fired several shots over our heads from Timber Island, where they had also taken post in a house, and announced to us, that they had taken up a position on the west side, by regular volleys. We continued to prepare ourselves to make the best defence which our strength would allow, if we should be attacked, for we were not yet satisfied what the Dutch intended; but in a short time an Indian came in to us with a letter from Stüvesant, in which he arrogantly demanded the surrender of the whole river, and required me and all the Swedes either to evacuate the country, or to remain there under Dutch protection, threatening with the consequences in case of refusal. Hereto I answered briefly, by letter, that, since so strange a demand was sent by him to me, I would reply by special messengers, and sent him my answer by the same Indian. We then held a general council of war, as to what should be done, if the Dutch assaulted us by storm or battery; and was determined that we should in any case maintain the defensive, and make the best resistance we could, but should not commence or provoke hostilities, on account of our weakness and want of supplies; that we should wait until they fired upon us, or began to storm the works, and then defend ourselves as long as we could, and leave the consequences to be redressed in the future by our gracious superiors.

The Dutch now began to encroach upon us more and more every day. They killed our cattle, goats, swine and poultry, broke open houses, pillaged the people outside the sconce of their property, and higher up the river they plundered many, and stripped them to the skin. At Gothenburg they robbed Mr. Papegoija's wife of all she had, with many others, who had collected their property together in the Hall there. They daily continued to advance their approaches to Fort Christina, (which was a small and feeble work, and lay upon low

ground, and could be commanded from the surrounding heights), and threw up two batteries besides those on the opposite bank and on Timber Island, and hoisted their flags on all of them, as well as on our ship in Fish Creek, all which hostile acts, injuries, and insults we were, to our great mortification, compelled to witness and suffer, being unable to resist them, by reason of our want of men and of powder, whereof our supply scarcely sufficed for a single round for our guns. Notwithstanding all this, we still trusted that they would at length be persuaded to hear reason, and accordingly on the 7th we sent messengers down to Stüvesant at Fort Casimir, with a written commission, whereby we sought to dissuade him from further hostilities, protesting against his invasion and disturbance of our proper territory without cause assigned, or declaration denying, as far as they could, our right of possession in the river; also suggesting to him the displeasure of our respective sovereigns, and other consequences of great moment which would ensue; that we were determined to defend our rights to the utmost of our strength, and that he must answer for all consequences, and finally required him to cease hostilities, and to retire with his people from Fort Christina. But all this availed nothing with him, and on the contrary he persisted in his claim to the whole river, and would listen to no terms of accommodation, declaring that such were his orders, and that those who had given them might answer for the consequences. He then wrote me a letter on the 9th, in which he anticipates all terms of accommodation, will not allow that we have any rights to the said river, seeks to refute our arguments, and styles our possession a usurpation, and so interprets every point to his own advantage.

As we still determined to maintain our own defence, and abide the result, the enemy continued to carryon their approaches day and night, and with our little force of about thirty men we could make no sorties, or prevent him from gaining positions from which he could command the sconce so completely, that there was not a spot on the ramparts where a man could stand in security, and as he now daily advanced his works, and summoned us to capitulate, with threats of giving no quarter, our men proposed to us to go out and try to bring Stüvesant to reason, both on account of our want of supplies, and the advanced condition of the enemy's works, and especially because our provisions were scanty and would soon be exhausted. Besides, our few and hastily collected people were getting worn out, partly sick, and partly ill disposed, and some had deserted. From these considerations, and the fear of a mutiny, it was agreed, that I and Elzvii should go out the next day and hold a parley with Stüvesant, and endeavor to restrain him from forcible measures, and to bring him to reason. We accordingly went out for this purpose on the 13th, and Stüvesant and Nicatius de Sylle met us between the sconce and their most advanced work. We solemnly protested against his procedure and his hostile conduct, and replied verbally to his last mentioned letter, confirmed our title with the best arguments we could, and held a long discussion with them; but all this produced no impression upon them, and they maintained their first ground, and insisted upon the surrender of Fort Christina and the whole river; to which we replied

that we would defend ourselves to the last and would await them, clearly showing them that they were unjustly invading our possessions, and declaring that we would appeal to our government to redress our wrongs, and protect our rights thus forcibly trenched upon, and so we went back to the sconce, exhorted our men to a manly defence, and encouraged them as well as we were able.

As soon as the Dutch had nearly completed their works, they brought the guns of all their batteries to bear upon us, and on the 14th instant, formally summoned Fort Christina, with harsh menaces, by a drummer and a messenger, to capitulate within twentyfour hours. We then assembled a general council of the whole garrison, and it was found to be their unanimous opinion, that inasmuch as we had not sufficient strength for our defence, (the Dutch having completed their works against the sconce, and neither the sconce nor the garrison being able to stand an assault), and were in want both of powder and other munitions, and had no hope of relief, therefore they were all of opinion, that we should make the best terms we could obtain with the Dutch; all which may be seen by the documents. So the next day we announced to the enemy, that we would consider their summons within the time prescribed, and being now reduced, by our want of supplies and weak condition, to yield to the violence practiced upon us, we concluded a capitulation with Stüvesant, as may be found by the original among the documents, and surrendered Fort Christina to him on the 15th instant, stipulating that the guns and all the effects belonging to the crown or the Company should be restored by the Dutch, according to the inventory, upon demand, and reserving the restitution of our sovereign's rights in time and manner fitting; providing also, that the Dutch should freely transport to Sweden both us, and as many Swedes as chose to accompany us, for we held it better that the people should be restored to their Fatherland's service than to leave them there in misery, without the necessaries of life, in which case they would have entered the service of the Dutch or English, and never again advantaged their country.

64. Myles Standish, Last Will and Testament, 1655, 1657

Introduction

Myles Standish (ca. 1584–1656) served as military commander for the defense of Plymouth, but he never joined their church. His first wife died, along with half the first colonists, during the first winter at Plymouth. His second marriage produced seven children. Much of the law in the colonies, and later in the United States, reflected English law. Under English inheritance law, wives and daughters were bypassed, and eldest sons inherited the bulk of the estate. Accordingly, Bradford and Standish provide for the support of their widows, but the widows inherit no actual property. Standish's will also makes provision for an indentured servant and asserts that he has a claim to land in England that has been wrongly denied him. This land he leaves for his eldest son to try to recover.

Primary Source

The Last will and Testament of Captaine Myles Standish Exhibited before the court held att Plymouth (the 4th) of may 1657 on the oath of Captaine James Cudworth; and ordered to bee recorded as followeth;

Given under my hand this march the 7th 1655 Witnesseth these prsents that I Myles Standish senir of Duxburrow being in prfect memory yett Deseased in my body and knowing the fraile estate of man in his best estate I Doe make this to be my last will and Testament in manor and forme following;

1 my will is that out of my whole estate my funerall charges be taken out & my bod(y) to be buried in Decent manor and if I Die att Duxburrow my body to bee layed as neare as Conveniently may bee to my two Daughters Lora Standish my Daughter and Mary Standish my Daughterinlaw

2 my will is that that out of the remaining prte of my whole estate that all my jus(t) and lawful Debts which I now owe or att the Day of my Death may owe bee paied

3 out of what remaines according to the order of this Govrment: my will is that my Dear and loveing wife Barbara Standish shall have the third prte

4 I have given to my son Josias Standish upon his marriage one young horse five sheep and two heiffers which I must upon that contract of marriage make forty pounds yett not knowing whether the estate will bear it att prsent; my will is that the resedue remaine in the whole stocke and that every one of my four sons viz Allexander Standish Myles Standish Josias Standish and Charles Standish may have forty pounds appeec; if not that they may have proportionable to ye remaining prte bee it more or lesse

5 my will is that my eldest son Allexander shall have a Double share in land

6 my will is that soe long as they live single that the whole bee in prtenership betwix(t) them

7 I do ordaine and make my Dearly beloved wife Barbara Standish Allexander Standish Myles Standish and Josias Standish Joynt Exequitors of this my last will and Testament 8 I Doe by this my will make and appoint my loveing frinds mr Timothy hatherley and Capt: James Cudworth Supervissors of this my last will and that they wilbee pleased to Doe the office of Christian love to bee healpfull to my poor wife and Children by theire Christian Counsell and advisse; and if any Difference should arise which I hope will not; my will i(s) that my said Supervissors shall Determine the same and that they see that m(y) poor wife shall have as comfortable maintainance as my poor state will beare the whole time of her life which if you my loveing frinds pleasse to Doe though neither they nor I shalbee able to recompenc I Doe not Doubt but the Lord will; By mee Myles Standish

further my will is that marcye Robenson whome I tenderly love for her Grandfathers sacke shall have three pounds in somthing to goe forward for her two yeares after my Decease which my will is my overseers shall see prformed

further (m)y will is that my servant John Irish Junir have forty shillings more then his Covenant which will appear upon the towne booke alwaies provided that hee continew till the time hee covenanted bee expired in the service of my exequitors or any of them with theire Joynt Concent

March 7th 1655 By mee Myles Standish.

9 I give unto my son & heire aparent Allexander Standish all my lands as heire apparent by lawfull Decent in Ormistick Borsconge Wrightington Maudsley Newburrow Crawston and the Ile of man and given to me as right heire by lawful Decent but Surruptuously Detained from mee my great G(ran)dfather being a 2cond or younger brother from the house of Standish of Standish

March the 7th 1655 by mee Myles Standish

Witnessed by mee

James Cudworth

65. John Hammond, *Leah and Rachel,* or, the Two Fruitfull Sisters Virginia and Maryland, 1656 [Excerpt]

Introduction

From the time Cecilius Calvert, Second Lord Baltimore, received a charter to establish a colony and a haven for Catholics in Maryland, he faced challenges on multiple fronts. In 1649, the year that Puri-

tans executed King Charles I, Maryland passed the Act Concerning Religion, which called for tolerance of all Christian religions, and Lord Baltimore appointed a Protestant governor, William Stone. Several hundred Puritans who had been expelled from Virginia settled in Maryland at Stone's invitation. By 1654, Maryland's legislature had a majority of Puritans. They repealed the Act Concerning Religion and banned both Catholic and Anglican worship. Puritan radicals drove priests from the colony and confiscated Catholic property. In the March 1655 Battle of the Severn, Governor Stone led a force to confront Puritan settlers but was defeated and captured. The author of this account fought on the governor's side and was captured and sentenced to death. He escaped to Virginia, but the Puritans executed four other participants. William Claiborne, mentioned in this account, had been an enemy of Maryland since the colony's beginning. Having been expelled in 1638, he returned to take advantage of the unrest. Lord Baltimore eventually worked out a compromise with Oliver Cromwell that allowed his family to regain control of Maryland in 1657.

Primary Source

[...

All was granted them, they had a whole County of the richest land in the province assigned them, and such as themselves made choyce of, the conditions of plantations (such as were common to all adventurers) were shewed and propounded to them, which they extreamly approved of, and nothing was in those conditions exacted from them, but appeales to the Provincial court, quit-rents, and an oath of fidelitie to the Proprietor: An assembly was called throughout the whole Country after their coming over (consisting as well of themselves as the rest) and because there were some few papists that first inhabited these themselves, and others being of different judgments, an act passed that all professing in Jesus Christ should have equall justice, priviledges and benefits in that province, and that none on penaltie (mentioned) should disturb each other in their several professions, nor give the urging termes, either of Roundheads, sectarie, Independent, Jesuit, Papist, etc., Intending an absolute peace and union; the Oath of Fidelitie (although none other then such as every Lord of a manner requires from his tenant) was over hauled, and this clause added to it (provided it infring not the libertie of the conscience.)

They sat downe joyfully, followed their vocations cheerfully, trade increased in their province, and divers others were by this incouraged and invited over from Virginia.

But these people finding themselves in a capacitie not only to capitulate, but to oversway, those had had so received and relieved them.

Began to pick quarrells, first with the Papists, next with the oath, and lastly declared their aversness to all conformalitie, wholly ayming (as themselves since confessed) to deprive the Lord propri-

etor of all his interest in that country, and make it their own: with [what] unworthiness? What ingratitude? with [what] unparalled inhumanitie was in these practices made obvious.

Amongst others that became tenants in this aforesaid distress was one Richard Bennett Merchant, who seated and settled amongst them, and so (not only owed obedience to that government, but) was obliged as a man received in his pretended distresse, to be gratfull benefactor. Upon the setting forth of a fleet intended for the reducement of Virginia, the said Bennett and one Claiborne, a pestilent enemie to the wel-faire of that province and the Lord proprietor, although he had formerly submissively acknowledge he owed his forfeited life to the said proprietor, for dealing so favorably with him for his misdemeanors, as by his treacherous letters under his hand (now in print) is manifest, and many other acts of grace conferred on him, having a commission directed to them and others (who miscarried by sea) to reduce Virginia (not Mary-land, for they were in obedience to the Common-wealth of England, and great assistance to the said fleet) although they knew Mary-land to be excluded and dasht out of their Commission, yet because the commission mentioned the Bay of Chesapeack, in which Maryland was (as well as Virginia) yet they were resolved to wreth and stretch their commission to the prejudice of Mary-land and becoming abbetters and confederats with those serpents that have been so taken in, presumed to alter the government and take away the governours Commission, putting in others in their place, viz. a Papist in cheife, and one more, who misgoverning the Country, they were excluded, and the former governor restored with an addition of Commissioners of their owne creatures, and as taking power from them, until further knowledge from England, driving herein at their own interest.

The governour (so restored) being truly informed that their proceedings were illegal, held Courts and proceeds as if no such alteration had been made, issues out Writs (according to order) In the name of the Lord proprietor, but they require and command them to do it in the name of the Keepers of the Liberties of England, according to act of Parliament, to which answer sufficient was given, that they never were in opposition to the present power, they had taken the Engagement, and for the tenure or form of writs, they were not compelled by virtue of that act to make them otherwise then they always had done, for by Patent from the late K. they had used the Kings name at all, therefore that act requiring all Writs formerly issuing out in the late Kings name, now to revolve to the Keepers of the Liberties of England, was no way binding to them, who had never used the kings name at all.

But it was not religion, it was not punctilios they stood upon, it was that sweete, that rich, that large Country they aimed at; and therefore agrees amongst themselves to frame petitions, complaints, and subscriptions from those bandetoes to themselves (the said Benner, and Claiborne) to ease them of their pretended sufferings, and

then come with arms, and againe make the province their own, exalting themselves in all places of trust and command, totally expulsing the Governer, and all the hospitable Proprietors, Officers out to their places.

But when his Highnesse (not acquired with these matchinations) had owned and under his hand and signet acknowledged Cap. Will. Stone (the former governor) Governor for the Lord Baltamore of his province of Mary-land, he again endeavored to reasume the government, and fetched away the records from those usurpers, proclaimed peace to all not obstinate, and favorably received many submissives, who with seeming joy returned, bewailing their unworthy ingratitude and inhumanitie, blaming the unbridled ambition and base avarice of those that had misled them.

The province consists of foure Counties already inhabited, *viz.* St. Maries, Calverton, An Arundal and Kent. St. Maries and Calverton submitted, An Arundall and part of Kent opposed.

The Governor desirous to reclaim those opposing, takes a partie about 130 persons with him, and sailes into those parts, one Roger Heamans who lad a great ship under him, and who had promised to be instrumentall to the governor, to wind up those differences (being Judas-like, hired to joyn with those opposing Countries, and having the Governour and his vessels within reach of his Ordnance, perfidiously and contrary to his undertaking and ingagments, fires at them and enforces them to the first shore to prevent that mischief.

The next morning he sends messengers to those of An Arundall to treat, and messengers aboard that Shittlecock Heamans, but all were detained; and on 25 of March last (being the next day and the Lords day) about 170 and odd of Kent and Anne Arundall came marching against them. Heaman fires a pace at them, and a small vessel of New-England under the command of one John Cutts comes neere the shore and seazes the boats, provision and ammunition be longing to the Governour and his partie, and so in a nick, in a straight were they fallen upon.

The Governour being shot in many places yields on quarter, which was granted; but being in hold, was threatned (notwithstanding that quarter given) to be immediately executed, unlesse he would writ to the rest to take quarter, which upon his request they did, twentie odd were killed in this skirmish, and all the rest prisoners on quarter, who were disarmed and taken into custodie.

But these formerly distressed supplicants for admittance, being now become High and Might States, and supposing their Conquest unquestionable, consult with themselves (notwithstanding their quarter given) to make their Conquest more absolute, by cutting off the heads of the Province, *viz.* the Governor, the Counsel and Commanders thereof: And so make themselves a Counsel of War, and condemn them to death: Foure were presently executed, *scilicet*,

Mr. William Eltonhead, one of the Councel; Capt. William Lewis, Mr. John Legate Gentleman, and John Pedro; the rest at the importunity of some women, and resolution of some of their souldiers (who would not suffer their designe to take thorough effect, as being pricked in Conscience for their ingratitudes) were saved, but were Amerced, Fined and Plundred at their pleasures. And although this was prophetiquely foreseen by diverse eminent Merchants of London, who Petitioned his Highnesse for prevention, and that his Highnesse sent a gracious command to Bennet, and all others, not to disturb the Lord Baltamores Officers, nor People in Mary-land, but recalled all Power or pretence of Power from them; yet they still hold, and possess (in defiance of so sacred a mandate) the said province of Maryland, and sent an impious Agent home to Parlie whilest they plundred; but he hath long since given up his account to the great avenger of all injuries: Although sticklers (somewhat more powerfull, but by many degrees more brazen fac't then his spirit could bare him forth to appear) Now labour to justifie these inhumanities, disorders, contempts, and rebellious; so that I may say with the Prophet Jeremiah; How doth the Citty sit solitary that was full of people? How is she become as a widdow? She that was great amongst the Nations, and Princesse amongst the Provinces? How is she become tributary? Thus have they brought to desolation, one of the happiest Plantations that ever Englishmen set foot in, and such a Country (that if it were again made formall) might harbor in peace and plenty all such as England shall have occasion to disburthen, or desire to forsake England.

A pious consideration of these distractions is by his Highnesse taking notice of, and these controversies are by him referred to the Hearing, and Report of those two Honourable and judicious Gentlemen the Lords Whitlock and Widdrington, whose Pains and Moderation in Hearing, and mildly disputing indifferently the condition of these uproars, gives not onely hopes of relief, but have added to their renowns, by all those that (so observed) have been present at the severall Hearings, an account whereof will ere long be published in print.

Upon determination whereof, it must be concluded that a settlement will follow, and then many families will flock over to in habit these ruines, the fertility of the Province will (in short time) make good (excepting the blood split which can never be recalled nor satisfied for.)

Let this be no discouragement to any to goe over, for it will not be more firmly settled then ever, and so thoroughly settled that neither envy nor deceipt can again ever shake it.

And being so setled, I know no country (although I have travelled many) that I more affect, more esteem; that which profits delights, and here is both absolute profit, reall delight; I shall forget my undertaking in the beginning of my booke, which was not to over extall the Country: for should I indeed give it its due commenda-

tions, I should seem to be suborn'd' but in few words, it is that Country in which I desire to spend the remnant of my dayes, in which I covert to make my grave.

This I have not written for profit, for it is known I have given away the copy, and therefore am the less to be mistrusted for a deluder, for popular applause I did it not, for in this pregnant age, my lines appear so harsh and disordered, that I would not have affixed my name to it, but in obedience to those commands that so require it, and to prevent the imputation of a libeller. The maine drift and scope I have herein aimed at, is to discover Virginia and Mary-land, and stand up in their just defences when calumniated, to let many that pine in England know, they are to their ruines deluded, that are frighted from going thither, if their wayes of livelihood be not certaine in England.

POST-SCRIPT.

A Word to the Governour and Counsell in Virginia.

Gentlemen,

As I have done your country of Virginia justice in standing up in its defence, so I expect and entreat the like from you: I know ye are honest and understand your selves; I cannot except nor speake against any of ye, but Will. Claiborne, whom ye all know to be a Villaine, but it is no more blemish to your degree, to have him of your societie, then it was to the Apostles to have Judas of theirs. I have had injury by him by palpable cousinages done me, as I shal one day demonstrate. But for the decree of your court against one Captaine Thomas Thoroughgood, late Commander of the ship *Cressent*, I desire you to consider of it again and reverse it for these reasons following.

I was an inhabitant of Mary-land of two years standing, proscribe to die by the rebels of the Bay. I fled disguised to Virginia, came a bord his Ship by an unknowne name, made my condition, not my person, known to him, and he charitably brought me for England, otherewise I had causelessly been put to death.

66. Navigation Acts, 1660, 1663, and 1696 [Excerpts]

Introduction

Parliament passed a series of navigation acts to control the movement of trade goods by sea. The intended effect of these acts was to

reserve to English shipping interests and businesses the ability to make money from trade with England and its colonies. The 1660 act provided that only English ships could carry goods to or from the colonies, and that the colonies could ship their tobacco and other crops only to England. Among the provisions of the 1663 act was the requirement that any finished goods sold in the colonies had to be shipped from England in English ships. Thus, European goods, such as fabrics, had to first go to England, thus adding to their price when they were eventually sold in the colonies. The acts also set customs duties on a range of commodities and established penalties for noncompliance. In so protecting English interests, the acts had a detrimental effect on colonial economies. They prevented colonists from shipping their goods to wherever prices were highest, and artificially inflated the prices colonists paid for finished goods. The 1696 navigation act was even stricter and fartherreaching than the earlier acts. The navigation acts prompted many traders to turn to smuggling in order to ship goods to and from the American colonies.

Primary Source

Navigation Act (1660)

An act for the encouraging and increasing of shipping and navigation.

FOR the increase of shipping and encouragement of the navigation of this nation, wherein, under the good providence and protection of God, the wealth, safety and strength of this kingdom is so much concerned; (2) be it enacted by the Kings' most excellent majesty, and by the lords and commons in this present parliament assembled, and by the authority thereof, That from and after the first day of December one thousand six hundred and sixty, and from thenceforward, no goods or commodities whatsoever shall be imported into or exported of any lands, islands, plantations or territories to this Majesty belonging or in his possession, or which may hereafter belong unto or be in the possession his Majesty, his heirs and successors, in Asia, Africa, America, in any other ship or ships, vessel or vessels whatsoever, but in such ships or vessels as do truly and without fraud belong only to the people of England or Ireland, dominion of Wales or town or Berwick upon Tweed, or are of the built of and belonging to any the said lands islands, plantations or territories, as the proprietors and right owners thereof, and whereof the master and three fourths of the mariners at least are English; (3) under the penalty of the forfeiture and loss of all the goods and commodities which shall be imported into or exported out of any the aforesaid places in any other ship or vessel, as also of the ship or vessel, with all its guns, furniture, tackle, ammunition and apparel; one third part thereof to his Majesty, his heirs and successors; one third part to the governor of such land, plantation, island or territory where such default shall be committed, in case the said ship or goods be there seized, or otherwise that third part also to his Majesty, his heirs and successors; and the other third part to him

or them who shall seize, inform or sue for the same in any court of record, by bill, information, plaint or other action, wherein no essoin, protection or wager of law shall be allowed; (4) and all admirals and other commanders at sea of any the ships of war or other ship having commission from his Majesty or from his heirs and successors, are hereby authorized and strictly required to seize and bring in as prize all such ships or vessels as shall have offended contrary hereunto, and deliver them to the court of admiralty, there to be proceeded against; and in case of condemnation, one moiety of such forfeitures shall be to the use of such admirals and commands and their companies, to be divided and proportioned amongst them according to the rules and orders of the sea in case of ships taken prize; and the other moiety to the use of his Majesty, his heirs and successors.

 $[\ldots]$

XVIII. And it is further enacted by the authority aforesaid, That from and after the first day of April, which shall be in the year of our Lord one Thousand six hundred sixty-one, no sugars, tobacco, cotton-wool, indicoes, ginger, fustick, or other dying wood, of the growth, production or manufacture of any English plantations in America, Asia or Africa, shall be shipped, carried conveyed or transported from any of the said English plantations to any land, island, territory, dominion, port or place whatsoever, other than to such other English plantations as do belong to his majesty, his heirs and successors, or to the kingdom of England or Ireland, or principality of Wales, or town of Berwick upon Tweed, there to be laid on shore, (2) under the penalty of the forfeiture of the said goods, or the full value thereof, as also of the ship, with all her guns, tackle, apparel, ammunition and furniture; the one moiety to the King's majesty, his heirs and successors, and the other moiety to him or them that shall seize, inform or sue for the same in any court of record, by bill, plaint, or information, wherein no essoin, protection or wager of law shall be allowed.

[...]

Navigation Act (1663)

An act for the encouragement of trade.

FORASMUCH as the encouraging of tillage ought to be in a especial manner regarded and endeavourer; and the surest and effectuallest means of promoting and advancing any trade, occupation, mystery, being by rendring it profitable to the users thereof; (2) and great quantities of land within this kingdom for the present lying in manner waste, and yielding little, which might thereby be improved considerable profit and advantage (if sufficient encouragement were given for the laying out of cost and labour on the same) and thereby much more corn produced, great numbers of people, horses and cattle imployed, and other lands also rendred more valuable:

II. Be it enacted by the King's most excellent majesty, with the advice and consent of the lords spiritual and temporal, and the commons, in this present parliament assembled, and by the authority thereof,; and it is hereby enacted, That from and after the first day of September in the year of our Lord one thousand six hundred sixty and three, and from thenceforward, when the prices of corn and grain Winchester measure do not exceed the rates hereafter following, at the havens or places where the same shall be shipped or loaden, (viz.) The quarter of whereto eight and forty shillings; the quarter of barley or malt, eight and twenty shillings; the quarter of buck-wheat, eight and twenty shillings; the quarter of oats, thirteen shillings and four pence; the quarter of rye, two and thirty shillings; the quarter of pease or beans, two and thirty shillings current English money; that then it shall be lawful for all and every person and persons to ship, load, carry and transport any of the said corn or grains from the havens or places where they shall be of such prices, unto any parts beyond the seas as merchandize; and law, stature or usage to the contrary notwithstanding; paying such rates for the same, and none other, as are to be paid when the same might have been transported by one of passed this present parliament, intituled. A subsidy grated to the King of tonnage and poundage.

III. And it is hereby further enacted by the authority aforesaid, That when the prices of the aforesaid corns and grains do not exceed the rates above-mentioned, respectively *Winchester* measure, at the haven or place into which any of them shall be imported from any parts beyond the seas, there shall be paid for the custom and poundage of every quarter of wheat, five shillings and four pence; and for every quarter of rye, four shillings; and for every quarter of barley or malt, two shillings and eight pence; and for every quarter of buckwheat, two shillings; and for every quarter of oats, one shilling four pence; and for every quarter of pease or beans, four shillings.

IV. And it is hereby further enacted by the authority aforesaid, That when the prices of corn or grain Winchester measure do not exceed the rates following at the markets, havens or places where the same shall be bought, (viz.) the quarter of wheat, eight and forty shillings; the quarter of rye, two and thirty shillings; the quarter of barley or malt, eight and twenty shillings; the quarter of buck-wheat, eight and twenty shillings; the quarter of oats, thirteen shillings and four pence; the quarter of pease or beans, two and thirty shillings; that then it shall be lawful for all and every person and persons (not forestalling nor selling the same in the same market within three months after the buying thereof) to buy in open market, and to lay upon and keep in his or their granaries or houses, and to sell again, such corn or grain of the kinds aforesaid, as without fraud or covin shall have been bought at or under the prices before expressed, without incurring any penalty; any law, statute or usage to the contrary notwithstanding.

V. And in regard to his Majesty's plantations beyond the seas are inhabited and peopled by his subjects of this his kingdom of England;

for the maintaining a greater correspondence and kindness between them, and keeping them in a firmer dependence upon it, and rendring them at more beneficial and advantageous unto it in the further imployment and increase of English shipping and seamen, vent of English woolen and other manufactures and commodities, rendring the navigation to and from the same more safe and cheap, and making this kingdom a staple, not only of the commodities of those plantations, but also of the commodities of other countries and places, for the supplying of them; and it being the usage of other nations to keep their plantations trade to themselves.

VI. Be it enacted, and it is hereby enacted, That from and after the five and twentieth day of March one thousand six hundred sixtyfour, no commodity of the growth, production or manufacture of Europe, shall be imported into any land, island, plantation, colony, territory or place to his majesty belonging, of which shall hereafter belong unto or be in the possession his Majesty, his heirs and successors, in Asia, Africa or America, (Tangier only excepted) but what shall be bona fide, and without fraud, laden and shipped in England, Wales, or the town of Berwick upon Tweed, and in English built shipping, or which were bona fide bought before the first day of October one thousand six hundred sixty and two, and had such certificate thereof as is directed in one act passed the last sessions of this present parliament, intituled, An act for preventing frauds, and regulating abuses in his Majesty's customs; and whereof the master and three fourths of the mariners at least are English, and which shall be carried directly thence to the said lands, islands, plantations, colonies, territories or places, and from no other place or places whatsoever; any law, statute or usage to the contrary notwithstanding; (2) under the penalty of the loss of all such commodities of the growth, production or manufacture of Europe, and shall be imported into any of them from any other place whatsoever, by land or water; and if by water, of the ship or vessel also in which they were imported, with all her guns, tackle, furniture, ammunition and apparel; one third part to his Majesty, his heirs and successors; one third part to the governor of such land, island, plantation, colony, territory or place, into which such goods were imported, if the said ship, vessel or goods be there seized or informed against and sued for; or otherwise that third part also to his Majesty's courts in such of the said lands, islands, colonies, plantations, territories or places where the offence was committed, or in any court of record in England, by bill, information, plaint or other action, wherein no essoin, protection or wager of law shall be allowed.

 $[\ldots]$

VIII. And for the better prevention of frauds, be it enacted, and it is hereby enacted, That from and after the five and twentieth of *March* one thousand six hundred sixty and four, every person or persons importing by land any goods or commodities whatsoever into any the said lands, islands, plantation, colonies, territories or places,

shall deliver to the governor of such land, island, plantation, colony, territory or place, or to such person or officer as shall be by him thereunto authorized and appointed, within four and twenty hours after such importation, his or their names and surnames, and a true inventory and particular of all such goods or commodities: (2) and no ship or vessel coming to any such land, island, plantation, colony, territory or place, shall lade or unlade any goods or commodities whatsoever, until the master or commander of such ship or vessel shall first have made known to the governor of such land, island, plantation, colony, territory or place, or such other person or officer as shall be by him thereunto authorized and appointed, the arrival of the said ship or vessel, with her name, and the name and surname of her master or commander, and have shewn to him that she is an English-built ship, or made good by producing such certificate, as abovesaid, that she is a ship or vessel bona fide belonging to England, Wales, or the town of Berwick, and navigated with an English master, and three fourth parts of the mariners at least Englishmen, and have delivered to such governor or other person or officer a true and perfect inventory or invoice of her lading, together with the place or places in which the said goods were laden or taken into the said ship or vessel: (3) under the pain of the loss of the ship or vessel, with all her guns, ammunition, tackle, furniture and apparel, and of all such goods of the growth, production or manufacture of Europe, as were not bona fide laden and taken in England, Wales, or the town of Berwick, to be recovered and divided in manner aforesaid: (4) and all such as are governor or commanders of any the said lands, islands, plantations, colonies, territories or places (Tangier only excepted) shall before the five and twentieth day of March one thousand six hundred sixty and four, and all such as shall hereafter be made governors or commanders of any of them, shall before their entrance upon the execution of such trust or charge, take a solemn oath before such person or persons as shall be authorized by his Majesty, his heirs and successors, to administer the same, to do their utmost within their respective governments or commands, to cause to be well and truly observed what is in this act enacted, in relation to the trade of such lands, islands, plantations, colonies, territories and places, under the penalty of being removed out of their respective government and commands: (5) and if any of them shall be found, after the taking of such oath, to have wittingly and willingly offended contrary to what is by this act required of them, that they shall for such offence be turned out of their governments, and be uncapable of the government of any other land, island, plantation or colony; and moreover, forfeit the sum of one thousand pounds of lawful money of England; the one moiety to his majesty, his heirs and successors; and the other moitey to him or them that shall inform or sue for the same in any of his Majesty's courts in any of the said plantation, or in any court of record in England, wherein no essoin, protection or wager of law shall be allowed.

IX. And it is herby further enacted, That if any officer of the customs in *England*, *Wales*, or town of *Berwick* upon *Tweed*, shall give

any warrant for, or suffer any sugar, tobacco, ginger, cotton-wool, indigo, speckle-wood or *Jamaica*-wood, fustick or other dying-wood of the growth of any of the said lands, islands, colonies, plantations, territories or places, to be carried into any other country or place whatsoever, until they have been first unladen *bona fide* and put on shore in some port or haven in *England* or *Wales*, or in the town of *Berwick*; the value of such of the said goods as he shall give warrant for, or suffer to pass into any other country or place; the one moiety to his Majesty, his heirs and successors; and the other moiety to him or them that shall inform or sue for the same in any court of record in *England* or *Wales*, wherein no essoin, protection or wager in law shall be allowed.

 $[\ldots]$

XIX. And it is hereby further enacted, That in case any person or persons shall resist or make forcible opposition against any person or persons in the due and through execution of the said act of the twelfth of this said Majesty's reign, that he, she or they, so resisting and making forcible opposition, shall over and above the penalties therein mentioned for such offences, be committed to the common gaol of the county where such offence shall be committed, there to remain without bail or main-prize, until he, she or they, have entred into a recognizance to his majesty, his heirs and successors, with two sufficient sureties, of ten pounds penalty, not to do or commit the like offence again.

[…]

Navigation Act (1696)

[…]

II. Be it enacted, and it is hereby enacted and ordained by the Kings' most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in parliament assembled, and by the authority of the same, That after the five and twentieth day of March, one thousand six hundred ninety eight, no good or merchancizes whatsoever shall be imported into, or exported out of any colony or plantation to his Majesty, in Asia, Africa or America, belonging, or in his possession, or which may hereafter belong unto, or be in the possession of his Majesty, his heirs or successors, or shall be laden in, or carried from any one ort or place in the said colonies or plantations to any other port or place in the fame, the kingdom of England, domino of Wales, or town of Berwick upon Tweed, in any ship or bottom, but what is shall be of the built of England, or of the built of Ireland, or the said colonies or plantations, and wholly owned by the people thereof, or any of them, and navigated with the masters and three fourths of the mariners of the said places only (except such ship only as are or shall be taken as prize, and condemnation thereof made in one of the courts of admiralty in England, Ireland, or the said colonies or plantation, to be navigated by the master and three fourths of the mariners *English*, or of the said plantations are aforesaid, and whereof the property doth belong to *English* men; and also except for the space of three years, such foreign built ships as shall be employed by the commissioners of his Majesty' navy for the time being, or upon contract with them, in bringing only masts, timber, and other naval stores for the Kings' service from his Majesty's colonies or plantations to this kingdom, to be navigated as aforesaid, and where of the property doth belong *English* men) under pain of forfeiture of ship and goods; one third part whereof to be to the use of his Majesty, his heirs and successors, one third part to the governor of the said colonies or plantations, and the other third part to the person who shall inform and sue for the same, by bill, plaint or information, in any of his Majesty's courts of record at *Westminster*, or in any court in his Majesty's plantations, where such offence shall be committed.

III. And be it further enacted by the authority aforesaid That (from and after the said five and twentieth day of *March*) good or merchandizes may be exported or imported to and from this kingdom, the colonies, plantations and places aforesaid, in any such ships as are or shall be taken as prize, and whereof condemnation shall be made in one of the courts of admiralty aforesaid, and shall be navigated as aforesaid, by the master, three fourths of the mariners *English*, and whereof the property shall belong to *English* men, and also masts, timber, and other naval stores for his Majesty's service, for the space of three years, may be imported from his Majesty's colonies or plantations to this kingdom, in such foreign built ships as shall be employed by the commissioners of the navy for the time being, or by contract with them; any law or statute to the contrary notwithstanding.

[…]

VI. And for the most effectual preventing of frauds, and regulation abuses in the plantation trade in America, be it further enacted by the authority aforesaid, That all ships coming into, or going out of, any of the said plantations, and landing or unlading any good or commodities, whether the same be his Majesty's ships of war, or merchants ships, and the masters and commanders thereof, and their ladings, shall be subject and liable to the same rules, visitations, searches, penalties and forfeitures, as to the entering, lading or discharging their respective ships and ladings, as ships and their ladings, and the commanders and matters of ships, are subject and liable unto in this kingdom, by virtue of an act of parliament made in the fourteenth year of the reign of King Charles the Second, intituled, An act for preventing frauds, and regulating abuses in his Majesty's customs: and that the officer for collecting and managing his Majesty's revenue, and inspecting the plantation trade, in any of the said plantation, shall have the same powers and authorities, for visiting and searching of ships, and taking their entries, and for seizing and securing or binging on shore any of the goods prohibited to be imported or exported into or out of any the said planta-

tions, or for which any duties are payable, or ought to have been paid, by any of the before mentioned acts, as are provided for the officers of the customs in England by the said last mentioned act made in the fourteenth year of the reign of King Charles the Second, and also to enter houses or warehouses, to search for and seize any such good; and that all the wharfingers, and owners of keys and wharfs, or any lightermen, bargemen, watermen, porters or other persons assisting in the conveyance, concealment or rescue of any of the said good, or in the hindring or resistance of any of the said officers in the performance of their duty, and the boats, barges, lighters or other vessels, employed in the conveyance of such goods, shall be subject to the like pains and penalties as are provided by the same act made in the fourteenth year of the reign of King Charles the Second, in relation to prohibited or uncustomed good in this kingdom; and that the like assistance shall be given to the said officers in the execution of their office, as by the said last mentioned act is provided for the officers in England; and also that the said officers shall be subject to the same penalties and forfeitures, for any corruptions, frauds, connivances, or concealments, in violation of any the before mentioned laws, as any officers of the customs in England are liable to, by virtue of the said last mentioned act; and also that in case any officer or officers in the plantations shall be sued or molested for any thing done in the execution of their office, the said officer shall and may plead the general issue, and shall give this or other custom acts in evidence, and the judge to allow thereof, have and enjoy the like privileges and advantages, as are allowed by law to the officers of his Majesty's customs in England.

$[\ldots]$

XIV. And whereas several ships and vessels laden with tobacco, sugars, and other goods of the growth and product of his Majesty's plantations in America, have been discharged in several ports of the kingdoms of Scotland and Ireland, contrary to the laws and statutes now in being, under pretence that the said ships and vessels were driven in thither by stress of weather, or for want of provision, and other disabilities could not proceed on their voyage; for remedy whereof be it enacted by the authority aforesaid, That from and after the first day of December, one thousand six hundred ninety six, it shall not be lawful, on any pretence whatsoever, to put on shore in the said kingdoms of Scotland or Ireland, any good or merchandize of the growth or product of any of his Majesty's plantations aforesaid, unless the same have been first landed in the kingdom of England, dominion of Wales, or town of Berwick upon Tweed, and paid the rates and duties wherewith they are chargeable by law, under the penalty of the forfeiture of the ship and goods; three fourths without composition to his Majesty, his heirs and successors, and the other fourth to him or them that shall sue for the same.

[...]

XVII. And for a more effectual prevention of frauds which may be used to elude the intention of this act, by colouring foreign ships under English names; be it further enacted the authority aforesaid, That from and after the five and twentieth day of March, which shall be in the year of our Lord one thousand six hundred ninety eight, no ship or vessel whatsoever shall be deemed or pass as a ship of the built of England, Ireland, Wales, Berwick, Guernsey, Jersey, or any of his Majesty's plantations in *America*, so as to be qualified to trade to, from or in any of the plantations, until the person or persons claiming property in such ship or vessel shall register the same as followeth, that is to say, if the ship at the time of such register doth belong to any port in England, Ireland, Wales, or to the town of Berwick upon Tweed, then proof shall be made upon oath of one or more of the owners of such ship or vessel, before the collector and controller of his Majesty's customs in such port; or if at the time of such register that ship belong to any of his Majesty's plantation in America, or to the islands of Guernsey or Jersey, then the like proof to be made before the governor, together with the principal officer of his Majesty's revenue residing on such plantation or island, which oath the said governors and officers of the customs respectively are hereby authorized to administer in the tenor following, viz.

67. Accounts of the Loss of New Amsterdam, 1664–1665 [Excerpts]

Introduction

New Netherland's location between New England and Maryland prevented either from expanding. Also, the Dutch competed with the English colonies for trade. During the Second Anglo-Dutch War (1654-1667), a fleet of English ships, commanded by Richard Nicholls, sailed into New Amsterdam's harbor and demanded surrender. On August 27, 1664, Petrus Stuyvesant, pressed by New Amsterdam's town council, surrendered New Netherland to the English without firing a shot. So certain was King Charles II of an English victory that he had, months earlier, already given his brother, the Duke of York, a charter for New York. Members of the New Amsterdam town council wrote to the directors of the Dutch West India Company to explain the surrender. In their letter they blamed the company for neglecting the colony. Dutch authorities recalled Stuyvesant home in 1665 to explain the loss of New Netherland. The second document is the report he presented to his superiors. He too blamed official neglect and sought to present evidence that he had had no other choice. At the end of the war, Stuyvesant returned to his farm in New York and remained there until his death in 1672. In 1673, during the Third Anglo-Dutch War, a small Dutch

naval force recaptured New York. It was returned to England by treaty in 1674.

Primary Source

LETTER OF THE TOWN COUNCIL OF NEW AMSTERDAM, 1664

Right Honorable Lords:

We, your Honors' loyal, sorrowful and desolate subjects, cannot neglect nor keep from relating the event, which through God's pleasure thus unexpectedly happened to us in consequence of your Honors' neglect and forgetfulness of your promise—to wit, the arrival here, of late, of four King's frigates from England, sent hither by His Majesty and his brother, the Duke of York, with commission to reduce not only this place, but also the whole New Netherland under His Majesty's authority, whereunto they brought with them a large body of soldiers, provided with considerable ammunition, On board one of the frigates were about four hundred and fifty as well soldiers as seamen, and the others in proportion.

The frigates being come together in front of Najac in the Bay, Richard Nicolls, the admiral, who is ruling here at present as Governor, sent a letter to our Director General, communicating therein the cause of his coming and his wish. On this unexpected letter the General sent for us to determine what was to be done herein. Whereupon it was resolved and decided to send some commissioners thither, to argue the matter with the General and his three commissioners, who were so sent for this purpose twice, but received no answer, than that they were not come here to dispute about it, but to execute their order and commission without fail, either peaceably or by force, and if they had anything to dispute about it, it must be done with His Majesty of England, as we could do nothing here in the premises. Three days' delay was demanded for consultation; that was duly allowed. But meanwhile they were not idle; they approached with their four frigates, two of which passed in front of the fort, the other anchored about Nooten Island and with five companies of soldiers encamped themselves at the ferry, opposite this place, together with a newly raised company of horse and a party of new soldiers, both from the North and from Long Island, mostly our deadly enemies, who expected nothing else than pillage, plunder and bloodshed, as men could perceive by their cursing and talking, when mention was made of a capitulation.

Finally, being then surrounded, we saw little means of deliverance; we resolved what ought to be here done, and after we had well enquired into our strength and had found it to be full fifteen hundred souls strong in this place, but of whom not two hundred and fifty men are capable of bearing arms exclusive of the soldiers, who were about one hundred and fifty strong, wholly unprovided with powder both in the city and in the fort; yea, not more than six hundred pounds were found in the fort besides seven hundred pounds unserviceable; also because the farmers, the third man of whom was

called out, refused, we with the greater portion of the inhabitants considered it necessary to remonstrate with our Director General and Council, that their Honors might consent to a capitulation, whereunto we labored according to our duty and had much trouble; and laid down and considered all the difficulties, which should arise from our not being able to resist such an enemy, as they besides could receive a much greater force than they had under their command.

The Director General and Council at length consented thereunto, whereto commissioners were sent to the admiral, who notified him that it was resolved to come to terms in order to prevent the shedding of blood, if a good agreement could be concluded.

Six persons were commissioned on each side for this purpose to treat on this matter, as they have done and concluded in manner as appears by the articles annexed. How that will result, time shall tell.

[...]

REPORT ON THE SURRENDER OF NEW NETHERLAND PETER STUYVESANT, 1665

 $[\ldots]$

I dare not interrupt your Illustrious High Mightinesses' most important business by a lengthy narrative of the poor condition in which I found New Netherland on my assuming its government. The open country was stripped of inhabitants to such a degree that, with the exception of the three English villages of Heemstede, New Flushing and Gravesend, there were not fifty bouweriers and plantations on it, and the whole province could not muster 250, at most 300 men capable of bearing arms.

Which was caused, first, (in default of a settlement of the boundary so repeatedly requested) by the troublesome neighbors of New England, who numbered full fifty to our one, continually encroaching on lands within established bounds, possessed and cultivated in fact by your Illustrious High Mightinesses' subjects.

Secondly, by the exceedingly detrimental, land-destroying and people-expelling wars with the cruel barbarians, which endured two years before my arrival there, whereby many subjects who possessed means were necessitated to depart, others to retreat under the crumbling fortress of New Amsterdam, which, on my arrival, I found resembling more a molehill than a fortress, without gates, the walls and bastions trodden under foot by men and cattle.

Less dare I, to avoid self-glorification, encumber your weighty occupations, Illustrious, High and Mighty, with the trouble, care, solicitude and continual zeal with which I have endeavored to promote the increase of population, agriculture and commerce; the

flourishing condition whereunto they were brought, not through any wisdom of mine, but through God's special blessing, and which might have been more flourishing if your formerly dutiful, but now afflicted, inhabitants of that conquest had been, Illustrious, High and Mighty, protected and remained protected by a suitable garrison, as necessity demanded, against the deplorable and tragical massacres by the barbarians, whereby (in addition to ten private murders) we were plunged three times into perilous wars, through want of sufficient garrisons; especially had they, on the supplicatory remonstrances of the people and our own so iterated entreaties, which must be considered almost innumerable, been helped with the long sought for settlement of the boundary, or in default thereof had they been seconded with the oft besought reinforcement of men and ships against the continual troubles, threats, encroachments and invasions of the English neighbors and government of Hartford Colony, our too powerful enemies.

That assistance, nevertheless, appears to have been retarded so long (wherefore and by what unpropitious circumstances the Hon. Directors best know) that our abovementioned too powerful neighbors and enemies found themselves reinforced by four royal ships, crammed full with an extraordinary amount of men and warlike stores. Our ancient enemies throughout the whole of Long Island, both from the east end and from the villages belonging to us united with them, hemmed us by water and by land, and cut off all supplies. Powder and provisions failing, and no relief nor reinforcement being expected, we were necessitated to come to terms with the enemy, not through neglect of duty or cowardice, as many, more from passion than knowledge of the facts, have decided, but in consequence of an absolute impossibility to defend the fort, much less the city of New Amsterdam, and still less the country. As you, Illustrious, High and Mighty, in your more profound and more discreet wisdom, will be able to judge from the following:

First, in regard to want of powder: The annexed account shows what had been received during the last four years and what was left over, from which it appears that there were not 2000 pounds in store in the city and fort; of that quantity there were not 600 pounds good and fit for muskets; the remainder damaged by age, so that when used for artillery, the cannon required a double charge or weight.

If necessary and you, Illustrious High and Mighty, demand it, the truth hereof can be sought from the gunner, who accompanies me hither, and who will not deny having said in the presence of divers persons and at various times: "What can my lord do? he knows well that there is no powder, and that the most of it is good for nothing; there is powder enough to do harm to the enemy, but 'tis no good; were I to commence firing in the morning, I should have all used up by noon."

What efforts we have employed to receive this and some other reinforcements and assistance may appear from the copies of two let-

ters sent to the colonie of Renselaerswyck and village of Beverwyck, marked No. A.

Whose answers intimate, that we could not be assisted by either the one or the other, because of the difficulties into which they had just then fallen with the northern Indians owing to the killing of three or four Christians and some cows, whether urged to do so by evil disposed neighbors, I submit to wiser opinions.

In regard to provisions: Although our stores were reasonably well supplied with them the whole fore part of the summer, even more than ever heretofore, the falling off being commonly caused by the want of credit or ready money to lay up an abundant stock of provisions;

Nevertheless our supplies became, from various accidents, so much diminished that on capitulating to the enemy, not 120 *skepels* of breadstuffs, and much less of peas and meat were remaining in store,

$[\ldots]$

The asserted scarcity of provisions is proved by the annexed declaration of the commissary himself, and of Sergeant Harmen Martensen, and moreover by the efforts we employed to obtain a greater quantity of these, were that possible. No. B.

Provisions were likewise so few and scarce in the city, in consequence of the approaching harvest, for the inhabitants are not in the habit of laying up more provisions than they have need of, that about eight days after the surrender of the place, there was not in the city of New Amsterdam enough of provisions, beef, pork and peas, to be obtained for the transportation of the military, about ninety strong, and the new grain had to be thrashed.

In addition to the want of the abovementioned necessaries, and many other minor articles, a general discontent and unwillingness to assist in defending the place became manifest among the people,

Which unwillingness was occasioned and caused in no small degree, first among the people living out of the city, and next among the burghers, by the attempts and encroachments experienced at the hands of the English in the preceding year, 1663.

First, through Captain John Talcot's reducing Eastdorp, situate on the main, not two leagues from New Amsterdam, by order and commission of the government of Hartford.

Next, through Captain Co's later invasion and subjugation of all the English villages and plantations on Long Island, which were under oath and obedience to you, Illustrious, High and Mighty, and the Hon. Company, with an armed troop of about 150 to 160 of John Schott's horse and foot. That this was done also by the order of Hartford's Colony

appears from the fact that in the following year, 1664, Governor Winthrop himself came with two commissioners from Hartford, and one from the east end of Long Island, with a considerable number of people on foot and on horseback, to the reduced English towns, in order to get the inhabitants to take the oath of allegiance in the King's name.

Owing to the very serious war with the Esopus Indians and their confederates, in consequence of a third deplorable massacre perpetrated there on the good inhabitants, we could not at the time do anything against such violent attempts and encroachments, except to protest against them verbally and in writing.

All this, recorded fully in the form of a journal, was, on November 10, 1663, and last of February, 1664, transmitted to the Honorable Directors, together with our, and the entire commonalty's grievances, remonstrances and humble petitions for redress, either by means of a settlement of the boundary, or else by an effective reinforcement of men and ships.

I could and should lay the authenticated copies before you, Illustrious, High and Mighty, were it not that I am apprehensive of incumbering thereby your present much more important business. On that account, therefore, in verification of what is set forth, are most humbly submitted to you, Illustrious, High and Mighty, only.

No. 1. An humble remonstrance of the country people on Long Island, whereof the original was sent on the last of February to the Honorable Directors, setting forth the threats and importunity made use of towards them by the English troop aforesaid, with a request for redress; otherwise, in default thereof, they shall be under the necessity of abandoning their lands or submitting to another government.

No. 2. is a copy of a letter sent to all the Dutch villages for a reinforcement, whence can be inferred our good inclination to defend the city and fort as long as possible. The answer thereto intimates their refusal, as they, living in the open country unprotected, could not abandon their lands, wives and children.

No. 3. The burghers' petition and protest exhibits their uneasiness; wherein they set forth at length the very urgent necessity to which they were reduced in consequence of the overwhelming power of the enemy; the impossibility, owing to want of provisions and munitions of war, especially powder, of defending the city one, and the fort three, days; and the absence of any relief to be expected or reinforcement to be secured, certainly not within six months; whereas by effective resistance everything would be ruined and plundered, and themselves, with wives and children, more than 1,500 in number, reduced to the direst poverty.

This dissatisfaction and unwillingness on the part of burgher and farmer were called forth by the abovementioned and other frequently

bruited threats, by the hostile invasions and encroachments that had been experienced and the inability to oppose them for want of power and reinforcements; but mainly by the sending of proclamations and open letters containing promises, in the King's name, to burgher and farmer, of free and peaceable possession of their property, unobstructed trade and navigation, not only to the King's dominions, but also to the Netherlands with their own ships and people.

Besides the abovementioned reasons for dissatisfaction and unwillingness, the former as well as the ruling burgomasters and schepens, and principal citizens, complained that their iterated remonstrances, letters and petitions, especially the last, of the 10th of November, wherein they had informed the Hon. Directors of the dire extremity of the country both in regard to the war with the barbarians and to the hostile attacks of the English, had not been deemed worthy of any answer; publicly declaring, "If the Hon. Company give themselves so little concern about the safety of the country and its inhabitants as not to be willing to send a ship of war to its succor in such pressing necessity, nor even a letter of advice as to what we may depend on and what succor we have to expect, we are utterly powerless, and, therefore, not bound to defend the city, to imperil our lives, properly, wives and children without hope of any succor or relief, and to lose all after two or three days' resistance."

Your patience would fail you, Illustrious, High and Mighty, if I should continue to relate all the disrespectful speeches and treatment which, Illustrious, High and Mighty, your servants of the Superior Government have been obliged to listen to and patiently to bear, during the approach of the frigates, whenever they sought to encourage the burghers and inhabitants to their duty, as could be verified by credible witnesses.

This further difficulty was made by the burghers that they were not certain of their lives and properties on account of the threats of plundering heard from some of the soldiers, who had their minds fixed more on plunder than on defence; giving utterance, among other things, to the following: We now hope to find an opportunity to pepper the devilish Chinese, who have made us smart so much; we know well where booty is to be got and where the young ladies reside who wear chains of gold. In verification whereof, it was alleged and proved, that a troop of soldiers had collected in front of one Nicolaus Meyer's house in order to plunder it, which was prevented by the burghers.

In addition to the preceding, many verbal warnings came from divers country people on Long Island, who daily noticed the growing and increasing strength of the English, and gathered from their talk that their business was not only with New Netherland but with the booty and plunder, and for these were they called out and enrolled. Which was afterwards confirmed not only by the dissolute English soldiery, but even by the most steady officers and by a striking example exhibited to the colonists of New Amstel on the South River, who, notwithstanding they had offered no resistance, but requested good terms,

could not obtain them, but were invaded, stripped, utterly plundered and many of them sold as slaves to Virginia.

To prevent these and many other misfortunes, calamities and mischiefs overtaking evidently and assuredly the honest inhabitants, owing to the aforesaid untenableness of the place and fort without assistance from Fatherland, which was not to be expected for six months, we and the Council, on the presentation of so many remonstrances, complaints and warnings, were under the necessity, God and the entire community know without any other object than the welfare of the public and the Company, to come to terms with the enemy and neighbors whose previous hostile invasions and encroachments neither we nor our predecessors have been able to oppose or prevent.

And, even if the good God had, for the moment, been pleased to avert the misfortune from us, to delay or prevent the arrival of those frigates, yet had we, through want of the reinforcements of men and ships from Fatherland so repeatedly demanded but not come, shortly after fallen, by this war with England, into a worse state and condition, in consequence of the overpowering might of the neighbors. This is sufficiently evident and plain from their hostile acts and encroachments against the inhabitants in a season of profound peace; being, as already stated, fifty to our one, they would afterwards, jure belli, have attacked, overwhelmed, plundered us and the good inhabitants whom they would have utterly expelled out of the country.

68. Daniel Denton, Description of the Indians of Long Island, 1670 [Excerpt]

Introduction

The Dutch West India Company established New Netherland in 1624. At first, the Dutch took great care to avoid conflict with the Indians. They purchased all the land on which they settled and refused to be drawn into the rivalry between the Algonquian and Iroquoian peoples. As the town of New Amsterdam grew, the colonists and the Algonquians living nearby came into increasing conflict. During the 1640s, Director General Willem Kieft launched a ruthless war against them, ordering massacres of men, women, and children on the flimsiest of pretexts. Between 1655 and 1664, New Netherland, under Director General Petrus Stuyvesant, went to war against the Algonquians three more times. By the time England took over the colony and renamed it New York, years of warfare and disease had taken their toll on the native population. In this account, an English official credits divine providence with "remov-

ing" the native population to make way for the English. Of the six Indian villages that had existed on Long Island when Denton arrived, only two remained by 1670. As part of a pamphlet intended to attract English colonists, Denton describes the survivors' customs, religion, and way of conducting intertribal warfare.

Primary Source

[…]

To say something of the *Indians* there is now but few upon the island, and those few no ways hurtful but rather serviceable to the *English*, and it is to be admired, how strangely they have decreased by the Hand of God, since the *English* first feeling of those pars; for since my time, where there were six town, they are reduced to two small Villages, and it hath been generally observed, that where the *English* come to settle, a Divine hand makes way for them, by removing or cutting off the *Indians*, either by Wars one with the other, or by some raging moral Disease.

The live principally by Hunting, fowling, and fishing; their Wives being the Husbandmen to till the Land, and plant their corn.

The meat they live most upon is Fish, fowl, and Venison; they eat likewise Polecats, Skunks, Racoon, Possum, Turtles, and the like.

They build small moveable Tents, which they remove two or three times a year, having their principal quarters where they plant their Corn: Their Hunting quarters, and their Fishing quarters: Their Recreations are chiefly Foot-ball and Cards, at which they will play away all they have, excepting a Flap to cover their nakedness: They are great lovers of strong drink, yet do not car for drinking, unless they have enough to make themselves drunk; and if there be so many in their company, that there is not sufficient to make them all drunk, they usually select so many out of their Company, proportionable to the quantity of drink, and the rest must be Spectators. And if any one chance to be drunk before he hath finish his proportion, (which is ordinarily a quart of Brandy, Rum or strong-waters) the rest will pour the rest of his part down his throat.

They often kill one another at these drunken Matches, which the friends of the murdered person, do revenge upon the Murderer unless he purchase his life with money, which they sometimes do: Their money is made of Periwinkle shell of which there is black and white, made much like unto beads and put upon strings.

For their worship which is diabolical, it is performed usually but once or twice a year, unless upon some extraordinary occasion, as upon making of War or the like; their usual time is about *Micbaelmass*, when their corn is first ripe, the day being appointed by their chief Priest or pawaw, most of them go to a hunting for venison: When they are all congregated, their Priest tells them if he want money, there God will accept of no other offering, which the people beleeving, every one gives money according to their ability. The

Priest take the money, and putting it into some dishes, sets them upon the top of their low flat-roofed houses, and falls to invocating their God to come and receive it, which with a many loud hallows and outcries, knocking the ground with sticks, and beating themselves, is performed by the priest, and seconded by the people.

After they have thus a while wearied, themselves, the priest by his Conjuration bring in a devil amongst them, in the shape sometimes of a fowl, sometimes of a beast, and sometimes of a man, at which the people being amazed, not daring to stir, he improves the opportunity, steps out, and makes sure of the money, and then returns to lay the spirit, who in the mean time is sometimes gone, and takes some of the Company along with him: but if any *English* at such times do come amongst them, it puts a period to their proceeding, and they will desire their absence, telling them their God will not come whilst they are there.

In their wars they fight no pitcht fields, but when they have notice of an enemies approach, they endeavor to secure their wives and children upon some Island, or in some thick swamp, and then with their guns and hatchets they way-lay their enemies, some lying behind one, some another, and it is a great fight where seven or eight is slain.

69. Royal Instructions Concerning Privateering, 1670–1674 [Excerpt]

Introduction

Privateering was essentially a legal form of piracy—attacking ships at sea and confiscating the vessels and their cargo. Governments licensed privateers, commanders of privately owned vessels, to attack the ships of enemy nations during times of war, and so enrich themselves. During the colonial period, English privateers operated against a changing cast of enemies—Spanish, Dutch, and French. The long time required for news from Europe to reach the Americas meant that privateers continued to attack shipping for months after the signing of a peace treaty. Many privateers stretched the rules by ignoring news of treaties and continuing to raid ships during times of peace, crossing the thin line into piracy. As independent operators, they were difficult to control. This official order addresses the problem of continued privateering after the signing of a 1670 treaty with Spain that gave England freedom to sail the Caribbean. It was issued to the governor of Jamaica, as many privateers operated out of Caribbean ports. It aimed to end raids on shipping by offering pardons and land grants to privateers who gave up raiding to either become planters or use their ships for trading.

Primary Source

MEASURES FOR SUPPRESSION OF PRIVATEERING

And for the better encouraging of all captains, officers, and seamen belonging to any of the privateer ships now plying in the seas of America to come in and apply themselves unto planting and merchandizing, you shall immediately after the publication of the said peace proclaim a general pardon and indemnity unto such of them as shall come in and submit themselves unto our government (within such reasonable time as you shall with the advice of the council limit) after the said proclamation, and betake themselves to planting or merchandizing, for all crimes and offenses committed by them since the month of June, 1660, and before the publication of the said peace, in which proclamation you are to assure those that shall come in and enter their submission within the time you shall prefix and settle as aforesaid, that they shall quietly enjoy all such goods as they shall be possessed of at the time of the publication of the said peace except the tenths and fifteenths; that if they will betake themselves to plant they shall have thirty and five acres of land by the head granted unto them and every of them, their heirs, and assigns forever; that if they will employ their ships in trade or merchandizing, they shall be admitted to trade in them with the same freedom as if they were English built; that if any of them shall desire to serve on board our ships of war, they shall be received into our service and pay. But notwithstanding the latitude given you to appoint such time for the coming in of the privateers as you with the council shall think fit, yet our will and pleasure is that you shall set as short a time as the nature of that affair will bear. And in relation to the tenths and fifteenths you are to take them from such as are in port and otherwise in your power, but not to insist so positively upon their payments as to discourage their submission.

And in case that you shall find that the encouragement beforementioned shall not have the effect we desire in persuading the privateers to some other course of life than that which of late they have practiced, you are to use all other means you shall judge necessary by force or persuasion to make them submit to and continue under our obedience.

70. John Eliot, Account of New England Indians' Conversion to Christianity, ca. 1671

Introduction

As increasing numbers of English colonists came to Massachusetts, white settlements grew up around native villages. Most of the Puritan

colonists wanted to drive off or kill the Indians. Beginning in the 1640s, Rev. John Eliot and fellow missionaries strove to convert the Indians to Christianity, as well as to the English way of life. Eliot wrote this fictitious dialogue to illustrate the Indians' spiritual concerns to other missionaries working to convert them. With funding from a missionary society in England, Eliot produced a native-language translation of the Bible and trained native teachers and missionaries. By 1675, more than 1,500 Indians had converted and lived in 14 "praying towns." When King Philip's War broke out in 1675, the Christian Indians were caught between their two worlds. Some colonists accused them of being spies, while others simply slaughtered them because they made an easy target. Both to protect them from the English and to keep them from aiding their own people, Massachusetts authorities placed them on two islands in Boston Harbor. There they died by the hundreds of exposure and starvation. The shot that killed King Philip and ended the war was fired by a Christian Indian.

Primary Source

Kinsman: I had rather that my actions of love should testifie how welcome you are, and how glad I am of this your kinde visitation, then that I should say it in a multitude of words. But in one word, You are very welcome to my hearts; and I account it among the best of the joyes of this day, that I see your face, and enjoy your company in my habitation.

Kinswoman: It is an addition to the joyes of this day, to see the face of my loving Kinsman: and I wish you had come a little earlier, that you might have taken part with us in the joyes of this day, wherein we have had all the delights that could be desired, in our merry meeting, and Dancing.

And I pray Cousin how doth your Wife, my loving Kinswoman, is she yet living? and is she not weary of your new way of praying to God? And what pleasure have you in those ways?

Piumbukhou: My wife doth remember her love to you, she is in good health of body, and her Soul is in a good condition, she is entered into the light of the knowledge of God, and of Christ; she is entered into the narrow way of heavenly joyes, and she doth greatly desire that you would turn from these ways of darkness in which you so much delight, and come taste and see how good the Lord is.

And whereas you wish I had come sooner, to have shared with you in your delights of this day; Alas, they are no delights, but griefs to me, to see that you do still delight in them. I am like a man that have tasted of sweet Wine and Honey, which have so altered the taste of my mouth, that I abhor to taste of your sinful and foolish pleasures, as the mouth doth abhor to taste the most filthy and stinking dung, the most sour grapes, or most bitter gall. Our joyes in the knowledge of God, and of Jesus Christ, which we are taught in the Book of God, and feel in our heart, is sweeter to our soul, than honey is unto the mouth and taste.

Kinswoman: We have all the delights that the flesh and blood of man can devise and delight in, and we taste and feel the delights of them, and would you make us believe that you have found out new joyes and delights, in comparison of which all our delights do stink like dung? Would you make us believe that we have neither eyes to see, nor ears to hear, nor mouthes to taste? Ha, ha, he! I appeal to the sense and sight and feeling of the Company present, whether this be so.

All. You say very true. Ha, ha, he!

Piumbukhou: Hearken to me, my friends, and see if I do not give a clear answer unto this seeming difficulty. Your dogs take as much delight in these Meetings, and the same kindes of delight as you do. They delight in each others company; they provoke each other to lust, and enjoy the pleasures of lust as you do; they eat and play and sleep as you do; what joys have you more than dogs have? to delight the body of flesh and blood.

But all mankinde have an higher and better part than the body, we have a Soul, and that Soul shall never die. Our soul is to converse with God, and to converse in such things as do concern God, and Heaven, and an eternal estate, either in happiness with God, if we walk with him and serve him in this life, or in misery and torment with the Devil, if we serve him in this life. The service of God doth consist in virtue, and wisdom, and delights of the soul, which will reach to heaven, and abide forever.

But the service of the Devil is in committing sins of the flesh, which defile both body and soul, and reach to Hell, and will turn all to fire and flame to torment your souls and bodies in all eternity.

Now consider, all your pleasures and delights are such as defile you with sin, and will turn to flame, to burn and torment you; they provoke God to wrath, who hath created the prison of hell to torment you, and the more you have took pleasure in sin, the greater are your offences against God, and the greater shall be your torments.

But we that pray to God repent of our old sins, and by faith in Christ we seek for, and find a pardon for what is past, and grace and strength to reform for time to come. So that our joyes are Soul-joyes in godliness, and virtue, and hope of glory in another world when we die.

Your joyes are bodily, fleshly, such as dogs have, and will all turn to flames in hell to torment you.

Kinsman. If these things be so, we had need to cease laughing, and fall to weeping, and see if we can draw water from our mournful eyes to quench these tormenting flames. My heart trembles to hear these things: I never heard so much before, nor have I any thing to say to the contrary, but that these things may be so. But how shall I know that you say true? Our forefathers were (many of them) wise men, and we have wise men now living, they all delight in these our

Delights: they have taught us nothing about our Soul, and God, and Heaven, and Hell, and joy and torment in the life to come. Are you wiser than our fathers? May not we rather think that English men have invented these stories to amaze us and fear us out of our old customs, and bring us to stand in awe of them, that they might wipe us of our lands, and drive us into corners, to seek new ways of living, and new places too? And be beholding to them for that which is our own, and was ours, before we knew them.

All. You say right.

Piumbukhou: The Book of God is no invention of Englishmen. It is the holy law of God himself, which was given unto man by God, before Englishmen had any knowledge of God; and all the knowledge which they have, they have it out of the Book of God: and this Book is given to us as well as to them, and it is as free for us to search the Scriptures as for them. So that we have our instruction from a higher hand, then the hand of man. It is the great Lord God of Heaven and Earth, who teacheth us these great things of which we speak. Yet this is also true, that we have great cause to be thankful to the English, and to thank God for them, for they had a good Country of their own, but by ships sailing into these parts of the world, they heard of us, and of our country, and of our nakedness, ignorance of God, and wild condition; God put it into their hearts to desire to come hither, and teach us the good knowledge of God; and their King gave them leave so to do, and in our country to have their liberty to serve God according to the word of God. And being come hither, we gave them leave freely to live among us. They have purchased of us a great part of those lands which they possess; they love us, they do us right, and no wrong willingly; if any do us wrong, it is without the consent of their Rulers, and upon our Complaints our wrongs are righted. They are (many of them, especially the Ruling part) good men, and desire to do us good. God put it into the heart of one of their ministers (as you all know) to teach us the knowledge of God, by the word of God, and hath translated the holy Book of God into our Language, so that we can perfectly know the mind and counsel of God; and out of this book have I learned all that I say unto you, and therefore you need no more doubt of the truth of it, then you have cause to doubt that the Heaven is over our head, the Sun shineth, the earth is under our feet, we walk and live upon it, and breathe in the air; for as we see with our eyes these things to be so, so we read with our own eyes these things which I speak of, to be written in God's own Book, and we feel the truth thereof in our own hearts.

Kinswoman. Cousin, you have wearied your legs this day with a long journey to come and visit us, and you weary your tongue with long discourses. I am willing to comfort and refresh you with a short supper.

All. Ha, ha, he. Though short, if sweet, that has good favor to a man that is weary. Ha, ha, he.

Kinswoman. You make long and learned discourses to us which we do not well understand. I think our best answer is to stop your mouth, and fill your belly with a good supper, and when your belly is full you will be content to take rest yourself, and give us leave to be at rest from these gastering and heart-trembling discourses. We are well as we are, and desire not to be troubled with these new wise sayings.

71. William Berkeley, Report on the Dutch Burning of the Tobacco Fleet, July 1673

Introduction

England and the Netherlands went to war three times during the colonial period: 1652-1654, 1664-1667, and 1672-1674. When European wars extended across the Atlantic to America, their burdens fell heavily on the colonists. Isolated from England and clinging to a tenuous existence, the colonists could ill afford the economic losses caused by warfare. During the Third Anglo-Dutch War, in July 1673, a fleet of Dutch warships appeared off the coast of Virginia. The Virginians, seeing a vulnerable fleet of Maryland vessels in the Chesapeake Bay, sent out a hastily assembled force of merchant ships to confront the Dutch. The colonists lost a total of 11 vessels to the Dutch. In this letter to the King Charles II, Virginia governor William Berkeley and members of his council point out that they can ill afford such a loss, nor can they defend such an extensive coastline. In addition, they have to defend their western frontier against Indians, and frontiersmen are understandably reluctant to leave their families to protect the coast. Pleading lack of food, loss of cattle to disease, and the need to sell the tobacco crop, the Virginians humbly request convoys to protect the tobacco shipments on their way to England.

Primary Source

Governor's Report The Dutch Burn Tobacco Fleet, July 1673

To the Kings Most Excellent Majestie and the Lords of Your Majesties most Honorable Privy Councell

The Governor and Councell of his Majesties Collony of Virginia In all Humility Present

That on Fryday the 11th of this Instant July (which was foure Dayes before the fleet was ordered to Saile from hence) To our very great Griefe and Damage, arrived on Our Coast Foure Saile of Holland Men of Warr from above thirty to Fourty foure Gunns Under the Command of Jacob Bincke and as many Flushingers one of Six

Gunns and three from thirty to Fourty Six Gunns With one Fire Ship, under the Command of Cornelius Everson Junior, and on Sarurday the 12th anchor'd in Lynhaven Bay within Our Capes; That upon their first Arrivall on Fryday they were discovered by Our Centinalls on the Coasts, . . . advice Given to Capt. Gardner and Capt. Cotterell, who Commanded your Majesties Shipps here, Who presently Commanded Severall Masters of the abler Merchants Shipps in James River on Board, and ordered them to Cleare their Shipps for fight, and Press'd as many men as they thought fitt out of the Weaker Shipps, But may it Please Your Majestie and your Most Honorable Councell, before that could be Done Capt. Gardner Saw Eight Shipps of Maryland under Saile in the Bay who he judged would fall A Prey to the Enemy for Want of Advice, and with Capt. Cotterell weighed Ancher, and with them Six Merchant Shipps to Engage the Enemy thereby to Save the Marylanders, Butt before they came within Reach of Gunn Shott foure of the Merchant Shipps came on Ground One Stood backe and one Commanded by Capt. Grove in Fighting came on Ground Soe the Two men of Warr were left to encounter Six of their biggest Ships. The two Smaller with the Fire Shipps being not yett come upp to them, The Fight Continued with Great resolution about three houres, After which Capt. Gardner Supposeing Capt. Grove (who fought well Whilest on float) to be gotten off the Ground resolved not to lose him, and Judging that the Enemy (if hee Checkt them not) would be in with our Merchant shipps Rideing in James River before they could Get from them, Hee tacked alone upon them with Exterordinary Courage, and for at least one houre fought them all, But findeing himselfe mistaken in the Condition of Groves his Shipp, and the night in hand, it being A Quarter past Eight before the fight ended, Hee with as much Courage and Conduct (and beyond the hopes Or expectation of those who saw that brave Action) disingaged himselfe from them, as he had before ingaged them, and brought off all the Marylanders but one and foure of ours which were on Ground, and Gave the rest, which Were nere fourty Saile almost A Tides Way before the Enemy, Which Undoubtedly Saved Many who otherwise Would have bin lost, Butt haveing all his Great Masts and his Fore topmast desperately wounded, and most of his Rigging Shott, he was forced with Capt. Cotterell to goe into Elizabeth River to Refitt with Roapes and Sailes Which brought the Enemy to Anchor, not Dareing to Persue the James River Fleet in a Strange Channell, and Leave your Majesties Friggetts behind them, Two and twenty of Our Shipps Stood upp James River and the Rest went under the Fort at Nansemond, Where the Enemy looked on them five Dayes but Attempted them not; Five of those which stood upp James River Comeing on Ground, They Sent upp three of their Smallest Shipps to them And Gott off one, and burnt the other foure, the rest Getting above the Fort at James Towne were Safe; And here wee expect it will be Objected that had not Soe long A Time bene given for the Departure of our Fleet this Misfortune had bin Avoided; To Which wee humbly Offer this answer That Capt. Cotterell arriveing here neere the 20th of June and representing to us Some Dayes after (in presence of all the Masters) that for want of Wood and water and other necessaries, he could not be ready before the 15th of July, was the Reason for the appointing that Day; Next the Masters of the Yorke Shipps were not ready till then, and the Enemy was within our Capes before the most Considerable Shipps of Maryland came to us besides Five Saile in Rappahannocke not Ready and two upp the Bay which in all two and twenty Saile, A Number Too Considerable to be left behind by your Majesties Convoy; This May it please your Majestie and your most Honorable Councell being the true State of our Misfortune in the present losse of Eleaven Shipps and Goods (wherein the Inhabitants of James River bore A very Great Share) Wee thought it Our Duty, for the Better Vindication of our Selves from Such Injuries as the Mallice of Some may indeavor to fix on us, by Misrepresenting us and our indeavors to your Majestie and most Honorable Councell, to Sett forth in this our Declaration, the true State and Condition of this Country in Generall and our particular disadvantages and disabilities to entenaine A Warr at the time of this Invasion, And therefore doe most humbly beseech your Majesty and your most Honorable Councell to Consider that though all that Land which now bares the name of Virginia be Reduced to little more than sixty Miles in breadth towards the Sea, Yet that Small Tract is intersected by Soe many Vast Rivers as makes more Miles to Defend, then wee have men of trust to Defend them, For by our neerest computation Wee leave at our backs as Many Servants (besides Negroes as their are freemen to defend the Shoars and all our Frontiers, [against] the Indians) Both which gives men fearfull apprehentions of the dainger they Leave their Estates and Families in, Whilest they are drawne from their houses to defend the Borders, Of which number alsoe at least one third are Single freemen (whose labour Will hardly maintaine them) or men much in debt, both which Wee may reasonably expect upon any Small advantage the Enemy may gaine upon us, would revolt to them in hopes of bettering their Condition by Shareing the Plunder of the Countrey with them, Nor can wee Keepe any number of Soldiers long together in A Place for Want of Provissions, For the aire being hott and Moist wee could never yett find the way of keeping any Sort of Corne A Yeare from Being eaten our by Vermine Which hinders our haveing Publique Magazines of Provisions necessary for Such occations, and our men (though their has bin Great Care taken in Exercizing them) haveing for Many yeares bene unacquainted with dainger, wee cannot with much Confidence rely on their Courage against an Enemy better practiced in the Hazards of Warr; But may it please your most Sacred Majestie and your most Honorable Councell, Their were many more difficulties from this last attempt, for diseases this Winter before haveing destroyed at least fifty thousand Cattell and their Owners to preserve them haveing given them almost all their Corne Brought Soe great A Scarcety of Provision amongst us as men Could not have bene keept long together, and the Enemies Arrivall being in A time when all mens Cropps both of tobacco and corne lay hardest upon their hands (being much in the weeds by reason of the great Raine which fell Sometime before) It Troubled them much to be drawne away from their Worke (though for their Common defense) Yen notwithstanding these and many more disadvantages they appeared Soe ready in

Every place that the Enemy desended not on the Land though they wanted water to great Extremety, The losse then being wholy on the Shipps and Loading (Except some fugative Servants who escapeing our dilligence gott to them and were Carryed away) Our industry for their defense wee humbly hope will appeare in this that their was not A Shipp lost which run not on Ground before She gott within the protection of one or other of our Forts, Nor did Your Majesties Shipps or any of the Merchant men want any Assistance wee could possibly helpe them too, Though in this alsoe their lay very great difficulty, For In these times of warr, the Merchant gives our Inhabitants Soe very little for their Labour as will not Cloath them and their Famelies, which Soe disasorts them as they rather rejoyce at their loss, then Shew any desire to defend them nor would they have bene brought to appeare for them by any other Motive then the affection they have to the Gentleness and Justice of the Government they have Soe long lived under, Yet though wee have Certainly done our Utmost for them to our very great expense and hazard of our Cropps Wee expect A Complaint against us for not haveing A Fort at Point Comfort, which Some Suppose would have prevented all this losse, though the Considerable part of it happened farr off in the Bay beyond the reach of any Gunn; To which Objection for our Justification Wee doe humbly Offer our Reasons to your most Excellent Majestie and most Honorable Councell against A Fort there, because it being A direct Chanell and A great Tide, A Shipp may ride in Safety in the Bay till it hath A Good Wind and upon A Tide may runn by A better Fort then all the Wealth and Skill of this Countrey can build. Especially Considering the distance they may goe from it, which were it but halfe A Mile would be too farr for us to depend Certainly on its defense; Then, the time of Loading being five or Six Monthes in every River, wee thought it best to build Forts in the most Convenient places for their defense, during their stay, Rather then one at Point Comfort, which at best Could but Secure James River, Butt by these two losses Receaved the last Warr [ie. the Second Anglo-Dutch War] and now they doe conceade it necessary that Point Comfort werr fortified Soe as to Secure their Comeing together, and wee doe truely wish Soe too, But Since wee beleive the doeing or nor doeing of it will Something depend upon our advice to Your Majestie Wee dare nor propose A battery of lesse then fourty or fifty dimmy [demi] cannon and Culvarine of A Good length, And that will Cost Considering the inconveniency of the place (which affoards not Soe much as A Foundation to build on, much less any Materialls) at least Fifteene thousand pounds sterling, which being A Some wee have not in our Power The Publique revenue not exceeding two and twenty hundred pounds A yeare of which the Governor has twelve hundred, The Councell two hundred and the rest expended in necessary workes, and the labour of our Inhabitants Scarcely Cloathing them, Wee humbly hope Your Majestie will nor expect it From us, Nor Dare wee propose lesse Strength, least A Weaker defense Should leave the Shipps (by depending too much upon it) more open to the Attempts of the Enemy then hither to they bin; And if your Majestie Shall be graciously pleased to build such A Fort as wee propose, Wee are nor able to maintaine A Garrison in it unlesse their be Such duties laid on Shipps through the whole Countrey as may Support the Charge For Soldiers will not Serve for tobacco, because the Merchants (working on their necessities) give them Soe little for it as A Yeares Sallery will hardly Clothe them, And the present Fort duties are Soe Small as not to Pay the Gunners finde Powder and repaire them but Most of that Charge lies upon the Countrey But Wee Doe most Humbly Offer it to your Majestie and your most Honorable Councells Consideration, Wether it may not be better to Send a Convoy proportioned to Such Strength as the Enemy may bring against us, Which may in Some Measure be knowne, by advice of their first setting out, And that the Charge of Such Convoy be upon the Fraight of the Merchant men, And to ease them of part of the Charge every hired man of Warr may be permitted to take two teire of tobacco in the hoald which would Serve to ballast them and not hinder their workeing Such A Convoy would Secure the Shipps and us who dare nor be Soe confident in Our defense (the dainger of our Servants and the Indians Considered) as not to give your Majestie This State of our present condition and to implead Your Assistance; And haveing thus in all humillity laid our cause before your Majestie and your Most Honorable Councell Wee appeale to your Goodness and Justice to Determine of it Most Heartily Praiseing God for his favour to us in giveing your Majestie Soe discerning A Judgment and Soe tender A heart cowards all Your Subjects And for Assisting you with Soe wise A Councell As wee doubt nor Will direct all your great and Royall Undertakings to A Glorious end Which is the earnest Desire of Your Majesties Most Loyall and Obedient Subject and Servants

72. John Gerrard, *An Account of the Attack on the Susquehannock Stronghold*, 1675

Introduction

The Susquehannocks lived along the Susquehanna River in present-day New York, Pennsylvania, and Maryland. Maryland first declared war on the Susquehannocks in 1642. Ten years later, the

Susquehannocks made peace with Maryland and gave the colony large tracts of land. The Susquehannocks had suffered huge losses in their ongoing war with the Iroquois and could no longer fight two wars at once. The peace endured for more than 20 years. In 1674, the Maryland government ordered the Susquehannocks, who were weakened by decades of warfare, to move to a settlement on the banks of the Potomac River. The next year, an argument ended in the murder of a Virginian and some 20 Susquehannocks. Fearing reprisals, more than 1,000 Virginia and Maryland militia surrounded the Susquehannock town. Militiamen murdered five Susquehannock chiefs. In this report, a Virginia militiaman attributes the killing to Marylanders. The Susquehannocks fled to southern Virginia, and then took revenge by attacking and killing settlers on the frontiers of both colonies. They remained at war with the English for another 15 years, until they were reduced to scattered remnants. The Maryland Assembly tried and convicted the militia commander for the murder, but he was not punished.

Primary Source

A narrative of the transactions of the Susquehannock Fort. Soe fare as I know concerning the Killing of the five Indians Assoone as our Virginia forces were landed in Maryland wee found five susquehannock Indians, under a guard and inquireing the reason of theire restraint, where i.e., were answered they endeavoured an escape and thereof were secured till our comeing in order to a treaty wee informing the Marylanders our businesse was first to treat and require satisfaction for the murder perpetrated before wee declared ourselves open enimies and proceeded to hostile actions Lt. Col. John Washington and Major Isaac Allerton upon this information thought it convenient to have them stronger guarded and themselves alsoe dureing the treaty which being donne and Col. Washington and Major Alerton accordingly treating there first demand was Satisfaction for the murder and spoyles committed on Virginia Shore Major Tilghman in the interim remaining silent: after long debate word illegible therein made by Col. Washington and Major Alerton the Indians disowned all that was Aledged to them and imputed it all to the senacas[.] Col Washington and Major Alerton urged that severall Cannoes loaded with beefe and pork had bin carried into theire fort alleadging that theire enimyes would not be soe kinde as to supply them with provisions and farther that some of their men had a little before been taken on Virginia side who had the Cloathes of such as had bin a little before murdered, upon there backes which made it appeare that they had bin the murderers: for these reasons Major Alerton and Col. Washington demanded Satisfaction or else they must proceed against them as enimyes and storme there fort and accordingly commanded the interpreter to bid them defiance[.] dureing the time of their Treaty Major Thomas Trewman came and asked the Gentlemen wheather they had finished, saying when you have donne I will Say something to them: And when col. Washington and Major Alerton had ended there treatie he went and commanded his interpreter John shanks to ask them how theire Indians came to be buried at Hutsons? and after a little further discourse caused them to be bound and told them he would Carry them to the place and show them theire owne Indians where they lay dead: Major Alerton asked him what he did intend to doe with them afterwards[.] Major Trewman answered he thought they deserved the like to which Major Alerton replyed I doe not thinke soe[.] noe sooner was this discourse ended between Major Allerton and Major Trewman than the Marylanders carried away those five Indians and before they had got five hundred yards distance from the place of this discourse and treaty spoken of, the Marylanders killed them and further saith not

73. Nathaniel Saltonstall, Accounts of King Philip's War, 1675–1676 [Excerpts]

Introduction

These excerpts from a series of letters—sent to London by a Boston merchant, Nathaniel Saltonstall-recount episodes in King Philip's War. The Wampanoag Indians had lived in peace with the English ever since 1620 when their leader, Massasoit, had made a treaty of friendship with the Pilgrims. Massasoit's son, Metacom, called King Philip by the English, organized an Indian confederacy to resist English expansion. A June 1675 attack on a village in Plymouth Colony set off the hugely destructive war. The United Colonies of New England joined forces against the Narragansetts, Pocumtucs, Nipmucs, and Wampanoags. The Indians destroyed numerous Massachusetts villages, making life on the frontier intolerable for the colonists. The first excerpt demonstrates how the English treated their Indian allies. The second describes the Great Swamp Fight. In December 1675, Plymouth governor Josiah Winslow led his militia into Rhode Island to attack the Narragansetts. Winslow found the Narragansetts camped on high ground in the middle of a vast swamp. The battle inflicted 240 English casualties and more than 900 on the Narragansetts. The war crushed Indian resistance but utterly destroyed parts of New England and killed 1 out of every 16 English fighting men.

[…]

This Unkus, and all his Subjects professing Christianity, are called Praying Indians. In the first Week in August, the Authority of Boston sent an Express to him, to require him to come in and Surrender himself, Men, and Arms, to the English; Whereupon, he sent along with the Messenger his three Sons, and about Sixty of his Men, with his Arms, to be thus disposed of, viz. His two youngest sons, (about thirty Years old) to remain as Hostages (as now they do at Cambridg) and his Eldest Son to go Captain of the Men as Assistants to the English against the Heathens, which accordingly they did. And the English not thinking themselves yet secure enough, because they cannot know a Heathen from a Christian by his Visage, nor Apparel: The Authority of Boston, at a Council held there the 30th of August, Published this following Order.

At a Council held in Boston, August 30, 1675.

The Council judging it of absolute Necessity for the Security of the English, and the Indians that are in Amity with us, that they be Restrained their usual commerce with the English, and Hunting in the Woods, during the Time of Hostility with those that are our Enemies.

Do Order, that all those Indians that are desirous to Approve themselves Faithful to the English, be Confined to their several Plantations under-written, until the council shall take further Order; and that they so order the setting of their Wigwams, that they may stand Compact in some one Part of their Plantations respectively, where it may be best for their own Provision and Defence. And that none of them do presume to Travel above one Mile from the Center of such their Dwelling, unless in Company with some English, or in their Service near their Dwellings; and excepting for gathering and fetching in their Corn with one Englishman, on peril of being taken as our Enemies, or their Abettors: And in Case that any of them shall be taken without the Limits abovesaid, except as abovesaid, and do lose their Lives, or be otherwise damnified, by English or Indians; The Council do hereby Declare, that they shall account themselves wholly Innocent, and their Blood or other Dammage (by them sustained) will be upon their own Heads. Also it shall not be lawful for any Indians that are in Amity with us, to entertain any strange Indians, or receive any of our Enemies Plunder, but shall from Time to Time make Discovery thereof to some English, that shall be Appointed for that End to sojourn among them, on Penalty of being reputed our Enemies, and of being liable to be proceeded against as such.

Also, whereas it is the Manner of the Heathen that are now in Hostility with us, contrary to the Practice of all Civil nations, to Execute their bloody Insolencies by Stealth, and Sculking in small Parties, declining all open Decision of their Controversie, either by Treaty or by the Sword.

The Council do therefore Order, That after the Publication of the Provision aforesaid, It shall be lawful for any Person, whether Eng-

lish or Indian, that shall find any Indians Travelling or Sculking in any of our Towns or Woods, contrary to the Limits above-named, to command them under their Guard and Examination, or to Kill and destroy them as they best may or can. The Council hereby declaring, That it will be most acceptable to them that none be Killed or Wounded that are Willing to surrender themselves into Custody.

The Places of the Indians Residencies are, Natick, Punquapaog, Nashoba, Wamesit, and Hassanemesit: And if there be any that belong to any other Plantations, they are to Repair to some one of these.

By the Council EDWARD RAWSON, Secr.

[...]

In the Afternoon of that Saturday, some of the Souldiers accidently espied an Indian alone, whom they took and carried to the General, who upon his Refusal to answer to those Questions demanded, was ordered to be Hanged forthwith; Whereupon the Indian to save his Life, told them where the whole Body of the Indians were together, as well King Philip, and all other confederate Sagamores and Sachems with their whole Retinue, as also the whole body of the Narragansets, being joined all in a body in November, about 4500 Indian Men, besides Wives and Children: Whereupon, keeping this Indian for their Guide, they having Provisions with them, marched all Night, the Indians being then 16 Miles distant from them, and that Night there fell a very hard Snow two or three Foot deep, and withal an extream hard Frost, so that some of our Men were frozen in their Hands and Feet, and thereby disabled for Service. The next Day, about Noon, they come to a large Swamp, which by Reasons of the Frost all the Night before, they were capable of going over (which else they could not have done). They forthwith in one Body entered the said Swamp, and in the Midst thereof was a Piece of firm Land, of about three or four Acres of Ground, whereon the Indians had built a Kind of Fort, being palisado'd round, and within that a Clay Wall, as also felled down Abundance of Trees to Lay quite round the said Fort, but they had not quite finished the said Work.

The General placed Capt. Moseley in the Front, to enter the Fort, and the Rest of the Companies were placed according to discretion. In their march they met with three Indians sent out as Scouts, whom they shot dead at Sight thereof: as soon as ever the Indians saw our Army coming, they shot as fast as ever they could, and so our men did the like. Before our men could come up to take Possession of the Fort, the Indians had shot three Bullets through Capt. Davenport, whereupon he bled extreamly, and immediately called for his Lieutenant, Mr. Edward Ting, and committed the Charge of the Company to him, and desire him to take care of his Gun, and deliver it according to Order, and immediately died in the Place; his Company were extreamly grieved at his Death, in Regard he was so courteous to them; for he being Commander of that Company,

belonging to Cambridge and Watertown etc. was a Stranger to most of them; and at the same Time that he came to take Possession of his Company, he made a very civil Speech to them, and also gave them free Liberty to choose their Serjeants themselves, which pleased them very well, and accordingly did so; and it is very probable the Indians might think that Capt. Davenport was the General, because he had a very good Buff Suit on at that Time, and therefore might shoot at him. In a short Time our Forces entered the fort, Captain Moseley being in the Front, the Indians knowing him very well, many directed their shot to him, as he afterwards told the General that he believed he saw 50 aim at him: As soon as he and they had entred the Fort, he espied a Heap of above 50 Indians lay dead in a Corner, which the Indians had gathered together; as soon as ever our Men had entred the Fort, the Indians fled, our Men killed many of them, as also of their Wives and Children, amongst which an Indian Black-Smith (the only Man amongst them that fitted their Guns and Arrow-heads;) and amongst many other Houses burnt his, as also demolished his Forge, and carried away his tools; they fought with the Indians, and pursued them so long as was advantageous to them; then the General gave Order to sound a Retreat, which was done according to Order. The Retreat was no sooner beaten, and the Souldiers were in a Marching Posture, before they were got all out of the Fort, a thousand fresh Indians set on our Men, but in an Hour's Time the Indians were forced to Retreat and Flie. Our Men as near as they can judge, may have killed about 600 Indian Men, besides Women and Children. Many more Indians were killed which we could have no Account of, by Reason that they would carry away as many dead Indians as they could. Our Men before they had been set on by the fresh Indians, had set fire to most of the Wigwams in and about the Fort (which were near 1000 in all,) how many were burnt down they could not tell positively, only thus; That they marched above three Miles from the Fort by the Light of the Fires.

74. Nathaniel Bacon, "Declaration in the Name of the People of Virginia," 1676

Introduction

William Berkeley governed Virginia from 1642 to 1652 and again from 1660 to 1677. His administration favored the interests of the wealthy upper class. He imposed heavy taxes on struggling farmers while paying himself a high salary, and in 1660 he canceled elections for more than 15 years. He granted the best land to his favorites, forcing former indentured servants to wrestland from the Indians on the western frontier. Nathaniel Bacon, an upper-class 29-year-old distantly related to the governor, had served on Vir-

ginia's council. He took up the cause of the struggling frontier dwellers and led an attack on the Indians. Berkeley opposed the expedition and accused Bacon of treason. Bacon and his men then occupied Jamestown, forcing the governor to flee, and burned the capital to the ground. This declaration contains a list of grievances against the governor, accusing him of favoritism, corruption, and treachery. The rebellion came to a halt when Bacon suddenly fell ill and died in October 1676. After Bacon's death, the governor returned to the capital and hanged 23 of Bacon's rebels, seizing their property for his friends. King Charles II recalled Berkeley to London to explain his actions. Ultimately, Bacon's Rebellion brought about reform in Virginia, including a reduction in taxes and availability of land for freed servants.

Primary Source

- 1. For having, upon specious pretenses of public works, raised great unjust taxes upon the commonalty for the advancement of private favorites and other sinister ends, but no visible effects in any measure adequate; for not having, during this long time of his government, in any measure advanced this hopeful colony either by fortifications, towns, or trade.
- 2. For having abused and rendered contemptible the magistrates of justice by advancing to places of judicature scandalous and ignorant favorites.
- 3. For having wronged his Majesty's prerogative and interest by assuming monopoly of the beaver trade and for having in it unjust gain betrayed and sold his Majesty's country and the lives of his loyal subjects to the barbarous heathen.
- 4. For having protected, favored, and emboldened the Indians against his Majesty's loyal subjects, never contriving, requiring, or appointing any due or proper means of satisfaction for their many invasions, robberies, and murders committed upon us.
- 5. For having, when the army of English was just upon the track of those Indians, who now in all places burn, spoil, murder and when we might with ease have destroyed them who then were in open hostility, for then having expressly countermanded and sent back our army by passing his word for the peaceable demeanor of the said Indians, who immediately prosecuted their evil intentions, committing horrid murders and robberies in all places, being protected by the said engagement and word past of him the said Sir William Berkeley, having ruined and laid desolate a great part of his Majesty's country, and have now drawn themselves into such obscure and remote places and are by their success so emboldened and confirmed by their confederacy so strengthened that the cries of blood are in all places, and the terror and consternation of the people so great, are now become not only difficult but a very formidable enemy who might at first with ease have been destroyed.

6. And lately, when, upon the loud outcries of blood, the assembly had, with all care, raised and framed an army for the preventing of further mischief and safeguard of this his Majesty's colony.

7. For having, with only the privacy of some few favorites without acquainting the people, only by the alteration of a figure, forged a commission, by we know not what hand, not only without but even against the consent of the people, for the raising and effecting civil war and destruction, which being happily and without bloodshed prevented; for having the second time attempted the same, thereby calling down our forces from the defense of the frontiers and most weakly exposed places.

8. For the prevention of civil mischief and ruin amongst ourselves while the barbarous enemy in all places did invade, murder, and spoil us, his Majesty's most faithful subjects.

Of this and the aforesaid articles we accuse Sir William Berkeley as guilty of each and every one of the same, and as one who has traitorously attempted, violated, and injured his Majesty's interest here by a loss of a great part of this his colony and many of his faithful loyal subjects by him betrayed and in a barbarous and shameful manner exposed to the incursions and murder of the heathen. And we do further declare these the ensuing persons in this list to have been his wicked and pernicious councilors, confederates, aiders, and assisters against the commonalty in these our civil commotions.

Sir Henry Chichley Richard Whitacre Lt. Col. ChristopherWormeleyNicholas SpencerPhillip Ludwell Joseph Bridger Robt. Beverley William Claiburne, Jr. Ri. Lee Thomas Hawkins Thomas Ballard William Sherwood William Cole John Page ClerkeJohn Clauffe Clerk

John West, Hubert Farrell, Thomas Reade, Math. Kempe

And we do further demand that the said Sir William Berkeley with all the persons in this list be forthwith delivered up or surrender themselves within four days after the notice hereof, or otherwise we declare as follows.

That in whatsoever place, house, or ship, any of the said persons shall reside, be hid, or protected, we declare the owners, masters, or inhabitants of the said places to be confederates and traitors to the people and the estates of them is also of all the aforesaid persons to be confiscated. And this we, the commons of Virginia, do declare, desiring a firm union amongst ourselves that we may jointly and with one accord defend ourselves against the common enemy. And let not the faults of the guilty be the reproach of the innocent, or the faults or crimes of the oppressors divide and separate us who have suffered by their oppressions.

These are, therefore, in his Majesty's name, to command you forthwith to seize the persons abovementioned as traitors to the King and country and them to bring to Middle Plantation and there to secure them until further order, and, in case of opposition, if you want any further assistance you are forthwith to demand it in the name of the people in all the counties of Virginia.

75. William Berkeley, Declaration on Bacon's Rebellion, 1676

Introduction

William Berkeley governed Virginia from 1642 to 1652 and again from 1660 to 1677. His administration favored the interests of the wealthy upper class. He imposed heavy taxes on struggling farmers while paying himself a high salary, and in 1660 he canceled elections for more than 15 years. He granted the best land to his favorites, forcing former indentured servants to wrest land from the Indians on the western frontier. Nathaniel Bacon, an upper-class 29-year-old distantly related to the governor, had served on Virginia's council. He took up the cause of the struggling frontier dwellers and led an attack on the Indians. Berkeley opposed the expedition and accused Bacon of treason. This declaration was Berkeley's attempt to rally support. Bacon and his men then occupied Jamestown, forcing the governor to flee, and burned the capital to the ground. The rebellion came to a halt when Bacon suddenly fell ill and died in October 1676. After Bacon's death, the governor returned to the capital and hanged 23 of Bacon's rebels, seizing their property for his friends. King Charles II recalled the governor to London to explain his actions, but Berkeley died shortly after his arrival. Ultimately, Bacon's Rebellion brought about reform in Virginia, including a reduction in taxes and availability of land for freed servants.

Primary Source

The declaration and Remonstrance of Sir William Berkeley his most sacred Majesties Governor and Captain Generall of Virginia

Sheweth That about the yeare 1660 Coll. Mathews the then Governor dyed and then in consideration of the service I had don the Country, in defending them from, and destroying great numbers of the Indians, without the loss of three men, in all the time that warr lasted, and in contemplation of the equal and uncorrupt Justice I had distributed to all men, Not onely the Assembly but the unanimous votes of all the Country, concurred to make me Governor in a time, when if the Rebells in England had prevailed, I had certainely dyed for accepting itt, 'twas Gentlemen an unfortunate Love, shewed to me, for to shew myselfe gratefull for this, I was willing to accept of this Government againe, when by my gracious Kings favour I might have had other places much more proffitable, and lesse toylesome then this hath beene. Since that time that I returned into the Country, I call the great God Judge of all things in heaven and earth to wittness, that I doe not know of any thing relateive to this Country wherein I have acted unjustly, corruptly, or negligently in distributeing equall Justice to all men, and takeing all possible care to preserve their proprietys, and defend the from their barbarous enimies.

But for all this, perhapps I have erred in things I know not of, if I have I am soe conscious of humane frailty, and my owne defects,

that I will not onely acknowledge them, but repent of, and amend them, and not like the Rebell Bacon persist in an error, onely because I have comitted itt, and tells me in diverse of his Letters that itt is not for his honnor to confess a fault, but I am of opinion that itt is onely for divells to be incorrigable, and men of principles like the worst of divells, and these he hath, if truth be reported to me, of diverse of his expressions of Atheisme, tending to take away all Religion and Laws.

And now I will state the Question betwixt me as a Governor and Mr. Bacon, and say that if any enimies should invade England, any Councellor Justice of peace or other inferiour officer, might raise what forces they could to protect his Majesties subjects, But I say againe, if after the Kings knowledge of this invasion, any the greatest peere of England, should raise forces against the kings prohibition this would be now, and ever was in all ages and Nations accompted treason. Nay I will goe further, that though this peere was truly zealous for the preservation of his King, and subjects, and had better and greater abillitys then all the rest of his fellow subjects, doe his King and Country service, yett if the King (though by false information) should suspect the contrary, itt were treason in this Noble peere to proceed after the King's prohibition, and for the truth of this I appeale to all the laws of England, and the Laws and constitutions of all other Nations in the world, And yett further itt is declaired by this Parliament that the takeing up Armes for the King and Parliament is treason, for the event shewed that what ever the pretence was to seduce ignorant and well affected people, yett the end was ruinous both to King and people, as this will be if not prevented, I doe therefore againe declair that Bacon proceeding against all Laws of all Nations modern and ancient, is Rebell to his sacred Majesty and this Country, nor will I insist upon the sweareing of men to live and dye togeather, which is treason by the very words of the Law.

Now my friends I have lived 34 yeares amongst you, as uncorrupt and dilligent as ever Governor was, Bacon is a man of two yeares amongst you, his person and qualities unknowne to most of you, and to all men else, by any vertuous action that ever I heard of, And that very action which he boasts of, was sickly and fooleishly, and as I am informed treacherously carried to the dishonnor of the English Nation, yett in itt, he lost more men then I did in three yeares Warr, and by the grace of God will putt myselfe to the same daingers and troubles againe when I have brought Bacon to acknowledge the Laws are above him, and I doubt not but by God's assistance to have better success then Bacon hath had, the reason of my hopes are, that I will take Councell of wiser men then my selfe, but Mr. Bacon hath none about him, but the lowest of the people.

Yett I must further enlarge, that I cannot without your helpe, doe any thinge in this but dye in defence of my King, his laws, and subjects, which I will cheerefully doe, though alone I doe itt, and considering my poore fortunes, I can not leave my poore Wife and friends a better legacy then by dyeing for my King and you: for his sacred Majesty will easeily distinguish betweene Mr. Bacons actions and myne, and Kinges have long Armes, either to reward or punish.

Now after all this, if Mr. Bacon can shew one precedens or example where such actings in any Nation what ever, was approved of, I will mediate with the King and you for a pardon, and excuce for him, but I can shew him an hundred examples where brave and great men have beene putt to death for gaineing Victorys against the Comand of their Superiors.

Lastly my most assured friends I would have preserved those Indians that I knew were howerly att our mercy, to have beene our spyes and intelligence, to finde out our bloody enimies, but as soone as I had the least intelligence that they alsoe were trecherous enimies, I gave out Commissions to distroy them all as the Commissions themselves will speake itt.

To conclude, I have don what was possible both to friend and enimy, have granted Mr. Bacon three pardons, which he hath scornefully rejected, suppoaseing himselfe stronger to subvert then I and you to maineteyne the Laws, by which onely and Gods assisting grace and mercy, all men mwt hope for peace and safety. I will add noe more though much more is still remaineing to Justifie me and condemne Mr. Bacon, but to desier that this declaration may be read in every County Court in the Country, and that a Court be presently called to doe itt, before the Assembly meet, That your approbation or dissattisfaction of this declaration may be knowne to all the Country, and the Kings Councell to whose most revered Judgments itt is submitted, Given the xxixth day of May, a happy day in the xxv'ith yeare of his most sacred Majesties Reigne, Charles the second, who God grant long and prosperously to Reigne, and lett all his good subjects say Amen.

76. First Thanksgiving Proclamation, June 20, 1676

Introduction

The Pilgrims gave thanks for their survival at two Plymouth celebrations, in 1621 and 1623. The first official Thanksgiving, however, was proclaimed by the town council of Charlestown, Massachusetts (now part of Boston), on June 20, 1676, in response to the turn of the tide in King Philip's War. The Wampanoag Indians had lived in peace with the English ever since 1620 when their leader, Massasoit, had made a treaty of friendship with the Pilgrims. Massasoit's son, Metacom, called King Philip by the English, organized an Indian confederacy to resist English expansion. A June 1675 attack on a village in Plymouth Colony set off the hugely destructive war. An alliance of Wampanoags, Narragansetts, Pocumtucs, and Nipmucs destroyed numerous Massachusetts and Rhode Island villages, making life on the frontier intolerable for the colonists. Although the Indians lost hundreds in the Great Swamp Fight of December 1675, they continued their raids through the winter. They even attacked a

town only 18 miles west of Boston. However, the Indian offensive began to dissipate by spring. In June 1676, Massachusetts leaders offered amnesty to Indians who surrendered, and hundreds accepted the offer. After several failed attempts, Thanksgiving became an annual American celebration beginning in 1863.

Primary Source

The Holy God having by a long and Continual Series of his Afflictive dispensations in and by the present Warr with the Heathen Natives of this land, written and brought to pass bitter things against his own Covenant people in this wilderness, yet so that we evidently discern that in the midst of his judgements he hath remembered mercy, having remembered his Footstool in the day of his sore displeasure against us for our sins, with many singular Intimations of his Fatherly Compassion, and regard; reserving many of our Towns from Desolation Threatened, and attempted by the Enemy, and giving us especially of late with many of our Confederates many signal Advantages against them, without such Disadvantage to ourselves as formerly we have been sensible of, if it be the Lord's mercy that we are not consumed, It certainly bespeaks our positive Thankfulness, when our Enemies are in any measure disappointed or destroyed; and fearing the Lord should take notice under so many Intimations of his returning mercy, we should be found an Insensible people, as not standing before Him with Thanksgiving, as well as lading him with our Complaints in the time of pressing Afflictions:

The Council has thought meet to appoint and set apart the 29th day of this instant June, as a day of Solemn Thanksgiving and praise to God for such his Goodness and Favour, many Particulars of which mercy might be Instanced, but we doubt not those who are sensible of God's Afflictions, have been as diligent to espy him returning to us; and that the Lord may behold us as a People offering Praise and thereby glorifying Him; the Council doth commend it to the Respective Ministers, Elders and people of this Jurisdiction; Solemnly and seriously to keep the same Beseeching that being perswaded by the mercies of God we may all, even this whole people offer up our bodies and soulds as a living and acceptable Service unto God by Jesus Christ.

77. Mary Rowlandson, *A Narrative* of the Captivity and Restoration of Mrs. Mary Rowlandson, 1682 [Excerpt]

Introduction

At sunrise on February 10, 1676, Narragansett Indians attacked and destroyed Lancaster, Massachusetts. The attackers killed 12 men,

women, and children and took 24 captives. Among those taken were Mary Rowlandson, wife of the town's Puritan minister, and her 3 children. Her wounded 6-year-old daughter died 9 days after their capture. The Indians took Rowlandson with them as they moved their village from place to place, covering some 150 miles. Rowlandson and her surviving 2 children, a girl of 10 and a boy of 14, were sold to separate owners among the Indians. Rowlandson, taking strength from her religious faith, used her wits to survive. She met King Philip himself, and sewed some clothing for his son, for which he paid her. Others then gave her food in return for sewing. Some Indians in the village treated her with kindness, others with cruelty. After 11 weeks of captivity among the Indians, Rowlandson was ransomed and released on May 3, 1676. Several months passed before her children were freed. Rowlandson wrote A Narrative of the Captivity and Restoration of Mrs. Mary Rowlandson, and it was published in Boston in 1682. The first of its kind, the book sold well, and stories of captivity among the Indians became a popular form of American literature. This excerpt recounts the day of the attack.

Primary Source

On the tenth of February 1675, Came the Indians with great numbers upon Lancaster: Their first coming was about Sun-rising; hearing the noise of some guns, we looked out; several Houses were burning, and the smoke ascending to Heaven. There were five persons taken in one house, the Father, and the Mother and a sucking Child, they knockt on the head; the other two they took and carried away alive. Their were two others, who being out of their Garison upon some occasion were set upon; one was knockt on the head, the other escaped: Another their was who running along was shot and wounded, and fell down; he begged of them his life promising them Money (as they told) but they would not hearken to him but knockt him in head, and stript him naked, and split open his Bowels. Another seeing many of the Indians about his Barn, ventured and went out, but was quickly shot down. There were three others belonging to the same Garison who were killed; the Indians getting up upon the roof of the Barn, had advantage to shoot down upon them over their Fortification. Thus these murderous wretches went on, burning and destroying before them.

At length they came and beset our house, and quickly it was the dole-fullest day that ever min eyes saw. The House stood upon the edg of a hill; some of the Indians got behind the hill, others into the Barn, and others behind any thing that could shelter them; from all which places they shot against the House, so that the Bullets seemed to fly like hail; and quickly they wounded one man among us, then another, and then a third, About two hours (according to my observation, in that amazing time) they had been about the house before they prevailed to fire it (which they did with Flax and Hemp, which they brought out of the Barn, and there being no defence about the House, only two flankers at two opposite corners and one of them not finished) they fired it once and one ventured out and quenched it, but they quickly fired it again, and that took. Now is the dreadfull hour come, that I have often heard of (in time of War, as it was the case of

others) but now mine eyes see it. Some in our house were fighting for their lives, others wallowing in their blood, the House on fire over our heads, and the bloody Heathen ready to knock us on the head, if we stirred out. Now might we hear Mothers and Children crying out for themselves, and one another, Lord, What shall we do? Then I took my Children (and one of my sisters, hers) to go forth and leave the house: but as soon as we came to the dore and appeared, the Indians shot so thick that the bullets rattled against the House, as if one had taken an handful of stones and threw them, so that we were fain to give back. We had six stout dogs belonging to our Garrison, but none of them would stir, though another time, if any Indian had come to the door, they were ready to fly upon him and tear him down. The Lord hereby would make us the more to acknowledge his hand, and to see that our help is always in him. But out we must go, the fire increasing, and coming along behind us, roaring, and the Indians gaping before us with their Guns, Spears and Hatchets to devour us. No sooner were we out of the House, but my Brother in Law (being before wounded, in defending the house, in or near the throat) fell down dead, wherat the Indians scornfully shouted, and hallowed, and were presently upon him, stripping off his cloaths, the bullets flying thick, one went through my side, and the same (as would seem through the bowels and hand of my dear Child in my arms. One of my elder sisters Children, named William, had then his Leg broken, which the Indians perceiving, they knockt him on head. Thus were we butchered by those merciless Heathen standing amazed, with the blood running down to our heels. My eldest Sister being yet in the House, and seeing those woful sights, the Infidels haling Mothers one way, and children another, and some wallowing in their blood: and her eldest Son telling her that her son William was dead, and my self was wounded, she said, And, Lord, let me dy with them, which was no sooner said, but she was struck with a Bullet and fell down dead over the threshold. I hope she is reaping the fruit of her good labours, being faithfull to the service of God in her place. In her younger years she lay under much trouble upon spiritual accounts, till it pleased God to make that precious Scripture take hold of her heart, 2 Cor 12.9: and he said unto me, my Grace is sufficient for thee. More then twenty years after I have heard her tell how sweet and comfortable that place was to her. But to return: The Indians laid hold of us, pulling me one way, and the Children another and said, Come go along with us: I told them they would kill me: they answered, If I were willing to go along with them, they would not hurt me.

Oh the dolefull sight that now was to behold at this House, *Come, behold the works of the Lord, what disolations he has made in the Earth.* Of thirty seven persons who were in this one House, none escaped either present death, or a bitter captivity, save only one, who might say as he, Job 1.15, *And I only am escaped alone to tell the News.* There were twelve killed, some shot, some stab'd with their Spears, some knock'd down with their hatchets. When we are in prosperity, Oh the little that we think of dreadfull sights, and to see our dear Friends, and Relations ly bleeding out their heart-blood upon the ground. There was one who was chopt into the head with a hatchet,

and stript naked, and yet was crawling up and down. It is a solemn sight to see so many Christians lying in their blood, some here, and some there, like a company of Sheep torn by Wolves, All of them stript naked by a company of hell-hounds, roaring, singing, ranting and insulting, as if they would have torn our very hearts out; yet, the Lord by his Almighty power preserved a number of us from death, for there were twenty-four of us taken alive and carried Captive.

I had often before this said, that if the Indians should come, I should chuse rather to be killed by them then taken alive but when it came to the tryal my mind changed; their glittering weapons so daunted my spirit, that I chose rather to go along with those (as I may say) ravenous Beasts, then that moment to end my dayes; and that I may the better declare what happened to me during that grievous Captivity, I shall particularly speak of the severall Removes we had up and down the Wilderness.

The first Remove.

Now away we must go with those Barbarous Creatures, with our bodies wounded and bleeding, and our hearts no less than our bodies. About a mile we went that night, up upon a hill within sight of the Town, where they intended to lodge. There was hard by a vacant house (deserted by the English before, for fear of the Indians). I asked them whither I might no lodge in the house that night to which they answered, what will you love English men still? This was the dolefullest night that ever my eyes saw. Oh the roaring, and singing and dancing, and yelling of those black creatures in the night, which made the place a lively resemblance of hell.

78. Accounts of Culpeper's Rebellion, 1679, 1680

Introduction

The tobacco growers of Carolina (North and South Carolina were at that time a single colony) objected to a 1672 law that levied a tax whenever a ship bearing tobacco stopped at another colonial port before crossing to England. Much of Carolina's tobacco was carried by New England ships, which stopped at Massachusetts ports on the way to England. This law was widely ignored in the colonies until the king issued a proclamation calling for its strict enforcement. In 1676, the proprietors of Carolina appointed Thomas Miller to collect the taxes. When Miller arrived in Carolina the following year, his opponents tried to prevent him from taking office, but the militia came to his assistance. In December 1677, an armed rebellion broke out, led by Carolina planters—John Culpeper among

them—and New England ship captains. The revolt became known as Culpeper's Rebellion. The rebels arrested and jailed Miller and brought him to trial. The rebels also sent armed men to the Virginia border to prevent Miller's replacement from entering Carolina. Miller escaped in 1679 and fled to England, where he sued Culpeper and other conspirators. These documents contain the information collected for the trial of Culpeper.

Primary Source

MR CARTWRIGHT (who was related to Mr Vice Chamberlaine, one of the Proprietors) being governor of the Northern part of Carolina and being returned for England and having left the Governm't there in ill order and worse hands, the Proprietors resolved to send another Governor and such a one, if they could be fortunate in their choice, as would put in execution their Instruction orders and designes, The former Governor having very much failed them especially in 2 poynts—The 2d was their discouraging the planting on the south side of the river Albemarle. The latter was extreamely the interest of the Proprietors, but crost allwayes by the Governnors and some of the cheife fo the Country, who had ingrosit the Indian trade to themselves and feared that it would be intercepted by those that should plant farther amongst them. The illness of the harbours was the cause that this Northern part of Carolina had no other vent for their Comodityes but either by Virginia, where they paid dutyes to the Governm't, or to New England, who were the onely immediate Traders with them; And ventur'd in, in small Vessells, and had soe manadg'd their affayres that they brought their goods att very lowe rates, eate outand ruin'd the place, defrauded the King of his Customes and yet govern'd the people ag't their owne Interest. To cure those evils the Prop'rs made choice of one Mr Eastchurch to be their Governor, a Gent'n of a good fame and related to the Lord Trea'r Clifford, who had recommended him to the Prop'rs formerly for that place and had the promise of severall of us. In Summer 1677 we dispatched away the sd Mr Eastchurch, together with Mr Miller, who was the Kings officer and made by us one of our Deputyes, It happen'd soe that they went not directly for Virginia, but took their passage in a ship bould for Nevis, where Mr Eastchurch, lighting upon a woman that was a considerable fortune, took hold of the oppertunity, marryed her, and dispatch away Mr Miller for Carolina to settle affayres against his comeing, who carried with him the Commission of the Lds prop'rs to their Deputyes and Commission from Mr Eastchurch himself that made Miller Presid't of the Councill until his arrival and gave him very full and ample powers. Miller, arriveing in Carolina with these commissions, is quietly received into the Governm't, and submitted to not onely as Gov'r but the King's Collector, in the discharge of w'ch duty as Collector he made a very considerable progress. But as Governor he did many extravagant things, making strange limitations for the choice of the Parliam't, gitting power in his hands of laying fynes, w'ch tis to be feared he neither did nor meant to use moderately, sending out strange warrants to bring some of the most considerable men of the Country alive or dead before him, setting summe of money upon their

1032 78. Accounts of Culpeper's Rebellion

heads: these proceedings having started and disaffected the people towards him, there arrives Capt. Zachariah Gilham with a very pretty vessel of some force, and together with him Durant, and about the same time Culpeper. They brought with them severall Armes, w'ch were for Trade in the Country, and finding that Miller had lost his reputation and interest amongst the people, stirr'd up a Commotion, seized him and all the writing belonging to the Prop'rs, and all the Tobacco and writing belonging to Kings Customes, imploying the Kings Tobacco towards the charge of maintaining and supporting their unlawful actions, And, w'ch aggravated the matter very much, Durant had in England sometime before this Voyage declared to some of the Prop'rs that Eastchurch should not be Governor and threatened to revolt. Capt. Gilham was a fitt man for his turn, having been turn'd out by some of the prop'rs of a considerable imploym't in Hudson Bay, wherein he had very much abused them.

Culpeper was a very ill man, having some tyme before fled from South Carolina, where he was in danger of hanging for laying the designe and indeavouring to sett the poore people to plunder the rich. These, with Crafurd and some other New England men, had a designe (as we conceive) to gitt the trade of this part of the Country into their hands for some years att least, And not onely defraud the King of all his Customes but buy the goods of the Inhabitants att their owne rates, for they gave not to them above halfe the vallue for their goods of w'ch the Virginians sold their for.

Not long after this imprisonment of Miller and that these generall men had formed themselves into what Mr Culpeper calls the Govern't of the Country by their owne authority and according to their owne model, Mr East church arrives in Virginia, who authority and commission they had not the least colour to dispute and yet they kept him out by force of armes, soe that he was forced to apply to the then governr of Virginia for aid and assistance from him to reduce them, w'ch had been accordingly donne, but that Eastchurch unfortunately dyes of a feavour. Presently after this these Gentlemen that had usurped the Govern't and cast of and imprisoned Deputyes that would not comply with them, sends over 2 Commiss're in their names to promise all obedience to the Lds Prop's, but insisting very highly for right againt Miller. The prop're perswaded one of their owne Members, Mr Southwell, to goe over and be Governor himselfe, to whome they promised the utmost submission (he being a very sober discreet gentleman) and was allsoe authorized from the commiss'rs of the customes to take care of the Kings concerns there, which wee conceive he would have settle in very good order but that he was unfortunately taken by the Turks in his passage thither, And upon whome the settlem't of the place very much, depends, it being a very difficult matter to gitt a man of worth and trust to go thither. His redemption is very day expected, and in the meanewhile we have dispatched one Mr Holden with Comissions and Deputations for the Governor to those that we did imadgine would manage it with most moderation, who sens us work that all is not quyett and peaceable. But his maj'ty ought to have an

exact acc't and reparation for the damadges donne in his Customes, and his officers repayed, the charge of w'ch ought in reason to fall principally upon those that have been the cheife Actors in it.

Indorsed:] The Case of T. Miller, Z. Gilham, etc concerning The Rebellion of Carolina. Rec'd from Sir P. Colleton the 9th of Feb'ry, 1679–80.

Answer of the Lords Proprietors of Carolina, read the 20 Nov. 1680.

In obedience to your Ld'ps command in your order of the 19th of July we have perused the petitions of Mr Thomas Miller and Mr Timothy Biggs and some of the Inhabitants of Albemarle in Carolina, and according to the best information we can att present get finde the matter of face they complaine of to be as followeth:

Mr Thomas Miller without any legall authority gott possession of the government of the County of Albermarle in Carolina in the yeare 1677, and was for a tyme quyetly obeyed, but doeing many illegall and arbitrary things and drinking often to excess and putting the people in generall by his threats and actions in great dread of their lives and estates, and they as we suppose getting some knowledge that he had no legal authority, tumultuously and disorderly imprison him and suddainly after Mr Biggs and Mr Nixon, for adhering to Mr Miller and abetting him in some of his actions, and revive an accusation against Mr Miller of treasonable words for which he had been formerly imprison'd but never tryed, And appoynt Mr Culpeper to receive the Kings Customes during the imprisonment of Mr Miller, and did many other tumultuous and irregular things. Mr Bigs makes his escape and comes home to England and gives us information of these disorders, upon w'ch we gott one Mr Seth Sothell, who is interested with us, to undertake the Government, who being a sober moderate man and no way concerned in the factions and animosityes of the place, we doubt not but would settle all things well there, and to whome we gave Instructions to examie ito the past disorders and punish the offenders. And the Comiss'rs of his Maj'ts Customes gave him also a Commission to be Collector of his Maj'ts Customes in Albemarle, but Mr Southhell in his voyage thither was taken by the Turks and carried into Argiers.

As soone as we heard of Mr Sothell's misfortune we sent a Commission to one Mr Harvey to be Gov'r until Mr Sothel's arrival there, whose release we speedily expected. With this Comission went Mr Robert Holden, whoome the Comissioners of the customes had appointed Collector of his Maj'tes Customes in Albemarle in the roome of Mr Sothell; both these Comissions as we are informed were quyetly and cheerfully obeyed by the people, and Mr Holden hath without any disturbance from the People collected his Mahj'tes Customes there and sent part of it home to the Comissioners here, and part of the Customes having been made use of by the people in the tyme of the disorders, they have laid a Taxe upon themselves for the repaying it to Mr Holden the present Collector.

Not long after the settlem't of the Governm't in Mr Harvey, he and the Council (as we are informed) did commit Mr Miller againe, in order to the bringing him to a Tryall for the treasonable words he had formerly spoken, But Mr Miller breakes prison and comes for England. And not long after Mr Bigs (who is by the Comissioners of the Customes appointed Surveyor of his Ma'tys dues in Albemarle) and Mr Holden the Collector quarrel among themselves, and Mr Bigs withdrawes himself from the Councill and perswades James Hill, the Duke of Albemarle's Deputy, to doe the same, hopeing thereby as we conceive to make a disturbance in the Governm't. Since then Mr Harvey is dead, and the Councill have chosen Col. Jenkins to execute the place of Governor until we shall appoint another, and all things, as we are informed by letters from thence beareing date May, June, and July last, are in quyet, and his Maj'tyes Customes quyetly paid by the People, though Mr Bigs hath endeavoured to interrupt the same together with some others, who being, as we are informed, prosecuted for ayding Mr Miller in his escape and other misdemeanors, are withdrawn into Virginia, and which we conceive are the persons whose names are to the Petition presented to his majesty. And this is the truest acc'tt we are able to give your Lordships, how the cases of Mr Miller and Mr Bigs appears to us. And to prevent the like disorders for the future, which hath been in great measure occasioned by factions and animosityes, in which most or all of the Inhabitants have been engaged.

We are sending Capt. Wilkinson thither Governor, to whoome we shall give Instructions to examine into the past disorders, and who being a Stranger and not concerned in the factions and animosityes, we have reason to hope will manage things with moderation and doe equall justice to all parties, and we undertake will take care so to settle all things that his Maj'tes Customes shall be duely paid to whomsoever shall be appointed to collect the same.

Notwithstanding, we think it our dutye to informe your Lordships that we are of opinion Mr Miller, being deeply ingaged in the Animosityes of the place and having by divers unjustifiable actions as we are informed (besides Indictments found against him) rendered himself liable to the sutes of particular persons for Injuryes donne them, from which he cannot by Law be protected, That a Stranger will doe his Maj'tye better service in that Imployment than Mr Miller, and more conduce to the continuation of the quyet of the place, which we submit to your Lord'ps great prudent and rest

Your L'd'ps most humble Serv'ts

CRAVEN.

79. Antonio de Otermin, Report on the Pueblo Uprising in New Mexico, 1680 [Excerpt]

Introduction

Don Juan de Oñate led the Spanish expedition to colonize New Mexico, a land of scarce resources populated by pueblo-dwelling natives. In 1598 he entered the territory with several hundred colonists. His soldiers rampaged through the country plundering the natives. In January 1599, Oñate brutally suppressed a revolt by Acoma Pueblo, killing 800 men, women, and children and enslaving hundreds of captives. Oñate then led several futile expeditions in search of fabled riches. Oñate's colonists gave up and returned to Mexico, complaining of Oñate's conduct, so the governor recalled and prosecuted him. Not until 1610 did the Spanish establish a permanent settlement in New Mexico, at Santa Fe. As the colony expanded, the Spanish tried to convert the Indians to Christianity and suppress native religious practices. Although not as brutal as Oñate and his men, they earned the natives' resentment. The Spaniards were shocked in 1680 when even their converts rose up against them in a surprise attack on multiple settlements. The Pueblos killed some 400 Spaniards, burning their towns and churches. The attack drove the Spanish from New Mexico, and they did not return until 1692.

Primary Source

The time has come when, with tears in my eyes and deep sorrow in my heart, I commence to give an account of the lamentable tragedy, such as has never before happened in the world, which has occurred in this miserable kingdom and holy custodia. His divine Majesty having thus permitted it because of my grievous sins. . . .

... I received information that a plot for a general uprising of the Christian Indians was being formed and was spreading rapidly. This was wholly contrary to the existing peace and tranquility in this miserable kingdom, not only among the Spaniards and natives, but even on the part of the heathen enemy, for it had been a long time since they had done us any considerable damage. It was my misfortune that I learned of it on the eve of the day set for the beginning of the said uprising, and though I immediately, at that instant, notified the lieutenant-general on the lower river and all the other alcaldes mayores—so that they could take every care and precaution against whatever might occur, and so that they could make every effort to guard and protect the religious ministers and the temples—the cunning and cleverness of the rebels was such, and so great, that my efforts were of little avail. . . .

On Tuesday, the thirteenth of the said month, [August 13,1680] at about nine o'clock in the morning, there came in sight of us in the suburb of Analco, in the cultivated field of the hermitage of San

Miguel, and on the other side of the river from the villa, all the Indians of the Tanos and Pecos nations and the Queres of San Marcos, armed and giving war whoops. . . .

With this, seeing after a short time that they not only did not cease the pillage but were advancing toward the villa with shamelessness and mockery, I ordered all the soldiers to go out and attack them until they succeeded in dislodging them from the place. Advancing for this purpose, they joined battle, killing some at the first encounter. Finding themselves repulsed, they took shelter and fortified themselves in the said hermitage and the houses of the Mexicans, from which they defended themselves a part of the day with the firearms they had and with arrows. . . . Many of the rebels remained dead and wounded, and our men retired to the *casas reales* with one soldier killed and the *maese de campo*, Francisco Gómez, and some fourteen or fifteen soldiers wounded, to attend them and entrench and fortify ourselves as best we could.

[...]

On the next Friday, the nations of the Taos, Pecuries, Jemez, and Queres having assembled during the past night, when dawn came more than 2,500 Indians fell upon us in the villa, fortifying and intrenching themselves in all its houses and at the entrances of all the streets, and cutting off our water, which comes through the *arroyo* and the irrigation canal in front of the *casas reales*. They burned the holy temple and many houses in the villa. . . .

On the next day, Saturday, they began at dawn to press us harder and more closely with gunshots, arrows, and stones, saying to us that now we should not escape them, and that, besides their own numbers, they were expecting help from the Apaches whom they had already summoned. They fatigued us greatly on this day, because all was fighting, and above all we suffered from thirst, as we were already oppressed by it. At nightfall, because of the evident peril in which we found ourselves by their gaining the two stations where the cannon were mounted, which we had at the doors of the casas reales, aimed at the entrances of the streets, in order to bring them inside it was necessary to assemble all the forces that I had with me, because we realized that this was their [the Indians'] intention. Instantly all the said Indian rebels began a chant of victory and raised war whoops, burning all the houses of the villa, and they kept us in this position the entire night, which I assure your reverence was the most horrible that could be thought of or imagined, because the whole villa was a torch and everywhere were war chants and shouts. What grieved us most were the dreadful flames from the church and the scoffing and ridicule which the wretched and miserable Indian rebels made of the sacred things, intoning the alabado and the other prayers of the church with jeers.

Finding myself in this state, with the church and the villa burned, and with the few horses, sheep, goats, and cattle which we had with-

out feed or water for so long that many had already died, and the rest were about to do so, and with such a multitude of people, most of them children and women, so that our numbers in all came to about a thousand persons, perishing with thirst—for we had nothing to drink during these two days except what had been kept in some jars and pitchers that were in the casas reales—surrounded by such a wailing of women and children, with confusion everywhere, I determined to take the resolution of going out in the morning to fight with the enemy until dying or conquering. Considering that the best strength and armor were prayers to appease the Divine wrath, though on the preceding days the poor women had made them with such fervor, that night I charged them to do so increasingly, and told the father guardian and the other two religious to say mass for us at dawn, and exhort all alike to repentance for their sins and to conformance with the Divine will, and to absolve us from guilt and punishment. These things being done, all of us who could mounted our horses, and the rest on foot with their arquebuses, and some Indians who were in our service with their bows and arrows, and in the best order possible we directed our course toward the house of the maese de campo, Francisco Xavier, which was the place where there were the most people and where they had been most active and boldest. On coming out of the entrance to the street it was seen that there was a great number of Indians. They were attacked in force, and though they resisted the first charge bravely, finally they were put to flight, many of them being overtaken and killed. Then turning at once upon those who were in the streets leading to the convent, they also were put to flight with little resistance.... The deaths of both parties in this and the other encounters exceeded three hundred Indians.

Finding myself a little relieved by this miraculous event, though I had lost much blood from two arrow wounds which I had received in the face and from a remarkable gunshot wound in the chest on the day before, I immediately had water given to the cattle, the horses, and the people. . . .

80. Count Frontenac, Report on War with the Iroquois, November 2, 1681 [Excerpt]

Introduction

The French and the Iroquois had a long history of hostility, dating back to the 1530s, when Jacques Cartier abducted several Iroquois chiefs. During the late 1500s, the five Iroquois nations formed a confederacy that featured the most sophisticated native government in North America. The existence of New France began with

Samuel de Champlain's founding of a settlement at Quebec in 1608. In 1609 Champlain perpetuated French-Iroquois enmity when he attacked the Iroquois on the shore of present-day Lake Champlain. Over the ensuing decades, the Iroquois acquired firearms from Dutch traders and grew more powerful and numerous, extending their influence far beyond their home territory. Iroquois country lay between English New York and New France, and the Iroquois allied themselves with the English. New France and the Iroquois fought a brutal war during the 1650s and 1660s. The Comte de Frontenac served as governor of New France from 1672 to 1682 and again from 1689 to 1698. In this letter he asks the king for a greater military presence to deter the Iroquois from renewing hostilities against New France. However, war resumed in 1683 and continued until 1698. During this period England and France also went to war against one another.

Primary Source

Frontenac to the King November 2, 1681

... I have resolved to invite them (the Iroquois) to come next summer to Fort Frontenac to explain their conduct to me.

They have, Sire, become so insolent since this expedition against the Illinois, although they are of no consideration, and they are being so much strengthened in these sentiments in order to induce them to carry on the war, in the belief it will embarrass the explorations of Sieur de la Salle, that it is to be feared that they will push their boldness still further and that, after having seen that we give no support to our allies, will attribute it to a weakness which will give birth to the desire to come to attack us.

[...]

I pray you very humbly, to consider that for ten years I alone have kept these Indians in a spirit of obedience, of quiet, and of peace, by a little skill and tact—it is difficult, when one is deprived of everything, to do more, or to anticipate things which could easily be prevented if one had a little help; to consider that the Indians are becoming inured to all I can say to them to hold them in allegiance; and that all these journeys which they see me make almost every to Fort Frontenac, no longer give them the same cause of amazement as they did at the beginning.

$[\ldots]$

Five or six hundred regular soldiers would soon dispel all these various ideas and it would be necessary only to show them and to march them through their lakes, without any other hostile act, to ensure peace for ten years.

81. Anne Bradstreet, A Dialogue between Old England and New, Concerning their Present Troubles, 1642

Introduction

King Charles I granted the Massachusetts Bay Company a charter for a New England colony in 1629. The following year saw a mass migration of English Puritans to the newly-established Massachusetts Bay Colony. Among them was the 18-year-old Anne Bradstreet and her extended family. Born in England around 1612, Anne Dudley married Simon Bradstreet at the age of 16. Mrs. Bradstreet was a devout Puritan, a mother of eight, and one of colonial America's earliest and most prolific English-language poets. Her poems were first published in 1650 when her brother-in-law took copies of them to England. She wrote on both religious and personal subjects. This poem concerns the beginning of the English Civil War in 1642. In it Bradstreet expresses her scorn for Catholicism, or "dark Popery." The English Civil War ended with the overthrow and execution of King Charles I in 1649. Suspicion that Charles was moving the Church of England in the direction of Catholicism had contributed to his unpopularity. After his execution, Parliament ruled England as a Puritan Commonwealth under the leadership of Oliver Cromwell and worked to reform the Church of England. Puritandominated Massachusetts rejoiced in the establishment of the Commonwealth, which persisted until 1660, when Charles II regained his late father's throne.

NEW ENGLAND.

Alas, dear mother, fairest queen and best,
With honour, wealth, and peace happy and blest,
What ails thee hang thy head, and cross thine arms,?
And sit i'th dust, to sigh these sad alarms?
What deluge of new woes thus overwhelm
The glories of thy ever famous realm?
What means this wailing tone, this mournful guise?
Ah, tell thy daughter, she may sympathize.

OLD ENGLAND.

Art ignorant indeed of these my woes?
Or must my forced tongue these griefs disclose?
And must myself dissect my tattered state,
Which 'mazed Christendom stands wondering at?
And thou a child, a limb, and dost not feel
My fainting, weakened body now to reel?
This physick purging potion, I have taken,
Will bring consumption or an ague quaking,

1036 81. Anne Bradstreet, A Dialogue between Old England and New, Concerning their Present Troubles

Unless some cordial thou fetch from high, Which present help may ease my malady. If I decease, dost think thou shalt survive? Or by my wasting state dost think to thrive? Then weigh our case, if't be not justly sad, Let me lament alone, while thou art glad.

NEW ENGLAND.

And thus (alas) your state you much deplore In general terms, but will not say wherefore: What medicine shall I seek to cure this woe, If the wound so dangerous I may not know. But you, perhaps, would have me guess it out: What, hath some Hengist like that Saxon stout By fraud or force usurp'd thy flowering crown, Or by tempestuous wars thy fields trod down? Or hath Canutus, that brave valiant Dane, The regal peaceful sceptre from thee ta'en? Or is't a Norman, whose victorious hand With English blood bedews thy conquered land? Or is't intestine wars that thus offend? Do Maud and Stephen for the crown contend? Do barons rise and side against their king, And call in foreign aid to help the thing? Must Edward be depos'd? or is it the hour That second Richard must be clapped i'th' tower? Or is't the fatal jarr, again begun, That from the red-white pricking roses sprung? Must Richmond's aid, the nobles now implore To come and break the tushes of the boar, If none of these, dear mother, what's your woe? Pray, do you fear Spain's bragging Armado? Doth your ally, fair France, conspire your wreck, Or do the Scots play false, behind your back? Doth Holland quit you ill for all your love? Whence is the storm from earth or heaven above? Is't drought, is't famine, or is't pestilence? Dost feel the smart, or fear the consequence? Your humble child intreats you show your grief. Though arms nor purse she hath for your relief, Such is her poverty: yet shall be found A suppliant for your help, as she is bound.

OLD ENGLAND.

I must confess some of those sores you name My beauteous body at this present maim; But foreign foe nor feigned friend I fear, For they have work enough (thou knowest) elsewhere. Nor is it Alcie's son, nor Henry's daughter; Whose proud contentions cause this slaughter;

Nor nobles siding, to make John no king, French Jews unjustly to the crown to bring; No Edward, Richard, to lose rule and life, Nor no Lancastrians to renew old strife; No Duke of York nor Earl of March to soile Their hands in kindreds blood whom they did foil; No crafty tyrant now usurps the Seat Who nephews slew that so he might be great; No need of Tudor roses to unite; None knows which is the red or which the white; Spain's braving fleet a second time is sunk, France knows how oft my fury she hath drunk. By Edward Third and Henry Fifth of fame; Her lilies in my arms avouch the same. My sister Scotland hurts me now no more, Though she hath been injurious heretofore; What Holland is I am in some suspense, But trust not much unto his excellence. For wants, sure some I feel, but more I fear, And for the pestilence, who knows how near; Famine and plague, two sisters of the sword, Destruction to a land doth soon afford: They're for my punishment ordain'd on high, Unless our tears prevent it speedily. But yet I answer not what you demand, To show the grievance of my troubled land; Before I tell the effect, I'll show the cause, Which are my sins the breach of sacred laws, Idolatry, supplanter of a nation, With foolish superstitious adoration, Are lik'd and countenanc'd by men of might, The gospel trodden down and hath no right: Church offices were sold and bought for gain, That Pope had hope to find Rome here again, For oaths and blasphemies did ever ear From Beelzebub himself such language hear; What scorning of the saints of the most high? What injuries did daily on them lie? What false reports, what nicknames did they take Not for their own, but for their Master's sake! And thou, poor soul, wert jeer'd among the rest; Thy flying for the truth was made a jest. For Sabbath-breaking and for drunkenness Did ever land profaneness more express? From crying blood yet cleansed am not I, Martyrs and others dying causelessly. How many princely heads on blocks laid down For naught but title to a fading crown? 'Mongst all the cruelties by great ones done, O Edward's youths, and Clarence hapless son, O Jane, why didst thou die in flowering prime? Because of royal stem, that was thy crime.

For bribery, adultery, and lyes, Where is the nation I can't parallize, With usury, extortion, and oppression, These be the Hydras of my stout transgression; These be the bitter fountains, heads, and roots, Whence flow'd the source, the sprigs, the boughs, and fruits. Of more than thou canst hear or I relate, That with high hand I still did perpetrate. For these were threatened the wofull day. I mockt the preachers, put it far away; The sermons yet upon record do stand That cry'd destruction to my wicked land. I then believ'd not, now I feel and see The plague of stubborn incredulity. Some lost their livings, some in prison pent, Some, fin'd, from house and friends to exile went. Their silent tongues to heaven did vengeance cry, Who saw their wrongs, and hath judg'd righteously, And will repay it sevenfold in my lap: This is forerunner of my afterclap. Nor took I warning by my neighbour's falls: I saw sad Germany's dismantled walls, I saw her people famished, nobles slain, Her fruitful land a barren heath remain. I saw, unmov'd, her armies foiled and fled, Wives forced, babes tossed, her houses calcined. I saw strong Rochel yielded to her foe, Thousands of starved Christians, there also. I saw poor Ireland bleeding out her last, Such cruelties as all reports have passed; Mine heart obdurate stood not yet aghast. Now sip I of that cup, and just it may be The bottom dregs reserved are for me.

NEW ENGLAND.

To all you've said, sad mother, I assent,
Your fearful sins great cause there's to lament.
My guilty hands in part hold up with you,
A sharer in your punishment's my due.
But all you say amounts to this effect,
Not what you feel, but what you do expect,
Pray, in plain terms, what is your present grief?
Then let's join heads and hearts for your relief.

OLD ENGLAND.

Well, to the matter, then. There's grown of late 'Twixt king and peers a question of state, Which is the chief, the law, or else the king: One said, it's he; the other, no such thing. 'Tis said my better part in parliament

To ease my groaning land showed their intent, To crush the proud, and right to each man deal, To help the church, and stay the commonweal. So many obstacles came in their way, As puts me to a stand what I should say; Old customs new prerogatives stood on; Had they not held law fast, all had been gone, Which by their prudence stood them in such stead They took high Strafford lower by the head. And to their Laud be it spoke, they held in the tower All England's metropolitan that hour; This done, an act they would have passed fain No prelate should his bishoprick retain; Here tugged they hard (indeed) for all men saw This must be done by gospel not by law. Next the militia they urged sore, This was deny'd, (I need not say wherefore) The king, displeased, at York himself absents. They humbly beg his return, show their intents; The writing, printing, posting to and fro, Show all was done, I'll therefore let it go. But now I come to speak of my disaster. Contention grown 'twixt subjects and their master; They worded it so long, they fell to blows, That thousands lay on heaps, here bleed my woes, I that no wars so many years have known, Am now destroy'd and slaughter'd by my own. But could the field alone this strife decide? One battle, two, or three I might abide: But these may be beginnings of more woe; Who knows but this may be my overthrow. Oh, pity me in this sad perturbation, My plundered towns, my houses devastation, My weeping virgins, and my young men slain, My wealthy trading fallen, my dearth of grain. The seed-times come, but ploughman hath no hope Because he knows not who shall in his crop: The poor they want their pay, their children bread, Their woful mothers' tears unpitied, If any pity in thy heart remain, Or any child-like love thou dost retain, For my relief, do what there lies in thee, And recompense that good I've done to thee.

NEW ENGLAND.

Dear mother, cease complaints, and wipe your eyes, Shake off your dust, cheer up, and now arise; You are my mother nurse, and I, your flesh, Your sunken bowels gladly would refresh: Your griefs I pity, but soon hope to see, Out of your troubles much good fruit to be; To see those latter days of hop'd-for good, Though now beclouded all with tears and blood: After dark Popery the day did clear; But now the sun in his brightness shall appear. Blest be the nobles of thy noble land, With ventured lives for truth's defence that stand. Blest be thy Commons, who for common good, And thy infringed laws have boldly stood. Blest be thy counties, who did aid thee still With hearts and states to testify their will. Blest be thy preachers, who do cheer thee on; Oh, cry the sword of God and Gideon; And shall I not on them wish Mero's curse That help thee not with prayers, arms and purse? And for myself let miseries abound, If mindless of thy state I e'er be found. These are the days the church's foes to crush, To root out Popeling's head, tail, branch, and rush; Let's bring Baal's vestments forth to make a fire, Their mitres, surplices, and all their attire, Copes, rochets, crossiers, and such empty trash, And let their names consume, but let the flash Light Christendom, and all the world to see We hate Rome's whore, with all her trumpery. Go on, brave Essex, with a loyal heart, Not false to king, nor to the better part; But those that hurt his people and his crown, As duty binds expel and tread them down. And ye brave nobles, chase away all fear, And to this hopeful cause closely adhere; O mother, can you weep, and have such peers? When they are gone, then drown yourself in tears, If now you weep so much, that then no more The briny ocean will o'erflow your shore. These, these are they, I trust, with Charles our King, Out of all mists such glorious days shall bring, That dazzled eyes, beholding, much shall wonder At that thy settled peace, thy wealth, and splendor, Thy church and weal established in such manner, That all shall joy that thou display'dst thy banner; And discipline erected so, I trust, That nursing kings shall come and lick thy dust: Then justice shall in all thy courts take place, Without respect of person or of case; Then bribes shall cease, and suits shall not stick long, Patience and purse of clients oft to wrong; Then high commissions shall fall to decay, And pursuivants and catchpoles want their pay. So shall thy happy nation ever flourish, When truth and righteousness they thus shall nourish. When thus in peace, thine armies brave send out To sack proud Rome, and all her vassals rout;

There let thy name, thy fame, and glory shine, As did thine ancestors in Palestine, And let her spoils full pay with interest be Of what unjustly once she poll'd from thee. Of all the woes thou canst let her be sped, And on her pour the vengeance threatened; Bring forth the beast that ruled the world with his beck, And tear his flesh, and set your feet on's neck, And make his filthy den so desolate, To the astonishment of all that knew his state: This done, with brandished swords to Turkey go, For then what is it but English blades dare do? And lay her waste for so's the sacred doom, And do to Gog as thou hast done to Rome. O Abraham's seed, lift up your heads on high, For sure the day of your Redemption's nigh; The scales shall fall from your long blinded eyes, And him you shall adore who now despise. Then fulness of the nations in shall flow, And Jew and Gentile to one worship go; Then follow days of happiness and rest. Whose lot doth fall to live therein is blest. No Canaanite shall then be found in the land, And holiness on horses bells shall stand. If this make way thereto, then sigh no more, But if at all thou didst not see it before. Farewell, dear mother; rightest cause prevail, And in a while you'll tell another tale.

82. John Barbot, "A Description of the Coasts of North and South Guinea," 1682 [Excerpt]

Introduction

As an agent for the French Royal African Company, John Barbot made at least two voyages to the west coast of Africa, one in 1678 and the other in 1682. In this excerpt below, published as "A Description of the Coasts of North and South Guinea" in 1732, he describes the effects of slavery on the region, which supplied most of Africa's slaves throughout the 17th and 18th centuries. Barbot details the extent to which West Africans had long participated in slavery and the slave trade. This they did by enslaving and selling their enemies, sentencing offenders to slavery, and even selling themselves for food in times of famine. He also argues that slaves were so ill-treated in Africa that they were better off being transported to America. Thus did Europeans, and later, Americans attempt to justify slavery. By the late 1600s, indentured servitude had become less economically

viable in England's southern American colonies, and slavery began taking its place as a source of labor. Trading ships from America regularly sailed to the West African coast to buy slaves.

Primary Source

John Barbot, an agent for the French Royal African Company, made at least two voyages to the West Coast of Africa, in 1678 and 1682.

Those sold by the Blacks are for the most part prisoners of war, taken either in fight, or pursuit, or in the incursions they make into their enemies territories; others stolen away by their own countrymen; and some there are, who will sell their own children, kindred, or neighbours. This has been often seen, and to compass it, they desire the person they intend to sell, to help them in carrying something to the factory by way of trade, and when there, the person so deluded, not understanding the language, is old and deliver'd up as a slave, notwithstanding all his resistance, and exclaiming against the treachery. . . .

The kings are so absolute, that upon any slight pretense of offences committed by their subjects, they order them to be sold for slaves, without regard to rank, or possession....

Abundance of little Blacks of both sexes are also stolen away by their neighbours, when found abroad on the roads, or in the woods; or else in the Cougans, or corn-fields, at the time of the year, when their parents keep them there all day, to scare away the devouring small birds, that come to feed on the millet, in swarms, as has been said above.

In times of dearth and famine, abundance of those people will sell themselves, for a maintenance, and to prevent starving. When I first arriv'd at Goerree, in December, 1681, I could have bought a great number, at very easy rates, if I could have found provisions to subsist them; so great was the dearth then, in that part of Nigritia.

To conclude, some slaves are also brought to these Blacks, from very remote inland countries, by way of trade, and sold for things of very inconsiderable value; but these slaves are generally poor and weak, by reason of the barbarous usage they have had in traveling so far, being continually beaten, and almost famish'd; so inhuman are the Blacks to one another....

The trade of slaves is in a more peculiar manner the business of kings, rich men, and prime merchants, exclusive of the inferior sort of Blacks.

These slaves are severely and barbarously treated by their masters, who subsist them poorly, and beat them inhumanly, as may be seen by the scabs and wounds on the bodies of many of them when sold to us. They scarce allow them the least rag to cover their nakedness, which they also take off from them when sold to Europeans; and they always go bare-headed. The wives and children of slaves, are also slaves to the master under whom they are married; and when dead, they never bury them, but cast out the bodies into some by place, to be devoured by birds, or beasts of prey.

This barbarous usage of those unfortunate wretches, makes it appear, that the fate of such as are bought and transported from the

coast to America, or other parts of the world, by Europeans, is less deplorable, than that of those who end their days in their native country; for aboard ships all possible care is taken to preserve and subsist them for the interest of the owners, and when sold in America, the same motive ought to prevail with their masters to use them well, that they may live the longer, and do them more service. Not to mention the inestimable advantage they may reap, of becoming christians, and saving their souls, if they make a true use of their condition. . . .

Many of those slaves we transport from Guinea to America are prepossessed with the opinion, that they are carried like sheep to the slaughter, and that the Europeans are fond of their flesh; which notion so far prevails with some, as to make them fall into a deep melancholy and despair, and to refuse all sustenance, tho' never so much compelled and even beaten to oblige them to take some nourishment: notwithstanding all which, they will starve to death; whereof I have had several instances in my own slaves both aboard and at Guadalupe. And tho' I must say I am naturally compassionate, yet have I been necessitated sometimes to cause the teeth of those wretches to be broken, because they would not open their mouths, or be prevailed upon by any entreaties to feed themselves; and thus have forced some sustenance into their throats....

As the slaves come down to Fida from the inland country, they are put into a booth, or prison, built for that purpose, near the beach, all of them together; and when the Europeans are to receive them, every part of every one of them, to the smallest member, men and women being all stark naked. Such as are allowed good and sound, are set on one side, and the others by themselves; which slaves so rejected are there called Mackrons, being above thirty five years of age, or defective in their limbs, eyes or teeth; or grown grey, or that have the venereal disease, or any other imperfection. These being set aside, each of the others, which have passed as good, is marked on the breast, with a red- hot iron, imprinting the mark of the French, English, or Dutch companies, that so each nation may distinguish their own, and to prevent their being chang'd by the natives for worse, as they are apt enough to do. In this particular, care is taken that the women, as tenderest, be not burnt too hard.

The branded slaves, after this, are returned to their former booth, where the factor is to subsist them at his own charge, which amounts to about two-pence a day for each of them, with bread and water, which is all their allowance. There they continue sometimes ten or fifteen days, till the sea is still enough to send them aboard; for very often it continues too boisterous for so long a time, unless in January, February and March, which is commonly the calmest season: and when it is so, the slaves are carried off by parcels, in barcanoes, and put aboard the ships in the road. Before they enter the canoes, or come out of the booth, their former Black masters strip them of every rag they have, without distinction of men or women; to supply which, in orderly ships, each of them as they come aboard is allowed a piece of canvas, to wrap around their waist, which is very acceptable to those poor wretches. . . .

If there happens to be no stock of slaves at Fida, the factor must trust the Blacks with his goods, to the value of a hundred and fifty, or two hundred slaves; which goods they carry up into the inland, to buy slaves, at all the markets, for above two hundred leagues up the country, where they are kept like cattle in Europe; the slaves sold there being generally prisoners of war, taken from their enemies, like other booty, and perhaps some few sold by their own countrymen, in extreme want, or upon a famine; as also some as a punishment of heinous crimes: tho' many Europeans believe that parents sell their own children, men their wives and relations, which, if it ever happens, is so seldom, that it cannot justly be charged upon a whole nation, as a custom and common practice. . . .

One thing is to be taken notice of by sea-faring men, that this Fida and Ardra slaves are of all the others, the most apt to revolt aboard ships, by a conspiracy carried on amongst themselves; especially such as are brought down to Fida, from very remote inland countries, who easily draw others into their plot: for being used to see men's flesh eaten in their own country, and publick markets held for the purpose, they are very full of the notion, that we buy and transport them to the same purpose; and will therefore watch all opportunities to deliver themselves, by assaulting a ship's crew, and murdering them all, if possible: whereof, we have almost every year some instances, in one European ship or other, that is filled with slaves.

83. William Penn, Pennsylvania Charter of Liberties and Pennsylvania Frame of Government, 1682 [Excerpt]

Introduction

William Penn (1644–1701) joined the Society of Friends at the age of 22. He was expelled from Oxford for his religious disobedience and jailed several times for seeking converts to his faith. Penn's father, meanwhile, had a close friendship with England's royal family and had loaned the king a large sum of money. When William Penn wanted to found a colony in America, Charles II repaid his debt to the family by granting him about 45,000 square miles of land, and a charter to colonize it, in 1681. The next year, Penn published the documents excerpted here to serve as the foundation of government in Pennsylvania. The Charter of Liberties specified the structure and operation of the colonial government. The Frame of Government guaranteed broad political participation, prohibited taxation except according to law, provided for bail and trial by jury, and protected religious freedom for all who believed in God. It also prohibited stage plays, cards, and cockfighting. Although the documents were never officially affirmed, residents regarded them as law. With these documents, Penn introduced ideas of representative government and religious tolerance into the New World. Not until the United States passed the Bill of Rights in 1791 did religious freedom become law throughout the country.

"IMPRIMIS"—THAT the Government of this Province shall according to the Powers of the Patent consist of the Governour and ffreemen of the said Province in the fform of a Provincial Council and General Assembly by whom all Laws Shall be made Officers Chosen and publick affairs Transacted and is hereafter Respectively declared That is to say

- 2. THAT the ffreemen of the said Province shall on the Twentieth day of the Twelfth Month which shall be in this present year One Thousand Six hundred Eighty and two Meet and Assemble in some fit place of which timely notice shall be beforehand given by the Governour or his deputies and then and there shall chuse of themselvs Seventy-Two persons of most note for their Wisdom Virtue and Ability who shall meet on the Tenth day of the ffirst month next ensuing and always be called and act as the Provincial Councill of the said province.
- 3. THAT at the ffirst Choice of such Provincial Council One Third part of the said Provincial Council shall be Chosen to serve for Three years then next ensuing one Third part for Two years then next ensuing and one Third part for one year then next following such Election and no longer and that the said Third part shall go out accordingly ANDon the Twentieth day of the Twelfth month aforesaid yearly forever afterward the ffreemen of the said province shall in like manner Meet and Assemble together and then Chuse Twenty ffour persons being one Third of the said Number to serve in provincial Council for Three years it being intended that one Third of the whole provincial Council (always consisting and to consist of seventy two persons as aforesaid) falling off yearly it shall be yearly supplied by such new yearly Eleccons as aforesaid and that no one person shall continue therein longer than Three years And in Case any member shall decease before the Last Eleccon during his time that then at the next Eleccon ensuing his decease another shall be chosen to Supply his place for the remaining time he was to have served and no longer.
- 4. THAT—After the first Seven years every one of the said Third parts that goeth yearly off shall be uncapable of being Chosen again for one whole year following that so all may be fitted for the Government and have Experience of the Care and burthen of it.
- 5. THAT—In the provincial Council in all Cases and matters of moment as There agreeing upon Bills to be passed into Laws Exorting Courts of Justice having Judgment upon criminals Impeached and choice of Officers in such manner as is herein after menconed Not lesse than Two Thirds-of the whole Provincial Council shall make a Quorum and that the Consent and approbation of Two Thirds of said Quorum shall be had in all such Cases or matters of Moment. And moreover that in all cases and matters of lesser moment Twenty-ffour members of the said Provincial Council shall

make a quorum The Majority of which ffour and Twenty shall and may always determine on such Cases and Causes of Lesser moment.

6. THAT—In this Provincial Council the Governour or his deputies shall or may always preside and have a treble Voice. And the said Provincial Council shall always Continue and Sit upon its own Adjournments and Committees.

7. THAT—The Governour and Provincial Council shall prepare and propose to the General Assembly hereinafter menconed all Bills which they shall at any time think fit to be past into Laws within the said Province which Bills shall be publisht and Affixed to the most noted places in the inhabited parts thereof Thirty days before the meeting of the General Assembly in order to the passing of them into laws or Rejecting of them as the General Assembly shall see meet.

8. THAT—The Governour and Provincial Council shall take Care that all Laws Statutes and Ordinances which shall at any time be made within the said Province be duly and diligently executed.

9. THAT—The Governour and Provincial Council shall at all times have the Care of the peace and Safety of the Province and that nothing be by any person Attempted to the subversion of this fframe of Government.

10. THAT—The Governour and Provincial Council shall at alltimes settle and order the Situation of all Cities ports and Market towns in every County modelling therein all publick buildings Streets and Market places and shall appoint all necessary roads and highways in the province.

11. THAT—The Governour and Provincial Council shall at all times have power to inspect the management of the public Treasury and punish those who shall Convert any part thereof to any other use than what hath been Agreed upon by the Governour Provincial Council and General Assembly.

12. THAT—The Governour and Provincial Council shall Erect and order all publick Schools and incourage and Reward the Authors of usefull Science and Laudable Inventons in the said province.

13. THAT—For the better management of the powers and Trust aforesaid the Provincial Council shall from time to time divide itself into ffour Distinct and proper Committees for the more Easie Administration of the Affairs of the province which divides the Seventy Two into ffour Eighteens Every one of which Eighteens shall consist of Six out of each of the Three Orders or yearly Eleccons—Each of which shall have a distinct portion of business as followeth A Committee of plantatons to situate and settle cities ports and Market-towns and -highways and to hear and decide all Suits and Controversies relating to Plantatons. A Committee of Justice and Safety to secure the peace of the province and punish the Male Adminis-

tration of those who subvert Justice to the prejudice of the publick and private Interest. A Committee of Trade and Treasury who Shall Regulate all Trade and Commerce according to Laws encourage Manufacture and Country-growth and defray the publick Charge of the province. And a Committee of manners Education and Arts that all Wicked and scandalous Living may be prevented and that Youth may be successively trained up in Virtue and useful Knowlledge and Arts. The Quorum of each of which Committees being six that is Two out of each of the three orders or yearly eleccons as aforesaid make a Constant or Standing Council of flour and Twenty which shall have the power of the Provincial Council being the Quorum of it in all Cases not excepted in the fifth Article. And in the said committees and standing Council of the Province the Governour or his deputy shall or may preside as aforesaid. And in the Absence of the Governour or his deputy if no one is by either of them appointed the said Committees or Council shall appoint a President for that time and not otherwise and what shall be Resolved at such Committees shall be reported to the said Council of the Province and shall be by them resolved and confirmed before the same shall be put in Execution And that these Respective Committees shall not sit at one and the same time except in Cases of necessity.

14. AND TO THE End that all Laws prepared by the Governour and Provincial Council aforesaid may yet have the more full Concurrence of the ffreemen of the Province It is declared granted and confirmed that at the time and place or places for the Choice of a Provincial Council as aforesaid the said FREEMEN shall yearly chuse to serve in a General Assembly as their representatives not exceeding Two hundred persons who shall yearly meet on the Twentieth day of the Second Month in the Capital Town or City of the said province where during Eight days the several members may freely confer with one another and if any of them see meet with a Committee of the Provincial Council consisting of Three out of each of the four Committees aforesaid being Twelve in all which shall be at that time purposely appointed to secuir from any of them proposals for the Alteration or Amendment of any of the said proposed and promulgated Bills and on the ninth day from their meeting the said General Assembly after the reading over of the proposed Bills by the Clerk of the Provincial Council and the occasion and motives for them being opened by the Governour or his Deputy shall give their Affirmative or Negative which to them seemeth best in such mamner as hereafter is exprest. But not less than two thirds shall make a Quorum in the passing of Laws and Choice of such Officers as are by them to be chosen.

15. THAT—The Laws so prepared and proposed as aforesaid that are Assented to by the General Assembly shall be Enrolled as Laws of the province with this stile by the Governour with the Assent and Approbation of the ffreemen in Provincial Council and General Assembly.

16. THAT—For the better Establishment of the Government and Laws of this province and to the end there may be an Universal Sat-

isfaction in the laying of the fundamentals thereof the General Assembly shall or may for the ffirst year consist of all the ffreemen of and in the said province and ever after it shall be yearly chosen as aforesaid. Which number of Two hundred shall be enlarged as the Country shall Increase in people So as it do not exceed ffive hundred at any time The Appointment and proportoning of which as also the laying and methodizing of the choice of the Provincial Council and General Assembly in future times most equally to the Division of the Hundreds and Counties which the Country shall hereafter be divided into shall be in the power of the Provincial Council to propose and the General Assembly to resolve.

17. THAT The Governour and the Provincial Council shall from time to time erect Standing Courts of Justice in such places and number as they shall Judge Convenient for the good Government of the said province And that the Provincial Council shall on the Thirteenth day of the First month yearly Elect and present to the Governour or his Deputy a double number of persons to serve for Judges Treasurers Masters of the Rolls within the said province for the year next ensuing. AND the freemen of the said province in their County Courts when they shall be erected and till then in the General Assembly shall on the Three and Twentieth day of the Second Month yearly Elect and present to the Governour or his Deputy a double number of persons to serve for Sheriffs Justices of peace and Coronors for the year next ensuing Out of which respective Eleccons and presentments the Governour or his Deputy shall nominate and Commissionate the proper number for each office the Third day after the said respective presentments or else the first named in such presentment for each office shall stand and serve for that office the year ensuing.

18. BUT for as much as the present Condition of the Province requires some Immediate Setlement and admitts not of so quick a Revolution of Officers and to the end the said Province may with all Convenient speed be well ordered and settled I William Penn do therefore think fit to nominate and appoint Such persons for Judges Treasurers Masters of Rolls Sheriffs Justices of the peace and Coronors as are most fitly qualified for those imployments To whom I shall make and grant Commissions for the said Offices respectively TO HOLD to them to whom the same shall be granted for so long time as every such person shall well behave himself in the Office or place to him respectively granted and no longer And upon the Decease or displacing of any of the said Officers the Succeeding Officer or Officers shall be chosen as before said.

19. That the General Assembly shall continue so long as may be needful to Impeach Criminals fit to be there Impeached To pass Bills into Laws that they shall think fit to pass into Laws and till such time as the Governour and Provincial Council shall declare that they have nothing further to propose unto them for their Assent and Approbation And that Declaration shall be a Dismiss to the General Assembly for that time Which General Assembly shall be notwith-

standing Capable of Assemblying together upon the summons of the Provincial Council at any time during that year if the said Provincial Council shall see occasion for their so Assembling.

20. THAT—All the Eleccons of Members or Representatives of the people to serve in Provincial Council and General Assembly, and all Questions to be determined by both or either of them that relate to passing of bills into Laws to the choice of Officers to Impeachments made by the General Assembly and Judgment of Criminals upon such Impeachment by the Provincial Council and to all other Cases by them respectively Judged of Importance Shall be resolved and determined by the BALLOTT And unless on suddain and Indispensable Occasions no business in Provincial Council or its respective Committees shall be finally determined the same day that it is moved.

21. AND THAT at all times when and so often as it shall happen that the Governour shall or may be an Infant under the Age of one and Twenty years and no Guardians or Commissioners are appointed in Writing by the ffather of said Infant or that Such Guardians or Commissioners shall be deceased that during such Minority the Provincial Council shall from time to time as they shall see meet Constitute and Appoint Guardians and Commissions not exceeding Three One of which Three shall preside as Deputy and Chief Guardian during such Minority and shall have and Execute with the consent of the other Two all the powers of a Governour in all publick Affairs and Concerns of the said province.

22. THAT—as often as any day of the month mentoned in any Article of this Charter shall fall on the First day of the Week commonly called the Lord's day the Business appointed for that day shall be differred till the next day unless in Case of Emergency.

23. THAT—no act Law or Ordinance whatsoever shall at any time hereafter be made or done by the Governour of this Province his heirs or Assigns or by the ffreemen in the Provincial Council or the General Assembly to Alter Change or Diminish the fform or Effect of this Charter or any part or Clause thereof or contrary to the true Intent and meaning thereof without the Consent of the Governour his heirs or Assigns and six parts of seven of the said ffreemen in Provincial Council and General Assembly.

24. AND LASTLY THAT I the said William Penn for myself my heirs and Assigns have Solemnly declared granted and confirmed and do hereby solemnly declare grant and confirm that neither I my heirs nor Assigns shall procure or do anything or things whereby the Liberties in this Charter contained and expressed shall be Infringed or broken And if anything be procured by any person or persons contrary to these premises it shall be held of no force or Effect. IN WITNESS whereof I the said William Penn have unto this present Charter of Liberties Set my hand and Broad Seal this ffive and Twentieth day of the Second Month vulgarly called April in the year of our Lord One Thousand Six Hundred Eighty and Two.

84. New York Charter of Liberties and Privileges, 1683

Introduction

The Dutch surrendered New Netherland to the English in 1664, and the Duke of York—the future King James II—received a charter for the colony of New York. The colony's first governor, Richard Nicholls, did not allow the colony to have an elected legislature because he feared that too many Dutch colonists would win seats. The next governor, the corrupt Sir Edmund Andros, alienated the populace. Responding to the colonists' complaints, the king recalled Andros and granted New York the right to elect a legislature. New York's first colonial assembly, which had both Dutch and English members, began meeting in 1683. The assembly quickly passed the Charter of Liberties and Privileges, granting equal rights to colonists of both nationalities. This document offered protection for freedom of assembly, recognized the right of women to hold property, and ensured that all colonists had the right to jury trials. Many of these rights were later enshrined in the U.S. Bill of Rights. However, King James II viewed the Charter of Liberties as a dangerous document that gave the assembly too much power. He refused to approve it, and in 1686 revoked it and disbanded the New York assembly. He forced New York into the Dominion of New England, governed by Andros.

Primary Source

FOR The better Establishing the Government of this province of New Yorke and that Justice and Right may be Equally done to all persons within the same

BEE It Enacted by the Governour Councell and Representatives now in Generall Assembly mett and assembled and by the authority of the same.

85. William Penn, A Further Account of the Province of Pennsylvania, 1685 [Excerpt]

Introduction

William Penn (1644-1701) joined the Society of Friends at the age of 22. He was expelled from Oxford for his religious disobedience and jailed several times for seeking converts to his faith. Penn's father, meanwhile, had a close friendship with England's royal family and had loaned the king a large sum of money. When William Penn wished to found a colony in America, Charles II repaid his debt to the family by granting him about 45,000 square miles of land, and a charter to colonize it, in 1681. Penn established a representative government for Pennsylvania, guaranteed religious liberty to Quakers and people of other faiths, and insisted that the Indians be treated fairly. Penn visited his colony only twice, from 1682 to 1684, and from 1699 to 1701. He returned to England in 1684 to defend his interests against Lord Baltimore, who claimed that Pennsylvania's three Lower Counties (present-day Delaware) rightfully belonged to Maryland. Penn's family connections influenced King James II to rule in his favor. Once his claim to the area was reaffirmed, Penn published this favorable account of his colony to encourage people to settle there. He highlights the economic opportunity, the guarantee of religious liberty, and friendly relations with the Indians, and states his own intention to settle with his family in Pennsylvania.

Primary Source

It has, I know, been much expected from me that I should give some farther Narrative of those parts of America where I am chiefly interested, and have lately been; having continued there above a Year after my former Relation, and receiving since my return the freshest and fullest Advices of its Progress and Improvement. But as the reason of my coming back was a Difference between the Lord Baltimore and myself, about the Lands of Delaware, in consequence reputed of mighty moment to us, so I wav'd publishing anything that might look in favor of the Country, or inviting to it, whilst it lay under the Discouragement and Disreputation of that Lord's claim and pretences.

But since they are, after many fair and full hearings before the Lords of the Committee for Plantations justly and happily Dismist, and the things agreed; and that the Letters which daily press me from all Parts on the subject of America, are so many and voluminous that to answer them severally were a Task too heavy and repeated to perform, I have thought it most easie to the Enquirer, as well as myself, to make this Account Publick, lest my silence or a more private intimations of things, should disablige the just inclinations of any to America, and at a time too when an extraordinary Providence seems to favour its Plantation and open a door to Europeans to pass thither.

Of the Natives.

1. Because many Stories have been prejudicially propagated, as if we were upon ill terms with the Natives, and sometimes, like Jobs Kindred, all cut off but the Messenger that brought the Tidings; I think it requisite to say thus much, that as there never was any such Messenger, so the dead People were alive, at our last advices; so far are we from ill terms with the Natives, that we have liv'd in great friendship. I have made seven Purchasses, and in Pay and Presents they have received at least twelve hundred pounds of me. Our humanity has obliged them so far, that they generally leave their guns at home, when they come to our settlements; they offer us no affront, not so much as to one of our Dogs; and if any of them break our Laws, they submit to be punisht by them: and to this they have tyed themselves by an obligation under their hands. We leave not the least indignity to them unrebukt, nor wrong unsatisfied. Justice gains and aws them. They have some Great Men amongst them, I mean for Wisdom, Truth and Justice. I refer to my former Account about their Laws Manners and Religious Rites.

Of the Government.

The Government is according to the words of the Grant, as near to the English as conveniently may be: In the whole, we aim at Duty to the King, the Preservation of Right to all, the suppression of Vice, and encouragement of Vertue and Arts; with Liberty to all People to worship Almighty God, according to their Faith and Perswasion.

Of the Seasons of Going, and usual time of Passage.

$[\ldots]$

And because some has urged my coming back, as an argument against the place, and the probability of its improvement; Adding, that I would for that reason never return; I think fit to say, That Next Summer, God willing, I intend to go back, and carry my Family, and the best part of my Personal Estate with me. And this I do, not only of Duty, but Inclination and Choice. God will Bless and Prosper poor America.

86. Edward Randolph, *The Causes* and Results of King Philip's War, 1676 [Excerpt]

Introduction

In 1676, King Charles II sent Edward Randolph to New England to investigate the level of compliance with English trade laws and navigation acts. Randolph reported widespread violations and painted an exaggerated picture of a colony prospering at England's expense. He also reported his view of King Philip's War (1675–1676). Already biased against the colonists, Randolph laid on them much of the blame for the war. Randolph's series of unfavorable reports influenced the king to cancel the Massachusetts Bay Colony's charter in 1684. In 1686, King James II merged the New England colonies, plus New York and New Jersey, into the Dominion of New England and appointed Sir Edmund Andros governor. In 1689, as word arrived of the unpopular king's loss of the throne, Massachusetts citizens arrested Governor Andros along with Randolph and resumed control of the colony. They appealed to the new king, William III, to restore their charter. Rather than return the original charter to the Puritans, in 1691 the king instead merged Plymouth Colony and Massachusetts Bay Colony into one royal colony called Massachusetts Bay.

Primary Source

Eighth Enquiry. What hath been the original cause of the present warre with the natives. What are the advantages or disadvantages arising thereby and will probably be the End?

Various are the reports and conjectures of the causes of the present Indian warre. Some impute it to an imprudent zeal in the magistrates of Boston to christianize those heathen before they were civilized and injoyning them the strict observation of their lawes, which, to a people so rude and licentious, hath proved even intollerable, and that the more, for that while the magistrates, for their profit, put the lawes severely in execution against the Indians, the people, on the other side, for lucre and gain, intice and provoke the Indians to the breach thereof, especially to drunkenness, to which those people are so generally addicted that they will strip themselves to their skin to have their fill of rum and brandy, the Massachusets having made a law that every Indian drunke should pay 10s. or be whipped, according to the discretion of the magistrate. Many of these poor people willingly offered their backs to the lash to save their money; whereupon, the magistrates finding much trouble and no profit to arise to the government by whipping, did change that punishment into 10 days worke for such as could not or would not pay the fine of 10s. which did highly incense the Indians.

Some beleeve there have been vagrant and jesuiticall priests, who have made it their businesse, for some yeares past, to goe from

Sachim to Sachim, to exasperate the Indians against the English and to bring them into a confederacy, and that they were promised supplies from France and other parts to extirpate the English nation out of the continent of America. Others impute the cause to some injuries offered to the Sachim Philip; for he being possessed of a tract of land called Mount Hope, a very fertile, pleasant and rich soyle, some English had a mind to dispossesse him thereof, who never wanting one pretence or other to attain their end, complained of injuries done by Philip and his Indians to their stock and cattle, whereupon Philip was often summoned before the magistrate, sometimes imprisoned, and never released but upon parting with a considerable part of his land.

But the government of the Massachusets (to give it in their own words) do declare these are the great evills for which God hath given the heathen commission to rise against them: The wofull breach of the 5th commandment, in contempt of their authority, which is a sin highly provoking to the Lord: For men wearing long hayre and perewigs made of womens hayre; for women wearing borders of hayre and for cutting, curling and laying out the hayre, and disguising themselves by following strange fashions in their apparell: For profanness in the people not frequenting their meetings, and others going away before the blessing be pronounced: For suffering the Quakers to live amongst them and to set up their threshholds by Gods thresholds, contrary to their old lawes and resolutions.

With many such reasons, but whatever be the cause, the English have contributed much to their misfortunes, for they first taught the Indians the use of armes, and admitted them to be present at all their musters and trainings, and shewed them how to handle, mend and fix their muskets, and have been furnished with all sorts of armes by permission of the government, so that the Indians are become excellent firemen. And at Natick there was a gathered church of praying Indians, who were exercised as trained bands, under officers of their owne; these have been the most barbarous and cruel enemies to the English of any others. Capt. Tom, their leader, being lately taken and hanged at Boston, with one other of their chiefs.

That notwithstanding the ancient law of the country, made in the year 1633, that no person should sell any armes or ammunition to any Indian upon penalty of £10 for every gun, £5 for a pound of powder, and 40s. for a pound of shot, yet the government of the Massachusets in the year 1657, upon designe to monopolize the whole Indian trade did publish and declare that the trade of furrs and peltry with the Indians in their jurisdiction did solely and properly belong to their commonwealth and not to every indifferent person, and did enact that no person should trade with the Indians for any sort of peltry, except such as were authorized by that court, under the penalty of £100 for every offence, giving liberty to all such as should have licence from them to sell, unto any Indian, guns, swords, powder and shot, paying to the treasurer 3d.

for each gun and for each dozen of swords; 6d. for a pound of powder and for every ten pounds of shot, by which means the Indians have been abundantly furnished with great store of armes and ammunition to the utter ruin and undoing of many families in the neighbouring colonies to inrich some few of their relations and church members.

No advantage but many disadvantages have arisen to the English by the war, for about 600 men have been slain, and 12 captains, most of them brave and stout persons and of loyal principles, whilest the church members had liberty to stay at home and not hazard their persons in the wildernesse.

The losse to the English in the severall colonies, in their habitations and stock, is reckoned to amount to £150,000 there having been about 1200 houses burned, 8000 head of cattle, great and small, killed, and many thousand bushels of wheat, pease and other grain burned (of which the Massachusets colony hath not been damnifyed one third part, the great losse falling upon New Plymouth and Connecticot colonies) and upward of 3000 Indians men women and children destroyed, who if well managed would have been very serviceable to the English, which makes all manner of labour dear.

The war at present is near an end. In Plymouth colony the Indians surrender themselves to Gov. Winslow, upon mercy, and bring in all their armes, are wholly at his disposall, except life and transportation; but for all such as have been notoriously cruell to women and children, so soon as discovered they are to be executed in the sight of their fellow Indians.

The government of Boston have concluded a peace upon these terms.

- 1. That there be henceforward a firme peace between the Indians and English.
- 2. That after publication of the articles of peace by the generall court, if any English shall willfully kill an Indian, upon due proof, he shall dye, and if an Indian kill an Englishman and escape, the Indians are to produce him, and lie to passe tryall by the English lawes.

That the Indians shall not conceal any known enemies to the English, but shall discover them and bring them to the English.

That upon all occasions the Indians are to aid and assist the English against their enemies, and to be under English command.

That all Indians have liberty to sit down at their former habitations without let. . . .

87. Commission of Sir Edmund Andros for the Dominion of New England, April 7, 1688 [Excerpt]

Introduction

In 1676, King Charles II sent his agent, Edward Randolph, to New England to investigate the level of compliance with English trade laws and navigation acts. Randolph reported widespread violations and painted an exaggerated picture of the colonies prospering at England's expense. Randolph's series of unfavorable reports influenced the king to cancel the Massachusetts Bay Colony's charter in 1684. In 1686, King James II merged the New England colonies, plus New York and New Jersey, into the Dominion of New England and appointed Sir Edmund Andros governor. He renewed the appointment in 1688 with this document. Andros had previously served as governor of New York where his corruption and favoritism earned him widespread loathing and forced his recall. In 1689, as word arrived of the unpopular king's loss of the throne, Massachusetts citizens arrested Governor Andros along with Randolph and resumed control of the colony. Instead of restoring their original charters, in 1691 the king merged Plymouth Colony and Massachusetts Bay Colony into one royal colony called Massachusetts Bay. News of Andros' arrest caused a rebellion in New York, while the other colonies that had been forced into the Dominion resumed self-government.

Primary Source

JAMES THE Second by the Grace of God King of England, Scotland, France and Ireland Defender of the Faith &c. To our trusty and welbeloved Sr Edmund Andros Knight Greeting: Whereas by our Commission under our Great Seal of England, bearing date the third day of June in the second year of our reign wee have constituted, and appointed you to be our Captain Generall and Governor in Chief in and over all that part of our territory and dominion of New England in America known by the names of our Colony of the Massachusetts Bay, our Colony of New Plymouth, our provinces of New Hampshire and Main and the Narraganset Country or King's province. And whereas since that time Wee have thought it necessary for our service and for the better protection and security of our subjects in those parts to join and annex to our said Government, the neighboring Colonies of Road Island and Connecticutt, our Province of New York and East and West Jersey, with the territories thereunto belonging, as wee do hereby join annex and unite the same to our said government and dominion of New England. Wee therefore reposing especiall trust and confidence in the prudence courage and loyalty of you the said Sir Edmund Andros, out of our especiall grace certain knowledge and meer motion, have thought fit to constitute and appoint as wee do by these presents constitute and appoint you the said Sr Edmund Andros to be our Captain Generall and Governor in Chief in and over our Colonies of the Massachusetts Bay and New Plymouth, our Provinces of New Hampshire and Main, the Narraganset country for King's Province, our Colony of Road Island and Connecticutt, our Province of New York and East and West Jersey, and of all that tract of land circuit continent precincts and limits in America lying and being in breadth from forty degrees of Northern latitude from the Equinoctaill Line to the River of St. Croix Eastward, and from thence directly Northward to the river of Canada, and in length and longitude by all the breadth aforesaid and throughout the main land from the Atlantick or Western Sea or Ocean on the East part, to the south Sea on the West part, with all the Islands, Seas, Rivers, waters, rights, members, and appurtenances, thereunto belonging (our province of Pensilvania and country of Delaware only excepted), to be called and known as formerly by the name and title of our territory and dominion of New England in America.

And for your better guidance and direction Wee doe hereby require and command you to do & execute all things in due manner, that shall belong unto the said office and the trust wee have reposed in you, according to the severall powers instructions and authoritys mentioned in these presents, or such further powers instructions and authoritys mentioned in these presents, as you shall herewith receive or which shall at any time hereafter be granted or appointed you under our signet and sign manual or by our order in our Privy Councill and according to such reasonable lawes and statutes as are now in force or such others as shall hereafter be made and established within our territory & dominion aforesaid.

And our will and pleasure is that you the said Sr Edmund Andros having, after publication of these our Letters Patents, first taken the Oath of duly executing the office our Captain Generall and Governor in Chief of our said territory and dominion, which our Councill there or any three of them are hereby required authorized and impowered to give and administer unto you, you shall administer unto each of the members of our Councill the Oath for the due execution of their places and trusts.

And Wee do hereby give and grant unto you full power and authority to suspend any member of our Councill from sitting voting and assisting therein, as you shall find just cause for so doing.

And if it shall hereafter at any time happen that by the death, departure out of our said territory, or suspension of any of our Counselors, or otherwise, there shall be a vacancy in our said Councill, (any five whereof wee do hereby appoint to be a Quorum) Our will and pleasure is that you signify the same unto us by the first opportunity, that Wee may under our Signet and Sign Manuall constitute and appoint others in their room.

And Wee do hereby give and grant unto you full power and authority, by and with the advise and consent of our said Councill or the major part of them, to make constitute and ordain lawes statutes

and ordinances for the public peace welfare and good governmt of our said territory & dominion and of the people and inhabitants thereof, and such others as shall resort thereto, and for the benefit of us, our heires and successors. Which said lawes statutes and ordinances, are to be, as near as conveniently may be, agreeable to the lawes & statutes of this our kingdome of England: Provided that all such lawes statutes and ordinances of what nature of the same, transmitted unto Us, under our Seal of New England, for our allowance or disapprobation of the, as also duplicates thereof by the next conveyance.

And Wee do by these presents give and grant unto you full power and authority by and with the advise and consent of our said Councill, or the major part of them, to impose assess and raise and levy rates and taxes as you shall find necessary for the support of the government within our territory and dominion of new England, to be collected and leveyed and to be imployed to the uses aforesaid in such manner as to you & our said Councill or the major part of them shall seem most equall and reasonable.

And for the better supporting the charge of the governmt of our said Territory and Dominion, our will and pleasure is and wee do by these presents authorize and impower you and the said Sir Edmund Andros and our Councill, to continue such taxes and impositions as are now laid and imposed upon the Inhabitants thereof; and to levy and distribute or cause the same to be levied and distributed to those ends I the best and most equall manner, until you shall by & with the advise and consent of our Councill agree on and settle such other taxes as shall be sufficient for the support of our government there, which are to be applied to that use and no other.

And our further will and pleasure is, that all publick money raised or to be raised or appointed for the support of the government within our said territory and dominion be issued out by warrant or order from you by & with the advise and consent of our Councill as a foresaid.

And our will and pleasure is that you shall and may keep and use our Seal appointed by Us for our said territory and dominion.

$[\ldots]$

And Wee do hereby give and grant unto you the said Sir Edmund Andros by your self your Captains and Commanders, by you to be authorized, full power and authority to levy arme muster command or employ, all persons whatsoever residing within our said Territory and Dominion of New England, and, as occasion shall serve, them to transferr from one place to another for the resisting and withstanding all enemies pyrats and rebels, both at land and sea, and to transferr such forces to any of our Plantations in America or the Territories thereunto belonging, as occasion shall require for the defence of the same against the invasion or attempt of any of

our enemies, and then, if occasion shall require to pursue and prosecute in or out of the limits of our said Territories and Plantations or any of them, And if it shall so please God, them to vanquish; and, being taken, according to the law of arms to put to death or keep and preserve alive, at your discretion. And also the execute martiall law in time of invasion insurrection or war, and during the continuance of the same, and upon soldiers in pay, and to do and execute all and every other things which to a Captain Generall doth or ought of right to belong, as fully and amply as any our Captain Generall doth or hath usually don.

And we do hereby give and grant unto you full power and authority to erect raise and build within our Territory and dominion aforesaid, such and so many forts, platforms, Castles, cities, boroughs, towns, and fortifications as you shall judge necessary; and the same or any of them to fortify and furnish with ordnance ammunition and all sorts of armes, fit and necessary for the security & defence of our said territory; and the same again or any of them to demolish or dismantle as may be most convenient.

 $[\ldots]$

As likewise to order and appoint within our said Territory such and so many ports harbors, bayes havens and other places for the convenience and security of shipping, and for the better loading and unloading of goods and merchandize as by you with the advice and consent of our Councill shall be thought fitt and necessary; and in them or any of them to erect nominat and appoint Cuxtom houses ware houses and officers relating thereto; and them to alter change, place, or displace from time to time, as with the advice aforesaid shall be thought fitt.

And forasmuch as pursuant to the lawes & customes of our Colony of the Massachusetts Bay and of our other Colonies and Provinces aforementioned, divers marriages have been made and performed by the Magstrats of our said territory; Our royall will and pleasure is hereby to confirm all the said marriages and to direct that they be held good and valid in the same manner to all intents and purposes whatsoever as if they had been made and contracted according to the lawes established within our kingdom of England.

And Wee do hereby require and command all officers and ministers, civill and military and all other inhabitants of our said Territory and Dominion to be obedient aiding and assisting unto you the said Sr Edm Andros in the execution of this our commission and of the powers and authorityes therein conteined, and upon your death or absence out of our said Territory unto our Lieut. Governor, to whom wee do therefore by these presents give and grant all and singular the powers and authorityes aforesaid to be exercised and enjoyed by him in case of your death or absence during our pleasure, or until you arrival within our said Territory and Dominion; as Wee do further hereby give and grant full power and authority to

our Lieut. Governor to do and execute whatsoever he shall be by you authorized and appointed to do and execute, in pursuance of and according to the powers granted to you by this Commission.

And if in the case of your death or absence there be no person upon the place, appointed by us to be Commander in Chief; our will and pleasure is, that the then present Councill of our Territory aforesaid, do take upon them the administration of the Governmt and execute this commission and the several powers and authoritys herein conteined; and that the first counselor who shall be at the time of your death or absence residing within the same, do preside in our said Councill, with such powers and preheminencies as any former President hath used and enjoyed within our said territory, or any other our plantations in America, until our pleasure be further known, or your arrival as aforesaid.

And lastly, our will and pleasure is that you the said Sr Edmund Andros shall and may hold exercise and enjoy the office and place of Captain Generall and Governor in Chief in and over our Territory and dominion aforesaid, with all its right members and appurtenances whatsoever, together will all and singular the powers and authorityes hereby granted unto you, for and during our will and pleasure.

In Witness whereof Wee have caused these our letters to be made Patents. Witness our self at Westminster the seventh day of Aprill in the fourth year of our raign.

By Writ of Privy Seal

Clerke.

88. Nathaniel Byfield, *An Account of the Late Revolution in New-England*, April 1689 [Excerpt]

Introduction

In 1676, King Charles II sent an agent to New England to investigate the level of compliance with English trade laws and navigation acts. The agent's reports of widespread violations influenced the king to cancel the Massachusetts Bay Colony's charter in 1684. In 1686, King James II merged the New England colonies, plus New York and New Jersey, into the Dominion of New England and appointed Sir Edmund Andros governor. Andros had previously served as governor of New York, and his corrupt administration had earned him widespread loathing and forced his recall. Governor Andros controlled the Dominion from his offices in Boston. In

1689, as word arrived of the unpopular king's loss of the throne, armed civilians arrested Andros. Andros escaped and fled to Newport, Rhode Island, but Newport authorities returned him to Massachusetts. From there he was deported to England. The arrest of Andros marked the end of the Dominion of New England. Instead of restoring their original charters, in 1691 King William III instead merged Plymouth Colony and Massachusetts Bay Colony into one royal colony called Massachusetts Bay. News of Andros' arrest caused a rebellion in New York, while the other colonies that had been forced into the Dominion resumed self-government.

An Account of the Late Revolution in New-England Written by Mr. Nathanael Byfield, to his Friends, & c.

GENTLEMEN,

HERE being an opportunity of sending for London, by a Vessel that loaded at Long-Island, and for want of a Wind put in here; and not knowing that there will be the like from this Country suddenly, I am willing to give you some brief Account of the most remarkable things that have happened here within this Fortnight last past; concluding that till about that time, you will have received per Carter, a full Account of the management of Affairs here. Upon the Eighteenth Instant, about Eight of the Clock in the Morning, in Boston, it was reported at the South end of the Town, That at the North end they were all in Arms; and the like Report was at the North end, respecting the South end: Whereupon Captain John George was immediately seized, and about nine of the clock the Drums beat thorough the Town; and an Ensign was set up upon the Beacon. Then Mr. Bradstreet, Mr. Dantforth, Major Richards, Dr. Cooke, and Mr. Addington &c. were brought to the Council-house by a Company of Soldiers under the Command of Captain Hill. The mean while the People in Arms, did take up and put in to Goal, Justice Bullivant, Justice Foxcroft, Mr. Randolf, Sheriff Sherlock, Captain Ravenscroft, Captain White, Farewel, Broadbent, Crafford, Larkin, Smith, and many more, as also Mercey the then Goalkeeper, and put Scates the Bricklayer in his place. About Noon, in the Gallery at the Council-house, was read the Declaration here inclosed. Then a Message was sent to the Fort to Sir Edmund Andros, By Mr. Oliver and Mr. Eyres, signed by the Gentlemen then in the Council-Chamber, (which is here also inclosed); to inform him how unsafe he was like to be if he did not deliver up himself, and Fort and Government forthwith, which he was loath to do. By this time, being about two of the Clock (the Lecture being put by) the Town was generally in Arms, and so many of the Countrey came in, that there was Twenty Companies in Boston, besides a great many that appeared at Charles Town that could not get over (some say Fifteen Hundred). There then came information to the Soldiers, That a Boat was come from the Frigat that made towards the Fort, which made them haste thither, and come to the Sconce soon after the Boat got thither; and 'tis said that Governor Andros, and about half a score Gentlemen, were coming down out of the Fort; but the Boat being seized, wherein were small Arms, Hand-Granadoes, and a quantity of Match, the Governour and the rest went in again; whereupon Mr. John Nelson, who was at the head of the Soldiers, did demand the Fort and the Governor, who was loath to submit to them; but at length did come down, and was with the Gentlemen that were with him, conveyed to the Council-house, where Mr. Bradstreet and the rest of the Gentlemen waited to receive him; to whom Mr. Stoughton first spake, telling him, He might thank himself for the present disaster that had befallen him, & c. He was then confined for that night to Mr. John Usher's house under strong Guards, and the next day conveyed to the Fort, (where he yet remains, and with him Lieutenant Collonel Ledget) which is under the Command of Mr. John Nelson; and at the Castle, which is under the Command of Mr. John Fairweather, is Mr. West, Mr. Graham, Mr. Palmer, and Captaine Tryfroye. At that time Mr. Dudley was out upon the Circuit, and was holding a Court at Southold on Long-Island. And on the 21 st. Instant he arrived at Newport, where he heard the News. The next day Letters came to him, advising him not to come home; he thereupon went over privately to Major Smith's at Naraganzett, and advice is this day come hither, that yesterday about a dozen young men, most of their own heads, went thither to demand him; and are gone with him down to Boston. We have also advice, that on Fryday last towards evening, Sir Edmond Andross did attempt to make an escape in Womans Apparel, and pass'd two Guards, and was stopped at the third, being discovered by his Shoes, not having changed them. We are here ready to blame you sometimes, that we have not to this day received advice concerning the great Changes in England, and in particular how it is like to fair with us here; who do hope and believe that all these things will work for our Good; and that you will not be wanting to promote the Good of a Country that stands in such need as New-England does at this day. The first day of May, according to former Usage, is the Election-day at Road Island; and many do say they intend their choice there then. I have not farther to trouble you with at present, but recommending you, and all our affairs with you, to the Direction and Blessing of our most Gracious God: I remain

Gentlemen.

Your Most Humble Servant at Command,

NATHANAEL BYFIELD.

Bristol, April 29. 1689.

Through the Goodness of God, there hath been no Blood shed. Nath. Clark is in Plymouth Gaol, and John Smith in Gaol here, all waiting for News from England.

89. Declaration of the Reasons and Motives for the present appearing in Arms of their Majesties Protestant subjects in the Province of Maryland, November 28, 1689 [Excerpt]

Introduction

As founders and proprietors of Maryland, the Calvert family had tried to govern the colony as a haven for all Christians, including Catholics, Anglicans (members of the Church of England), and Puritans. They encountered repeated challenges to this ideal. In the mid-1650s, Puritans took over Maryland's government and banned both Catholic and Anglican worship. The Calverts regained control a few years later, but in 1689 they faced a Protestant rebellion. Protestants had grown to make up 80 percent of Maryland's population and resented the privileges granted to Catholics. When the Protestant king William and Queen Mary deposed the Catholic king James II in 1689, Maryland's governor canceled the meeting of the assembly. Protestant rebels then marched on the capital and overthrew the proprietary government. Maryland became a royal colony with a Protestant governor. The new government barred Catholics and Quakers from holding any political office. Benedict Calvert, the fourth Lord Baltimore, only regained control of the colony in 1715 by converting to the Church of England and establishing it as the official church of Maryland. This statement by the Protestant rebels enumerates their grievances against the proprietary government.

Primary Source

ALTHOUGH the Nature and State of Affairs relating to the Government of this Province is so well and notoriously known to all Persons any way concerned in the same, as to the People and Inhabitants here, who are more immediately Interested, as might excuse any Declaration or Apology for this present inevitable Appearance: Yet forasmuch as (by the Plots, Contrivances, Insinuations, Remonstrances, and Subscriptions, carried on, suggested, extorted, and obtained by the Lord Baltemore, his Deputies, Representatives, and Officers here) the Injustice and Tyranny under which we groan is palliated, and most if not all the Particulars of our Grievances shrouded from the Eye of Observation and the Hand of Redress, We thought fit for general Satisfaction, and particularly to undeceive those that may have a sinister Account of our Proceedings, to Publish this Declaration of the Reason and Motives inducing us thereunto.

His Lordship's Right and Title to the Government is by Virtue of a Charter to his Father Cecilius, from King Charles the First, of Blessed Memory. How his present Lordship has managed the Powers and Authorities given and granted in the same, We could Mourn and Lament only in silence, would our Duty to God, our Allegeance to his Vicegerent, and the Care and Welfare of our Selves and Posterity, permit us.

[…]

In the next place, Churches and Chappels (which by the said Charter should be Built and Consecrated according to the Ecclesiastical Laws of the Kingdom of England) to our great Regret and Discouragement of our Religion are erected and converted to the use of Popish Idolatry and Superstition. Jesuits and Seminary Priests are the only Incumbents (for which there is a Supply provided by sending our Popish Youth to be Educated at St. Omers) as also the chief Advisers and Councellors in Affairs of Government, and the Richest and most Fertile Land set apart for their Use and Maintenance, while other Lands that are piously intended, and given for the Maintenance of the Protestant Ministry, become Escheat, and are taken as Forfeit, the Ministers themselves discouraged, and no care taken for their Subsistance.

The Power to Enact Laws is another branch of his Lordship's Authority; but how well that has been Executed and Circumstanced is too notorious. His present Lordship upon the Death of his Father, in order thereunto, sent out Writs for Four (as was ever the usuage) for each County to serve as Representatives of the People; but when Elected, there were Two only of each Respective Four pick'd out and summoned to that Convention, Whereby many Laws were made, and the greatest Levy yet known, laid upon the Inhabitants.

The next Session, the House was filled up with the remaining Two that was left out of the former, in which there were many and the best of our Laws Enacted, to the great Benefit and Satisfaction of the People. But his Lordship soon after Dissolved and Declared the best of those Laws, such as he thought fit, null and void by Proclamation; notwithstanding they were Assented to in his Lordship's Name by the Governor, in his absence, and he himself sometime Personally Acted and Governed by the same; so that the Question in our Courts of Judicature, in any point that relates to many of our Laws, is not so much the relation it has to the said Laws, but whether the Laws themselves be agreeable to the Approbation and Pleasure of his Lordship? Whereby our Liberty and Property is become uncertain, and under the Arbitrary Disposition of the Judges and Commissioners of our Courts of Justice.

The said Assembly being sometime after Dissolved by Proclamation, another was Elected and met, consisting only of Two Members for each County, directly opposite to an Act of Assembly for Four, in which several Laws, with his Lordship's Personal Assent, were Enacted: Among the which, one for the Encouragement of Trade and Erecting of Towns. But the Execution of that Act was soon after, by Proclamation from his Lordship out of England, sus-

pended the last Year, and all Officers Military and Civil severely prohibited executing or inflicting the Penalties of the same. Notwithstanding which suspension, being in effect a dissolution and abrogating the whole Act, the Income of Three Pence to the Government by the said Act, payable for every Hogshead of Tobacco Exported, is carefully Exacted and Collected.

How Fatal, and of what Pernicious Consequence, that Unlimited and Arbitrary pretended Authority may be to the Inhabitants, is too apparent, but. by considering, That by the same Reason, all the rest of our Laws, whereby our Liberty and Property subsists, are subject to the same Arbitrary Disposition, and if timely Remedy be not had, must stand or fall according to his Lordship's Good Will and Pleasure.

Nor is this Nullifying and Suspending Power the only Grievance that doth perplex and burthen us, in relation to Laws; but these Laws that are of a certain and unquestioned acceptation are executed and countenanced, as they are more or less agreeable to the good liking of our Governours in particular; One very good Law provides, That Orphan Children should be disposed of to Persons of the same Religion with that of their deceased Parents. In direct opposition to which, several Children of Protestants have been committed to the Tutelage of Papists, and brought up in the Romish Superstition. We could instance in a Young Woman, that has been lately forced, by Order of Council, from her Husband, committed to the Custody of a Papist and brought up in his Religion. 'Tis endless to enumerate the particulars of this nature, while on the contrary those Laws that enhance the Grandeur and Income of his said Lordship are severely Imposed and executed; especially one that against all Sense, Equity, Reason, and Law Punishes all Speeches, Practices, and Attempts relating to his Lordship and Government, that shall be thought Mutinous and Seditious by the Judges of the Provincial Court, with either Whipping, Branding, Boreing through the Tongue, Fine, Imprisonment, Banishment, or Death; all or either of the said Punishments, at the Discretion of the said Judges; who have given a very recent and remarkable Proof of their Authority in each particular Punishment aforesaid, upon several of the good People of this Province, while the rest are in the same danger to have their Words and Actions liable to the Constructions and Punishment of the said Judges, and their Lives and Fortunes to the Mercy of their Arbitrary Fancies) Opinions, and Sentences.

To these Grievances are added,

Excessive Officers Fees, and that too under Execution, directly against the Law made and provided to redress the same; wherein there is no probability of a Legal Remedy, the Officers themselves that are Parties and culpable being Judges.

The like Excessive Fees imposed upon and extorted from Masters and Owners of Vessels Trading into this Province, without any Law

to Justifie the same, and directly against the plain Words of the Charter, that say, there shall be no Imposition or Assessment without the Consent of the Freemen in the Assembly: To the great Obstruction of Trade, and Prejudice of the Inhabitants.

The like excessive Fees Imposed upon and extorted from the Owners of Vessels that are Built here, or do really belong to the Inhabitants; contrary to an Act of Assembly, made and provided for the same: Wherein, Moderate and Reasonable Fees are assertained, for the Promoting and Encouragement of Shipping and Navigation amongst our selves.

The frequent Pressing of Men, Horses, Boats, Provisions, and other Necessaries, in time of Peace; and often to gratifie private Designs and Occasions, to the great Burthen and Regret of the Inhabitants, contrary to Law and several Acts of Assembly in that Case made and provided.

The Seizing and Apprehending of Protestants in their Houses, with Armed Force consisting of Papists, and that in time of Peace; their hurrying them away to Prisons without Warrant or Cause of Commitment, there kept and Confined with Popish Guards, a long time without Trial.

Not only private but publick Outrages and Murthers committed and done by Papists upon Protestants without any Redress, but rather connived at and Tollerated by the chief in Authority; and indeed it were in vain to desire or expect any help or measures from them, being Papists and Guided by the Counsels and Instigations of the Jesuits, either in these or any other Grievances or Oppression. And yet, these are the Men that are our Chief Judges, at the Common Law, in Chancery, of the Probat of Wills, and the Affairs of Administration, in the Upper House of Assembly, and the Chief Military Officers and Commanders of our Forces; being still the same Individual Persons, in all these particular Qualifications and Places.

[...]

We are every day threatned with the Loss of our Lives, Liberties, and Estates, of which we have great Reason to think our selves in Imminent Danger, by the Practices and Machinations that are on foot to betray us to the French, Northern, and other Indians, of which some have been dealt withal, and others Invited to Assist in our Destruction; well remembring the Incursion and Inrode of the said Northern Indians, in the Year 1681, who were conducted into the Heart of the Province by French Jesuits, and lay sore upon us, while the Representatives of the Country, then in the Assembly, were severely press'd upon by our Superiors, to yield them an Unlimited and Tiranical Power in the Affairs of the Militia. As so great a Piece of Villany cannot be the Result but of the worst of Principles; so we should with the greatest Difficulties believe it to

be true, if Undeniable Evidence and Circumstances did not convince us.

 $[\ldots]$

And we do, Lastly, Invite and Require all manner of Persons whatsoever, Residing or Inhabiting in this Province, as they tender their Allegiance, the Protestant Religion, their Lives, Fortunes and Families, to Aid and Assist us in this our Undertaking. Given under our Hands in Mary Land, the 25th Day of July, in the First Year of Their Majesties Reign, Annoque Domini 1689.

God save King William and Queen Mary

90. English Bill of Rights, December 16, 1689 [Excerpt]

Introduction

The Glorious Revolution of 1688 deposed the Catholic king James II and installed the Protestant William of Orange and his wife Mary (the daughter of James II and also Protestant) as king and queen of England. James II had tried to augment his own authority and bypass Parliament in making laws. His Protestant enemies urged William of Orange to invade England, which he did in November 1688, forcing James II to flee to France. Before they were installed as the new rulers of England, William and Mary accepted the terms of the Declaration of Right, which limited royal authority. This declaration became the English Bill of Rights, the abbreviated name of the December 16, 1689, act of Parliament that specified the rights of the monarch and Parliament. The act expanded the rights of the people, as represented by Parliament. The monarch could no longer overrule Parliament or act without its approval. The act also declared that England was to be a Protestant nation and barred Catholics from the throne. Among its other provisions are guarantees of the right to bear arms and trial by jury, and prohibitions against excessive bail and cruel and unusual punishment. Similar provisions are part of the U.S. Bill of Rights. The English Bill of Rights is still in effect in Great Britain.

[...

WHEREAS the late King James the Second, by the assistance of divers evil counsellors, judges and ministers employed by him, did endeavor to subvert and extirpate the protestant religion, and the laws and liberties of this kingdom;

- 1. By assuming and exercising a power of dispensing with and suspending of laws, and the execution of laws, without consent of parliament.
- 2. By committing and prosecuting divers worthy prelates, for humbly petitioning to be excused from concurring to the said assumed power.
- 3. By levying money for and to the use of the crown, by pretence of prerogative, for other time, and in other manner, than the same was granted by parliament.
- 5. By raising and keeping a standing army within this kingdom in time of peace, without consent of parliament, and quartering soldiers contrary to law.
- 6. By causing several good subjects, being protestants, to be disarmed, at the same time when papists were both armed and employed, contrary to law.
- 7. By violating the freedom of election of members to serve in parliament.
- 8. By prosecutions in the court of King's bench, for matters and causes cognizable only in parliament; and by divers other arbitrary and illegal courses.
- 9. And whereas of late years, partial, corrupt, and unqualified persons have been returned and served on juries in trials, and particularly divers jurors in trials for high treason, which were not free-holders.
- 10. And excessive bail hath been required of persons committed in criminal cases, to elude the benefit of the laws made for the liberty of the subjects.
- 11. And excessive fines have been imposed; and illegal and cruel punishments have been inflicted.
- 12. And several grants and promises made of fines and forfeitures, before any conviction or judgement against the persons, upon whom the same were to be levied.

All which are utterly and directly contrary to the known laws and statutes, and freedom of this realm.

And whereas the said late king James the Second having abdicated the government, and the throne being thereby vacant . . . the said lords spiritual and temporal, and commons . . . do in the first place (as their ancestors in like case have usually done) for the vindicating and asserting their ancient rights and liberties, declare;

- 1. That the pretended power of suspending of laws, or the execution of laws, by regal authority, without consent of parliament, is illegal.
- 2. That the pretended power of dispensing with laws, or the execution of laws, by regal authority, as it hath been assumed and exercised of late, is illegal.
- 3. That the commission for erecting the late court of commissioners for ecclesiastical causes, and all other commissions and courts of like nature are illegal and pernicious.
- 4. That levying money for or to the use of the crown, by pretence of prerogative, without grant of parliament, for longer time, or in other manner than the same is or shall be granted, is illegal.

- 5. That it is the right of the subjects to petition the King, and all committments and prosecutions for such petitioning are illegal.
- 6. That the raising or keeping a standing army within the kingdom in time of peace, unless it be with consent of parliament, is against law.
- 7. That the subjects which are protestants, may have arms for their defence suitable to their conditions, and as allowed by law.
 - 8. That election of members of parliament ought to be free.
- 9. That the freedom of speech, and debates or proceedings in parliament, ought not to be impeached or questioned in any court or place out of parliament.
- 10. That excessive bail ought not to be required, nor excessive fines imposed; nor cruel and unusual punishments inflicted.
- 11. That jurors ought to be duly impanelled and returned, and jurors which pass upon men in trials for high treason ought to be freeholders.
- 12. That all grants and promises of fines and forfeitures of particular persons before conviction, are illegal and void.
- 13. And that for redress of all grievances, and for the amending, strengthening, and preserving of the laws, parliaments ought to be held frequently.

And they do claim, demand, and insist upon all and singular the premisses, as their undoubted rights and liberties; and that no declarations, judgements, doings or proceedings, ought in any wise to be drawn hereafter into consequence or example. . . .

91. Diego de Vargas, Account of the Spanish Reconquest of New Mexico, October 12, 1692 [Excerpt]

Introduction

Spanish ventures in the New World, though licensed by the king, were privately financed and expected to make a profit. Don Juan de Oñate led the first, failed, Spanish expedition to colonize New Mexico, a land of scarce resources populated by pueblo-dwelling natives. In 1598 he entered the territory with several hundred colonists. After plundering the natives and brutally suppressing a revolt by Acoma Pueblo, Oñate led several futile expeditions in search of fabled riches. The colonists gave up and returned to old Mexico. Not until 1610 did the Spanish establish a permanent settlement in New Mexico, at Santa Fe. As the colony expanded, the Spanish tried to convert the Indians to Christianity and suppress native religious practices. Although not as brutal as Oñate and his men, they earned the natives' resentment. The Spaniards were shocked in 1680 when even their converts rose up against them in a surprise attack on multiple settlements. The attack drove the Spanish from New Mexico, and they

did not return until 1692, under the leadership of Diego de Vargas. In his letter of October 12, 1692, Vargas reports his success and emphasizes that he undertook the expedition at his own expense.

Primary Source

Letter from Diego de Vargas to Ignacio López de Zárate October 12, 1692

Son and dear sir,

I have written to Your Lordship on every occasion offered by the mail dispatched to Mexico City. I have apprised you of my progress in this government and of the fortunate results, which are to the satisfaction of the most excellent lord viceroy, the Conde de Galve, and the ministers of the Junta of the Royal Treasury.

I have no doubt that they will inform his majesty of these results in his Royal and Supreme Council of the Indies and of the present success, because it is such a triumph and glory to God and king. I decided to conquer and restore at my own expense this villa of Santa Fe, capital of the kingdom of New Mexico. It seemed appropriate to me to write, though briefly, to the king our lord. Because I was appointed by his majesty, it would not be good to neglect to inform his Royal and Supreme Council of the Indies of this victory. I therefore give him the news of this conquest, of the pueblos and districts I have restored to his royal crown, and the number of people baptized. During the twelve years since the Indians of this kingdom rose up and separated themselves from Our Holy Faith, they have been living as apostates in their idolatry.

Finally, I want Your Lordship to be aware of how important this news will be to his majesty. In 1681, the Rev. Father fray Francisco de Ayeta (who resides at the Convento Grande in Mexico City), procurator general of the Holy Gospel Province of Our Father St. Francis for the entire kingdom of New Spain, left for Santa Fe in the governor's company. At that time, the most excellent lord Conde de Paredes, Marques de la Laguna, was governing the kingdom of New Spain. He gave Father Ayeta 95,000 pesos for this conquest. I could wish for no better chronicler of this important undertaking than this father, who came in that capacity. As I have said, he came with the then governor, but they did not succeed. They returned in despair after having restored to the faith only 385 people from the pueblo of Isleta, at such a high cost.

Though it was considered a desperate situation, with divine favor and at my own expense, I have now achieved the unexpected. As I write, I am dispatching a courier to the most excellent lord viceroy, the Conde de Galve, from this villa. I have just arrived from the pueblos and nations of the interior as far as the Taos, the most distant.

I am writing this father, although briefly, so that he will be informed of everything and because he will rejoice. I shall send the copy of the

military proceedings of the conquest by the flota so that his majesty will be informed in the royal council. Now, don Toribio de la Huerta need not weary himself in this conquest. His majesty can only reward him for his wish, favoring him with the title of marques of this kingdom and the many other grants he was seeking. He even received on account an ayuda de costa. This is not meant to reproach his majesty for anything, but only to advise Your Lordship on this point. By the flota (if God Our Lord gives me life), I shall send the copy of the proceeding to date and whatever else I do here in the service of God and king.

Please do me the favor of inquiring whether by this packet boat the most excellent lord viceroy and the lords of the royal junta report to his majesty about what I am relating in this letter. It will be easy for Your Lordship to find out in the office of the Secretary of the Indies. Please advise me with all care of the particulars they may tell you and of the report on my services. Once I know with certainty what they tell Your Lordship, I can consider my possibilities for advancement. I long to see letters from Your Lordship and my beloved children. I have remitted to my son, Juan Manuel, two drafts, each in the amount of 400 pesos of 8 reales, free of conveyance charge and placed on deposit in Madrid. I trust that my correspondent, Capt. don Luis Saenz de Tagle, knight of the Order of Alcantara and silver merchant in Mexico City, will have issued these drafts on don Enrique de la Rosa, with whom he has business dealings in Cadiz.

I shall redouble my effort (Our Lord giving me life), undertaking to remit part of the dowry to Your Lordship by the flota. No reason or cause other than paying what is due you could keep me exiled here. Be assured, therefore, that I shall not fail you, but serve you with the earnestness of a friend and father-in-law who esteems you. I have no doubt that you will be very considerate in your duties to my beloved daughter, Isabel, and my grandchildren. I imagine that by now you will have had more children. To everyone, I give my blessing and ask Your Lordship to embrace them in my name as I would like to personally. I hope that His Divine Majesty will grant me this wish. May He keep Your Lordship many happy years.

Will Your Lordship please hand deliver my letters to the lord Marques de Villanueva, your brother and my friend, and to my children. Please send to Torrelaguna the packet from this villa of Santa Fe, capital of the kingdom of New Mexico, newly restored to and conquered for the royal crown. 12 October 1692.

He who esteems and loves you as father and friend kisses Your Lordship's hand,

Don Diego de Vargas Zapata Lujan Ponce de Leon [rubrica]

To lord don Ignacio López de Zárate, my son-in-law

After having written this, it occurred to me that to save time, it would be good to ask his majesty for the favor when the report comes from the lord viceroy and the royal junta. Your Lordship will please have this letter presented and advise me, taking it upon yourself to reply. The letter is unsealed so that Your Lordship can read it and understand my just petition.

92. Death Warrant for Sarah Good, Rebecca Nurse, Susanna Martin, Elizabeth How, and Sarah Wild, 1692

Introduction

This death warrant for Sarah Good, Rebecca Nurse, Susanna Martin, Elizabeth How, and Sarah Wild was issued during the witchcraft trials of 1692 in Salem, Massachusetts. The women's executions caused a storm of controversy, particularly as Nurse was a well-respected member of the church. Many citizens had difficulty believing her guilty of witchcraft. Hundreds were accused during this period of mass hysteria, but most were tried and released. However, 19 accused witches were hanged, and 1 person was pressed to death by heavy stones during questioning. The population lived in growing fear of arrest. An accusation against the governor's wife finally convinced Salem's leaders to end the trials in October 1692. Thousands of convicted witches had been burned to death in Europe during the 1500s and 1600s, but witch hunts had nearly ceased there by 1650. The Puritans, however, believed strongly in the presence of evil, and some Puritan ministers saw the apparent increase in witchcraft as a sign of inadequate religious devotion among their congregations. Other colonies had a small number of witch trials but did not put anyone to death. By the year 1700, witch trials had ceased in the American colonies.

93. Cotton Mather, *The Wonders*of the Invisible World, 1693 [Excerpt]

Introduction

The leading Puritan minister in colonial New England, Rev. Cotton Mather (1663–1728) distinguished himself as a theologian, scholar, author, public speaker, and popular leader. Descended from the prominent Puritans John Cotton and Increase Mather, he graduated from Harvard at the age of 15. Mather's influence extended beyond spiritual matters to political ones. He was instrumental in the 1688 downfall of Sir Edmund Andros, governor of the hated Dominion of New England. His 1693 book, *Wonders of the Invisible World*, was widely considered throughout New England as the most important scholarly work on witchcraft ever to appear in print. Mather was an ardent believer in the pervasiveness of witchcraft in colonial society and had vigorously supported the Salem witchcraft trials of the previous year. Yet his belief in the supernatural coexisted with an understanding of scientific principles. Most notably,

he promoted experiments with the use of inoculation to prevent smallpox, and was persecuted for his efforts. Mather wrote more than 400 pamphlets and books. The sheer volume of his work influenced his contemporaries. It also provides a substantial source for understanding the historical events of his time.

Primary Source

... Martha Carrier was indicted for the bewitching of certain persons, according to the form usual in such cases, pleading not guilty to her indictment. There were first brought in a considerable number of the bewitched persons, who not only made the court sensible of an horrid witchcraft committed upon them, but also deposed that it was Martha Carrier or her shape that grievously tormented them by biting, pricking, pinching, and choking of them. It was further deposed that while this Carrier was on her examination before the magistrates, the poor people were so tortured that everyone expected their death upon the very spot, but that upon the binding of Carrier they were eased....

Benjamin Abbot gave in his testimony that last March was a twelve-month this Carrier was very angry with him upon laying out some land near her husband's.... Presently after this he was taken with a swelling in his foot, and then with a pain in his side, and exceedingly tormented. It bred unto a sore, which was lanced by Doctor Prescot, and several gallons of corruption ran out of it. For six weeks it continued very bad; and then another sore bred in his groin, which was also lanced by Doctor Prescot. Another sore then bred in his groin, which was likewise cut, and put him to very great misery. He was brought unto death's door and so remained until Carrier was taken and carried away by the constable, from which very day he began to mend and so grew better every day and is well ever since.

Allin Toothaker testified that Richard, the son of Martha Carrier, having some difference with him, pulled him down by the hair of the head. When he rose again, he was going to strike at Richard Carrier, but fell down flat on his back to the ground and had not power to stir hand or foot until he told Carrier he yielded; and then he saw the shape of Martha Carrier go off his breast....

Phebe Chandler testified that about a fortnight before the apprehension of Martha Carrier, on a Lord's day while the psalm was singing in the church, this Carrier then took her by the shoulder and shaking her asked her where she lived. She made no answer, although as Carrier, who lived next door to her father's house, could not in reason but know who she was. Quickly after this, as she was at several times crossing the fields, she heard a voice that she took to be Martha Carrier's; and it seemed as if it was over her head. The voice told her she should within two or three days be poisoned. Accordingly, within such a little time, one half of her right hand became greatly swollen and very painful, as also part of her face—whereof she can give no account how it came. It continued very bad for some days, and several times since she has had a greater pain in her breast and been so seized on her legs that she has hardly been able to go. She added that lately, going well to the house of God, Richard, the son of Martha Car-

rier, looked very earnestly upon her; and immediately her hand, which had formerly been poisoned, as is said above, began to pain her greatly; and she had a strange burning at her stomach, but was then struck deaf so that she could not hear any of the prayer or singing till the two or three last words of the psalm....

One Lacy, who likewise confessed her share in this witchcraft, now testified that she and the prisoner were once bodily present at a witch meeting in Salem village, and that she knew the prisoner to be a witch and to have been at a diabolical sacrament, and that the prisoner was the undoing of her and her children by enticing them into the snare of the devil. . . .

In the time of this prisoner's trial, one Susanna Sheldon in open court had her hands unaccountable tied together with a wheel band so fast that without cutting it could not be loosened. It was done by a specter, and the sufferer affirmed that it was the prisoner's.

Memorandum: This rampant hag, Martha Carrier, was the person of whom the confession of the witches and of her own children among them are agreed that the devil had promised she should be queen of hell.

94. Indenture of Servitude for Ship Passage, August 19, 1696

Introduction

More than 300,000 indentured servants came to England's North American colonies before the American Revolution. These poor immigrants sold their labor for a specified number of years to pay for their passage on a voyage to the New World. Contracts varied tremendously, but generally indentured servants were bound to labor for seven years. Young children could be bound until they reached the age of 21. Some contracts stipulated that masters supply the servants with either land, money, or supplies once they fulfilled their contracts to give them a start in life. Most indentured servants were English, Irish, Scottish, or German, and the vast majority settled in the colonies of Virginia or Maryland. Once freed, many servants found that they could not afford to purchase land, and thus faced a lifetime of laboring for others. Indentured servitude peaked during the mid-17th century but continued until the American Revolution. In the southern colonies, plantation owners came to prefer slaves to indentured servants. Elizabeth Morris, the indentured servant who signed this contract on August 19, 1696, was destined for the colony of New York and bound for four years of service to Captain William Kidd, the renowned privateer turned pirate.

95. Account of Leisler's Revolt, 1698 [Excerpt]

Introduction

In 1686, King James II forced the New England colonies, plus New York and New Jersey, into the Dominion of New England and appointed Sir Edmund Andros governor. Andros had previously served as governor of New York, and his corrupt administration had earned him widespread loathing and forced his recall. In 1689, as word arrived of the unpopular king's loss of the throne, armed civilians arrested Andros in Boston. News of King James II's replacement by the Dutch William of Orange and the arrest of Andros emboldened several English and Dutch towns to oust their public officials. Jacob Leisler, a Dutch militia captain, took control of New York and declared a new government, consisting of a Com-

mittee of Safety, composed of representatives from the counties. The committee pledged loyalty to King William III and Queen Mary II. However, the most influential English and Dutch New Yorkers refused to support Leisler. The king commissioned a new governor of New York, Colonel Henry Sloughter, who arrived in 1691. When Leisler did not at once cede power, Sloughter charged him with treason and had him summarily executed. The ill will generated by the rebellion and the execution divided New York for many years, as demonstrated by this anonymous 1698 letter denouncing Leisler and his supporters.

Primary Source

A LETTER FROM A GENTLEMAN OF THE CITY OF NEW YORK, 1698

Sir:

I cannot but admire to hear that some Gentlemen still have a good Opinion of the late Disorders committed by Capt. Jacob Leysler, and his Accomplices, in New-York, as if they had been for His Majesties Service, and the Security of that Province; and that such Monstrous Falsehoods do find Credit, That the Persons before in Commission, and did labour to oppose and prevent those Disorders, were Jacobites, or Persons ill affected to the Happy Revolution in England. But it has been often the Calamity of all Ages to palliate Vice with false Glosses, and to criminate the best Actions of the most Virtuous and most Pious Men. So that Truth and Innocency, without some Defence, has not proved at all times a sufficient Bullwork against malitious Falsehoods and Calumnies. Wherefore I shall endeavour to give you a true and brief Account of that matter, as I my self have been a Personal Witness to most of them.

It was about the beginning of April, 1689, when the first Reports arrived at New-York, that the Prince of Orange, now his present Majesty, was arrived in England with considerable Forces, and that the late King James was fled into France, and that it was expected War would be soon proclaimed between England and France.

The Leiut. Governour, Francis Nicholson, and the Council, being Protestants, resolved thereupon to suspend all Roman Catholicks from Command and Places of Trust in the Government, and accordingly suspended Major Baxter from being a Member of Council and Captain of a Company at Albany and Bartholomew Russel from being Ensign in the Fort at New-York, they both being Papists, who forth-with left their Command, and departed the Province.

And because but three Members of the Council were residing in New-York, viz. Mr. Frederick Phillips, Coll. Stephanus Cortlandt, and Coll. Nicholas Bayard, all of Dutch Birth, all Members, and the two last, for the space of near thirty Years past, Elders and Deacons of the Dutch

Protestant Church in New-York, and most affectionate to the Royal House of Orange, It was Resolved by the said Lieut. Governor and Council, to call and conveen to their Assistance all the Justices of the Peace, and other civil Magistrates, and the Commission Officers in the Province, for to consult and advise with them what might be proper for the Preservation of the Peace, and the Safety of said Province in that Conjuncture, till Orders should arrive from England.

[...]

But against Expectation it soon happened, that on the last day of said Month of May, Capt. Leysler having a Vessel with some Wines in the Road,3 for which he refused to pay the Duty, did in a Seditious manner stir up the meanest sort of the Inhabitants (affirming, That King James being fled the Kingdom, all manner of Government was fallen in this Province) to rise in Arms, and forcibly possess themselves of the Fort and Stores, which accordingly was effected whilest the Lieut. Governour and Council, with the Convention, were met at the City Hall to consult what might be proper for the common Good and Safety; where a party of Armed Men came from the Fort, and forced the Lieut. Governour to deliver them the Keys; and seized also in his Chamber a Chest with Seven Hundred Seventy Three Pounds, Twelve Shillings, in Money of the Government. And though Coll. Bayard, with some others appointed by the Convention, used all endeavours to prevent those Disorders, all proved vain; for most of those that appeared in Arms were Drunk, and cryed out, They disown'd all manner of Government. Whereupon, by Capt. Leysler's perswasion, they proclaimed him to be their Commander, there being then no other Commission Officer amongst them.

Capt. Leysler being in this manner possest of the Fort, took some Persons to his Assistance, which he call'd, The Committee of Safety. And the Lieut. Governour, Francis Nicollson, being in this manner forced out of his Command, for the safety of his Person, which was daily threatened, withdrew out of the Province.

[…]

About a week after, Reports came from Boston, That their Royal Highnesses, the Prince and Princes of Orange were proclaimed King and Queen of England. Whereupon the Council and Convention were very desirous to get that Proclamation, and not only wrote for it, but some of them hearing that two Gentlemen were coming from Connecticut with a Copy of said Proclamation, went out two days to meet them, in expectation of having the Happiness to proclaim it; but Major Gold and Mr. Fitz, missing them, having put the Proclamation into Capt. Leysler's hands, he, without taking any Notice of the Councilor Convention, did proclaim the same, though very disorderly, after which he went with his Accomplices to the Fort, and the Gentlemen of the Council and Magistrates, and most of the principal Inhabitants and Merchants, went to Coll. Bayards

House and drank the Health and Prosperity of King William and Queen Mary with great Expressions of Joy.

Two days after, a printed Proclamation was procured by some of the Council, dated the 14th of February, 1688, whereby their Majesties confirmed all Sheriffs, Justices of the Peace, Collectors and Receivers of the Revenues, etc., being Protestants; which was forth-with published at the City Hall by the Mayor and Alder-men, accompanyed with the Council, and most of the chief Citizens and Merchants. And pursuant thereunto the Collector, Mat. Plowman, being a Papist, was forth-with suspended by the Convention; and Coll. Bayard, Alder-man, Paul Richards, Capt. Thomas Winham, and Lieut. John Haynes, Merchants, were by them commissionated and appointed to collect the Revenue until Orders should arrive from England. Whereupon those Gentlemen were sworn by Coll. Cortland, then Major of the City, they being the first in this Province that took the Oathes to their Majesties appointed by Act of Parliament, instead of the Oathes of Allegiance and Supreamacy.

But as soon as those Gentlemen entered upon the Office, Capt. Leysler with a party of his Men in Arms, and Drink, fell upon them at the Custom-House, and with Naked Swords beat them thence, endeavouring to Massacree some of them, which were Rescued by Providence. Whereupon said Leysler beat an Alarm, crying about the City, "Treason, Treason," and made a strict search to seize Coll. Bayard, who made his escape, and departed for Albany, where he staid all Summer, in hopes that Orders might arrive from England to settle those Disorders.

The said Capt. Leysler, finding almost every man of Sence, Reputation, or Estate in the place to oppose and discourage his Irregularities, caused frequent false Alarms to be made, and sent several parties of his armed Men out of the Fort, drag'd into nasty Goals within said Fort several of the principal Magistrates, Officers and Gentlemen, and others, that would not own his Power to be lawful, which he kept in close Prison during Will and Pleasure, without any Process, or allowing them to Bail. And he further publish't several times, by beat of Drums, That all those who would not come into the Fort and sign their hands, and so thereby to own his Power to be lawful, should be deemed and esteemed as Enemies to his Majesty and the Country, and be by him treated accordingly. By which means many of the Inhabitants, tho' they abhor'd his Actions, only to escape a nasty Goal and to secure their Estates were by fear and compulsion drove to comply, submit and sign to whatever he commanded.

And though Capt. Leysler had at first so violently opposed the collecting of the Revenue, alledging it unlawful, as soon as his Wines were landed, and that he got into some Power, he forth-with set up for himself the collecting of said Revenue by Peter d'Lanoy, allowing him a great Sallary, and all the Perquisits of that Office.

 $[\ldots]$

Upon the 10th of December following returned the said Mr. John Riggs from England, with Letters from his Majesty and the Lords, in answer to the Letters sent by the Lieut.

Governour and Council above recited, Directed, "To Our Trusty and Well-beloved Francis Nicholson, Esq; Our Lieutenant Governour and Commander in chief of Our Province of New-York in America, and in his absence To such as for the time being, take care for the Preservation of the Peace, and administring the Laws in Our said Province." Whereby his Majesty approved of the Proceedings and Care that had been taken by said Lieut. Governour and Council for the Peace and Safety of the Province, with further Power and Directions to continue therein till further Orders. Which said Letters the said Mr. Riggs designed to deliver on the following Morning to the Gentlemen of the Council, to whom they properly did belong, being an answer to their said Letter; but was obstructed therein by said Leysler, who sent a party of his Men in Arms, and brought said Riggs to the Fort, where he forced said Letters from him, though some Gentlemen of the Council, that went the same time to the Fort, protested against it, but he drove them out of the Fort, calling them Rogues, Papists, and other opprobious Names.

Soon after the Receipt of said Letters, said Capt. Leysler stiled himself Lieutenant Governour, appointed a Council, and presumed further to call a select Number of his own Party, who called themselves The General Assembly of the Province, and by their advice and assistance raised several Taxes and great Sums of Money from their Majesties good Subjects within this Province. Which Taxes, together with that 773l. 12s. in Money, which he had seized from the Government, and the whole Revenue, he applyed to his own use, and to maintain said Disorders, allowing his private men 18d. per Day, and to others proportionably.

On the 20th of January following Coll. Bayard and Mr. Nicolls had the ill fortune to fall into his hands, and were in a barbarous manner, by a party in Arms, drag'd into the Fort, and there put into a Nasty place, without any manner of Process, or being allowed to bayl, though the same was offered for said Coll. Bayard, by some of the ablest and richest Inhabitants, to the Sum of Twenty Thousand Pounds, wither for his appearance to answer, or depart the Province, or to go for England; but without any Cause given, or Reasons assigned, laid said Coll. Bayard in Irons, and kept him and Mr. Nicolls close Prisoners for the space of fourteen Months, where they, with several others, that had been long detained Prisoners, were set at Liberty by Governour Slaughter.

And whilest he kept those Gentlemen in Prison, he quartered his armed Men in their Houses, where they committed all manner of Outrages; And to give one Instance of many others, A Party of twelve Men were quartered at the House of Coll. Bayard, with directions to

pillage and plunder at discretion, which was bought off with Money and plentiful Entertainment. But the same day, when that party had received their Money, another party came in with Naked Swords, opened several Chambers and Chests in said House, and did Rob and carry away what Money and other Goods they found.

[…]

In this manner he the said Leysler, with his Accomplices, did force, pillage, rob and steal from their Majesties good Subjects within this Province, almost to their utter Ruin, vast Sums of Money, and other Effects, the estimation of the Damages done only within this City of New-York amounting, as by Account may appear, to the Sum of Thirteen Thousand Nine Hundred and Fifty Nine Pounds, besides the Rapines, Spoils and Violences done at Coll. Willets on Nassaw-Island, and to many others in several parts of the Province.

And thus you may see how he used and exercised an Exorbitant, Arbitrary and Unlawful Power over the Persons and Estates of his Majesties good Subjects here, against the known and Fundamental Laws of the Land, and in subvertion of the same, to the great Oppression of his Majesties Subjects, and to the apparent decay of Trade and Commerce.

96. Cotton Mather, *Decennium Lutuosum*, 1699 [Excerpt]

Introduction

The leading Puritan minister in colonial New England, Rev. Cotton Mather (1663–1728) distinguished himself as a theologian, scholar, author, public speaker, and popular leader. Descended from the prominent Puritans John Cotton and Increase Mather, he graduated from Harvard at the age of 15. Mather wrote more than 400 pamphlets and books. The sheer volume of his work influenced his contemporaries and provides a substantial source for understanding the historical events of his time. His 1699 book, Decennium Luctuosum, a history of King William's War in New England, was part of his more general religious history of New England. King William's War, in which England and the Netherlands were allied against France, was called the War of the Grand Alliance or the Nine Years' War in Europe, and lasted from 1689 to 1697. During the war, French and Indian fighters from Canada launched devastating attacks against New England frontier towns. In this excerpt, Mather gives vent to his loathing of Quakers and criticizes a Quaker author for blaming the war on the Puritans' unjust dealings with the Indians. Massachusetts had long been an inhospitable place for Quakers, most notably when authorities executed several Quakers in 1660.

Primary Source

[...

Quakers Encountered.

For the present then, we have done with the Indians: But while the Indians have been thus molesting us, we have suffered Molestations of another sort, from another sort of Enemies, which may with very good Reason be cast into the same History with them. If the Indians have chosen to prey upon the Frontiers, and Out-Skirts, of the Province, the Quakers have chosen the very same Frontiers, and Out-Skirts, for their more spiritual Assaults; and finding little Success elsewhere, they have been Labouring incessantly, and sometimes not unsuccessfully, to Enchant and Poison the Souls of poor people, in the very places, where the Bodies and Estates of the people have presently after been devoured by the Salvages. But that which makes it the more agreeable, to allow the Quakers an Article in our History of the Indians, is, That a certain silly Scribbler, the very First-born of Nonsensicality, (and a First-born too, that one might Salute as the Martyr Polycarp once did the wicked Marcion,) One Tom Maule, at this Time living in Salem, hath exposed unto the Publick a Volumn of Nonsensical Blasphemies and Heresies, wherein he sets himself to Defend the Indians in their Bloody villanies, and Revile the Countrey for Defending it self against them. And that the Venom of this Pamphlet might be Improved unto the Heighth of slanderous Wickedness, there hath been since added unto it, in another Pamphlet, a parcel of Ingredients compounded, for mischief, as if by the Art of Apothecary. None but he whom the Jews in their Talmuds call Ben-tamalion could have inspired such a Slanderer! Have the Quakers ever yet Censured this their Author, for holding-forth in his Alcoran That the Devil, Sin, Death, and Hell, are but Nothing, they are but a Non-Entity: And, That all men who have a body of Sin remaining in them are Witches? I have cause to believe, they never did! Nor that they ever advised him to pull in his Horns, from goring the sides of New-England, with such passages as those, in the same horrible Pamphlet: "God hath well Rewarded the Inhabitants of New-England, for their Unrighteous Dealings, towards the Native Indians, whom now the Lord hath suffered to Reward the Inhabitants, with a double measure of Blood, by Fire and Sword, etc." And those Unrighteous Dealings he Explains to be the Killing of the Indians, (or Murdering of them) by the Old Planters of these colonies in their First Settlement. Thus are the Ashes of our Fathers vilely staled upon, by one, who perhaps would not stick at the Villany of doing as much upon their Baptism it self. I must tell you, Friends, that if you don't publickly give forth a Testimony to Defie Tom Maule, and his Works, it will be thought by some, who it may be don't wish you so well as I do, that you own this Bloody Stuff: which, doubtless you'l not be so ill advised as to

do. But, certainly, if the good people of New-England now make it not a proverb for a lyar of the first Magnitude, he is as very a liar as Tom Maule, they will deprive their Language of one Significant Expression, which now offers it self unto them.

97. Samuel Sewall, *The Selling of Joseph: A Memorial*, 1700

Introduction

A Harvard graduate, Samuel Sewall (1652–1732) was active in the government and religious affairs of Massachusetts. He was one of the judges who presided over the Salem witch trials in 1692. He alone came to regret his participation in the trials, and in 1697 issued a public apology. In 1700 he published this early antislavery argument. Although New England did not have a plantation economy, Massachusetts traders prospered by participating in the African slave trade. They sailed to Africa to acquire slaves, then sold the slaves to planters in the West Indies. Also, wealthy New England townspeople kept African slaves as house servants. In a few short paragraphs, Sewall decries the cruelty of the slave trade and demolishes the justifications commonly offered by slavery's supporters. In later years, Sewall also argued for better treatment of Native Americans.

Primary Source

Forasmuch as Liberty is in real value next unto Life: None ought to part with it themselves, or deprive others of it, but upon most mature Consideration.

The Numerousness of Slaves at this day in the Province, and the Uneasiness of them under their Slavery, hath put many upon thinking whether the Foundation of it be firmly and well laid; so as to sustain the Vast Weight that is built upon it. It is most certain that all Men, as they are the Sons of Adam, are Coheirs; and have equal Right unto Liberty, and all other outward Comforts of Life. GOD hath given the Earth [with all its Commodities] unto the Sons of Adam, Psal 115.16. And hath made of One Blood, all Nations of Men, for to dwell on all the face of the Earth; and hath determined the Times before appointed, and the bounds of their habitation: That they should seek the Lord. For asmuch then as we are the Offspring of GOD &c. Act 17.26, 27, 29. Now although the Title given by the last ADAM, doth infinitely better Men's Estates, respecting GOD and themselves; and grants them a most beneficial and inviolable Lease under the Broad Seal of Heaven, who were before only Tenants at Will: Yet through the Indulgence of GOD to our First Parents after the Fall, the outward Estate of all and every of the Children, remains the same, as to one another. So that Originally, and Naturally, there is no such thing as Slavery. Joseph was rightfully no more a Slave to his Brethren, then they were to him: and they had no more Authority to Sell him, than they had to Slay him. And if they had nothing to do to Sell him; the Ishmaelites bargaining with them, and paying down Twenty pieces of Silver, could not make a Title. Neither could Potiphar have any better Interest in him than the Ishmaelites had. Gen. 37. 20, 27, 28. For he that shall in this case plead Alteration of Property, seems to have forfeited a great part of his own claim to Humanity. There is no proportion between Twenty Pieces of Silver, and LIBERTY. The Commodity it self is the Claimer. If Arabian Gold be imported in any quantities, most are afraid to meddle with it, though they might have it at easy rates; lest if it should have been wrongfully taken from the Owners, it should kindle a fire to the Consumption of their whole Estate. 'Tis pity there should be more Caution used in buying a Horse, or a little lifeless dust; than there is in purchasing Men and Women: Whenas they are the Offspring of GOD, and their Liberty is,

_____ Auto pretiosior Omni.

And seeing GOD hath said, He that Stealeth a Man and Selleth him, or if he be found in his hand, he shall surely be put to Death. Exod. 12.16. This Law being of Everlasting Equity, wherein Man Stealing is ranked amongst the most atrocious of Capital Crimes: What louder Cry can there be made of the Celebrated Warning, *Caveat Emptor?*

And all things considered, it would conduce more to the Welfare of the Province, to have White Servants for a Term of Years, than to have Slaves for Life. Few can endure to hear of a Negro's being made free; and indeed they can seldom use their freedom well; yet their continual aspiring after their forbidden Liberty, renders them Unwilling Servants. And there is such a disparity in their Conditions, Color & Hair, that they can never embody with us, and grow up into orderly Families, to the Peopling of the Land: but still remain in our Body Politick as a kind of extravasat Blood. As many Negro men as there are among us, so many empty places there are in our Train Bands, and the places taken up of Men that might make Husbands for our Daughters. And the Sons and Daughters of New England would become more like Jacob, and Rachel, if this Slavery were thrust quite out of doors. Moreover it is too well known what Temptations Masters are under, to connive at the Fornification of their Slaves; lest they should be obliged to find them Wives, or pay their Fines. It seems to be practically pleaded that they might be Lawless; 'tis thought much of, that the Law should have Satisfaction for their Thefts, and other Immoralities; by which means, Holiness to the Lord, is more rarely engraven upon this sort of Servitude. It is likewise most lamentable to think, how in taking Negros out of Africa, and Selling of them here, That which GOD ha's joyned together men do boldly rend asunder; Men from their Country, Husbands from their Wives, Parents from their Children. How horrible is the Uncleanness, Mortality, if not Murder, that the Ships are guilty of that bring great Crouds of these miserable Men, and Women. Methinks, when we are bemoaning the barbarous Usage of our Friends and Kinsfolk in Africa: it might not be unseasonable to enquire whether we are not culpable in forcing the Africans to become Slaves amongst our selves. And it may be a question whether all the Benefit received by Negro Slaves, will balance the Accompt of Cash laid out upon them; and for the Redemption of our own enslaved Friends out of Africa. Besides all the Persons and Estates that have perished there.

Obj. 1. These Blackamores are if the Posterity if Cham, and therefore are under the Curse of Slavery. Gen. 9.25, 26, 27.

Answ. Of all Offices, one would not begg this; viz. Uncall'd for, to be an Executioner of the Vindictive Wrath of God; the extent and duration of which is to us uncertain. If this ever was a Commission; How do we know but that it is long since out of date? Many have found it to their Cost, that a Prophetical Denunciation of Judgment against a Person or People, would not warrant them to inflict that evil. If it would, Hazael might justify himself in all he did against his Master, and the Israelites, from 2 Kings 8.10, 12.

But it is possible that by cursory reading, this Text may have been mistaken. For Canaan is the Person Cursed three times over, without the mentioning of Cham. Good Expositors suppose the Curse entailed on him, and that this Prophesie was accomplished in the Extirpation of the Canaanites, and in the Servitude of the Gibeonites, Vide Pareum. Whereas the Blackmores are not descended of Canaan, but of Cush. Psal. 68. 31. Princes shall come out of Egypt [Mizraim] Ethopia [Cush] shall soon stretch out her hands unto God. Under which Names, all Africa may be comprehended; and the Promised Conversion ought to be prayed for. Jer. 13, 23. Can the Ethiopian change his skin? This shews that Black Men are the Posterity of Cush: Who time out of mind have been distinguished by their Colour. And for want of the true, Ovid assigns a fabulous cause of it.

Answ. Evil must not be done, that good may come of it. The extraordinary and comprehensive Benefit accruing to the Church of God, and to Joseph personally, did not rectify his brethrens Sale of him.

Obj. 3. The Africans have Wars with one another: our Ships bring lawful Captives taken in those Wars.

Answ. For ought is known, their Wars are much such as were between Jacob's Sons and their Brother Joseph. If they be between Town and Town; Provincial, or National: Every War is upon one side Unjust. An Unlawful War can't make lawful Captives. And by Receiving, we are in danger to promote, and partake in their Barbarous Cruelties. I am sure, if some Gentlemen should go down to the Brewsters to take the Air, and Fish: And a stronger party from Hull should Surprise them, and Sell them for Slaves to a Ship out-

ward bound: they would think themselves unjustly dealt with; both by Sellers and Buyers. And yet 'tis to be feared, we have no other kind of Title to our Nigers. Therefore all things whatsoever ye would that men should do to you, do ye even so to them: for this is the Law and the Prophets. Matt. 7. 12.

Obj. 4. Abraham had servants bought with his Money, and born in his House.

Answ. Until the Circumstances of Abraham's purchase be recorded, no Argument can be drawn from it. In the mean time, Charity obliges us to conclude, that He knew it was lawful and good.

It is Observable that the Israelites were strictly forbidden the buying, or selling one another for Slaves. Levit. 25. 39, 46. Jer. 34. 8-22. And GOD gaged His Blessing in lieu of any loss they might conceipt they suffered thereby. Deut. 15. 18. And since the partition Wall is broken down, inordinate Self love should likewise be demolished. GOD expects that Christians should be of a more Ingenuous and benign frame of spirit. Christians should carry it to all the World, as the Israelites were to carry it one towards another. And for men obstinately to persist in holding their Neighbours and Brethren under the Rigor of perpetual Bondage, seems to be no proper way of gaining Assurance that God ha's given them Spiritual Freedom. Our Blessed Saviour ha's altered the Measures of the Ancient Love-Song, and set it to a most Excellent New Tune, which all ought to be ambitious of Learning. Matt. 5. 43, 44. John 13. 34. These Ethiopians, as black as they are; seeing they are the Sons and Daughters of the First Adam, the Brethren and Sister of the Last ADAM, and the Offspring of GOD; They ought to be treated with a Respect agreeable.

98. King Philip V, Orders to the Colonial Governor of St. Augustine to Prepare for English Attack, January 11, 1701

Introduction

From 1701 to 1714, the English and the Dutch fought France and Spain in the War of the Spanish Succession. Known as Queen Anne's War in America, the war gave rise to battles in Canada, New England, South Carolina, and Florida. The king of Spain sent these orders to the royal governor at St. Augustine, Florida, to prepare for a possible English invasion of Spanish New World possessions in the Caribbean and elsewhere. Indeed, in September 1702, Carolina governor James Moore led a combined force of more than 1,000 colonial militia and Indians against St. Augustine. St. Augustine,

Florida, established by Spain in 1565, lay only some 250 miles from the Carolina capital, Charles Town (present day Charleston, South Carolina). About 1,500 Spanish lived at St. Augustine. Moore's force arrived in eight vessels and occupied the town while the Spanish withdrew into the Castillo San Marcos. Moore laid siege to the fortress for eight weeks but abandoned it when two Spanish vessels arrived from Havana. The Carolinians burned the town and their own ships, and withdrew overland. In 1704 Moore mounted a second campaign against Spanish Florida that destroyed Spanish missions and about three quarters of the Indian population.

Primary Source

Royal Cedula, Madrid, January 11, 1701

THE KING

My governor and captain general of the province of San Augustine of Florida:

Having very reliable news that the English and Dutch are planning an invasion and conquest of the Indies, for which purpose they have assembled a great number of war vessels with a large landing force, I desire to warn you of these plans so that you will be informed of them and make all preparations that may be necessary for defense and opposition of any invasion. For this purpose you will avail yourself of French auxiliary arms, not only of those found in the island of Santo Domingo and other places in the possession that crown, but also of those which recently have been sent to those coasts by the Most Christina Majesty and my grandfather. And you will likewise avail yourself of every means afforded by the million in subsidy conceded by His Holiness [Pope] Innocent XII from the funds of the crusades and other resources designed for the expulsion of the Scots from Darien, since this [threat of war] is but the consequence of appeasement. And in the war against the enemies of the crown and of the religion, you will closely attend to this and will report whenever opportunities offer, after the receipt of this dispatch on whatever you do by virtue of its authority, being advised that in conformity therewith, orders are being sent to the viceroys of both kingdoms, and to the governors of all forts and ports of the Indies, and that the same advice is given to General Admiral don Pedro Fernandez Navarette, to the commanders of the windward fleet, and to the vessels of Cartagena, with the order that they are not to leave those coasts until they are so ordered; rather, that they survey those [coasts] in order to supply their fortifications with the necessities for their defense. Madrid, 11th of January, 1701. I the Queen; the Cardinal Porto Carrero; Fray Don Manuel Arias; Don Fernando de Aragon; the bishop Inquisitor General; By Command of the King, Our Lord; Don Manuel de Aperregui.

99. Spanish Reports of English Attacks on Indians, 1704 [Excerpt]

Introduction

From 1702 to 1713, the English and the Dutch fought France and Spain in the War of the Spanish Succession. Known as Queen Anne's War in America, the war gave rise to battles in Canada, New England, South Carolina, and Florida. A series of campaigns involving the Spanish and English and their Indian allies began in 1702. In Charles Town, South Carolina, Gov. James Moore advocated a preemptive strike at the Spanish in St. Augustine, some 250 miles distant. In September 1702, Moore led a combined force of more than 1,000 colonial militia and Indians in a failed campaign against St. Augustine. The Spanish, in turn, attacked Charles Town but their expedition also failed. In 1704 Moore mounted a second expedition against Spanish Florida. His army marched over land through Georgia and into northern Florida, burning Spanish missions and communities of Indians who were loyal to the Spanish, and captured more than a thousand Indians to be sold into slavery. Moore's campaign ultimately destroyed three quarters of the Indian population in Spanish territory. This correspondence between the governor of Florida and officials in Spain details the destruction wrought by the Moore expedition.

Primary Source

Extract from a letter of Governor Zúñiga to the King. February 3, 1704

.... And now in a sloop which I have kept in reserve solely for emergencies, I am sending to Havana an appeal for supplies and reinforcements, in view of the news which I received yesterday at one o'clock, of how on the 25th of January of this year, the enemy attacked Ayubale, one of the largest places in Apalachee, and captured it with a large force on foot, of English, Negroes, and Indians, with which they have invaded the province, to besiege the blockhouse. It was my desire to send assistance to the infantry and settlers found there, and well as to some natives who have joined them, but I find myself with so few people, and I am disconsolate that I dare not leave this place without some defense....

Extract from a letter of Governor Zúñiga to the King. March 30, 1704

.... And since in tow months of siege they could not accomplish their aim, they seek now to destroy the provinces and terrorize the Indians, pagan as well as Christian, and have this additional force to make hostile incursions in these parts as close as sixty leagues either by sea or land. In the incursions they have made since the siege, San Joseph de Ocuia in Apalachee, Pilitiriva, and San Francisco have all been destroyed and many Indians killed, and in all they have carried off more than five hundred prisoners. All this has

been related to Your Majesty, but they have now returned to Apalachee, accompanied by the governor who here besieged me, with a force of fifteen hundred Indians and fifty English, desolating the country, and assaulting the place of Ayubale on the 25th of January of this year, which was defended with all bravery by the Indians and the parish priest Fray Angel de Miranda, who fought from morning until two in the afternoon, when their munitions gave out. The enemy advanced to the stockade close by the church and convent, which they set fire and captured. On the 26th my deputy governor in Apalachee, Captain Juan Ruíz de Mexía, with about thirty Spanish soldiers and settlers, and four hundred Apalachee Indians, surrounded the enemy and killed six or seven of the English and about one hundred of the pagan Indians, to say nothing of another fifty killed by the priest Miranda and the Indians of Ayubale, and two or three English more. But finally, for lack of munitions, my people were defeated, and my deputy was wounded by a ball which toppled him from his horse. They also killed the parish priest of Patale, who wished to accompany them, and two soldiers and some Indians who were roasted with much barbarity and cruelty by the abhorrent pagans, who bound them to some stakes by the feet and hands and set them afire until their lives were extinguished. This was seen by my deputy and soldiers, whom they stripped and secured in stocks, except Fray Angel de Miranda, who was unbound. During this cruel and barbarous martyrdom which the poor Apalachee Indians experienced, there were some of them who encouraged the others, declaring that through martyrdom they would appear before God; and to the pagans they said: "Make more fire so that our hearts may be allowed to suffer for our souls. We go to enjoy God as Christians, but when you die the demons in hell will keep you eternally ablaze, at which lamentable event Our Lord will not be moved to compassion." . . . The enemy freed my deputy, the priest Miranda, and four of the soldiers, on the supposition that they could exact a ransom of four hundred pesos in reals, with five cows and five horses for each. But Captain Don Jacinto Roque Pérez, whom my deputy had left in command for the defense of the blockhouse of San Luis, sent word to the English governor that he did not intend to give anything. Finally, the governor did not attack the blockhouse, but turned away at a distance of two leagues. On their withdrawal, they left five places destroyed, and of these, the entire population of two places accompanied them voluntarily. They carried off al that could be collected, including cows and horses, and that which could not be carried, they destroyed and burnt. The enemy carried off more than six hundred of the Christina Indians. Four of the Gallegan soldiers who arrived in the past year fled to the enemy from the blockhouse, carrying off their arms, carabines, pistols, and horses. An Irishman fled to the blockhouse of San Luis with a flag of peace. He was sent here for interrogation, and from his examination no cause to justify harsh treatment was found. He was liberated, as there is no opportunity for him to communicate with the English prisoners whom I have here, and he is to be sent to Havana, so that from there they may send him to those kingdoms, or the New Spain....

Royal Officials to Viceroy July 16, 1704

... And now, Most Excellent Sir, by the latest report from the deputy of Apalachee, the warnings so often given of the desire of the enemy to possess that province are seen justified through the destruction of the native Christians, which they have been accomplishing since the date of the last dispatch sent to Your Excellency up to the present. Those unfortunate soldiers, settlers, and natives experienced death, burning, captivity, and the desolation of the few places that remain, after they were reduced to four; and the repeated and frequent raids have left very few people in two of these. In one, they even killed and burned a priest and his sexton in their convent, and are so daring as to come within sight of the wooden blockhouse with a garrison that His Majesty has in that province to protect those places. The deputy set out with some foot soldiers and Christian Indians to oppose and dislodge the enemy. During the skirmish he was abandoned by those Indians who accompanied him, and who joined their own kind, whereupon those who were mounted fled, leaving behind those who were surrounded by the enemy. Twenty-two of the infantry, killed or captured, were lost. Among them were those who had come from Pensacola to drive back cattle for the subsistence of that place, of which they are now deprived. The Indian alcaldes were barbarously burned alive, and sixteen Spaniards were killed. The remainder were ignominiously carried off naked. For each death of a wounded enemy Indian, they retaliated by burning a Spaniard or Indian, as will be evident to Your Excellency from the enclosed letters.

It is learned from captives who have escaped from these raids that these adversaries are planning to join with a band of three thousand pagans raised by the English, and with other rebels, to descend again and ravage the few remaining people in Apalachee, capture the blockhouse, and burn the infantry. With this news and the events already experienced, the Indians are quietly passing to the enemy unopposed as they have no desire to see themselves killed or captured; they are leaving their families, who are Christian and loyal to the King, to be supported by the Spanish. They intimate that even were they given aid and encouragement of future assistance, that because of their need and the injuries they have received, and in order not to experience them further, they would quietly desert to the enemy, for otherwise they would be burned by them. In view of this, and seeking as a last resort to save the lives of those few soldiers and settlers who at the price of their ranches and lives have defended the blockhouse to gain His Majesty's good will, and to save the few vassals who, reduced to only two localities, have remained there, and to maintain them as friends before they become alienated—since now because of the meager resources, they could not be aided from the presidio with men and supplies at a distance of eighty leagues, sixty of which are depopulated, and only traversed with much risk, as they are already occupied by the enemy, and a river which cannot be forded—and since the women and children of some few Spanish families, as well as some priests, have already fled from the danger,

some to Pensacola, others to some islands and because of the uncertain subsistence and loyalty of the Indians—it was decided by a general council that all would be withdrawn to the presidio, the blockhouse dismantled and burned, and the cattle that the enemy had left driven in. This is done in order to deprive them of this sustenance—they have no other—and so that the Indians who can be assembled be also withdrawn to this place, as was proposed by a chief himself and his village of Ivitachuco. It is hoped that God may restore this province and that it may again be garrisoned.

And in this manner, Most Excellent Sir, as a last resort is the province deserted and abandoned. The enemy will eagerly settle it, and will go on, as is known and expected, to besiege this place which is so desired by their royal power, because it offers a situation so convenient to their operations on the mainland through its connection with the settlements to the north, and with ports on the Gulf of Mexico, which they much desire to obtain, since now it is free from the Apalachee. It is known that they are preparing eighteen vessels for Pensacola and for this place thirty vessels, with men and bombs that they bring from Europe. This we submit for the serious consideration of Your Excellency, so that the condition of this garrison may be clear. It is exposed to a misfortune (may God not permit it) from a lack of troops, provisions, and munitions that obliges us to have recourse to the mercy of Your Excellency, to whom we represent the foregoing in order that now, from the solicitude of Your Excellency in that kingdom, we may expect of you the help that necessity requires in this exigency to protect the defenseless lives of this presidio and free them from the barbarous cruelties of the Indians, and especially of the rebellious Christians, so that His Majesty will not lose the territory which is now the Province of Apalachee, of Guale, and part of Timuqua. Of what remains there can be some doubt because of its vulnerability, and the fear of the natives that God may withdraw His law from them. Of all of this we are confident, from the great piety of Your Excellency, on whom alone depend our hopes and aid today, as now there is no other recourse than the aid which we ask and this place expects of Your Excellency. Our Lady protect Your Excellency many happy years in the dignity which you merit.

100. James Moore, Letters Regarding the English Attack on Spanish Florida, 1704

Introduction

From 1702 to 1713, the English and the Dutch fought France and Spain in the War of the Spanish Succession. Known as Queen

Anne's War in America, the war gave rise to battles in Canada, New England, South Carolina, and Florida. A series of campaigns involving the Spanish and the English and their Indian allies began in 1702. In Charles Town, South Carolina, Gov. James Moore advocated a preemptive strike at the Spanish in St. Augustine, some 250 miles distant. In September 1702, Moore led a combined force of more than 1,000 colonial militia and Indians in a failed campaign against St. Augustine. The Spanish, in turn, attacked Charles Town but their expedition also failed. In 1704, having stepped down as governor, Moore mounted a second expedition against Spanish Florida at his own expense. His 1,000-man army marched overland through Georgia and into northern Florida, burning Spanish missions and communities of Indians who were loyal to the Spanish, and captured more than a thousand Indians to be sold into slavery. Moore's campaign ultimately destroyed three quarters of the Indian population in Spanish territory. In these letters, Moore reports on his success and asserts that his actions have made Carolina secure from Spanish attack.

Primary Source

Colonel Moore's Letter to Sir Nathaniel Johnson, 16 April, 1704

May it please Your honour,

To accept of this short Narrative of what I, with the Army under my Command, have been doing since my departure from the Ockmulgee, which was on the 19th of December. On the 14th of January at the sun rising we came to a Town, a strong and almost regular Fort, called Aiavalla [Ayubale]: At our first approach the Indians in it fired, and shot Arrows at us briskly, from which we hid and Sheltered Ourselves under the Side of a great Mud Walled House, til we could take a View of the Fort, and consider of the best way of assaulting it, which we concluded to be by breaking open the Church doors, which were a part of the Fort, with Axes.

I no sooner proposed this, but my Men readily undertook it, run up to it briskly (the Enemy at the same time shooting at them) were beaten off, without effecting it, and 14 white men wounded. Two hours after that we thought fit to attempt burning the church, which we did, three or four Indians assisting us in it we burnt it. The Indians in it obstinately defended themselves and killed us two men, viz., Francis Plowden and Thomas Dale. After we were within their Fort a Fryar, the only [white] within it, came forth and begged mercy: In this we took 26 men alive and 58 women and children, the Indians took about as many more of each sort. The Fryar told us we killed in the two storms 24 men.

The next morning the Captain of St. Lewis's Fort with 23 Whites and 400 Indians came to fight us, which we did, beat him, and took eight of his men prisoners. And as the Indians (which say the did it) tell us, killed 5 or 6 whites. We have a particular account of 168 Indian men killed and taken in this fight and flight. The Apalatchee Indi-

ans say the lost 200, which we have reason to believe the least. In this fight Captain John Berringer, fighting bravely in the head of our men, was killed at my foot. Captain Fox died of a wound given him on our first storming of the fort.

Two days after I sent to the King of the Attachookas [Ivitachuco] (who with 130 men was in his strong and well-made Fort) to come to me to make this peace with me, he did it, and compounded for it with his church plate and led horses leaded with provision. After this I marched thro' two towns, which have all strong Forts and defenses against small armies, they all submitted and surrendered their Forts to me without conditions. I have now in my company all the whole people of three towns, and the greatest part of four more; we have totally destroyed all the people of two town, so that we have left in Apalatchee but that one town which compounded with me, part of St. Lewis's and the people of one town which run away altogether, their town, church, and fort, we have burnt. The people of St. Lewis's which remain, come unto me every night. I expect, and have advice, that the town which compounded with me, are coming after me. The waiting for these people make any marches slow; for I am willing to bring away free, as many Indians as I can, this being the address of the commons to order it so. This will make my mens part of plunder (which otherwise might have been £100 per man) but small, but I hope with your Honour's assistance, to find a way to gratify them for their bold and stout actions, and their great loss of blood. I never saw, or heard, of a stouter or braver thing done than the storming of the fort; it hath regained the reputation we seemed to have lost under the conduct of Captain Mackie, the Indians having now a mighty value for the whites.

Apalatchee is now reduced to that feeble, and low condition, that it neither can supply St. Augustine with provisions, or disturb, damage or frighten our Indians living between us and Apalatchee, and the French. In short, we have made Carolina as safe as the conquest of Apalatchee can make it.

If I had not had so many men wounded in our first attempt, I had assaulted St. Lewis's fort, in which is now but 28 or 30 men, and 20 of these came thence from Pensacola to buy provisions the first night after I took the first Fort.

On Sunday the 23rd of this month I came out of Apalatchee settlement, and am now about 30 miles in my way home, but do not expect to reach it til about the middle of March, notwithstanding my horses will not be able to carry me [to the] Cherokee nations.

I have had a dirty, tedious and uneasy journey, and tho I have no reason to fear any harm from the enemy, thro the difference between the Whites and the Indians, between Indian and Indian, bad way and false alarms, do still labour under the hourly uneasinesses. The number of free Apalatchee Indians, which are not under my protection, bound with me to Carolina, are 300; the Indians

under my command killed and took prisoners in the plantations, whilst we stormed the Fort, as many Indians as we and they took and killed in the Fort.

I am & Ja. Moore

Extract of colonel Moore's letter to the Lords Proprietors, 16 April, 1704

I will not trouble Your Lordships with a relation of the many hazards and difficulties I underwent in my expedition against Apalatchee, but beg leave to let you know what I have done there.

By my own interest and at my own charge I raised 50 whites, all the Government thought fit to spare out of the settlement at that time; with them and 1000 Indians, which by my own interest I raised to follow me, I went to Apalatchee: The first place I came to was the strongest Fort in Apalatchee, which after nine hours I took, and in it 200 persons alive, and killed 20 men in the engagement. I had killed 3 whites and 4 Indians; of the last there were but 15 ever came within shot of the fort. The next morning the Captain of the fort of St. Lewis and Governor of the Province of Apalatchee, with all the force of Whites and Indians he could raise in the province came and gave me battle in the field; after half an hour's fight we routed them and in the fight and flight killed six Spaniards, one of which was a Fryar; took the Captain and Governor and Adjutant General and Seven men Spaniards prisoners, and killed and took 200 Indian men. In this fight my Captain was killed and 11 of my Indians. I lay in the field of battle four days, some of my wounded men not being in a condition to march, or to be carried any way in this time The next strongest Fort was surrendered to me upon conditions. On the 5th day I marched to two more Forts, both which were delivered up to me, without conditions, and the men, women and children of the whole town, which were in it, prisoners at discretion. In one of these Forts I lodged one night; the next day I marched to two more Forts, both [of] which with the people that were in them were delivered to me without conditions, as were the two other Forts. In one of these I lay two nights, here I offered freedom of persons and goods, to as many Kings, as with all the people under their government would go along with me, and live under and subject themselves to our Government. On these terms four Kings and all their people, came away with me, and part of the people of four more Kings; which I have planted among our Indians, and put them out of a capacity of returning back again alone[.] In this expedition I brought away 300 men, and 1000 women and children, have killed, and taken as slaves 325 men, and have taken slaves 4000 women and children; tho I did not make slave, or put to death one man, woman or child but what were taken in the fight, or in the fort I took by storm. All which I have done with the loss of 4 whites and 15 Indians, and without one penny charge to the publick. Before this expedition we were more afraid of the Spaniards of Apalatchee and their Indians in conjunction the French of Mississippi, and their Indians doing us harm by

land, than of any forces of the enemy by sea. This has wholly disabled them from attempting anything against us by land, the whole strength of Apalatchee not exceeding 300 Indians and 24 Whites, who cannot now (as I have seated our Indians) come at me that way, must they March thro 300 Indian men our friends, which were before this conquest of Apalatchee (for fear of the Spaniards and their Indians) every day moving to the Northway of us.

That colony of the French which is situated on the River Mississippi, are not the French we have reason to fear; they have seated another colony on a river call Coosa six days journey nearer us than Mississippi, and not above 50 miles from us than Apalatchee. These French and Their Indians (if suffered to live where they are now) will be no less a dangerous enemy to us in peace than in war, it being much easier for them to cut off our settlements from this place, than it is for the Canada Indians to cut off the inland towns in New England.

101. Robert Beverley, *The History*and *Present State of Virginia*,1705 [Excerpt]

Introduction

When the first English settlers came to Virginia in 1607, its native peoples consisted of the Algonquian inhabitants of some thirty villages who accepted the leadership of the chieftain, Powhatan. The 1614 wedding of Powhatan's daughter, Pocahontas, to the Englishman John Rolfe brought about a brief period of peace. By 1622, Powhatan's successor and half-brother Opechancanough laid plans to drive the English from his land. The resulting massacre of more than a third of the Virginia's English population spurred the survivors to launch a brutal reprisal. In 1644, Opechancanough launched another attack on the English. His warriors killed more than 400 frontier settlers. However, the colony had grown to a population of nearly 10,000, while exposure to European diseases and long years of warfare had reduced the Indian population of Virginia to barely half of what it had been when the first Englishmen arrived. In 1646, a treaty with Opechancanough's successor ended the war. The native peoples' territory and freedom of movement were severely restricted. A later frontier war ended in 1677 with a treaty that imposed even greater restrictions. This 1705 history written by a prominent Virginian provides the inevitable end of the story: "The Indians of Virginia are almost wasted..."

Primary Source

The *Indians* of *Virginia* are almost wasted, but such Towns, or People as retain their Names, and live in Bodies, are hereunder set

down; All which together can't raise five hundred fighting men. They live poorly, and much in fear of the Neighbouring *Indians*. Each Town, by the Articles of Peace in 1677. pays 3 *Indian* Arrows for their Land, and 20 Beaver Skins for protection every year.

In Accomack are 8 Towns, viz.

Matomkin is much decreased of late by the Small Pox, that was carried thither.

Gingoteque. The few remains of this Town are joyn'd with a Nation of the *Maryland Indians*.

Kiequotank, is reduc'd to very few Men.

Matchopungo, has a small number yet living.

Occahanock, has a small number yet living.

Pungoteque. Govern'd by a Queen, but a small Nation.

Oanancock, has but four or five Families.

Chiconessex, has very few, who just keep the name.

Nanduye. A Seat of the Empress. Not above 20 Families, but she hath all the Nations of this Shore under Tribute.

In *Northampton. Gangascoe*, which is almost as numerous as all the foregoing Nations put together.

In *Prince George. Wyanoke*, is almost wasted, and now gone to live among other *Indians*.

In *Charles City. Appamattox*. These Live in Collonel *Byrd's* Pasture, not being above seven Families.

In *Surry*. *Nottawayes*, which are about a hundred Bow-men, of late a thriving and increasing People.

By *Nansamond. Menheering*, has about thirty Bow men, who keep at a stand.

Nansamond. About thirty Bow-men: They have increased much of late.

In *King Williams County*, 2. *Pamunkie*, has about forty Bow-men, who decrease.

Chickahomonie, which had about sixteen Bow-men, but lately increas' d.

In *Essex. Rappahannock*, is reduc'd to a few Families, and live scatter'd upon the *English* Seats.

In Richmond. Port-Tabago, has bout five Bow-men, but Wasting.

In *Northumberland. Wiccocomoco*, has but three men living, which yet keep up their Kingdom, and retain their Fashion; they live by themselves, separate from all other *Indians*, and from the *English*.

Thus I have given a succinct account of the *Indians*; happy, I think, in their simple State of Nature, and in their enjoyment of Plenty, without the Curse of Labour. They have on several accounts reason to lament the arrival of the *Europeans*, by whose means they seem to have lost their Felicity, as well as their Innocence. The *English* have taken away great part of their Country, and consequently made every thing less plenty amongst them. They have introduc'd Drunkenness and Luxury amongst them, which have multiply'd their Wants, and put them upon desiring a thousand things, they

never dreamt of before. I have been the more concise in my account of this harmless people, because I have inserted several Figures, which I hope have both supplied the defect of Words, and render'd the Descriptions more clear. I shall in the next place proceed to treat of *Virginia*, as it is now improv'd, (I should rather say alter'd,) by the *English* and of its present Constitution and Settlement.

The End of the Third Book.

102. John Williams, *The Redeemed Captive Returning to Zion*,1707 [Excerpt]

Introduction

From 1702 to 1713, the English and the Dutch fought France and Spain in the War of the Spanish Succession. Known as Queen Anne's War in America, the war gave rise to battles in Canada, New England, South Carolina, and Florida. John Williams, a Harvardeducated Puritan minister in Massachusetts, was among the captives taken in a French and Indian raid on Deerfield in February 1704. The attackers killed Williams's two youngest sons and marched the captives, including his five other children, into Canada. The forced march killed Mrs. Williams. Williams himself gained his freedom late in 1706, after nearly three years of captivity. He participated as a chaplain in a later campaign of the war. Four of the Williams children, who had been scattered among several Indian villages, eventually returned home. One daughter, Eunice, six years old at the time of her capture, spent the remainder of her long life living as an Indian. She became the subject of a 1995 book, The Unredeemed Captive. Warfare between the French and the English in North America involved not only a fight for territory, but also a fight for souls. This excerpt details the variety of ways in which the French captors tried to force Catholicism on their captives.

Primary Source

.... After another days travel, we came to a river where the ice was thawed; we made a canoe of elmbark in one day, and arrived on a Saturday near noon, at Chamblee, a small village, where is a garrison and fort of French soldiers.

[At Chamblee]

This village is about fifteen miles from Montreal. The French were very kind to me. A gentleman of the place took me into his house, and to his table; and lodged me at night on a good feather-bed. The inhabitants and officers were very obliging to me, the little time I staid with them, and promised to write a letter to the governor in

chief, to inform him of my passing down the river. Here I saw a girl taken from our town, and a young man, who informed me that the greatest part of the captives were come in, and that two of my children were at Montreal; that many of the captives had been in three weeks before my arrival. Mercy in the midst of judgment! As we passed along the river towards Sorel, we went into a house, where was an English woman of our town, who had been left among the French in order to her conveyance to the Indian fort. The French were very kind to her, and to myself, and gave us the best provision they had; and she embarked with us, to go down to St. Francois fort. When we came down to the first inhabited house at Sorel, a French woman came to the river side, and desired us to go into her house; and when we were entered she compassioned our state, and told us, she had in the last war been a captive among the Indians, and therefore was not a little sensible of our difficulties. She gave the Indians something to eat in the chimney corner, and spread a cloth on the table for us with napkins; which gave such offence to the Indians, that they hasted away, and would not call in at the fort. But wherever we entered into houses, the French were very courteous. When we came to St. Francois river, we found some difficulty by reason of the ice; and entering into a Frenchman's house, he gave us a loaf of bread, and some fish to carry away with us; but we passed down the river till night, and there seven of us supped on the fish called bull-head or pout, and did not eat it up, the fish was so very large.

The next morning we met with such a great quantity of ice, that we were forced to leave our canoe, and travel on land. We went to a French officer's house, who took us into a private room, out of the sight of the Indians, and treated us very courteously. That night we arrived at the fort called St. Francois; where we found several poor children, who had been taken from the eastward in the summer before; a sight very affecting, they being in habit very much like Indians, and in manners very much symbolizing with them. At this fort lived two jesuits, one of which was made superiour of the jesuits at Quebec. One of the jesuits met me at the fort gate, and asked me to go into the church, and give God thanks for preserving my life. I told him I would do that in some other place. When the bell rang for evening prayers, he that took me, bid me go; but I refused. The jesuit came to our wigwam, and prayed a short prayer, and invited me to sup with them, and justified the Indians in what they did against us; rehearsing some things done by major Walden, above thirty years ago; and how justly God retaliated them in the last war, and inveighed against us for beginning this war with the Indians: And said, we had before the last winter, and in the winter, been very barbarous and cruel, in burning and killing Indians. I told them, that the Indians, in a very perfidious manner, had committed murders on many of our inhabitants, after the signing articles of peace: And as to what they spake of cruelties, they were undoubtedly falsehoods, for I well knew the English were not approvers of any inhumanity or barbarity towards enemies. They said, an Englishman had killed one of St. Casteen's relations, who occasioned this war; for, say they, the nations, in a general counsel, had concluded not

to engage in the war, on any side, till they themselves were first molested, and then all of them, as one, would engage against them that began a war with them; and that upon the killing of Casteen's kinsman, a post was dispatched to Canada, to advertise the Macquas, and Indians, that the English had begun a war: On which they gathered up their forces, and that the French joined with them, to come down on the eastern parts; and that when they came near New England, several of the eastern Indians told them of the peace made with the English, and the satisfaction given them from the English for that murder. But the Macquas told them, it was now too late; for they were sent for, and were now come, and would fall on them, if without their consent they made a peace with the English. Said also, that a letter was shown them, sent from the governour of Port-Royal, which, he said, was taken in an English ship, being a letter from the queen of England to our governour, writing how she approved his designs to ensnare and deceitfully to seize on the Indians; so that being enraged from that letter, and being forced, as it were, they began the present war. I told them the letter was a lie, forged by the French.

The next morning the bell rang for mass: My master bid me go to church: I refused: He threatened me, and went away in a rage. At noon, the jesuits sent for me to dine with them; for I eat at their table all the time I was at the fort. And after dinner, they told me, the Indians would not allow of any of their captives staying in their wigwams, whilst they were at church; and were resolved by force and violence to bring us all to church, if we would not go without. I told them it was highly unreasonable so to impose upon those who were of a contrary religion; and to force us to be present at such service, as we abhorred, was nothing becoming christianity. They replied, they were savages, and would not hearken to reason, but would have their wills: Said also, if they were in New-England themselves, they would go into their churches, to see their ways of worship. I answered, the case was far different, for there was nothing (themselves being judges) as to matter or manner of worship, but what was according to the word of God, in our churches; and therefore it could not be an offence to any man's conscience. But among them, there were idolatrous superstitions in worship. To which I answered, That I was not to do evil that good might come on it; and that forcing in matters of religion was hateful. They answered, The Indians were resolved to have it so, and they could not pacify them without my coming; and they would engage they should offer no force or violence to cause any compliance with their ceremonies.

The next mass, my master bid me go to church: I objected; he arose, and forcibly pulled me by the head and shoulders out of the wigwam to the church, which was near the door. So I went in, and sat down behind the door; and there saw a great confusion, instead of any gospel order; for one of the jesuits was at the altar, saying mass in a tongue unknown to the savages; and the other, between the altar and the door, saying and singing prayers among the Indians at the same time; and many others were at the same time saying over their

pater nosters, and Ave Mary, by tale from their chapelit, or beads on a string. At our going out, we smiled at their devotion so managed; which was offensive to them; for they said we made a derision of their worship. When I was here, a certain savages died; one of the jesuits told me she was a very holy woman, who had not committed one sin in twelve years. After a day or two, the Jesuits asked me what I though of their way, now I saw it? I told them, I thought Christ said of it as Mark vii. 7,8,9. Howbeit, in vain do they worship me, teaching for doctrines the commandments of men. For laying aside the commandment of God, ye bold the tradition of men, as the washing of pots and cups; and many other such like things ye do. And he said unto them, Full well ye reject the commandment of God, that ye may keep your own tradition. They told me, they were not the commandments of men, but apostolical tradition, of equal authority with the holy scriptures: And that after my death, I should bewail my not praying to the Virgin Mary; and that I should find the want of her intercession for me with her son; judging me to hell for asserting the scriptures to be a perfect rule of faith: And said, I abounded in my own sense, entertaining explications contrary to the sense of the pope, regularly fitting with a general council, explaining scripture, and making articles of faith. I told them, it was my comfort that Christ was to be my judge, and not they, at the great day; and as for their censuring and judging me, I was not moved with it.

One day, a certain savage, taken prisoner in Philip's war, who had lived at Mr. Buckley's at Weathersfield, called Ruth, who could speak English very well, who had been often at my house, but was now proselyted to the Romish faith, came into the wigwam, and with her an English maid, who was taken the last war, who was dressed up in Indian apparel, unable to speak one word of English, who said she could neither tell her own name, or the name of the place from whence she was taken. These two talked in the Indian dialect with my master a long time; after which, my master bade me cross myself; I told him I would not; he commanded me several times, and I as often refused. Ruth said, Mr. Williams, you know the scripture, and therefore act against your own light; for you know the scripture faith, servants obey your masters; he is your master, and you his servant. I told her she was ignorant, and knew not the meaning of the scripture, telling her, I was not to disobey the great God to obey any master, and that I was ready to suffer for God, if called thereto: On which she talked to my master; I suppose she interpreted what I said. My master took hold of my hand to force me to cross myself; but I struggled with him, and would not suffer him to guide my hand; upon this, he pulled off a crucifix from his own neck, and bade me kiss it; but I refused once and again; he told me he would dash out my brains with his hatchet if I refused. I told him I should sooner choose death than to sin against God. Then he ran and catched up his hatchet, and acted as though he would have dashed out my brains. Seeing I was not moved, he threw down his hatchet, saying he would first bite off all my nails if I still refused. I gave him my hand, and told him I was ready to suffer; he set his teeth in my thumb nail, and gave a gripe with his teeth, and the said,

no good minister, no love God, as bad as the devil; and so left off. I have reason to bless God, who strengthened me to withstand. By this he was so discouraged as never more to meddle with me about my religion. I asked leave of the jesuits to pray with those English of our town who were with me; but they absolutely refused to give us any permission to pray one with another, and did what they could to prevent our having any discourse together.

After a few days, the governour de Vaudreuil, governour in chief, sent down two men with letters to the jesuits, desiring them to order my being sent up to him to Montreal; upon which, one of the jesuits went with my two masters, and took me along with them, as also two more of Deerfield, a man, and his daughter about seven years of age. When we came to the lake, the wind was tempestuous, and contray to us, so that they were afraid to go over; they landed and kindled a fire, and said they would wait a while to see whether the wind would fall or change. I went aside from the company, among the trees, and spread our case, with the temptations of it, before God, and pleaded that he would order the season so, that we might not go back again, but be furthered on our voyage, that I might have opportunity to see my children and neighbours, and converse with them, and know their state. When I returned, the wind was more boisterous; and then a second time, and the wind was more fierce. I reflected upon myself for my unquietness, and the want of a resigned will to the will of God. And a third time went and bewailed before God my anxious cares, and the tumultuous working of my own heart, begged a will fully resigned to the will of God, and thought that by the grace of God I was brought to say amen to whatever God should determine. Upon my return to the company, the wind was yet high: The jesuit and my master said, Come, we will go back again to the fort, for there is no likelihood of proceeding in our voyage, for very frequently such a wind continues three days, sometimes six. After it continued so many hours, I said to them, The will of the Lord be done; and the canoe was put again into the river, and we embarked. No sooner had my master put me into the canoe, and put off the shore, but the wind fell; and coming into the middle of the river, they said, We may go over the lake well enough: And so we did. I promised, if God gave me opportunity, I would stir up others to glorify God in a continued persevering, committing their straits of heart to him. He is a prayer-hearing God, and the stormy winds obey him. After we passed over the lake, the French, wherever we came, were very compassionate to us.

[At Montreal.]

When I came to Montreal, which was eight weeks after my captivity, the governour de Vaudreuil redeemed me out of the hands of the Indians, gave me good clothing, took me to his table, gave me the use of a very good chamber, and was in all respects, relating to my outward man, courteous and charitable to admiration. At my first entering into his house, he sent for my two children, who were in the city, that I might see them; and promised to do what he could to get all my children and neighbours out of the hands of the sav-

ages. My change of diet, after the difficulties of my journeys, caused an alteration in my body: I was physicked, blooded, and very tenderly taken care of in my sickness.

103. John Lawson, *A New Voyage* to Carolina, 1709 [Excerpt]

Introduction

The English naturalist John Lawson arrived in Charles Town (Charleston, South Carolina) in 1701. He traveled through both Carolinas and visited numerous Indian villages. In A New Voyage to Carolina, published in London in 1709 and excerpted here, he wrote of the Indians' generosity and civility. Lawson bought land and settled in eastern North Carolina. Despite his admiration for the Indians, he died at their hands. In September 1711, Lawson, along with the Swiss nobleman Christoph von Graffenried and two slaves, was captured by Tuscarora Indians while exploring along the Neuse River. Graffenried had recently established the town of New Bern with some 400 new inhabitants. The Tuscaroras executed Lawson, thinking he was trying to claim their land. They spared the other captives, out of sympathy with black slaves, and possibly in the mistaken belief that Graffenried was the colonial governor. At dawn on September 22, 1711, the Tuscarora mounted a surprise attack on the farms around New Bern, killing some 130 colonists and beginning the Tuscarora War. The colonists inflicted a decisive defeat on the Tuscaroras in 1713. Most of the Tuscaroras then migrated to New York and became the sixth nation in the Iroquois Confederation.

Primary Source

And since I hinted at a Regulation of the Savages, and to propose a way to convert them to Christianity, I will first particularize the several Nations of Indians that are our Neighbours, and then proceed to what I promis'd.

Tuskeruro Indians are fifteen Towns, viz. Haruta, Waqui, Contahnah, Anna Ooka, Conauh-Kare Harooka, Una Nauhan, Kentanuska, Chunaneets, Kenta, Eno, Naur-hegh-ne, Oonossoora, Tosneoc, Nonawharitse, Nursoorooka; Fighting Men 1200. Waccon, Towns 2, Yupwauremau, Tooptatmeer, Fighting Men 120. Machapunga, Town 1, Maramiskeet, Fighting Men 30. Bear River, Town 1, Raudauqua-quank, Fighting Men 50. Maherring Indians, Town 1, Maherring River, Fighting Men 50. Chuwon Indians, Town 1, Bennets Creek, Fighting Men 15. Paspatank Indians, Town 1, Paspatank River, Fighting Men 10. Poteskeit, Town 1, North River, Fighting Men 30. Nottaway Indians,

Town 1, Winoack Creek, Fighting Men 30. Hatteras Town 1, Sand Banks, Fighting Men 16. Connamox Indians, Towns 2, Coranine, Raruta, Fighting Men 25. Neus Indians, Towns 2, Chattooka, Rouconk, Fighting Men 15. Pampticough Indians, Town 1, Island, Fighting Men 15. Jaupim Indians, 6 People. These five Nations of the Totero's, Sapona's, Keiauwee's, Aconechos, and Schoccories, are lately come amongst us, and may contain, in all, about 750 Men, Women and Children. Total 4780.

Now, there appears to be one thousand six hundred and twelve Fighting Men, of our Neighbouring Indians; and probably, there are three Fifths of Women and Children, not including Old Men, which amounts to four thousand and thirty Savages, besides the five Nations lately come. Now, as I before hinted, we will see what grounds there are to make these People serviceable to us, and better themselves thereby.

On a fair Scheme, we must first allow these Savages what really belongs to them, that is, what good Qualities, and natural Endowments, they possess, whereby they being in their proper Colours, the Event may be better guess'd at, and fathom'd.

First, they are as apt to learn any Handicraft, as any People that the World affords; I will except none; as is seen by their Canoes and Stauking Heads, which they make of themselves; but to my purpose, the Indian Slaves in South Carolina, and elsewhere, make my Argument good.

Secondly, we have no disciplin'd Men in Europe, but what have, at one time or other, been branded with Mutining, and Murmuring against their Chiefs. These Savages are never found guilty of that great Crime in a Soldier; I challenge all Mankind to tell me of one Instance of it; besides, they never prove Traitors to their Native Country, but rather chuse Death than partake and side with the Enemy.

They naturally possess the Righteous Man's Gift; they are Patient under all Afflictions, and have a great many other Natural Vertues, which I have slightly touch'd throughout the Account of these Savages.

They are really better to us, than we are to them; they always give us Victuals at their Quarters, and take care we are arm'd against Hunger and Thirst: We do not so by them (generally speaking) but let them walk by our Doors Hungry, and do not often relieve them. We look upon them with Scorn and Disdain, and think them little better than Beasts in Humane Shape, though if well examined, we shall find that, for all our Religion and Education, we possess more Moral Deformities, and Evils than these Savages do, or are acquainted withal.

We reckon them Slaves in Comparison to us, and Intruders, as oft as they enter our Houses, or hunt near our Dwellings. But if we will admit Reason to be our Guide, she will inform us, that these Indians are the freest People in the World, and so far from being Intruders upon us, that we have abandon'd our own Native Soil, to drive them out, and possess theirs....

104. Christoph von Graffenried, Account of the Tuscarora Attack in North Carolina, 1711 [Excerpt]

Introduction

In 1710, the Swiss baron Christoph von Graffenried, established the town of New Bern with some 400 new inhabitants. This proved to be the last straw for the Tuscaroras, who had long resented unfair treatment by white traders. In September 1711, Graffenried, along with the English naturalist John Lawson and two slaves, were captured by Tuscaroras while exploring along the Neuse River. The Tuscaroras executed Lawson but spared the other captives, out of sympathy with black slaves, and possibly in the mistaken belief that Graffenried was the colonial governor. They revealed to Graffenried their plans to attack the colonists, but Graffenried could not escape to raise the alarm. At dawn on September 22, 1711, the Tuscaroras mounted a surprise attack on the farms around New Bern, killing some 130 colonists. In this excerpt, Graffenried describes these events as he observed them during his captivity. With help from South Carolina forces and Yamasees warriors, the colonists inflicted a decisive defeat on the Tuscaroras in 1713. Most of the Tuscaroras then migrated to New York and joined the Iroquois Confederation. The Yamasees rose against the colonists of South Carolina in 1715 and killed several hundred. An alliance with the Cherokees proved crucial to the colonists' victory.

Primary Source

They let my negro loose also, but I never saw him again. Poor Lawson remaining in the same place could easily guess that it was all over and no mercy for him. He took his leave of me striving to see me in his danger; and I, not daring to speak with him or give him the least consolation, indicated my sympathy by some signs which I gave him.

A little while after this, the man who had spoken for me in the council led me to his hut, where I was to remain quietly until further orders, and in this interval the unfortunate Lawson was executed; with what sort of death I really do not know. To be sure I had heard before from several savages that the threat had been made that he was to have his throat cut with a razor which was found in his sack. The smaller negro, who was left alive, also testified to this; but some

say he was hanged; others that he was burned. The savages keep it very secret how he was killed. May God have pity on his soul.

The day after the execution of Surveyor General Lawson the chief men of the village came to me with the report that they had it in mind to make war on North Carolina. Especially did they wish to surprise the people of Pamtego, Neuse, and Trent Rivers, and Core Sound. So that for good reasons they could not let me go until they were through with this expedition. What was I to do? I had to have patience, for none of my reasons helped. A hard thing about it was that I had to hear such sad news and yet could not help nor let these poor people know the least thing of it. It is true, they promised that Caduca, which is the old name of the little city of New Bern, should receive no harm; but the people of the colony should come down into the little city, otherwise they could not promise much for the damage. These were good words, but how was I to let the poor people know? Since no savage would take the warning to them, I had to leave this also to the Most High. There were about five hundred fighting men collected together, partly Tuscaroras, although the principal villages of this nation were not involved with them. The other Indians, the Marmuskits, those of Bay River, Weetock, Pamtego, Neuse, and Core began this massacring and plundering at the same time. Divided into small platoons these barbarians plundered and massacred the poor people at Pamtego, Neuse, and Trent. A few days after, these murderers came back loaded with their booty. Oh what a sad sight to see this and the poor women and children captives. My heart almost broke. To be sure I could speak with them, but very guardedly. The first came from Pamtego, the others from Neuse and Trent. The very same Indian with whom I lodged brought a young boy with him, one of my tenants, and many garments and house utensils that I recognized. Oh how it went through my heart like a knife thrust, in the fear that my colony was all gone, and especially when I asked the little fellow what had happened and taken place. Weeping bitterly he told me that his father, mother, brother, yes, the whole family had been massacred by the very same Indian above mentioned. With all this I dared not act in any way as though I felt it. For about six weeks I had to remain a prisoner in this disagreeable place, Catechna, before I could go home. In what danger, terror, disgrace, and vexation is easily to be thought.

All sorts of things happened in this time. Once I was in great perplexity. The men folks were all on this massacring expedition, the women all somewhat distant to get cherries, others to dig sweet potatoes, a species of yellow roots, very good and pleasant. And so I found myself entirely alone that same day in the village. A struggle arose in me whether I should get away from there and go home or not. I studied long over it, considered it best to call upon my God for help in this doubt, so that he would put it into my mind what I should do in such critical circumstance. After I had made my prayer, examined and treated the matter pro et contra, I finally considered the better way would be to stay; comforting myself with this

that He who had saved me from the first extreme peril would still help me further. Again, if any Indian met or saw me I should be a dead man, for there would be no hope of mercy. In addition they would be so embittered that before I could get home, since I did not know the way, everything would be plundered, burned, and murdered. Experience proved afterwards that I chose the better way.

After these heathens had made their barbarous expedition they came home and rested for a time. Then I watched the opportunity and when I found the chiefs of the village in good humor I asked whether I might not soon go home. To bring them to a favorable disposition I proposed to make a separate peace with the, promised at the same time each chief of the ten villages a cloth coat, something in addition for my ransom; to the king, two flasks of powder, five hundred bullets, two bottles of rum, a brandy made of sugar. But the Indians wanted to have much more, such as guns, more powder, and lead or bullets; but I told them this was contraband, that is, ware which was forbidden to offer for sale under penalty of hanging; that I would, at least, have to be neutral and help neither one side not the other: Otherwise there would nothing come of our peace. They accepted these and other reasons, and so we made an agreement as your Highness will see in the enclosed article of the treaty.

But although we made our treaty, still these suspicious fellows did not want to let me go without more secure and certain guarantee.

105. Louis XIV, Patent to Trade in Louisiana granted to Anthony Crozat, September 14, 1712 [Excerpt]

Introduction

Rene-Robert Cavelier, Sieur de La Salle, explored the Mississippi River Valley in 1682 and planned to use it as a French base to attack adjacent Spanish possessions. He was murdered by mutinous subordinates in Texas in 1687. His loyal friend Henri Joutel published a memoir of La Salle's last expedition, to which this letter is appended. In it Louis XIV delineates the vast territory explored by La Salle—called Louisiana and bounded by Carolina, New Mexico, and the Gulf of Mexico—and declares his intention to annex Louisiana to New France. King Louis also cites the continual warfare as the reason for the 30-year delay between La Salle's 1682 discoveries and the issuance of the patent. Indeed, France was involved in King William's War (also called the War of the Grand Alliance or the Nine Years' War) from 1689 to 1697 and Queen Anne's War (also called the War of the Spanish Succession) from 1702 to 1713. The patent grants to the merchant Anthony Crozat

exclusive trading rights in Louisiana for 15 years, plus the right to mine precious metals and to transport slaves from Africa for sale in Louisiana. In return Crozat was required to provide free trans-Atlantic passage to Louisiana for French troops and colonists. In the ensuing decades, French traders competed with the British for the loyalty of Indians residing in this territory.

Primary Source

The Letters Patent granted by the King of France to M. Crozat.

.... We did in the Year 1683 give our orders to undertake a Discovery of the Countries and Lands which are situated in the Northern Part of America, between New France and New Mexico: And the Sieur de la Sale, to whom we committed that Enterprize, having had Success enough to confirm a Belief that a Communication might be settled from New France to the Gulph of Mexico by Means of large Rivers; This obliged us immediately after the Peace of Ryswick to give Orders for the establishing a Colony there, and maintaining a Garrison which has kept and preserved the Possession, we had taken in the very Year 1683 of the Lands, Coasts and Islands which are situated in the Gulph of Mexico, between Carolina on the East, and Old and New Mexico on the West. But a new War having broke out in Europe shortly after, there was no Possibility, till now, of reaping from that new Colony the Advantages that might have been expected from thence, because the private Men, who are concerned in the Sea Trade, were all under Engagements with other Colonies, which they have been obliged to follow: And whereas upon the Information we have received concerning the Disposition and Situation of the said Countries known at present by the Name of the Province of *Louisiana*, we are of Opinion that there may be established therein a considerable Commerce, so much the more advantageous to our Kingdom in that there has hitherto been a Necessity of fetching from Foreigners the greatest Part of the Commodies which may be brought from thence, and because in Exchange thereof we need carry thither nothing but Commodities of the Growth and Manufacture of our own Kingdom; we have resolved to grant the Commerce of the Country of Louisiana to the Sieur Anthony Crozat our Councellor, Secretary of the Household, Crown and Revenue, to whom we entrust the Execution of this Project. We are the more readily inclined hereunto, because his Zeal and the singular Knowledge he has acquired in maritime Commerce, encourage us to hope for as good Success as he has hitherto had in the divers and sundry Enterprizes he has gone upon, and which have procured to our Kingdom great Quantities of Gold and Silver in such Conjunctures as have rendered them very welcome to us.

.... We by these Presents, signed by our Hand, have appointed and do appoint the said Sieur Crozat solely to carry on a Trade in all the Lands possessed by Us, and bounded by New Mexico, and by the Lands of the English of Carolina, all the Establishment, Ports, Havens, Rivers, and principally the Port and Haven of the Isle Dauphine, heretofore called Massacre; the River of St. Lewis, heretofore called

Missisipi, from the Edge of the Sea as far as the Islinois; together with the River of St. Philip, heretofore called the Missourys, and of St. Jerome, heretofore called Ovabache, with all the Countries, Territories, Lakes within Land, and the Rivers which fall directly or indirectly into that Part of the River of St. Lewis.

The ART I C L E S.

I. Our Pleasure is, that all the aforesaid Lands, Countries Streams, Rivers and Islands be and remain comprised under the Name of *The Government of Louisiana*, *which shall be dependant upon the General Government of New France*, to which it is subordinate; and further, that all the Lands which we possess from the *Islinois* be united, so far as Occasion requires, to the General Government of *New France*, and become Part thereof, reserving however to Ourselves the Liberty of enlarging as We shall think fit the Extent of the Government of the said Country of *Louisiana*.

II. We grant to the said Sieur Crozat far Fifteen successive Years, to be reckon'd from the Day of Inrolling these presents, a Right and Power to transport all Sorts of Goods and Merchandize from France into the said Country of Louisiana, and to traffick thither as he shall think fit. We forbid all and every Person and Persons, Company and Companies of what Quality or Condition soever, and under any Pretence whatever, to trade thither, under Penalty of Confiscatian of Goods, Ships, and other more severe Punishments, as Occasion shall require; for this Purpose we order our Governours and other Officers commanding our Troops in the said Country forcibly to abet, aid and assist the Directors and Agents of the said Sieur Crozat.

III. We permit him to search for, open and dig all Sorts of Mines, Veins and Minerals throughout the whole Extent of the said Country of *Louisiana*, and to transport the Profits thereof into any Part of *France* during the said Fifteen Years; and we grant in Perpetuity to him, his Heirs, and others claiming under him or them, the Property of, in and to the Mines, Veins and Minerals which he shall bring to bear, paying us, in Lieu of all Claim, the Fifth Part of the Gold and Silver which the said *Sieur Crozat* shall cause to be transported to *France* at his own Charges into what Part he pleases, (of which Fifth we will run the Risque of the Sea and of War,) and the Tenth Part of what Effects he shall draw from the other Mines, Veins and, Minerals, which Tenth he shall transfer and convey to our Magazines in the said Country of *Louisiana*.

We likewise permit him to search for precious Stones and Pearls, paying us the Fifth Part in the same Manner as is mention'd for the Gold and Silver.

 $[\ldots]$

IV. The said *Sieur Crozat* may vend all such Merchandize, Goods, Wares, Commodities, Arms, and Ammunition as he shall have caused

to be transported into the said Country and Government of *Louisiana*, as well to the *French*, as *Savages* who are or shall be there setled; nor shall any Person or Persons under any Pretence whatsoever be capable of doing the like without his Leave expressed in Writing.

V. He may purchase in the said Country, all Sorts of Furs, Skins, Leather, Wool, and other Commodities and Effects of the said Country, and transport them to *France* during the said Fifteen Years: And as our Intention is to favour, as much as we can, our Inhabitants of *New France*, and to hinder the Lessening of their Trade, we forbid him Trafficking for Castor in the said Country under any Pretence whatsoever; nor to Convey any from thence into our Kingdom or Foreign Countries.

VI. We Grant to the *Sieur Crozat*, his Heirs or those claiming under him or them, the Property of, in and to all Settlements and Manufactories which he shall erect or set up in the said Country for Silk, Indigo, Wooll, Leather, Mines, Veins and Minerals, as likewise the Property of, in and to the Lands which he shall cause to be Cultivated with the Mansions, Mills, and Structures which he shall cause to be built thereon, taking Grants thereof from Us, which Grants he shall obtain upon the Verbal Process and Opinion of our Governor and of the Subdelegate of the Intendant of New France in the said Country, to be by him Reported unto Us.

 $[\ldots]$

VII. Our Edicts, Ordinances and Customs, and the Usages of the Mayoralty and Shreevalty of *Paris*, shall be observed for Laws and Customs in the said Country of *Louisiana*.

VIII. The said Sieur Crozat shall be oblig'd to send to the said Country of Louisiana Two Ships every Year, which he shall cause to set out in the proper Season, in each of which Ships he shall cause to be imbark'd, without paying any Freight, 25 Tun of Victuals, Effects and necessary Ammunition, for the Maintenance of the Garrison and Forts of the Louisiana; and in Case we should cause to be laden above the said 25 Tun in each Ship, we consent to pay the Freight to the said Sieur Crozat, at the common Merchantile Rates.

He shall be oblig'd to convey our Officers of *Louisiana* in the Ships which he shall send thither, and to furnish them with Subsistance and a Captain's Table for 30 Sols per Day, which we will cause to be paid for each.

He shall likewise give Passage in the said Ships, to the Soldiers, which we shall please to send to the said Country; and we will cause the necessary Provisions for their Subsistance to be furnish'd to him, or will pay him far them at the same Price as is paid to the Purveyor-General of our Marine.

He shall be furthermore oblig'd ta send on Board each Ship, which he shall cause to set out far the said Country, Ten young Men or Women, at his awn Election. IX. We will cause to be deliver'd out of our Magazines to the said *Sieur Crozat*, 10000 Weight of Gunpowder every Year, which he shall pay us for at the Price that it shall cost us, and this for so long Time as the present Privilege shall last.

X. The Wares and Merchandize which the said *Sieur Crozat* shall consign to the said Country of Louisiana shall be exempt from all Duties of Exportation, laid or to be laid, on Condition, that his Directors, Deputies or Clerks, shall engage to give within the Space of a Year, to be reckon'd from the Date thereof, a Certificate of their Unlading in the said Country of Louisiana; under Penalty, in Case of Contravention, to pay the Quadruple of the Duties, reserving to our selves the Power of giving him a longer Respite in such Cases and Occurrences as we shall think proper.

XI. And as for the Goods and Merchandize, which the *Sieur Crozat* shall cause to be brought from the said Country of *Louisiana*, and upon his Account, into the Ports of our Kingdom, and shall afterwards cause to be transported into Foreign Countries, they shall pay no Duties either of Importation or Exportation, and shall be deposited in the Custom-House, Warehouses of Ports where they shall arrive, until they be taken away; and when the Deputies and Clerks of the said *Sieur Crozat* shall be minded to cause them to be transported in Foreign Countries, either by Sea or Land, they shall be oblig'd to give Security to bring within a certain Time, a Certificate from the last Office, containing what they Exported there, and another Certificate of their unlading in Foreign Countries.

XII. In Case the said *Sieur Crozat* be obliged, for the furtherance of his Commerce to fetch from Foreign Countries some Goods and Merchandize of Foreign Manufacture, in order to Transport them into the said Country of *Louisiana*. He shall make Us Acquainted therewith, and lay before Us States thereof; upon which we, if we think fit, will Grant him our Particular Permission with Exemptions from all Duties of Importation and Exportation, Provided the said Goods and Merchandize be Deposited afterwards in our Custom-House Ware-houses until they be Laden in the Ships of the said *Sieur Crozat*, who shall be obliged to bring in one Year, to be reckoned from the Day of the Date hereof, a Certificate of their unlading in the said Country of *Louisiana*, under Penalty, in Case of Contraventian, to pay quadruple the Duties: Reserving to our selves, in like Manner, the Liberty of granting to the said *Sieur Crozat*, a longer Respite, if it be necessary.

[...]

XIV. If for the Cultures and Plantations which the said *Sieur Crozat* is minded to make he finds it proper to have Blacks in the said Country of the *Louisiana*, he may send a Ship every Year to trade for them directly upon the Coast of *Guinea*, taking Permission from the *Guinea* Company so to do, he may sell those Blacks, to the Inhabitants of the Colony of *Louisiana*; and we forbid all other Companies

and Persons whatsoever, under any Pretence whatsoever, to introduce Blacks or Traffick for them in the said Country, nor shall the said *Sieur Crozat* carry any Blacks else where.

 $[\ldots]$

XVI. The said *Sieur Crozat* shall be obliged, after the Expiration of the first nine Years of this Grant, to Pay the Officers and the Garrison which shall be in the said Country During the Six last Years of the Continuance of this Present Priviledge: The said *Sieur Crozat* may in that Time propose and nominate the Officers, as Vacancies shall fall, and such Officers, shall be Confirmed by us, if we approve of them.

106. Treaty of Utrecht, 1713 [Excerpt]

Introduction

From 1702 to 1713, the English and the Dutch fought France and Spain in the War of the Spanish Succession. Known as Queen Anne's War in America, the war gave rise to battles in Canada, New England, South Carolina, and Florida. In New England, French and Indian forces from New France destroyed numerous English settlements. In the south, Carolinians and Indians led by Gov. James Moore cut a swath of destruction through the Spanish missions and Indian villages of Spanish Florida. The English colonists' campaign against Florida ultimately destroyed three-quarters of Florida's Spanish loyal Indian population and made slaves of more than a thousand Indians. The Treaty of Utrecht was actually a series of treaties signed between the major European powers to bring the war to an end. The treaties were signed over a period of several months, lasting from April 11, 1713, to September 7, 1714. Although the French had sued for peace, the various powers made a number of exchanges in territory and a wide variety of concessions to one another, with France losing more than the other nations. Below is an excerpt of the treaty signed between Britain and Spain in the summer of 1713.

Primary Source

Peace-Treaty between His Catholic Majesty Felipe the Fifth & Her Highness Queen Anne Stuart, Queen of England.

The English negotiators were The Bishop of Bristol and the Earl of Stratford; the Spanish, the Duke of Osuna and the Marquis of Monteleón. They did unanimously compact the following Peace-Treaty comprising twenty-five Articles:

I. There shall be a binding peace between the two Sovereigns and Their successors, and each shall endeavour to ensure that His subjects observe this peace.

II. That all fears that the Realms of France and Spain might ever be conjoined in one Person shall be allayed, and that the peace herein convened between the two Powers shall be firmly established and the proper balance of forces ever guaranteed and peace thereby ensured, His Catholic Majesty does here reiterate and reaffirm the abdication of all His rights to the Crown of France. Hereto were appended the Act of Abdication, the resolution of the Cortes, the Royal Decree naming the House of Savoy as lawful heirs and successors to the Spanish Throne, the Acts of Renunciation made by the French Royal Family of all Their claims and rights to the Throne of Spain, and the epistle of His Most Christian Majesty.

III. All those acts of hostility occasioned by this present war shall now pass into the annals of history and no more shall men remind themselves of them.

IV. All prisoners-of-war shall be straightways set at liberty upon the ratification of this present Treaty.

V. His Catholic Majesty does hereby solemnly pledge Himself to recognise the limits placed on the succession to the British Throne, with respect to the House of Hanover.

VI. His Catholic Majesty does hereby enter into a solemn undertaking that He shall henceforth never commit any act of hostility against Her Majesty the Queen of Great Britain nor any of Her line who do succeed her.

VII. All the Tribunals and Petty Sessions shall once again be established and convened, that all subjects of either Monarch shall be entitled to seek satisfaction at law in respect of all their claims and allegations.

VIII. Both parties shall enjoy all shipping concessions and rights and permission to trade freely the one with the other, as is their wont in time of peace, and as was the inviolable rule during the reign of King Carlos the Second; and all such freedoms shall apply to the trafficking in negroes as is set out in Article twelve.

IX. Each and every subject of the one Realm shall enjoy the same privileges and enfranchisements as do the subjects of the other, and do those subjects of the French Realm and all members of all other Nations whatsoever.

X. His Catholic Majesty does hereby cede all rights to the townships and stronghold of Gibraltar to the Crown of Great Britain; yet with the proviso that the cession and granting of such rights shall in no way imply the granting of any territorial jurisdiction and that it shall in no wise be taken to include any rights whatever to open communication with those Spanish cities and lands that do surround the said township and stronghold; and Her Britannic Majesty does hereby enter into an undertaking that no Jews nor any Moors shall enjoy the right to be elected to positions of authority in the said township and fortress nor to reside therein, and does pledge Herself to exclude all Moorish men-o'-war from the said port and harbour. She does furthermore hereby grant licence to all inhabitants of the said township to practise whatever Faith they do profess.

XI. His Catholic Majesty does hereby in like wise cede to the Crown of Great Britain the island of Minorca together with the harbour, city and fortress of Mahón, on the same terms as those stipulated above in respect of the cession of Gibraltar, with the proviso that, should the said Crown at any time wish to relinquish these same rights, she shall not do so to any third Power without first offering them to the Crown of Spain.

XII. His Catholic Majesty does hereby cede to Her Britannic Majesty and the Company of her subjects for the period of thirty years from the first day of May, 1713, exclusive rights to import negroes into His colonies in the Americas, on the same conditions as those hitherto applying to the similar rights enjoyed by the Crown of France, and on the terms set down in the Treaty of Settlement drawn up in Madrid on the 26th of March in this present year, 1713, which Treaty shall be deemed to be included herein word for word, precisely as though it had here been inserted in its entirety.

XIII. Seeing that Her Majesty the Queen of Great Britain does intercede on behalf of the inhabitants of Catalonia and does beseech that they be granted pardon and the restoration of their ancient rights and estates, His Catholic Majesty shall be pleased to grant not only that these rights and estates be fully restored unto them but that they shall henceforth enjoy also those privileges that do attach to the inhabitants of the two Castilles.

XIV. His Majesty does also hearken to the entreaties of Her Britannic Majesty and does herein admit Her request that the Realm of Sicily be ceded to His Royal Highness Victor Amadeo, Duke of Savoy, and Her Britannic Majesty shall undertake to use Her every good office to ensure that, should the male line of the House of Savoy at any time cease to enjoy proper continuance, this Realm shall revert to the Crown of Spain; and She does hereby enter into an obligation to guarantee that the said Realm shall never be made over in gift to another Head of State, for whatever reason and whatever pretext, unless that other person be His Catholic Majesty the King of Spain or one such among His heirs and successors.

XV. Their Royal Majesties do hereby reiterate all Peace-Treaties and all Pacts of Confederation and all Trade Agreements compacted hitherto between Their two Crowns, and do reaffirm them, save that they be in contraction of the Articles contained herein; and Her Britannic Majesty is pleased to recognise all rights and privileges claimed by the Basque peoples and by other subjects of the Spanish Crown to fish in the waters that do surround the Island of Newfoundland, and is pleased to ratify them.

XVI. All the provisions for requital and restitution contained in the Cease-Fire Treaty agreed on the 22nd August between His Most Christian Majesty and Her Britannic Majesty, and prorogued until the 22nd of April of this present year, shall have full and lawful effect.

XVII. Should any subject of either Monarch flout any of the stipulations contained herein, this shall not be sufficient and necessary cause for hostilities to be renewed, but rather shall any such felon be punished in accordance with established law.

XVIII. Should some stroke of fate occasion a renewal of hostilities (God forbid), there shall be a moratorium of the persecution of individuals of either Nation such that they shall be vouchsafed six months during which they may either remove or sell all the property and interests they do possess on the soil of the other.

XIX. All those Rulers named in this Treaty and all those which shall be named herein by mutual consent within six months of the date of this Treaty, shall be deemed to have concurred with all the provisions contained herein.

XX. All the Articles of the Peace-Treaty which is about to be concerted between His Catholic Majesty and the King of Portugal shall be deemed to form part of this present Treaty and Her Britannic Majesty does hereby constitute Herself guarantor of this.

XXI. All the agreements reached on that same day between His Catholic Majesty and His Royal Highness, the Duke of Savoy, shall be deemed to form part of this present Treaty and Her Britannic Majesty does hereby pledge Herself to observe all agreements so reached.

XXII. His Majesty the King of Sweden, His Highness the Duke of Tuscany and His Highness the Duke of Parma, together with their subjects and all their rights and liberties shall be admitted with due solemnity as co-signatories to this Treaty.

XXIII. The Most Serene Republic of Venice shall be deemed cosignatory to this Treaty.

XXIV. It is furthermore the avowed wish of Their Majesties that the Most Serene Republic of Genoa be deemed co-signatory to this Treaty and that Her subjects enjoy all those trading rights which were ever theirs during the reign of Carlos the Second, King of Spain.

XXV. The City of Danzig shall be deemed co-signatory to this Treaty.

XXVI. This Treaty shall be ratified within six weeks.

... This same Peace-Treaty was confirmed by Her Majesty, the Queen of Great Britain in Kensington on the 31st day of July of this same year, and by His Catholic Majesty in Madrid on the 4th of August; peace thereby being established between Their two Crowns, to the great joy of all Their subjects. (10th July, 1713.)

107. Cato's Letters, 1721 [Excerpt]

Introduction

Written by British radicals John Trenchard and Thomas Gordon, Cato's Letters were among the most influential of the writings of the Whig party. In Great Britain, the liberal Whigs championed civil rights and democracy. Cato's Letters first appeared in two English newspapers, the *London Journal* and the *British Journal*, between November 5, 1720, and July 27, 1723. The 144 original letters, published under the name "Cato," a long-dead Roman opponent of Julius Caesar, were frequently re-published as collections or printed as individual essays in newspapers in both Britain and the American colonies. Many educated American colonists owned collections of Cato's Letters, and their popularity persisted for decades. The letters addressed various events and issues of the period, including the importance of allowing colonists to profit

from their own labor. Trenchard and Gordon asserted the existence of a right to civil and religious liberty and argued the need to guard against abuses of power. They also favored freedom of speech and opposed standing armies. More than 50 years later, Cato's letters influenced Americans in their desire for independence from Great Britain.

Vol. 1; NO. 33. SATURDAY, JUNE 17, 1721. Cautions Against the Natural Encroachments of Power.

Sir, Considering what sort of a creature man is it is scarce possible to put him under too many restraints, when he is possessed of great power: He may possibly use it well; but they act most prudently, who, supposing that he would use it ill, inclose him within certain bounds, and make it terrible to him to exceed them.

Men that are above all fear, soon grow above all shame. Rupto pudore-metu, suo tantum ingenio utebatur, says Tacitus of Tiberius. Even Nero had lived a great while inoffensively, and reigned virtuously: But finding at last that he might do what he would, he let loose his appetite for blood, and committed such mighty, such monstrous, such unnatural slaughters and outrages, as none but a heart bent on the study of cruelty could have devised. The good counsels of Seneca and Burrhus were, for some time, checks upon his wolfish nature; and doubtless he apprehended, that if he made direct and downright war upon his people, they would use resistance and make reprisals: But discovering, by degrees, that they would bear any thing, and his soldiers would execute every thing, he grew into an open defiance with mankind, and daily and wantonly wallowed in their blood. Having no other rival, he seemed to rival himself, and every day's wickedness was blacker than another.

Yet Nero was not the worst of all men: There have been thousands as bad as he, and only wanted the same opportunity to shew it. And there actually have been many princes in the world who have shed more blood, and done more mischief to mankind, than Nero did. I could instance in a late one, who destroyed more lives than ever Nero destroyed, perhaps an hundred to one. It makes no difference, that Nero committed butcheries out of cruelty, and the other only for his glory: However the world may be deceived by the change of names into an abhorrence of the one, and an admiration of the other; it is all one to a nation, when they are to be slaughtered, whether they be slaughtered by the hangman or by dragoons, in prison or in the field; nor is ambition better than cruelty, when it begets mischief as great.

It is nothing strange, that men, who think themselves unaccountable, should act unaccountably, and that all men would be unaccountable if they could: Even those who have done nothing to displease, do not know but some time or other they may; and no man

cares to be at the entire mercy of another. Hence it is, that if every man had his will, all men would exercise dominion, and no man would suffer it. It is therefore owing more to the necessities of men, than to their inclinations, that they have put themselves under the restraint of laws, and appointed certain persons, called magistrates, to execute them; otherwise they would never be executed, scarce any man having such a degree of virtue as willingly to execute the laws upon himself; but, on the contrary, most men thinking them a grievance, when they come to meddle with themselves and their property. Suarum legum auctor & eversor, was the character of Pompey: He made laws when they suited his occasions, and broke them when they thwarted his will. And it is the character of almost every man possessed of Pompey's power: They intend them for a security to themselves, and for a terror to others. This shews the distrust that men have of men; and this made a great philosopher call the state of nature, a state of war; which definition is true in a restrained sense, since human societies and human laws are the effect of necessity and experience: Whereas were all men left to the boundless liberty which they claim from nature, every man would be interfering and quarrelling with another; every man would be plundering the acquisitions of another; the labour of one man would be the property of another; weakness would be the prey of force; and one man's industry would be the cause of another man's idleness.

Hence grew the necessity of government; which was the mutual contract of a number of men, agreeing upon certain terms of union and society, and putting themselves under penalties, if they violated these terms, which were called laws, and put into the hands of one or more men to execute. And thus men quitted part of their natural liberty to acquire civil security. But frequently the remedy proved worse than the disease; and human society had often no enemies so great as their own magistrates; who, where-ever they were trusted with too much power, always abused it, and grew mischievous to those who made them what they were. Rome, while she was free (that is, while she kept her magistrates within due bounds) could defend herself against all the world, and conquer it: But being enslaved (that is, her magistrates having broke their bounds) she could not defend herself against her own single tyrants, nor could they defend her against her foreign foes and invaders; for by their madness and cruelties they had destroyed her virtue and spirit, and exhausted her strength. This shews that those magistrates that are at absolute defiance with a nation, either cannot subsist long, or will not suffer the nation to subsist long; and that mighty traitors, rather than fall themselves, will pull down their country.

What a dreadful spirit must that man possess, who can put a private appetite in balance against the universal good of his country, and of mankind! Alexander and Caesar were that sort of men; they would set the world on fire, and spill its blood, rather than not govern it. Caligula knew that he was hated, and deserved to be hated; but it did not mend him. Oderint dum metuant [Let them hate so long as they fear], was his by-word: All that the monster aimed at, was to be great and terrible. Most of these tyrants died as became

them; and, as they had reigned, by violence: But that did not mend their successors, who generally earned the fate of those that went before them, before they were warm in their place. Invenit etiam aemulos infelix nequitia: Quid si floreat vigeatque? [Even unfruitful wickedness finds imitators. What if it were to flourish and prosper?"] "If unfortunate villainy thus finds rivals, what shall we say, when it exalts its head and prospers?"

There is no evil under the sun but what is to be dreaded from men, who may do what they please with impunity: They seldom or never stop at certain degrees of mischief when they have power to go farther; but hurry on from wickedness to wickedness, as far and as fast as human malice can prompt human power. Ubi semel recto de erratum est. in praeceps pervenitur a rectis in vitia, a vitiis in prava, a pravis in praecipitia [Whenever one wanders from the right, one quickly descends into danger—from propriety to depravity, from depravity to crime, from crime to the abyss.], says a Roman historian; who in this speaks the truth, though in other instances he tells many lies; I mean that base flatterer of power, Velleius Paterculus. So that when we see any great mischief committed with safety, we may justly apprehend mischiefs still greater.

The world is governed by men, and men by their passions; which, being boundless and insatiable, are always terrible when they are not controuled. Who was ever satiated with riches, or surfeited with power, or tired with honours? There is a tradition concerning Alexander, that having penetrated to the Eastern Ocean, and ravaged as much of this world as he knew, he wept that there was never another world for him to conquer. This, whether true or no, shews the spirit of the man, and indeed of human nature, whose appetites are infinite.

People are ruined by their ignorance of human nature; which ignorance leads them to credulity, and too great a confidence in particular men. They fondly imagine that he, who, possessing a great deal by their favour, owes them great gratitude, and all good offices, will therefore return their kindness: But, alas! how often are they mistaken in their favourites and trustees; who, the more they have given them, are often the more incited to take all, and to return destruction for generous usage. The common people generally think that great men have great minds, and scorn base actions; which judgment is so false, that the basest and worst of all actions have been done by great men: Perhaps they have not picked private pockets, but they have done worse; they have often disturbed, deceived, and pillaged the world: And he who is capable of the highest mischief, is capable of the meanest: He who plunders a country of a million of money, would in suitable circumstances steal a silver spoon; and a conqueror, who steals and pillages a kingdom, would, in an humbler fortune, rifle a portmanteau, or rob an orchard.

Political jealousy, therefore, in the people, is a necessary and laudable passion. But in a chief magistrate, a jealousy of his people is not so justifiable, their ambition being only to preserve themselves; whereas it is natural for power to be striving to enlarge itself, and to

be encroaching upon those that have none. The most laudable jealousy of a magistrate is to be jealous for his people; which will shew that he loves them, and has used them well: But to be jealous of them, would denote that he has evil designs against them, and has used them ill. The people's jealousy tends to preserve liberty; and the prince's to destroy it. Venice is a glorious instance of the former, and so is England; and all nations who have lost their liberty, are melancholy proofs of the latter.

Power is naturally active, vigilant, and distrustful; which qualities in it push it upon all means and expedients to fortify itself, and upon destroying all opposition, and even all seeds of opposition, and make it restless as long as any thing stands in its way. It would do what it pleases, and have no check. Now, because liberty chastises and shortens power, therefore power would extinguish liberty; and consequently liberty has too much cause to be exceeding jealous, and always upon her defence. Power has many advantages over her; it has generally numerous guards, many creatures, and much treasure; besides, it has more craft and experience, less honesty and innocence: And whereas power can, and for the most part does, subsist where liberty is not, liberty cannot subsist without power; so that she has, as it were, the enemy always a ther gates.

Some have said, that magistrates being accountable to none but God, ought to know no other restraint. But this reasoning is as frivolous as it is wicked; for no good man cares how many punishments and penalties lie in his way to an offence which he does not intend to commit: A man who does not mean to commit murder, is not sorry that murder is punished with death. And as to wicked men, their being accountable to God, whom they do not fear, is no security to use against their folly and malice; and to say that we ought to have no security against them, is to insult common sense, and give the lie to the first law of nature, that of self-preservation. Human reason says, that there is no obedience, no regard due to those rulers, who govern by no rule but their lust. Such men are no rulers; they are outlaws; who, being at defiance with God and man, are protected by no law of God, or of reason. By what precept, moral or divine, are we forbid to kill a wolf, or burn an infected ship? Is it unlawful to prevent wickedness and misery, and to resist the authors of them? Are crimes sanctified by their greatness? And is he who robs a country, and murders ten thousand, less a criminal, then he who steals single guineas, and takes away single lives? Is there any sin in preventing, and restraining, or resisting the greatest sin that can be committed, that of oppressing and destroying mankind by wholesale? Sure there never were such open, such shameless, such selfish impostors, as the advocates for lawless power! It is a damnable sin to oppress them; yet it is a damnable sin to oppose them when they oppress, or gain by oppression of others! When they are hurt themselves ever so little, or but think themselves hurt, they are the loudest of all men in their complaints, and the most outrageous in their behaviour: But when others are plundered, oppressed, and butchered, complaints are sedition; and to seek redress, is damnation. Is not this to be the authors of all wickedness and falsehood?

To conclude: Power, without control, appertains to God alone; and no man ought to be trusted with what no man is equal to. In truth there are so many passions, and inconsistencies, and so much self-ishness, belonging to human nature, that we can scarce be too much upon our guard against each other. The only security which we can have that men will be honest, is to make it their interest to be honest; and the best defence which we can have against their being knaves, is to make it terrible to them to be knaves. As there are many men wicked in some stations, who would be innocent in others; the best way is to make wickedness unsafe in any station.

I am, &c.

108. Quoted by Antoine le Page du Pratz, Reply of the Stung Serpent, 1723

Introduction

The Frenchman Rene-Robert Cavelier, Sieur de La Salle, explored a vast North American territory, encompassing the Mississippi River Valley, in 1682. Two wars intervened before King Louis XIV of France could spare the resources to annex and colonize the land—called Louisiana and bounded by Carolina, New Mexico, and the Gulf of Mexico. In 1712, as Queen Anne's War (also called the War of the Spanish Succession) drew to a close, Louis XIV granted a French merchant a patent to establish trade relations and settlements in Louisiana. The first Frenchmen received a warm welcome from the Natchez Indians of southern Mississippi. The French built a fort, but the fort's commandant mistreated the Indians. The Natchez came to realize that they were materially worse off than they had been before French colonization, and their resentment grew over the course of several years. They planned an attack to eject the French from their country. On November 29, 1729, the Natchez mounted a coordinated attack and killed at least 200 Frenchmen. When news of the attack reached New Orleans, French vengeance was swift. Within a year they had destroyed the Natchez as a people. This 1723 account provides early evidence of the building Natchez resentment of the French presence.

Reply of the Stung Serpent

"Why," continued he, with an air of displeasure, "did the French come into our country? We did not go to seek them: they asked for land of us, because their country was too little for all the men that were in it. We told them they might take land where they pleased, there was enough for them and for us; that it was good the same sun should enlighten us both, and that we would walk as friends in the same path; and that we would give them of our provisions, assist them to build, and to labour in their fields. We have done so; is not this true? What occasion then had we for Frenchmen? Before they came, did we not live better than we do, seeing we deprive ourselves of a part of our corn, our game, and fish, to give a part to them? In what respect, then, had we occasion for them? Was it for their guns? The bows and arrows which we used, were sufficient to make us live well. Was it for their white, blue, and red blankets? We can do well enough with buffalo skins, which are warmer; our women wrought feather-blankets for the winter, and mulberry-mantles for the summer; which indeed were not so beautiful; but our women were more laborious and less vain than they are now. In fine, before the arrival of the French, we lived like men who can be satisfied with what they have; whereas at this day we are like slaves, who are not suffered to do as they please."

109. Molasses Act, May 1733 [Excerpt]

Introduction

Enacted by the British Parliament in May 1733, the Molasses Act placed a high duty on all foreign molasses, rum, and sugar imported into the North American colonies. Parliament intended this law to protect British West Indian sugar planters from French competition. The Molasses Act was the latest in a long series of Navigation Acts. The acts were designed to prevent Spanish, Dutch, and French traders from competing with the British for North American customers. Colonial Americans had grown wealthy by exporting fish, lumber, and farm produce to the West Indies, importing molasses, and distilling it into rum. They exported the rum, trading it for European manufactured goods and slaves for West Indian planters. To evade the consequences of the earlier Navigation Acts, the colonists had already developed a complex network of smuggling operations, and the Molasses Act only encouraged them to continue smuggling. Not only did the colonists ignore the Molasses Act, but they persisted in trading with the French during the French and Indian War, thus prolonging the conflict. The Sugar Act (1764) eventually replaced the Molasses Act. Although it dramatically reduced the duty, it called for a strict enforcement. Such laws eventually contributed to the outbreak of the American Revolution.

Primary Source

An act for the better securing and encouraging the trade of his Majesty's sugar colonies in America.

WHEREAS the welfare and prosperity of your Majesty's sugar colonies in America are of the greatest consequence and importance to the trade, navigation and strength of this kingdom: and whereas the planters of the said sugar colonies have of late years fallen under such great discouragements, that they are unable to improve or carry on the sugar trade upon an equal footing with the foreign sugar colonies, without some advantage and relief be given to them from Great Britain: for remedy whereof...be it enacted.... That from and after . . . [December 25, 1733,] . . . there shall be raised, levied, collected and paid, unto and for the use of his Majesty . . . , upon all rum or spirits of the produce or manufacture of any of the colonies or plantations in America, not in the possession or under the dominion of his Majesty . . . , which at any time or times within or during the continuance of this act, shall be imported or brought into any of the colonies or plantations in America, which now are or hereafter may be in the possession or under the dominion of his Majesty . . . , the sum of nine pence, money of Great Britain,... for every gallon thereof, and after that rate for any greater or lesser quantity: and upon all molasses or syrups of such foreign produce or manufacture as aforesaid, which shall be imported or brought into any of the said colonies or plantations . . . , the sum of six pence of like money for every gallon thereof . . . ; and upon all sugars and paneles of such foreign growth, produce or manufacture as aforesaid, which shall be imported into any of the said colonies or plantations . . . a duty after the rate of five shillings of like money, for every hundred weight Avoirdupoize. . . .

IV. And be it further enacted . . . , That from and after . . . [December 25, I733,] . . . no sugary paneled syrups or molasses, of the growth, product and manufacture of any of the colonies or plantations in America, nor any rum or spirits of America, except of the growth or manufacture of his Majesty's sugar colonies there, shall be imported by any person or persons whatsoever into the kingdom of Ireland, but such only as shall be fairly and bona fide loaden and shipped in Great Britain in ships navigated according to the several laws now in being in that behalf, under the penalty of forfeiting all such sugar, paneles, syrups or molasses, rum or spirits, or the value thereof, together with the ship or vessel in which the same shall be imported, with all her guns, tackle, furniture, ammunition, and apparel. . . .

IX. And it is hereby further enacted . . . , That in case any sugar or paneles of the growth, produce or manufacture of any of the colonies or plantations belonging to or in the possession of his Majesty . . . , which shall have been imported into Great Britain after . . . June 24, I733,] . . . shall at any time within one year after the importation thereof, be again exported out of Great Britain, . . . all the residue and remainder of the subsidy or duty, by any former act or acts of parliament granted and charged on such sugar or paneles as aforesaid, shall without any delay or reward be repaid to such merchant or merchants, who do export the same, within one month after demand thereof.

X. And it is hereby further enacted . . . , That from and after . . . [June 24, 1733,] . . . for every hundred weight of sugar refined in Great Britain . . . , which shall be exported out of this kingdom, there shall be, by virtue of this act, repaid at the customhouse to the exporter, within one month after the demand thereof, over and above the several sums of three shillings and one shilling per hundred, payable by two former acts of parliament, one of them made in the ninth and tenth years of the reign of his late Majesty King William the Third, and the other in the second and third years of the reign of her late Majesty Queen Anne, the further sum of two shillings, oath or solemn affirmation as aforesaid, being first made by the refiner, that the said sugar so exported, was produced from brown and muscovado sugar, and that as he verily believes, the same was imported from some of the colonies or plantations in America belonging to and in the possession of the crown of Great Britain, and that as he verily believes the duty of the said brown and muscovado sugar was duly paid at the time of the importation thereof, and that the same was duly exported. . . .

110. The Libel Case of John Peter Zenger, 1734 [Excerpt]

Introduction

John Peter Zenger, the immigrant printer of the New York Weekly Journal, became a symbol of the cause of freedom of the press when he was arrested for publishing articles critical of New York's royal governor, William Cosby. The free press enshrined in the U.S. Constitution lay years in the future. Criticizing the government in print was against the law in colonial America, and thus automatically considered libelous. Governor Cosby was greedy and corrupt. His political enemies persuaded Zenger, an immigrant printer who needed new business, to start a newspaper and publish opposition views. Zenger had nothing to do with the opinions expressed in his paper. However, New York authorities arrested him in November 1734 and set his bail so high that he remained in prison until his August 1735 trial. Cosby disbarred Zenger's local defense attorneys, so Andrew Hamilton of Philadelphia volunteered to defend him. In the trial proceedings excerpted here, Hamilton wins Zenger's acquittal by arguing that a statement is not libelous if it is known to be true. He also instructs the jurors to defy the judge and make their own decision on whether the words in question were actually libelous. The Journal article reprinted here accuses Cosby of being a French sympathizer and allowing French visitors to acquire valuable military intelligence.

Primary Source

 $[\ldots]$

Mr. Hamilton. I thank your Honour. Then Gentlemen of the Jury, it is to you we must now appeal, for Witnesses, to the Truth of the

Facts we have offered, and are denied the Liberty to prove; and let it not seem strange, that I apply my self to you in this Manner, I am warranted so to do both by Law and Reason. The Law supposes you to be summoned, out of the Neighbourhood where the Fact is alledged to be committed; and the Reason of your being taken out of the Neighbourhood is, because you are supposed to have the best Knowledge of the Fact that is to be tried. And were you to find a Verdict against my Client, you must take upon you to say, the Papers referred to in the Information, and which we acknowledge we printed and published, are false, scandalous and seditious; but of this I can have no Apprehension. You are citizens of New York, you are really what the Law supposes you to be, honest and lawful Men; and according to my Brief, the Facts which we offer to prove were not committed in a Corner; they are notoriously known to be true; and therefore in your Justice lies our Safety. And as we are denied the Liberty of giving Evidence, to prove the Truth of what we have published, I will beg Leave to lay it down as a standing Rule in such Cases: That the suppressing of Evidence ought always to be taken for the strongest Evidence; and I hope it will have that Weight with you. But since we are not admitted to examine our Witnesses, I will endeavour to shorten the Dispute with Mr. Attorney, and to that End, I desire he would favour us with some Standard Definition of a Libel, by which it may be certainly known, whether a Writing be a Libel, yea or not.

Mr. Attorney. The Books, I think, have given a very full Definition of a Libel; they say it is in a strict Sense taken for a malicious Defamation, expressed either in Printing or Writing, and tending either to blacken the Memory of one who is dead, or the Reputation of one who is alive, and expose him to publick Hatred, Contempt or Ridicule. But it is said, That in a larger Sense the Notion of a Libel may be applied to any Defamation whatsoever, empressed either by Signs or Pictures, as by fixing up a Gallows against a Man's Door, or by painting him in a shameful and igmoninious Manner. And since the chief Cause for which the Law so severely punishes all Offences of this Nature, is the direct Tendency of them to a Breach of Publick Peace, by provoking the Parties injured, their Friends and Families to Acts of Revenge, which it would be impossible to restrain by the severest Laws, were there no Redress from Publick Justice for Injuries of this kind, which of all others are most sensibly felt; and since the plain Meaning of such Scandal as is expressed by Signs or Pictures, is as obvious to common Sense, and as easily understood by every common Capacity, and altogether as provoking as that which is expressed by Writing or Printing, why should it not be equally criminal? And from the same Ground it seemeth also clearly to follow, That such Scandal as is expressed in a scoffing and ironical Manner, makes a Writing as properly a Libel, as that which is expressed in direct Terms; as where a Writing, in a taunting Manner reckoning up several Acts of publick charity done by one, says You will not play the Jew, nor the Hypocrite, and so goes on in a Strain of Ridicule to insinuate, that what he did was owing his Vain-Glory; or where a Writing, pretending to recommend to one the Characters of several great men for his Imitation, instead of taking Notice of what they are generally esteemed famous for, pitched on such Qualities only which their Enemies charge them with the Want of, as by proposing such a one to be imitated for his Courage, who is known to be a great Statesman, but no Soldier, and another to be imitated for his Learning, who is known to be a great General, but no Scholar, &c. which Kind of Writing is as well understood to mean only to upbraid the Parties with the Want of these Qualities, as if it had directly and expressly done so.

Mr. Hamilton. Ay, Mr Attorney; but what certain Standard Rule have the Books laid down, by which we can certainly know, whether the Words or the Signs are malicious? Whether they are defamatory? Whether they tend to the Breach of the Peace, and are sufficient Ground to provoke, a Man, his Family, or Friends to Acts of Revenge, especially those of the *ironical* sort words? And what Rule have you to know when I write *ironically*? I think it would be hard, when I say, such a Man is a very worthy honest Gentleman, and of fine Understanding, that therefore I meant he was a Knave or a Fool.

Mr. Attorney. I think the Books are very full; it is said in I Hawk. p. 193 just now read, That such Scandal as is expressed in a scoffing and ironical Manner, makes a Writing as properly a Libel, as that which is expressed direct Terms; as where a Writing, in a taunting Manner says, reckoning up several Acts of Charity done by one, says, You will not play the Jew or Hypocrite, and so goes on to insinuate, that what he did was owing to his Vain-Glory &c. Which Kind of Writing is as well understood to mean only to upbraid the Parties with the Want of these Qualities, as if it had directly and expressly done so. I think nothing can be plainer or more full that these Words.

Mr. Hamilton. I agree the Words are very plain, and I shall not scruple to allow (when we are agreed that the Words are false and scandalous, and were spoken in an ironical and scoffing Manner, &c.) that they are really libellous; but here still occurs the Uncertainty, which makes the Difficulty to know, what Words are scandalous and what are not; for you say, they may be scandalous, true or false; besides, how shall we know whether the Words were spoke in a scoffing and ironical manner or seriously? Or how can you know, whether the Man did not think as he wrote? For by your rule, if he did, it is no Irony, and consequently no Libel. But under Favour, Mr. Attorney, I think the same Book, and the same Section will shew us the only Rule by which all these things are to be known. The Words are these; which Kind of Writing is as well UNDERSTOOD to mean only to upbraid the Parties with the Want of these Qualities, as if they had directly and expressly done so. Here it is plain, the words are scandalous, scoffing and ironical, only as they are UNDERSTOOD. I know no rule laid down in the Books but his, I mean, as the Words are understood.

Mr. Ch. Just. That is certain. All Words are libellous or not, as they are *understood*. Those who are to judge of the Words, must judge whether they are *scandalous* or *ironical*, *tend to the Breach of the Peace*, or are *seditious*: There can be no Doubt of it.

Mr. *Hamilton*. I thank Your Honour; I am glad to find the Court of this Opinion. Then it follows that those twelve Men must Understand the Words in the Information to be *scandalous*, that is to say *false*; for I think it is not pretended they are of the *ironical* Sort; and when they understand the Words to be so, they will say we are guilty of publishing a *false Libel*, and not otherwise.

Mr. Ch. Just. No, Mr. *Hamilton*; the Jury may find that *Zenger* printed and published those papers, and leave it to the Court to judge whether they are libellous; you know this is very common; it is in the Nature of special Verdict, where the Jury leave the matter of Law to the Court.

Mr. Hamilton. I know, may it please Your Honour, the Jury may do so; but I do likewise know, they may do otherwise. I know they have the Right beyond all Dispute, to determine both the Law and the Fact, and where they do not doubt of the Law, they ought to do so. This of leaving it to the Judgment of the Court, whether the Words are libellous or not, in Effect renders Juries useless to say no worse) in many Cases; but this I shall have Occasion to speak to by and by; and I will with the Court's Leave proceed to examine the Inconveniencies that must inevitably rise from the Doctrines Mr. Attorney has laid down; and I observe, in support of this Prosecution, he has frequently repeated the Words taken from the Case of Libel, famous, in 5 Co. This is indeed the leading Case, and to which almost all the other Cases upon the Subject of Libels do refer; and I must insist upon saying, That according as this Case seems to be understood by the Court and Mr. Attorney, it is not Law at this Day: for tho' I own it to be base and unworthy to scandalize any Man, yet I think it is even villainous to scandalize a Person of publick Character, and I will go so far into Mr. Attorney's Doctrine as to agree, that if the Faults, Mistakes, nay even the Vices of such a Person be private and personal, and don't affect the Peace of the publick, or the Liberty or Property of our Neighbour, it is unmanly and unmannerly to expose them either by Word or Writing. But when a Ruler of a People brings his personal Failings, but much more his Vices, into his Administration, and the People find themselves affected by them, either in their Liberties or Properties, that will alter the Case mightily, and all the high Things that are said in Favour of Rulers, and of Dignities, and upon the side of Power, will not be able to stop People's Mouths when they feel themselves oppressed, I mean in a free government. It is true in Times past it was a Crime to speak Truth, and in that terrible Court of Star Chamber, many worthy and brave Men suffered for so doing; and yet even in that Court, and in those bad Times, a great and good Man durst say, what I hope will not be take amiss of me to say in this place, to wit, The Practice of Informations for Libels is a Sword in the Hands of a wicked King, and an arrand Coward, to cut down and destroy the innocent; the one cannot, because of his high Station, and the other dares not, because of his Want of Courage, revenge himself in another Manner.

Mr. Attorney. Pray Mr. *Hamilton*, have a Care what you say, don't go too far neither, I don't like those Liberties.

[...]

Mr. Hamilton. I hope to be pardon'e Sir for my Zeal upon this Occasion; it is an old and wise Caution. That when our Neighbour's House is on Fire, we ought to take Care of our own. For tho' Blessed be God, I live in a Government where Liberty is well understood, and freely enjoyed; yet Experience has shewn us all (I'm sure it has to me) that a bad Precedent in one Government, is soon set up for an Authority in another; and therefore I cannot but think it mine, and every Honest Man's duty, that (while we pay all due Obedience to Men in Authority) we ought at the same Time to be upon our Guard against Power, wherever we apprehend it may affect ourselves or our Fellow-Subjects.

I am truly very unequal to such an Undertaking on many Accounts. And you see I labour under the Weight of many Years, and am born down with great Infirmities of Body; yet Old and Weak as I am, I should think it my duty if required, to go to the utmost Part of the Land, where my Service cou'd be of any Use in assisting to quence the Flame of Prosecutions upon Informations, set on Foot by the Government, to deprive a People of the Right of Remonstrating, (and complaining too) of the arbitrary Attempts of Men in Power. Men who injure and oppress the People under their Administration, provoke them to cry out and complain; and then make that very Complaint the Foundation for new Oppressions and Prosecutions. I wish I could say there were no Instances of this Kind. But to conclude; the Question before the Court and you Gentlemen of the Jury, is not so small nor private Concern, it is not the Cause of a poor Printer, nor of New-York alone, which you are not trying: No! It may in its Consequence, affect every Freeman that lives under a British Government on the main of America. It is the best Cause. It is the Cause of Liberty; and I make no Doubt but your upright Conduct, this Day, will not only entitle you to the Love and Esteem of your Fellow-Citizens; but every Man who prefers Freedom to a Life of Slavery will bless and honour You, as Men who have baffled the Attempt of Tyranny; and by an impartial and uncorrupt Verdict, have laid a noble Foundation for securing to ourselves, our Posterity, and our Neighbours, That, to which Nature and the Laws of our Country have given us a Right,—The Liberty—both of exposing and opposing arbitrary Power (in these Parts of the World, at least) by speaking and writing Truth.

Mr. Ch. Just. Gentlemen of the Jury. The great Pains Mr. Hamilton has taken to shew how little Regard Juries ought to pay to the Opinion of the Judges; and his insisting so much upon the Conduct of some Judges in Tryals of this kind; is done no doubt, with a Design that you should take but very little Notice of what I might say upon this Occasion. I shall therefore only observe to you that as the Facts or Words in the Information are confessed, the only thing that can come in Question before you is, whether the Words as set forth in

the Information made a Libel. And that is a Matter of Law, no doubt, an which you may leave to the Court. But I shall trouble you no further with any Thing more of my own, but read to you the Words of a learned and upright Judge in a Case of the like Nature.

'To say that corrupt Officers are appointed to administer Affairs, is certainly a Reflection on the Government. If People should not be called to account for possessing the People with an ill Opinion of the Government, no Government can subsist. For it is very necessary for all Governments that the People should have a good opinion it. And nothing can be worse to any Government, than to endeavour to procure Animosities; as to the Management of it, this has been always look'd upon as a Crime, and no Government can be safe without it be punished.'

'Now you are to consider, whether these Words I have read to you, do not tend to beget an ill Opinion of the Administration of the Government? To tell us, that those that are employed know nothing of the matter, and those that do know are not employed. Men are not adapted to Offices, but Offices to Men, out of a particular Regard to their Interest, and not to their Fitness for the Places; this is the Purport of these Papers.'

Mr. *Hamilton*. I humbly beg your Honours Pardon: I am very much misapprehended, if you suppose what I said was so designed.

Sir, you, know, I made an Apology for the Freedom I found my self under a Necessity of using upon this Occasion. I said, there was Nothing personal designed; it arose from the nature of our Defence.

The Jury withdrew, and in a small Time returned, and being asked by the Clerk whether they were agreed on their Verdict, and whether *John Peter Zenger* was guilty of Printing and Publishing the Libels in the Information mentioned? They answered by *Thomas Hunt*, their Foreman, *Not Guilty*. Upon which there were three Huzzas in the Hall which was crowded with People, and the next Day I was discharged from my Imprisonment.

New York Weekly Journal 12–17-1733

It is agreed on all Hands, that a Fool may ask more Questions than a wise Man can answer, or perhaps will answer if he could; but notwithstanding that, I would be glad to be satisfied in the following Points of Speculation that the above Affidavits afford. And it will be no great Puzile to a wife man to answer with a *Yea*, or a *Nay*, which is the most that will be required in most of those Questions.

- Q. 1. It is prudent in the French governours not to suffer an Englishman to view their Fortifications, sound their harbours, tarry in their country to discover their Strength?
- Q. 2. It is prudent in an English Governour to suffer a French man to view our Fortifications, sound our harbours? &c.

- Q. 3. If the above Affidavits be true, had the French a bad Harvest in Canada? Or do they want Provisions?
- Q. 4. Was the Letter from the Governour of Louisburg to our Governour true?
- Q. 5. Might not our Governour as easily have discovered the falsehood of it as any body else; if he would?
- Q. 6. Ought he not to have endeavored to do it?
- Q. 7. Did our governour endeavour to do it?
- Q. 8. Was it not known to the greatest Part of the town, before the Sloop Le Caesar left New-York, that the French in the Sloop Le Caesar had founded and taken the Land-Marks from without Sandyhook up to New-York? Had taken the View of the Town? Had been in the Fort?
- Q. 9. Might not the governour have known the same Thing, if he would?
- Q. 10. Is there not great Probability that he did know it?
- Q. 11. Was it four our Benefit or that of the French these soundings and Land-marks were taken, and View made?
- Q. 12. Could we not, by seizing their Papers, and confining their Persons, have prevented them in great Measure from making use of the Discoveries they made?
- Q. 13. Ought they not to have been so prevented?
- Q. 14. Was it prudent to suffer them to pass through Hellgate, and also to discover that Way of Access to us?
- Q. 15. If a French Governour had suffered an English Sloop and company to do what a French sloop and Company has done here, would he not have deserved to be ______?
- Q. 16. Since it appears by the Affidavits, there was no such scarcity of provisions as by the letter from the Governour of Louisburgh to our Governour, since the conduct of the French to the English that happen to go to Canada, shews they think it necessary to keep us ignorant of their State and Condition as much as they can. Since the Sounding our harbours, viewing our Fortifications, and the honourable Treatment they have received here (the reverse of what we receive in Canada) has let them into a perfect Knowledge of our State and Condition. And since their Voyage must appear to any Man of the least Penetration to have been made with an Intent to make that Discovery, and only with that Intent. Whether it would not be reasonable in us to provide as well and as soon as we can for our Defence?

- Q. 17. Whether that can be done any way so well and effectually as by calling the Assembly very together?
- Q. 18. If this be not done, and any dangerous consequences follow after so full Warning, Who is Blameable?

111. The Walking Purchase, August 25, 1737

Introduction

William Penn's three sons inherited the proprietorship of Pennsylvania. Thomas Penn came to Pennsylvania in 1732, hoping to restore his family's fortunes by selling land to the growing population of new settlers. First he had to purchase land from the Indians. He did not share his father's sense of fairness toward the native peoples. Helped by James Logan, their late father's secretary, the Penn brothers plotted the infamous Walking Purchase. Having been pushed off their ancestral land in Delaware and New Jersey, the Lenni Lenape, or Delaware, Indians lived in the upper Delaware and Lehigh river valleys of eastern Pennsylvania. On August 25, 1737, the Delawares succumbed to pressure and ratified an alleged 1686 deed-probably fake—that gave the Penns all the land that a man could walk in a day and a half. On September 18, 1737, the Penns' three hired runners traversed paths that had been cleared in advance, and the Delaware witnesses could not keep up. Forced to relinquish a huge tract of land, the Delawares made a formal complaint to colonial officials, to no avail. A future generation of Delawares avenged themselves on frontier settlers during the French and Indian War.

Primary Source

We, Teesshakomen, alias Tisheekunk, and Tootamis alias Nutimus, two of the Sachem's or Chiefs of the Delaware Indians, having, almost three Years ago, at Durham, begun a treaty with our honourable Brethren John and Thomas Penn, and from thence another Meeting was appointed to be at Pensbury, the next Spring Following, to which We repaired with Lappawinzoe and Several others of the Delaware Indians, At which Treaty Several Deeds were produced and Shewed to us by our said Bretheren, concerning Several Tracts of Land which our Forefathers had, more than fifty Years ago, Bargained and Sold unto our good Friend and Brother William Penn, the Father of the said John and Thomas Penn, and in particular one Deed from Mayhkeerickkishsho, Sayhoppy and Taughhaughsey, the Chiefs or Kings of the Northern Indians on Delaware, who, for large Quantities of Goods delivered by the Agents of William Penn, to those Indian Chiefs, did Bargain and Sell unto the said William Penn, All those Tract or Tracts of Landlying and being in the Province of Pennsylvania, Beginning upon a line formerly laid out from a Corner Spruce Tree by the River Delaware, about Makeerickkitton, and from thence running along the ledge or foot of the Mountains, West North West to a corner white Oak marked with the Letter P, Standing by the Indian Path that Leadeth to an Indian town called Playwickey, and from thence extending Westward to Neshameney Creek, from which said line the said Tract or Tracts therebyi Granted, doth extend itself back into the Woods as far as a Man can goe in one day and a helf, and bounded on the Westerly side with the Creek called Neshameny, or the most Westerly branch thereof, So far as the said Branch doth extend, and from thence by line to the utmost extent of the said one day and a half's Journey, and from thence to the aforesaid River Delaware, and from thence down the Several Courses of the said River to the first mentioned Spruce tree. And all this did likewise appear to be true by William Biles and Joseph Wood, who upon their Affirmations, did solemnly declare that they well remembred the Treaty held between the Agents of William Penn and those Indians. But some of our Old Men being then Absent, We requested of our Brethren John Penn and Thomas Penn, that We might have more time to Consult with our People concerning the same, which request being granted us, We have, after more than two Years since the Treaty at Pensbury, now come to Philadelphia, together with our chief Sachems Monochyhickan, and several of our Old Men, and upon a further Treaty held upon the same Subject, We Do Acknowledge Ourselves and every of Us, to be fully satisfyed that the above described Tract or Tracts of Land were truly Granted and Sold by the said Mayhkeericckkishsho, Sayhoppy, and Taughhaughsey, unto the said William Penn and his heirs, And for a further Confirmation thereof, We, the said Monockyhickan, Lappawinzoe, Tisheekunk, and Nutimus, Do, for ourselves and all other the Delaware Indians, fully, clearly and Absolutely Remise, Release, and forever Quit claim unto the said John Penn, Thomas Penn, and Richard Penn, All our Right Title, Interest, and pretentions whatsoever of, in, or to the said Tract or Tracts of Land, and every Part and Parcel thereof, So that neither We, or any of us, or our Children, shall or may at any time hereafter, have Challenge, Claim, or Demand any Right, Title or Interest, or any pretentions whatsoever of, in, or to the said Tract or Tracts of Land, or any Part thereof, but of and from the same shall be excluded, and forever Debarred. And We do hereby further Agree, that the extent of the said Tract or Tracts of Land shall be forthwith Walked, Travelled, or gone over by proper Persons to be appointed for that Purpose, According to the direction of the aforesaid Deed.

In Witness whereof, We have hereunto set our hands and Seals, at Philadelphia, the Twenty-fifth day of the Month called August, in the Year, According to the English account, one thousand Seven hundred and thirty-seven.

MANAWKYHICKON, his X mark LAPPAWINZOE, his X mark TEESHACOMIN, his X mark NOOTIMUS his X mark The above Deed being read and explained to all the Indians at this Treaty, the following Persons, on behalf of themselves and all the other Indians now present, have agreed to Sign or put their Names to the same as Witnesses, in Token of their free and full consent to what the above named Monochyhickan, Llappawinzoe, Tisheekunk, and Nutimus, have signed and Sealed.

112. Iroquois Responses to the Walking Purchase, July 12, 1742

Introduction

William Penn's son and heir, Thomas Penn, came to Pennsylvania in 1732. Penn hoped to restore his family's fortunes by selling land to the growing population of new settlers. Seeking to purchase land from the Lenni Lenape, or Delaware, Indians, he did not share his father's sense of fairness toward the native peoples. Helped by James Logan, their late father's secretary, the Penn brothers devised the Walking Purchase. Having been pushed off their ancestral land in Delaware and New Jersey, the Delaware Indians lived in the upper Delaware and Lehigh river valleys of eastern Pennsylvania. On August 25, 1737, the Delawares succumbed to pressure and ratified an alleged 1686 deed—probably fake—that gave the Penns all the land that a man could walk in a day and a half. On September 18, 1737, the Penns' three hired runners traversed paths that had been cleared in advance, and the Delawares were thus forced to relinquish a huge tract of land. The Delawares refused to vacate the land

and made a formal complaint to colonial officials. The Penns then appealed to the Iroquois, who dominated the Delawares. In their response, below, the Iroquois chastised the Delawares and ordered them off the land. A future generation of Delawares, forced to move westward, avenged themselves on frontier settlers during the French and Indian War.

At a COUNCIL held at the Proprietor's, July 12, 1742.

PRESENT

The Honourable GEORGE THOMAS, Esq; Lieutenant-Governor. James Logan, Thomas Lawrence, Robert Strettel, Clement Plumsted, Abraham Taylor, Esqrs.

Mr. Richard Peters.

CANASSATEGO, SHICKCALAMY, And sundry Chiefs of the Six Nations.

SASSOONAN, and the Delawares.

NUTTIMUS, and the Fork-Indians

CONRAD WEISER, Interpreter.

Pisquetoman, Cornelius Spring, Nicholas Scull, Interpreters to the Fork-Indians.

CANASSATEGO said:

BRETHREN, the Governor and Council,

The other Day you informed us of the Misbehaviour of our Cousins the Delawares, with respect to their continuing to claim, and refusing to remove from some Land on the River Delaware, notwithstanding their Ancestors had sold it by a Deed under their Hands and Seals to the Proprietaries, for a valuable Consideration, upward of fifty Years ago; and notwithstanding that, they themselves had also not many Years ago, after a long and full Examination, ratified that Deed of their Ancestors, and given a fresh one under their Hands and Seals; and then you requested us to remove them, inforcing your Request with a String of Wampum.—Afterwards we laid on the Table our own Letters by Conrad Weiser; some of our Cousins Letters, and the several Writings to prove the Charge against our Cousins, with a Draught of the Land in Dispute.—We now tell you, we have perused all these several Papers: We see with our own Eyes, that they have been a very unruly People, and are altogether in the Wrong in their Dealings with you.—We have concluded to remove them, and oblige them to go over the River Delaware, and quit all Claim to any Lands on this Side for the future, since they have received Pay for them, and it is gone thro' their Guts long ago.—To confirm to you that we will see your Request executed, we lay down this String of Wampum in return for yours.

Then turning to the Delawares, holding a Belt of Wampun in his Hand, he spoke to them as follows:

COUSINS,

Let this belt of Wampum serve to chastise you. You ought to be taken by the Hair of the Head and shaked severely, till you recover your Senses and become sober. You don't know what Ground you stand on, nor what you are doing. Our Brother Onas's Cause is very just and plain, and his Intentions to preserve Friendship. On the other Hand, Your Cause is bad; your Heart far from being upright; and you are maliciously bent to break the Chain of Friendship with our Brother Onas and his people. We have seen with our Eyes a Deed sign'd by nine of your Ancestors above fifty Years ago for this very Land, and a Release sign'd not may Years since, by some of yourselves and Chiefs now living, to the Number of fifteen or upwards.—But how come you to take upon you to sell Land at all? We conquered you; we made Women of you; you know you are Women, and can no more sell Land than Women; nor is it fit you should have the Power of selling Lands, since you would abuse it. This Land that you claim is gone through your Guts, you have been furnish'd with Cloaths, Meat and Drink, by the Goods paid you for it, and now you want it again, like children as you are.—But what makes you sell Land in the Dark? Did you ever tell us that you had sold this Land? Did we ever receive any Part, even the Value of a Pipe-Shank, from you for it? You have told us a blind Story, that you sent a Messenger to us to inform us of the Sale, but he never came amongst us, nor we never head any thing about it.—This is acting in the Dark, and very different from the conduct our Six Nations observe in their Sales of Land; on such Occasions they give publick Notice, and invite all the Indians of their united Nations, and give them all a Share of the Present they receive for their Lands.—This is the Behaviour of the wise united Nations.—But we find you are none of our Blood: You act a dishonest Part, not only in this but in other matters; Your Ears are never open to Slanderous Reports about our Brethren; you receive them with as much Greediness as lewd Women receive the Embraces of bad Men. And for all these Reasons we charge you to remove instantly; we don't give you the Liberty to think about it. You are Women. Take the Advice of a wise Man, and remove immediately. You may return to the other Side of Delaware where you came from: But we do not know whether, considering how you have demean'd yourselves, you will be permitted to live there; or whether you have not swallowed that Land down your throats as well as the Land on this Side. We therefore assign you two Places to go, either to Wyomen or Shamokin. You may go to either of thesse Places, and then we shall have you more under our Eye, and shall see how you behave. Don't deliberate; but remove away, and take this Belt of Wampum.

After our just Reproof, and absolute Order to depart from the Land, you are now to take Notice of what we have further to say to you. This String of Wampum serves to forbid you, your Children and Grand-Children, to the latest Posterity forever, medling in Land-Affairs; neither you nor any who shall descent from you, are ever hereafter to presume to sell any Land: For which Purpose, you are to preserve this String, in Memory of what your Uncles have this

Day given you in Charge.—We have some other Business to transact with our Brethren, and therefore depart the Council, and consider what has been said to you.

113. Eyewitness Account and Official Report of the Stono Rebellion, 1739, 1740 [Excerpt]

Introduction

South Carolina's plantation economy required numerous slaves. By 1730, slaves in South Carolina outnumbered white colonists two to one. The Carolina constitution of 1669 had granted white Carolinians absolute power over their slaves. As a result, Carolina slave owners both treated their slaves with great cruelty and feared that their slaves might turn on them at any time. Slave revolts had occurred in other colonies, but the Stono Rebellion of September 1739 was the largest such revolt in colonial America. A small group of slaves, communicating with drums, assembled, captured a store at Stono Bridge (near Charleston), killed the owner, and seized guns and ammunition. They set off on a march to Florida, where they believed that the Spanish, then at war with the British, would set them free. As they progressed, beating drums to recruit others, at least 60 more slaves joined them. The growing rebel force burned several plantations and killed a number of white people. The colonists quickly assembled a militia and, within a day, captured and executed most of the rebels. South Carolina later passed restrictive laws promoting harsher treatment of slaves, including one prohibiting slaves from having drums. The following excerpts are an eyewitness account and an official report of the rebellion.

Primary Source

Lieutenant Governor Bull's Eyewitness Account

My Lords,

I beg leave to lay before your Lordships an Account of our Affairs, first in regard to the desertion of Our Negroes, who are encouraged to it by a Certain Proclamation published by the King of Spain's Order at St. Augustine declaring Freedom to all Negroes who should desert thither from the British Colonies; Since which Several parties have deserted and are there openly received and Protected, many attempts of others have been discovered and prevented, notwithstanding which on the 9th of September last at Night a great number of Negroes Arose in Rebellion, broke open a Store where they got Arms, killed twenty one White Persons, and were march-

ing the next morning in a Daring manner out of the Province, killing all they met, and burning Several Houses as they passed along the road. I was returning from Granville County with four Gentlemen and met these rebels at Eleven a Clock in the forenoon, and fortunately deserned the approaching Danger time enough to avoid it, and to give notice to the Militia who on that Occasion behaved with so much expedition and bravery, as by four a Clock the Same day to come up with them and killed and took so many as put a stop to any further mischief at that time, forty four of them have been killed and Executed some few yet remain concealed in the Woods expecting the same Fate, seem desparate. If Such an attempt is made in a time of peace what might be expected if an Enemy Should appear upon our Frontier with a design to Invade us? which we have great reason to expect upon the first Notice of a Rupture, being fully informed by Several hands of the great Preparations made sometime ago at the Havana, which according to late accounts lye ready waiting only for Orders to put that Design in Execution.

It was the Opinion of His Majesty's council with several other Gentlemen that one of the most Effectual means that could be used at present to prevent such desertion of our Negroes, is to encourage some Indians by a suitable Reward to pursue and if possible to bring back the Deserters, and while the Indians are thus Employed they would be in the way ready to intercept others that might attempt to follow, and I have sent for the Chiefs of the Chickasaws living at new Windsor and the Catawbaw Indians for that purpose . . .

The Official Report

. . . . In September 1739, our Slaves made an Insurrection at Stono in the Heart of our Settlements not twenty miles from Charles Town, in which they massacred twenty-three Whites after the most cruel and barbarous Manner to be conceived and having got Arms and Ammunition out of a Store they bent their Course to the Southward burning all the Houses on the Road. But they marched so slow, in full Confidence of their own Strength from the first Success, that they gave Time to a Party of our Militia to come up with them. The Number was in a Manner equal on both Sides and an Engagement ensued such as may be supposed in such a Case wherein one fought for Liberty and Life, the other for their Country and every Thing that was dear to them. But by the Blessing of God the Negroes were defeated, the greatest Part being killed on the Spot or taken, and those that then escaped were so closely pursued and hunted Day after Day that in the End all but two or three were taken and executed. That the Negroes would not have made this Insurrection had they not depended on St. Augustine for a Place of Reception afterwards was very certain; and that the Spaniards had a Hand in prompting them to this particular Action there was but little Room to doubt, for in July preceding Don Piedro, Captain of the Horse at St. Augustine, came to Charles Town in a Launch with twenty or thirty men (one of which was a Negro that spoke English very well) under Pretence of delivering a Letter to General Oglethorpe although he could not possibly be ignorant that the General resided at Frederica not Half the Distance from St. Augustine and in his Return he was seen at Times to put into every one of our Inlets on the Coast. And in the very Month in which the above Insurrection was made the General acquainted our Lieutenant Governour by Letter that the magistrates of Georgia had seized a Spaniard whom he took to be a Priest, and that they thought from what they had discovered that he was employed by the Spaniards to procure a general Insurrection of the Negroes.

On this Occasion every Breast was filled with Concern. Evil brought Home to us within our very Doors awakened the Attention of the most Unthinking. Every one that had any Relation, any tie of nature; every one that had a Life to lose were in the most sensible Manner shocked at such Danger daily hanging over their Heads. With Regret we bewailed our peculiar Case, that we could not enjoy the Benefits of Peace like the rest of Mankind and that our own Industry should be the means of taking from us all the Sweets of Life and of rendering us liable to the Loss of our Lives and Fortunes. With Indignation we looked at St. Augustine (like another Sallee) that Den of Thieves and Ruffians! Receptacle of Debtors, Servants and Slaves! Bane of Industry and Society! And revolved in our Minds all the Injuries this province had received from thence ever since it[s] first Settlement, that they had from first to last, in Times of profoundest Peace, both publickly and privately, by themselves and Indians and Negroes, in every Shape molested us not without some instances of uncommon Cruelty....

114. Accounts of the War of Jenkins' Ear, 1739, 1740, 1742 [Excerpt]

Introduction

In 1565, the Spanish founded St. Augustine, Florida, and in subsequent years established forts and missions along the Georgia coast. English colonists from South Carolina made several incursions into Georgia during the early 1700s and drove the Spanish back into Florida. The first permanent English settlers of Georgia, led by James Oglethorpe, came to Savannah in 1733. General Oglethorpe was an idealistic, educated member of Parliament with military experience. He established friendly relations with the native peoples of the region. In October 1739 Great Britain declared war on Spain, and the news reached Savannah in May 1740. Known as the War of Jenkins' Ear, it involved rivalry over trade with American colonies and skirmishes over the boundary between English Georgia and Spanish Florida. In 1739, the Spanish raided the Georgia coast and Oglethorpe responded with raids into Florida. In 1740,

Oglethorpe led an unsuccessful campaign against St. Augustine. Georgia then repulsed a 1742 Spanish invasion, and in 1743 Oglethorpe led another failed siege of St. Augustine. He was recalled to Britain to account for his failures and never returned to Georgia. These letters, by Oglethorpe and other participants, report on the 1739 and 1742 Spanish invasions and the 1740 campaign against Florida.

Primary Source

JAMES OGLETHORPE TO THE TRUSTEES Frederica November 16, 1739

Gentlemen:

The Spaniards have fallen upon Amelia and killed two unarmed sick men. One of the scout boats being there took the alarm and they and a party from the garrison pursued the Spaniards very briskly. We have not so much as given the least provocation to the Spaniards as yet, but most manfully they surprised two poor sick men, cut off their heads, mangled their bodies most barbarously, and as soon as a party and boat appeared, which together did not make their number, they retired with the utmost precipitation.

A number of scout boats are absolutely necessary. The men of war stationed at Charles town can not be here. Since Captain Burrish went away, we have had no man of war except Captain Fanshaw, and he did not stay above eight or ten days. The launches from Augustine can run into almost every inlet in the province. Therefore it is absolutely necessary that the Trustees should apply to Parliament for at least five ten-oared boats and a troop of Rangers, otherwise there will be no possibility of the people's going out to plant without being murdered as those Highlanders were. The regiment can defend the parts they are in, but they cannot march on foot over the waters without boats nor overtake horse or Indians on foot in the vast woods on the continent.

The French have attacked the Carolina Indians and the Spaniards have invaded us. I wish it may not be resolved between them to root the English out of America. We here are resolved to die hard and will not lose one inch of ground without fighting. But we cannot do impossibilities. We have no cannon from the King, nor any others but some small iron guns bought by the Trust. We have very little powder, we have no horse for marching and very few boats, and no fund for paying the men, but of one boat. The Spaniards have a number of launches, also horse and a fine train of artillery well provided with all stores. The best expedient I can think of is to strike first and, as our strength consists in men and that the people of the colony as well as the soldiers handle their arms well and are desirous of action, I think the best way is to make use of our strength and beat them out of the field and destroy their plantations and out-set-tlements (in which the Indians who are very faithful can assist us)

and to form the siege of Augustine, if I can get artillery. It is impossible to keep this province or Carolina without either destroying Augustine or keeping horse rangers and scout boats sufficient to restrain their nimble parties. I must therefore again desire you would insist for our having an Establishment of four ten-oared boats to the Southward, and one at Savannah, a small train of artillery, some gunners and at least 400 barrels of cannon, and 100 of musket powder with bullets proportionable.

JAMES OGLETHORPE TO THE DUKE OF NEWCASTLE Florida May 15, 1740

My Lord:

Since the taking Saint Diego I have taken two large launches, which the Spaniards call half-galleys, who came up the river from Augustine to attempt the relief of Saint Diego. They quitted the galleys, threw their guns overboard and escaped into the woods. I have left a garrison in Saint Diego, it being necessary, and appointed Lieutenant Dunbar Fort Major, who signalized himself on their occasion. I hope Your Grace will intercede with His Majesty that he may have the appointments for that post, I have also begun to increase the fortifications of Saint Diego, which blocks Augustine on one side. In the taking Saint Diego, His Majesty's troops and the Indians behaved with great bravery. There were two Spaniards wounded, but one of His Majesty's hurt. I shall send Your Grace the particulars by the first occasion and am, My Lord, Your Grace's most obedient, humble servant.

FRANCIS MOORE TO HARMAN VERELST Frederica June 9, 1740

Sir:

I am come up hither to carry some cash and other things down to the General, who I expect to meet at Augustine. I am sorry to tell you when I left him (which was on the 6th instant at Fort Diego in Florida) he was ill, though much better than he had been for some time before.

I must not omit acquainting you that this day, month, the General landed on the Spanish shore and the next day marched about 16 miles along the sea beach, then struck inland about 7 or 8 miles more, and there found a fort called Saint Diego. The next morning he began to attack it and the enemy returned the fire very vigorously, so that they were most part of the next day firing at one another. The next morning the General sent a Spaniard (one of those before taken at Saint Francis de Pupa, and of whom you have doubtless long since had a particular account) with a drum to summon the garrison. He acquainted them with the good usage he had met with from the Eng-

lish, and upon that they treated and the same day surrendered the fort and all belonging to it to the General, in which were two pieces of large cannon, 9 swivel guns, 70 small arms, 50 prisoners and a good deal of ammunition. The troops and Indians feed plentifully upon fat Spanish beef, there being some thousand head about Fort Diego, to which place I am going in a day or two.

 $[\ldots]$

P.S. We have had lately two duels in Florida. In one of them Mr. Eyles, A Surgeon's Mate, was killed. In the other Mr. Peter Grant, Naval Officer, had the same fate.

CAPTAIN NORBURY TO WALTER HAYTER From camp before Saint Augustine June 30, 1740

Sir:

I have just time to acquaint you that I, General Oglethorpe and all his officers and his regiment are well, and that now we are very busy in bombarding and cannonading the town and castle of Saint Augustine and have made our approaches with our cannon and mortars within half a mile of the town and have done great execution in knocking down and burning with our shells part of the town and castle. And the enemy fire upon us day and night from the town, castle and their galleys and launches balls from 24-, 18- and 9pounders but as yet have done us little damage. Only one of our men had both his legs taken off with one of them. We are all very well entrenched and are now going to attack the town and castle. General Oglethorpe is marched with a strong detachment from off this island to the main called Moucey or the Negroes' Fort, to attack the town and castle and to surround them and keep them in. the remainder of our forces with the Carolina Regiment, commanded by Colonel Vanderdussen, Rangers and Indians are to attack on the left of the town and, the men of war's men to the amount of 200 are to attack the Spanish galleys in their boats and galleys, and by a signal given we all storm at once, and under God and in so just a war, we shall carry it. I am now marching into our trenches.

JAMES OGLETHOPE TO THE TRUSTEES From Camp before Saint Augustine July 19, 1740

Gentlemen:

I acquainted you with my taking the fort of Saint Francis Picolata and Saint Diego, and about eighty prisoners from the Spaniards, and also of several Indians joining us, and that the Assembly of Carolina had voted an assistance of one regiment &c. for besieging Saint Augustine. But it was so late before they got all things ready that the month of May was come in before we got to the rendezvous,

whereas we ought to have taken the field at farthest in March. I undertook the siege because Saint Augustine in January was scarce of food, the castle had no covered way, the entrenchments 'round the covered way was weak, and, if the town was taken and the people drove into the castle, a bombardment would soon oblige them to surrender for want of room. The troops of the garrison were not complete, and a great number of transport pioneers were in the place desirous to desert. I then laid it down that they should take the advantage of the circumstance and immediately invest the town or at least stop up their communications by sea, which, if they did not, succours would come from the Havana, they would fortify the town and a bombardment world be of little service, since the inhabitants would have large room to avoid it and the season of the year would oblige the men of war to go off the coast and the troops to retire from the heats or perish with sickness. After I had left Charles Town and before we could invest the place, the half-galleys got in from Cuba. We had no pioneers to open trenches, no engineers but Colonel Cook and Mr. Mace, no bombardiers nor gunner that understood the service and no sufficient train.

After April the Spaniards pardoned the transports and completed the garrison with them and entrenched the two strongly towards the land. However I agreed with the Commodore that, if they would attack the half-galleys and the Carolina Regiment attack the side of the town, I would storm the entrenchment by land.

The fleet landed two hundred men, with the Captains Warren, Laws and Townshend, on the Island Saint Anastasia and gave the utmost assistance in putting the few guns and mortars that we had into battery. We summoned the Governour who refused to surrender. We cannonaded and bombarded the town for above twenty days. The Commodore acquainted me upon mature examination, the council of war found it impracticable to attack the half-galleys and that on the 5th July they must be obliged to retire into harbour for fear of hurricane storms. The Indians also acquainted me that the heat and heavy rains would be unhealthy to keep the field and resolved to return home.

About the same time Captain Fanshaw, who was cruising off the Metanza's, which is the Southern entrance of Augustine and the Musquetoes, acquainted the commodore that there were seven vessels loaded with provision &c. got into the Musquetoes and that he could not get at them. Soon after that they got most of their provision into Saint Augustine.

It being impossible to continue the siege I prevailed with the men of war to stay some days longer and ordered Colonel Cook and Colonel Van Dussen to embark with the train, ammunition, troops &c. on board the vessels (they being on the island), which they did, and sent them into this river.

The Spaniards made a sally on me (with about 500 men) who lay on the land side. I ordered Ensign Cathcart with 20 men, supported by

Major Hern and Captain Desbrisay with upwards of one hundred men, to attack them. I followed with the body. We drove them into the works and pursued them to the very barriers of the covered way. After the train and provision were embarked and safe out of the harbour, I marched with drums beating, colours flying in the day from my camp near the town to a camp three miles distance, where I lay that night. The next day I marched nine miles, where I emcamped that night. We discovered a party of Spanish horse [and] Indians, whom we charged, took one Spanish horseman, killed two Indians, the rest run into garrison.

[...]

JAMES OGLETHORPE TO THE DUKE OF NEWCASTLE Frederica July 30, 1742

My Lord:

I am to acquaint Your Grace with the success of His majesty's arms here. The Spaniards with a fleet of 51 sail and a land army on board, under the command of General Montiano and Major General Antonio Arodondo, who was also Engineer General, attacked the colony of Georgia. The fleet was separated, 14 sail of half-galleys and small craft attempted Fort William but were repulsed by Captain Dunbar. They then came into Cumberland Sound to have intercepted me, going with some boats to reinforce Fort William. I fought my way through them and God blessed us with such success that the whole 14 sail stood out to sea and only 10 of them ever joined their fleet.

On the 28th June part of their fleet, consisting of 36 sail, came and lay off this bar 'till 5th July. They several times attempted to land and were disappointed. At last they run into the harbour and after an hot engagement, which lasted four hours, passed by all our batteries and ships and got into the River Frederica. In the fight one of the guard vessels in His Majesty's Service belonging to this colony was disabled and sunk, also several trading vessels. But I got one ship and two vessels, in spite of the enemy, out of the harbour and sent to Charles Town. I marched to Frederica to defend it, on which they landed at Saint Simon's, and attempted to march by land. We engaged two parties making near 500 men one day in the woods, whom we entirely defeated, taking one Captain and 18 men prisoner and killing upwards of 200. They attempted the town by water and were also repulsed and we, continually harassing of them, forced them to reembark, The Cuba fleet, being 20 sail, run out to sea and General Montiano went to Fort Saint Andrew's which I had slighted and abandoned, and from thence went to Fort William where, attempting to land, [he] was repulsed and them attacked the fort by water and, after the assault of three hours, were beat off and drove to sea. I followed them to Fort William, but Don Manuel never stopped 'till he got to Augustine.

115. Jonathan Edwards, *Sinnersin the Hands of an Angry God*,1741 [Excerpt]

Introduction

The reverend Jonathan Edwards (1703-1758) was a leading figure of the Great Awakening, a religious revival that swept through England's American colonies from the 1720s through the 1740s. The Great Awakening led to a renewal of religious fervor among Protestants and made Christian faith more accessible to the masses. It developed in reaction to the widespread conviction that people were losing religious faith and becoming materialistic. English and American evangelists preached to enthusiastic crowds about their faith in personal salvation. Jonathan Edwards, a dynamic speaker, brilliant religious thinker, and minister of a Congregationalist (formerly Puritan) congregation in Connecticut, fired the spirit of revivalism throughout western New England. His 1741 sermon, Sinners in the Hands of an Angry God, became his most famous work, widely republished throughout colonial North America. It contained graphic depictions of the punishment he believed awaited sinners. Edwards became embroiled in one of the many religious controversies that arose from the Great Awakening and was dismissed from his congregation. He later served as a missionary to the Indians and shortly before his death was appointed president of the College of New Jersey, the future Princeton University.

[…]

The God that holds you over the pit of hell, much as one holds a spider, or some loathsome insect over the fire, abhors you, and is dreadfully provoked: his wrath towards you burns like fire; he looks upon you as worthy of nothing else, but to be cast into the fire; he is of purer eyes than to bear to have you in his sight; you are ten thousand times more abominable in his eyes, than the most hateful venomous serpent is in ours. You have offended him infinitely more than ever a stubborn rebel did his prince; and yet it is nothing but his hand that holds you from falling into the fire every moment. It is to be ascribed to nothing else, that you did not go to hell the last night; that you was suffered to awake again in this world, after you closed your eyes to sleep. And there is no other reason to be given, why you have not dropped into hell since you arose in the morning, but that God's hand has held you up. There is no other reason to be given why you have not gone to hell, since you have sat here in the house of God, provoking his pure eyes by your sinful wicked manner of attending his solemn worship. Yea, there is nothing else that is to be given as a reason why you do not this very moment drop down into hell.

O sinner! Consider the fearful danger you are in: it is a great furnace of wrath, a wide and bottomless pit, full of the fire of wrath, that you are held over in the hand of that God, whose wrath is provoked and incensed as much against you, as against many of the damned in hell. You hang by a slender thread, with the flames of divine wrath flashing about it, and ready every moment to singe it, and burn it asunder; and you have no interest in any Mediator, and nothing to lay hold of to save yourself, nothing to keep off the flames of wrath, nothing of your own, nothing that you ever have done, nothing that you can do, to induce God to spare you one moment.—

And consider here more particularly,

1. Whose wrath it is: it is the wrath of the infinite God. If it were only the wrath of man, though it were of the most potent prince, it would be comparatively little to be regarded. The wrath of kings is very much dreaded, especially of absolute monarchs, who have the possessions and lives of their subjects wholly in their power, to be disposed of at their mere will. Prov. 20:2. "The fear of a king is as the roaring of a lion: Whoso provoketh him to anger, sinneth against his own soul." The subject that very much enrages an arbitrary prince, is liable to suffer the most extreme torments that human art can invent, or human power can inflict. But the greatest earthly potentates in their greatest majesty and strength, and when clothed in their greatest terrors, are but feeble, despicable worms of the dust, in comparison of the great and almighty Creator and King of heaven and earth. It is but little that they can do, when most enraged, and when they have exerted the utmost of their fury. All the kings of the earth, before God, are as grasshoppers; they are nothing, and less than nothing: both their love and their hatred is to be despised. The wrath of the great King of kings, is as much more terrible than theirs, as his majesty is greater. Luke 12:4,5. "And I say unto you, my friends, Be not afraid of them that kill the body, and after that, have no more that they can do. But I will forewarn you whom you shall fear: fear him, which after he hath killed, hath power to cast into hell: yea, I say unto you, Fear him."

2. It is the *fierceness* of his wrath that you are exposed to. We often read of the fury of God; as in Isa. 59:18. "According to their deeds, accordingly he will repay fury to his adversaries." So Isa. 66:15. "For behold, the Lord will come with fire, and with his chariots like a whirlwind, to render his anger with fury, and his rebuke with flames of fire." And in many other places. So, Rev. 19:15, we read of "the wine press of the fierceness and wrath of Almighty God." The words are exceeding terrible. If it had only been said, "the wrath of God," the words would have implied that which is infinitely dreadful: but it is "the fierceness and wrath of God." The fury of God! the fierceness of Jehovah! Oh, how dreadful that must be! Who can utter or conceive what such expressions carry in them! But it is also "the fierceness and wrath of almighty God." As though there would be a very great manifestation of his almighty power in what the fierceness of his wrath should inflict, as though omnipotence should be

as it were enraged, and exerted, as men are wont to exert their strength in the fierceness of their wrath. Oh! then, what will be the consequence! What will become of the poor worms that shall suffer it! Whose hands can be strong? And whose heart can endure? To what a dreadful, inexpressible, inconceivable depth of misery must the poor creature be sunk who shall be the subject of this!

Consider this, you that are here present, that yet remain in an unregenerate state. That God will execute the fierceness of his anger, implies, that he will inflict wrath without any pity. When God beholds the ineffable extremity of your case, and sees your torment to be so vastly disproportioned to your strength, and sees how your poor soul is crushed, and sinks down, as it were, into an infinite gloom; he will have no compassion upon you, he will not forbear the executions of his wrath, or in the least lighten his hand; there shall be no moderation or mercy, nor will God then at all stay his rough wind; he will have no regard to your welfare, nor be at all careful lest you should suffer too much in any other sense, than only that you shall not suffer beyond what strict justice requires. Nothing shall be withheld, because it is so hard for you to bear. Ezek. 8:18. "Therefore will I also deal in fury: mine eye shall not spare, neither will I have pity; and though they cry in mine ears with a loud voice, yet I will not hear them." Now God stands ready to pity you; this is a day of mercy; you may cry now with some encouragement of obtaining mercy. But when once the day of mercy is past, your most lamentable and dolorous cries and shrieks will be in vain; you will be wholly lost and thrown away of God, as to any regard to your welfare. God will have no other use to put you to, but to suffer misery; you shall be continued in being to no other end; for you will be a vessel of wrath fitted to destruction; and there will be no other use of this vessel, but to be filled full of wrath. God will be so far from pitying you when you cry to him, that it is said he will only "laugh and mock," Prov. 1:25,26,&c.

How awful are those words, Isa. 63:3, which are the words of the great God. "I will tread them in mine anger, and will trample them in my fury, and their blood shall be sprinkled upon my garments, and I will stain all my raiment." It is perhaps impossible to conceive of words that carry in them greater manifestations of these three things, viz. contempt, and hatred, and fierceness of indignation. If you cry to God to pity you, he will be so far from pitying you in your doleful case, or showing you the least regard or favour, that instead of that, he will only tread you under foot. And though he will know that you cannot bear the weight of omnipotence treading upon you, yet he will not regard that, but he will crush you under his feet without mercy; he will crush out your blood, and make it fly, and it shall be sprinkled on his garments, so as to stain all his raiment. He will not only hate you, but he will have you in the utmost contempt: no place shall be thought fit for you, but under his feet to be trodden down as the mire of the streets.

3. The *misery* you are exposed to is that which God will inflict to that end, that he might show what that wrath of Jehovah is. God hath had it on his heart to show to angels and men, both how excellent his love is, and also how terrible his wrath is. Sometimes earthly kings have a mind to show how terrible their wrath is, by the

extreme punishments they would execute on those that would provoke them. Nebuchadnezzar, that mighty and haughty monarch of the Chaldean empire, was willing to show his wrath when enraged with Shadrach, Meshach, and Abednego; and accordingly gave orders that the burning fiery furnace should be heated seven times hotter than it was before; doubtless, it was raised to the utmost degree of fierceness that human art could raise it. But the great God is also willing to show his wrath, and magnify his awful majesty and mighty power in the extreme sufferings of his enemies. Rom. 9:22. "What if God, willing to show his wrath, and to make his power known, endured with much long-suffering the vessels of wrath fitted to destruction?" And seeing this is his design, and what he has determined, even to show how terrible the unrestrained wrath, the fury and fierceness of Jehovah is, he will do it to effect. There will be something accomplished and brought to pass that will be dreadful with a witness. When the great and angry God hath risen up and executed his awful vengeance on the poor sinner, and the wretch is actually suffering the infinite weight and power of his indignation, then will God call upon the whole universe to behold that awful majesty and mighty power that is to be seen in it. Isa. 33:12-14. "And the people shall be as the burnings of lime, as thorns cut up shall they be burnt in the fire. Hear ye that are far off, what I have done; and ye that are near, acknowledge my might. The sinners in Zion are afraid; fearfulness hath surprised the hypocrites," &c.

Thus it will be with you that are in an unconverted state, if you continue in it; the infinite might, and majesty, and terribleness of the omnipotent God shall be magnified upon you, in the ineffable strength of your torments. You shall be tormented in the presence of the holy angels, and in the presence of the Lamb; and when you shall be in this state of suffering, the glorious inhabitants of heaven shall go forth and look on the awful spectacle, that they may see what the wrath and fierceness of the Almighty is; and when they have seen it, they will fall down and adore that great power and majesty. Isa. 66:23,24. "And it shall come to pass, that from one new moon to another, and from one sabbath to another, shall all flesh come to worship before me, saith the Lord. And they shall go forth and look upon the carcasses of the men that have transgressed against me; for their worm shall not die, neither shall their fire be quenched, and they shall be an abhorring unto all flesh."

4. It is everlasting wrath. It would be dreadful to suffer this fierceness and wrath of Almighty God one moment; but you must suffer it to all eternity. There will be no end to this exquisite horrible misery. When you look forward, you shall see a long for ever, a boundless duration before you, which will swallow up your thoughts, and amaze your soul; and you will absolutely despair of ever having any deliverance, any end, any mitigation, any rest at all. You will know certainly that you must wear out long ages, millions of millions of ages, in wrestling and conflicting with this almighty merciless vengeance; and then when you have so done, when so many ages have actually been spent by you in this manner, you will know that all is but a point to what remains. So that your punishment will indeed be infinite. Oh, who can express what the state of a soul in

such circumstances is! All that we can possibly say about it, gives but a very feeble, faint representation of it; it is inexpressible and inconceivable: For "who knows the power of God's anger?"

How dreadful is the state of those that are daily and hourly in the danger of this great wrath and infinite misery! But this is the dismal case of every soul in this congregation that has not been born again, however moral and strict, sober and religious, they may otherwise be. Oh that you would consider it, whether you be young or old! There is reason to think, that there are many in this congregation now hearing this discourse, that will actually be the subjects of this very misery to all eternity. We know not who they are, or in what seats they sit, or what thoughts they now have. It may be they are now at ease, and hear all these things without much disturbance, and are now flattering themselves that they are not the persons, promising themselves that they shall escape. If we knew that there was one person, and but one, in the whole congregation, that was to be the subject of this misery, what an awful thing would it be to think of! If we knew who it was, what an awful sight would it be to see such a person! How might all the rest of the congregation lift up a lamentable and bitter cry over him! But, alas! instead of one, how many is it likely will remember this discourse in hell? And it would be a wonder, if some that are now present should not be in hell in a very short time, even before this year is out. And it would be no wonder if some persons, that now sit here, in some seats of this meeting-house, in health, quiet and secure, should be there before tomorrow morning. Those of you that finally continue in a natural condition, that shall keep out of hell longest will be there in a little time! your damnation does not slumber; it will come swiftly, and, in all probability, very suddenly upon many of you. You have reason to wonder that you are not already in hell. It is doubtless the case of some whom you have seen and known, that never deserved hell more than you, and that heretofore appeared as likely to have been now alive as you. Their case is past all hope; they are crying in extreme misery and perfect despair; but here you are in the land of the living and in the house of God, and have an opportunity to obtain salvation. What would not those poor damned hopeless souls give for one day's opportunity such as you now enjoy!

And now you have an extraordinary opportunity, a day wherein Christ has thrown the door of mercy wide open, and stands in calling and crying with a loud voice to poor sinners; a day wherein many are flocking to him, and pressing into the kingdom of God. Many are daily coming from the east, west, north and south; many that were very lately in the same miserable condition that you are in, are now in a happy state, with their hearts filled with love to him who has loved them, and washed them from their sins in his own blood, and rejoicing in hope of the glory of God. How awful is it to be left behind at such a day! To see so many others feasting, while you are pining and perishing! To see so many rejoicing and singing for joy of heart, while you have cause to mourn for sorrow of heart, and howl for vexation of spirit! How can you rest one moment in such a condition? Are not your souls as precious as the souls of the people at Suffield, where they are flocking from day to day to Christ?

Are there not many here who have lived long in the world, and are not to this day born again? and so are aliens from the commonwealth of Israel, and have done nothing ever since they have lived, but treasure up wrath against the day of wrath? Oh, sirs, your case, in an especial manner, is extremely dangerous. Your guilt and hardness of heart is extremely great. Do you not see how generally persons of your years are passed over and left, in the present remarkable and wonderful dispensation of God's mercy? You had need to consider yourselves, and awake thoroughly out of sleep. You cannot bear the fierceness and wrath of the infinite God.—And you, young men, and young women, will you neglect this precious season which you now enjoy, when so many others of your age are renouncing all youthful vanities, and flocking to Christ? You especially have now an extraordinary opportunity; but if you neglect it, it will soon be with you as with those persons who spent all the precious days of youth in sin, and are now come to such a dreadful pass in blindness and hardness.—And you, children, who are unconverted, do not you know that you are going down to hell, to bear the dreadful wrath of that God, who is now angry with you every day and every night? Will you be content to be the children of the devil, when so many other children in the land are converted, and are become the holy and happy children of the King of kings?

And let every one that is yet out of Christ, and hanging over the pit of hell, whether they be old men and women, or middle aged, or young people, or little children, now hearken to the loud calls of God's word and providence. This acceptable year of the Lord, a day of such great favour to some, will doubtless be a day of as remarkable vengeance to others. Men's hearts harden, and their guilt increases apace at such a day as this, if they neglect their souls; and never was there so great danger of such persons being given up to hardness of heart and blindness of mind. God seems now to be hastily gathering in his elect in all parts of the land; and probably the greater part of adult persons that ever shall be saved, will be brought in now in a little time, and that it will be as it was on the great out-pouring of the Spirit upon the Jews in the apostles' days; the election will obtain, and the rest will be blinded. If this should be the case with you, you will eternally curse this day, and will curse the day that ever you was born, to see such a season of the pouring out of God's Spirit, and will wish that you had died and gone to hell before you had seen it. Now undoubtedly it is, as it was in the days of John the Baptist, the axe is in an extraordinary manner laid at the root of the trees, that every tree which brings not forth good fruit, may be hewn down and cast into the fire.

Therefore, let every one that is out of Christ, now awake and fly from the wrath to come. The wrath of Almighty God is now undoubtedly hanging over a great part of this congregation. Let every one fly out of Sodom: "Haste and escape for your lives, look not behind you, escape to the mountain, lest you be consumed."

116. George Whitefield, *Directions How to Hear Sermons* [Excerpt]

Introduction

The reverend George Whitefield (1714-1770) was a leading figure of the Great Awakening, a religious revival that swept through England's American colonies from the 1720s through the 1740s. A corresponding movement, called Evangelicalism, arose in England. The Great Awakening led to a renewal of religious fervor among Protestants and made Christian faith more accessible to the masses. It developed in reaction to the widespread conviction that people were losing religious faith and becoming materialistic. English and American evangelists preached to enthusiastic crowds about their faith in personal salvation. The English-born evangelist George Whitefield came to Georgia in 1738 to serve as a missionary. He had experienced a religious conversion in his youth. Beginning in 1739, Whitefield toured the colonies and preached to vast audiences, winning hundreds of converts. His popularity drew the resentment of established religious authorities, who scorned him as an outsider. In 1748 he returned to Great Britain and spent his remaining years preaching throughout the British Isles.

Primary Source

Luke viii.18.

Take Heed therefore, how you hear,

The Occasion of our Lord's giving this Caution, was this: Perceiving that much People were gathered together, to hear him out of every City, and knowing (for he is God, and knoweth all things) that many, if not most of them, would be Hearers only, and not Doers of the Word, he spake to them by a Parable, wherein, under the Similitude of a Sower, that went out to sow his Seed, he plainly intimated, how few there were amongst them, who would receive any saving Benefit from his Doctrine, or bring forth Fruit unto Perfection.

The Application, one would imagine, should be plain and obvious: but the Disciples, as yet unenlightened in any great Degree by the Holy Spirit, and therefore unable to see into the hidden Mysteries of the Kingdom of God, dealt with our Savior, as People ought to deal with their Ministers,—discoursed with him privately about the Meaning of what he had taught them in Publick, and with a sincere Desire of doing their Duty, asked for an Interpretation of the Parable.

Our blessed Lord, as he always was willing to instruct those that were teachable (herein setting his Ministers an Example to be courteous and easy of Access) freely told them the Signification of it. And withal, to make them more cautious and more attentive to his Doctrine for the future, He tells them, that they were in an especial Manner to be the Light of the World, and were to proclaim on the House-top whatsoever he told them in Secret. And as their improv-

ing the Knowledge already imparted, was the only Condition upon which more was to be given them, it therefore highly concerned them to *take Heed how they heard*.

From the Context then it appears, that the Words were primarily spoken to the Apostles themselves. But because they were the Representatives of the whole Church, and 'tis to be feared, out of those many Thousands that flock to hear Sermons, but few, comparatively speaking, are effectually influenced by them; I cannot but think it very necessary to remind you of the Caution given by our Lord to his Disciples, and to exhort you with the utmost Earnestness to *take heed how you hear*.

In Prosecution of which Design I shall in the following Discourse, I. First, Prove that every One ought to take all Opportunities of hearing Sermons. And,

II. Secondly, I shall lay down some Cautions and Directions, in order to your hearing them with Profit and Advantage.

I. And, first, I am to prove that every One ought to take all Opportunities of hearing sermons.

That there have always been particular Persons set apart by God to instruct and exhort his People to practice what he should require of them, is evident from many Passages of Scripture.—St. Jude tells us, that *Enoch* the seventh from *Adam*, prophesied, or preached, concerning the Lord's coming with ten Thousand of his Saints to Judgment. And *Noah*, who lived not long after, is stiled by St. *Peter*, *a preacher of righteousness*. And though in all the intermediate Space between the Flood and giving of the Law, we hear but of few Preachers, yet we may reasonably conclude, that God never left himself without Witness, but at sundry Times, and after diverse Manners, spoke to our Fathers by the Patriarchs and Prophets.

But however it was before, we are assured that after the Delivery of the law, God has constantly separated to himself a certain Order of Men to preach to, as well as pray for his People; and commanded them to inquire their Duty at the Priests Mouths. And though the *Jews* were frequently led into Captivity, and for their Sins scattered abroad through the Face of the Earth; yet he never utterly forsook his Church, but still kept up a Remnant of Prophets and Preachers, as *Ezekiel, Jeremiah, Daniel*, and others, to reprove, instruct, and call them to Repentance.

[...]

II. Second general Thing proposed, To lay down some Cautions and Directions, in order to your hearing Sermons with Profit and Advantage.

And here, if we reflect on what has been already delivered, and consider that Preaching is an Ordinance of God, a Means appointed by

Jesus Christ himself for promoting his Kingdom amongst Men, you cannot reasonably be offended, if, in order that you may hear Sermons with Profit and Advantage, I

First, direct or intreat you to come to hear them, not out of Curiosity, but from a sincere desire to know and do your Duty.

Formality and Hypocrisy in any religious Exercise, is an Abomination unto the Lord. And to enter his House merely to have our Ears entertained, and not our Hearts reformed, must certainly be highly displeasing to the Most High God, as well as unprofitable to ourselves.

Hence it is, that so many remain Unconverted, yea, Unaffected with the most Evangelical Preaching; so that like St. Paul's Companions, before his conversion, they only hear the Preacher's Voice with their outward Ears, but do not experience the Power of it inwardly in their Hearts. Or, like the Ground near Gideon's Fleece, they remain untouched; whilst others, who came to be fed with the sincere Milk of the Word, like the Fleece itself, are watered by the Dew of God's Heavenly Blessing, and grow thereby.

Flee therefore, my Brethren, flee Curiosity; and prepare your Hearts by a humble Disposition, to receive with Meekness the engrafted Word, and then it will be a Means, under God, to quicken, build up, purify, and save your Souls.

A Second Direction I shall lay down for the same Purpose, is, not only to prepare your Hearts before you hear, but also to give diligent heed to the Things that are spoken, whilst you are hearing the Word of God.

[...]

Third direction,—not to entertain any the least Prejudice against the Minister.

For could a Preacher speak with the Tongue of Men and Angels, if his Audience was prejudiced against him, he would be but as sounding Brass, or tinkling Cymbal.

That was the Reason why Jesus Christ himself, the eternal Word, could not do many mighty Works, nor preach to any great effect among those of his own country; for they were offended at him. And was this same Jesus, this God incarnate, again to bow the heavens, and to come down speaking as never Man spake, yet, if we were prejudiced against him, as the *Jews* were, we should harden our hearts as the *Jews* did theirs.

Take Heed therefore, my Brethren, and beware of entertaining any Dislike against those whom the Holy Ghost has made Overseers over you. Consider that the Clergy are Men of like Passions with yourselves. And tho' we should even hear a Person teaching others to do, what he has not learned himself; yet, that is no sufficient Reason for rejecting his Doctrine: For ministers speak not in their own, but Christ's Name. And we know who commanded the People to do whatsoever the Scribes and Pharisees should say unto them, though they said but did not.

But Fourthly, as you ought not to be prejudiced against, so you should be careful not to depend too much on a Preacher, or think more highly of him than you ought to think. For though this be an Extreme that People seldom run into, yet preferring one Teacher in Opposition to another, has been of ill Consequence to the Church of God.

 $[\ldots]$

A Fifth Direction I would recommend is, to make a particular Application of every Thing that is delivered to your own Hearts.

When our Savior was discoursing at his last Supper with his beloved Disciples, and foretold that one of them should betray him, each of them immediately applied it to his own Heart, and said, Lord, is it I? And would Persons in like Manner, when Preachers are dissuading from any Vice, or persuading to any Virtue, instead of crying, this was designed against such and such a one, turn their Thoughts inwardly, and say, Lord, is it I? How far more beneficial should we find Discourses to be, than now they generally are now?

But we are apt to wander too much abroad: Always looking at the Mote with is in our Neighbor's Eye, rather than at the beam which is in our own.

Haste we now to the Sixth and last Direction: If you would receive a Blessing from the Lord, when you hear his Word preached, pray to him, both before, in, and after every Sermon, to endue the Minister with Power to speak, and to grant you a Will and Ability to put in Practice, what he shall shew from the Book of God to be your Duty.

This would be an excellent Means to render the Word preached effectual to the enlightening and enflaming your Hearts, and without this all the other Means before prescribed will be in vain.

[...]

But still *take heed how you hear*. For upon your improving the Grace you have, more shall be given, and you shall have abundance. For he is faithful that has promised, Who also will do it. Nay, God from out of Sion, shall so bless you, that every Sermon you hear shall communicate to you a fresh Supply of Spiritual Knowledge. The Word of God shall dwell in you richly; you shall go on from Strength to Strength, from one Degree of Grace unto another, till being grown up to be perfect Men in Christ Jesus, and filled with all the fullness

of God, you shall be translated by Death to see Him as he is, and to sing Praise before his Throne with Angels and Archangels, Cherubim and Seraphim, and the general Assembly of the First-born, whose names are written in Heaven, for ever and ever.

Which God of his infinite Mercy grant, &c.

117. Treaty at Lancaster, June–July, 1744 [Excerpt]

Introduction

The Iroquois had considered the French to be their enemies since French explorers had attacked them in the early 1600s. They maintained a strong alliance with the English and cooperated with them in controlling the movements of other Indians in New York, Pennsylvania, and surrounding areas. For example, when the Delawares tried to resist the Walking Purchase in eastern Pennsylvania, the Iroquois ordered them to move on in 1742. In turn, the Iroquois received gifts from colonial authorities. The European war called the War of the Austrian Succession (1740–1748) spilled over into North America when France entered the war against Great Britain. This became King George's War, fought in America between France and Great Britain from 1744 to 1748. In 1744, warriors and sachems (chiefs) of the Iroquois Six Nations met in Lancaster, Pennsylvania, with Gov. George Thomas of Pennsylvania, colonial officials from Virginia and Maryland, and the interpreter Conrad Weiser. The English wished to secure a trading route through Iroquois territory. During the multi-day negotiations, the Iroquois complained of how cheaply they had sold their land to the English. The colonial officials then imparted news of France's entry into the war and called on the Iroquois to support the English colonists against those of New France. The Iroquois reaffirmed their alliance with the English.

[...

Lancaster Meeting June 30, 1744

We do remember we were employed by Maryland to conquer the Conestogoes, and that the second time we were at War with the, we carried them all off.

Brother Assaragoa,

You charge us with not acting agreeable to our Peace with the Catawbas, we will repeat to you truly what was done. The Governor of New-York, at Albany, in Behalf of Assaragoa, gave us several Belts

of Wampum from the Cherikees and Catawbas, and we agreed to a Peace, if those nations would send some of their great Men to us to confirm it Face to Face, and that they would trade with us; and desired that they would appoint a Time to meet at Albany for that Purpose, but they never came.

Brother Assaragoa,

We then desired a Letter might be sent to the Catawbas and Cherikees, to desire them to come and confirm the Peace. It was long before and Answer came; but we met the Cherikees, and confirmed the Peace, and sent some of our People to take care of them, until they returned to their own Country.

The Catawbas refused to come, and sent us work, That we were but Women, that they were Men, and double Men, that they could make women of us, and would be always at War with us. They are a deceitful People. Our Brother Assaragoa is deceived by them; we don't blame him for it, but are sorry he is so deceived.

Brother Assaragoa,

We have confirmed the Peace with the Cherikees, but not with the Catawbas. They have been treacherous, and know it; so that the War must continue till one of us is destroyed. This we think proper to tell you, that you may not be troubled at what we do to the Catawbas.

Brother Assaragoa.

We will now speak to the Point between us. You say you will agree with us as to the Road; we desire that may be the road which was last made (the Waggon-road.) It is always, a Custom among Brethren or Strangers to use each other kindly; you have some very ill-natured People living up there; so that we desire the Persons in Power may know that we are to have reasonable victuals when we are in want.

You know very well, when the white People came first here they were poor; but now they have got our lands, and are by them become rich, and we are not poor; what little we have had for the Land goes soon away, but the Land lasts for ever. You told us you had brought with you a Chest of Goods, and that you have the Key in your Pockets; but we have never seen the Chest, nor the Goods that are said to be in it; it may be small, and the Goods few; we want to see them, and are desirous to come to some Conclusion. We have been sleeping here these ten Days past, and have not done any thing to the Purpose.

The Commissioners told they should see the goods on Monday.

July 3, 1744

The Great King of ENGLAND and the French King have declared War against each other. Two Battles have been fought, one by Land,

and the other by Sea. The great King of ENGLAND commanded the Land-Army in Person, and gained a compleat victory. Numbers of the French were killed and taken Prisoners, and the rest were forced to pass a River with Precipitation to save their Lives. The Great God covered the King's Head in that Battle, so that he did not receive the least Hurt; for which you, as well as we, have Reason to be very thankful.

THE Engagement at Sea was likewise to the Advantage of the English. The French and Spaniards joined their Ships together, and came out to fight us. The brave English Admiral burnt one of their largest Ships, and many others were so shattered, that they were glad to take the Opportunity of a very high Wind, and a dark Night, to run away, and to hide themselves again in their own Harbours. Had the Weather proved fair, he would, in all Probability, have taken or destroyed them all.

I need not put you in mind how much William Penn and his Sons have been your Friends, and the Friends of all the Indians. You have long and often experienced their Friendship for you; nor need I repeat to you how kindly you were treated, and what valuable Presents were made to you two Years ago by the Governor, the Council, and the Assembly of Pensylvania. The Sons of William Penn are all now in England, and have left me in their Place, well knowing how much I regard you and all the Indians. As a fresh Proof of this, I have left my house, and am come thus far to see you, to renew our Treaties, to brighten the Covenant-Chain, and to confirm our Friendship with you. In Testimony whereof, I present you with this Belt of Wampum.

Which was received with the Yo-hah.

As your Nations have engaged themselves by Treaty to assist us, your Brethren of Pensylvania, in case of a War with the French, we do not doubt but you will punctually perform an engagement so solemnly entered into. A War is now declared, and we expect that you will not suffer the French, or any of the Indians in Alliance with them, to march through your country to disturb any of our Settlements; and that you will give us the earliest and best Intelligence of any Designs that may be formed by them to our Disadvantage. . . .

"That War had been declared between the great King of ENGLAND and the French King; that two great Battles had been fought, one by Land, and the other at Sea; with many other Particulars." We are glad to hear the Arms of the King of England were successful, and take part with you in your Joy on this Occasion. You then came nearer Home, and told us, "You had left your House, and were come thus far on Behalf of the whole People of Pensylvania to see us; to renew your Treaties, to brighten the Covenant-Chain, and to confirm your Friendship with us." We approve the Proposition, we thank you for it. We own, with Pleasure, that the Covenant-Chain between us and Pensylvania is of old Standing, and has never con-

tracted any Rust; we wish it may always continue as bright as it has done hitherto; and, in Token of the Sincerity of our Wishes, we present you with this Belt of Wampum.

Which was received with the Yo-hah.

Brother Onas,

You was pleased Yesterday to remind us of our mutual obligation to assist each other in case of a War with the French, and to repeat the Substance of what we ought to do by our Treaties with you; and that as a War had been already entered into with the French, you called upon us to assist you, and not to suffer the French to march through our Country to disturb any of your Settlements.

IN answer, we assure you we have all these particulars in our Hearts, they are fresh in our Memory. We shall never forget that you and we have but one Heart, one Head, one Eye, one Ear, and one Hand. We shall have all your Country under our Eye, and take all the care we can to prevent any Enemy from coming into it; and, in proof of our Care, we must inform you, that before we came here, we told Onadio, our Father, as he is called, that neither he, nor any of his People, should come through our Country, to hurt our Brethren the English, or any of the Settlements belonging to them; there was Room enough at Sea to fight, there he might do what he pleased, but he should not come upon our Land to do any Damage to our Brethren. And you may depend upon our using our utmost Care to see this effectually done; and, in token of our Sincerity, we present you with this Belt of Wampum.

Which was received with the usual Ceremony.

118. Stephen Williams, *Louisbourg Journals*, 1745 [Excerpt]

Introduction

The European conflict called the War of the Austrian Succession (1740–1748) spilled over into North America when France entered the war against Great Britain. This became King George's War, fought in America between France and Great Britain from 1744 to 1748. At the end of the previous French-English conflict in North America, Queen Anne's War (1702–1713), the French had been forced to cede Acadia, the main part of present-day Nova Scotia, but had then built the fortress of Louisbourg on Cape Breton Island. This strategic location dominated the entrance to the St. Lawrence River and provided access to abundant North Atlantic fishing grounds. At the outbreak of King George's War, New Englanders organized a 4,000-man force to move against Louisbourg, which

they captured after a 55-day siege in 1745. After the New Englanders took possession of the fort and settled in for the winter, many succumbed to disease from the unsanitary conditions. This excerpt is from the journal of the chaplain accompanying a Massachusetts unit, describing his unending work ministering to the sick and dying. The victorious New Englanders were disgusted when Louisbourg was returned to France at war's end. The British captured Louisbourg again, for the last time, during the French and Indian War.

119. Six Nations Meet with Colonial Officials at Albany, August 19, 1746

Introduction

The Iroquois had considered the French to be their enemies since French explorers had attacked them in the early 1600s. They maintained a strong alliance with the English and cooperated with them in controlling the movements of other Indians in their territory. They lived in northern New York and Pennsylvania, and served as a buffer between Canada and the British colonies. The European war called the War of the Austrian Succession (1740–1748) spilled over into North America when France entered the war against Great Britain. This became King George's War, fought in America between France and Great Britain from 1744 to 1748. In 1744, warriors and sachems of the Iroquois Six Nations met colonial officials in Lancaster, Pennsylvania, and reaffirmed their alliance with the English. During a meeting in Albany, New York, two years later, New York officials urged the Iroquois to join them in a major operation against Canada. In his attempt to sway the Iroquois, the speaker cited French and Indian attacks on the English frontier, the necessity of avenging one's ancestors, and the opportunity to attain glory.

Primary Source

"The King your Father, having been informed of the unmanly Murders committed on the Frontiers of New-England, and of this Province, is resolved to subdue the Country of Canada, and thereby put an End to all the mischievous Designs of the French in these Parts. And for this purpose, he has ordered his, Governors of Virginia, Maryland, Pensylvania, and New-Jersey, to join their Forces to the Forces of this Province, to attack Canada by Land: They are all now upon their march, and you will soon see them here.

"At the same Time the Forces of the Massachusets- Bay, Connecticut, Rhode-Island, and New-Hampshire, are to go in Ships to Cape-Breton, and there join with his Majesty's Ships of War, and a great Army of experienc'd Soldiers from Great-Britain.

"Many Ships of War are already arrived there, and some thousand of Soldiers; many more Ships and Soldiers are following; and I expect every Hour to hear of their Arrival; after which the Attack upon Canada will be made on all Sides, both by Sea and Land.

"You may perceive the King has ordered a Strength sufficient to subdue Canada; but at the same Time, the King your Father expects and orders you his Children, to join with your whole Force in this Enterprize; and thereby gives the Six Nations a glorious Opportunity of establishing their Fame and Renown over all the Indian Nations in America, in the Conquest of your inveterate Enemies the French; who, however they may dissemble and profess Friendship, can never forget the Slaughter which your Fathers made of them; and for that purpose, caress those Nations who have always been your inveterate Enemies, and who desire nothing so much as to seethe Name of the Six Nations become obliterate, and forgot for ever.

[Gave a Belt.]

"Brethren, The French, on all Occasions, shew, that they act against your Brethren the English, like Men that know they dare not look them in the Face in Day-Light; and therefore, like Thieves, steal upon poor People, who do not expect them, in the Night, and consequently are not prepared for them: Your Brethren in their Revenge have acted like Men of Courage; they do not attack poor Farmers at their Labour, but boldly attempted the Reduction of Louisburg, the strongest Town the French had in America, in the fortifying of which they had spent above twenty Years: It was surrounded with strong Walls and Forts, in which they had planted their largest Cannon in every Place, where they thought the English could come near them; notwithstanding of all these Precautions and Advantages, they were forced to submit to the English Valour.

"You must have heard from your Fathers, and I doubt not several of your old Men still remember what the French did at Onondaga; how they surprized your Countrymen at Cadarackui; how they invaded the Senekas, and what Mischiefs they did to the Mohawks; how many of your Countrymen suffered by the Fire at Montreal. Before they entered upon these cruel and mischievous Designs, they sent Priests among you to delude you, and lull you asleep, while they were preparing to knock you on the Head; and I hear they are attempting to do the same now.

[Gave a Belt.]

"I need not put you in mind what Revenge your Fathers took for these Injuries, when they put all the Island of Montreal, and a great Part of Canada, to Fire and Sword; can you think that the French forget this? No, they have the Ax privately in their Hands against you, and use these deceitful Arts, by which only they have been able to gain Advantage over you, that by your trusting to them, they may at some time or other, at one Blow, remove from the Face of the

Earth, the Remembrance of a People that have so often put them to Shame and Flight.

"If your Fathers could now rise out of their Graves, how would their Hearts leap with Joy to see this Day; when so glorious an Opportunity is put into their Hands to revenge all the Injuries their Country has received from the French, and be never more exposed to their Treachery and Deceit.

"I make no doubt you are the true Sons of such renowned and brave Ancestors, animated with the same Spirit for your Country's Glory, and in Revenge of the Injuries your Fathers received, uncapable of being deluded by the flattering Speeches of them, who always have been, and always must be, in their Hearts, your Enemies, and who desire nothing more, than the Destruction of your Nations.

"I therefore invite you, Brethren, by this Belt, to join with us, and to share with us, in the Honour of the Conquest of our and your deceitful Enemies; and that you not only join all the Force of the Six Nations with us, but likewise invite all the Nations depending on you, to take a Share in this glorious Enterprize: And I will furnish your fighting Men with Arms, Ammunition, Cloathing, Provisions, and every Thing necessary for the War; and in their Absence, take Care of their Wives and Children.

120. Conrad Weiser, Journal of an Envoy to the Indians, 1748 [Excerpt]

Introduction

The European war called the War of the Austrian Succession (1740-1748) had spilled over into North America when France entered the war against Great Britain. This became King George's War, fought in America between France and Great Britain from 1744 to 1748. Shortly after the war ended in 1748, Conrad Weiser met with representatives of several Indian nations in western Pennsylvania to reaffirm English-Indian friendship. The German-born Weiser had come to New York at the age of 14, learned the Mohawk language, and was adopted into the Mohawk tribe, one of the six Iroquois nations. He moved to Pennsylvania and worked for most of his adult life as a trader and interpreter, representing English interests in negotiations with the Iroquois and other native peoples. In 1748, although France and Britain had just declared a cease-fire, Weiser traveled to western Pennsylvania to represent Virginia and Pennsylvania in their efforts to gain reassurance of the Indians' loyalty to the English. In his journal, Weiser recounts his argument that they could not depend on the French to adhere to a cease-fire.

Primary Source

7th. Being inform'd that the Wondats had a mind to go back again to the French, & had endeavour'd to take the Delawares with them to recommend them to the French, I sent Andrew Montour to Beaver Creek with a string of Wampum to inform himself of the Truth of the matter; they sent a String in answer to let me know they had no Correspondence that way with the Wondats, and that the aforesaid Report was false.

8th.... I treated them [*the Wyandot*] with a quart of Whiskey & a Roll of Tobacco; they expressed their good Wishes to King George & all his People, & were mightily pleas'd that I look'd upon the as Brethren of the English.

This Day I desir'd the Deputies of all the nations of Indians settled on the Waters of Ohio to give me a List of their fighting Men, which they promis'd to do. A great many of the Indians went away this Day because the goods did not come, & the People in the Town cou'd not find Provision enough, the number was so great.

The following is the number of every nation, given to me by their several Deputies in Council, in so many Sticks tied up in a bundle:

The Senacas 163, Shawonese 162, Owendaets [*Wyandot*] 100, Tisagechroanu [*Huron*] 40, Mohawks 74, Mohickons 15, Onondagers 35, Cajukas [*Cayuga*] 20, Oneidos 15, Delawares 165, in all 789....

 $10^{\rm th}$. A great many of the Indians got drunk; one Henry Noland had brought near 30 Gallons of Whiskey to the Town. . . .

11th. George Croghan & myself staved and 8 Gallon Cag of Liquor belonging to the aforesaid Henry Norland, who could not be prevail'd on to hide it in the Woods, but would sell it & get drunk himselfe....

15th. I let the Indians know that I wou'd deliver my Message to morrow, & the Goods I had, & that they must send Deputies with me on my returning homewards, & wherever we shou'd meet the rest of the Goods I wou'd send them to them if they were not taken by the Enemy, to which they agree. . . .

17th. It rained very hard, but in the Afternoon it held up for about 3 hours; the Deputies of the several Nations met in council & I delivered them what I had to say from the President & Council of Pennsylvania by Andrew Montour.

'Brethren, you that live on Ohio: . . . some of you have been in Philadelphia last Fall & acquainted us that You had taken up the English Hatchet, and that You had already made use of it against the French, & that the French had very hard heads, & Your country afforded nothing but Sticks & Hickerys which was not sufficient to break them. You desir'd your Brethren wou'd assist You with some

Weapons sufficient to do it. . . . you receiv'd a Supply by George Croghan sent you by your said Brethren; but before George Croghan came back from Ohio News came from over the Great Lake that the King of Great Britain & the French King has agreed upon a Cessation of Arms for Six Months & that a Peace was very likely to follow. Your Brethren, the President & council, were then in a manner at a loss what to do. . . . but as your Brethren never miss'd fulfilling their Promises, they have upon second consideration thought proper to turn the intended supply into a civil & Brotherly Present. . . . A French Peace is a very uncertain One, they keep it no longer than their Interest permits, then they break it without provocation given them.

121. Treaty of Aix-la-Chapelle, 1748 [Excerpt]

Introduction

The European war called the War of the Austrian Succession (1740-1748) spilled over into North America when France entered the war against Great Britain. This became King George's War, fought in America between France and Great Britain from 1744 to 1748. The war had begun in Europe in 1740, but France did not enter the war until 1744, when it declared war on Britain and attacked the British-held town of Annapolis Royal, Nova Scotia. Much of King George's War took place in Canada, but French and Native American raiders also attacked settlements on the New England frontier. The agreement that ended the War of the Austrian Succession, the Treaty of Aix-la-Chapelle, signed in October 1748, recognized the right of Holy Roman Empress Maria Theresa to succeed her father to the throne, although she was forced to relinquish some of her territory. The treaty also gave Nova Scotia to the British, while returning the hard-won fortress of Louisbourg on Cape Breton Island to the French. The peace proved short-lived, however, as the Seven Years' War erupted between the powers in the mid-1750s.

Primary Source

The Definitive Treaty of Christian, Universal, and Perpetual Peace, Friendship and Union, Concluded at Aix-la-Chapelle on the 18th of October, 1748

Article I

There shall be a Christian, Universal, and Perpetual Peace, both by Sea and Land, and a sincere and constant Friendship between the High Powers before mentioned, and between their Heirs and Successors, Kingdoms, States, Provinces, Countries, Subjects and Vassals, of what Quality or Condition soever, without Exception of Place or Person, in such a Manner that the High Contracting Parties must have a constant attention to maintain between them and their said States and Subjects, this reciprocal Friendship and Correspondence without permitting either one Party or the other to commit any Sort of Hostilities on any Account or Pretence whatever, and shunning every Thing which may tend to alter the happy Union happily re-established between them; engaging themselves, on the contrary, to procure on all Occasions whatever may contribute to their mutual Glory, Interests and Advantages, without giving any Succour or Protection, directly or indirectly, to those who may so much as attempt to prejudice either one or other of the said High contracting Parties.

Article II

There shall be a general Oblivion of all that has been done or committed during the War which is now put an End to, and each on the Day of Exchange of the Ratifications of all the Parties shall be restored to the Possession of all his Effects, Dignities, Ecclesiastical Benefices, Honours and Revenues, which he enjoyed on the Commencement of the War, notwithstanding all the Possessions, Seizures or Confiscations occasioned by said War.

Article III

The Treaties of Westphalia of 1648; those of Madrid, between the Crowns of England and Spain, of 1667 and 1670; the Treaties of Peace of Nimeguen of 1678 and 1679; of Ryswick of 1697; of Utrecht of 1713; of Baden of 1714; the Treaty of the Triple Alliance of the Hague of 1717; that of the Quadruple Alliance of London of 1718; and the Treaty of Peace of Vienna of 1738, shall serve as a Basis and Foundation to the General Peace and to the present Treaty, and for this Effect they shall be renewed and confirmed in the best Form, and as if they were inserted Word for Word, and are still to be exactly observed in their whole Tenor, and religiously executed on all Sides, excepting however some Points which are derogated by the present Treaty.

Article IV

The Prisoners made on all Sides, as well by Sea as Land, and the Hostages required or given during the War, to this Day, shall be restored without Ransom in six Weeks or sooner, to reckon from the Exchange of the Ratification of the present Treaty, and to be proceeded on immediately after this Exchange; and all the Ships either of War, or Merchants, which may have been taken since the Expiration of the Times agreed on for the Cessation of Hostilities by Sea, shall be restored *bona fida*, with all their Equipages and Cargoes, and Security given on both Sides for the Payment of Debts which the Prisoners or Hostages may have contracted in the Countries wherein they have been detained to the Time they are set at Liberty.

Article V

All the Conquests which have been made since the Commencement of the War, or which since the Conclusion of the Preliminary Articles signed the 30th of the Month of April last may have been, or are, made, either in Europe or the East Indies, or any other Part of the World whatever, must be restored without Exception, conformable to what has been stipulated by the said preliminary Articles and by the Declaration since signed, the High Parties engaging to proceed immediately to this Restitution, as well as to put the serene Infant Don *Philip* into Possession of the states which are to be ceded in Virtue of the said Preliminaries, the said Parties renouncing solemnly, both for themselves and their Heirs and Successors, all their Rights and Pretentions, under what Title and Pretext forever, to all the States, Countries and Places which they have respectively engaged to give up or cede, saving however the stipulated Reversion of the States ceded to the serene Infant Don *Philip*.

Article VI

It is determined and agreed, that all the respective Restitutions and Cessions in Europe, shall be entirely made and executed on all Sides in the Space of six Weeks, or sooner if possible, form the Day of the Exchange of the Ratifications of the present Treaty of all the eight Parties before mentioned; so that within the same Term of six Weeks, the most Christian King shall restore, as well to the Empress Queen of Hungary and Bohemia, as to the States General of the united Provinces, all the Places he has taken from them during the War.

The Empress Queen of Hungary and Bohemia, in Consequence hereof, must be replaced in the full and peaceable Possession of all that she enjoyed before the present War in the Low Countries and elsewhere, except what is regulated otherwise by the present Treaty. At the same Time the Lords of the States General of the united Provinces are to be put in the full and peaceable Possession, such as they enjoyed before the present War, of the Towns of Bergen op Zoom and Maestricht, and of all that they possessed before the present War in Dutch Flanders, in Brabant, Holland and elsewhere.

And the Towns and Places in the Low Countries, whereof the Sovereignty belonged to the Empress Queen of Hungary and Bohemia, in which their High Mightinesses have the Right of Garrison, shall be evacuated to the Troops of the Republick in the same Space of Time. The King of Sardinia to be, in the same Time and Manner, entirely re-established and maintained in the Dutchy of Savoy and in the County of Nice, and likewise in all the States, Countries, Places and Forts, taken from him on Account of the present War.

The serene Duke of Modena, and the serene Republick of Genoa, shall be at the same Time entirely re-established and maintained in the States, Countries, Places and Forts, taken from them during the

present War, and this conformable to the Tenor of the thirteenth and fourteenth Articles of this Treaty relating thereto.

All the Restitutions and Cessions of the said Towns, Forts, and Places, shall be made with all the Artillery and Ammunition found therein on the Day of their Occupation in the Course of the War by the Powers which have made the said Cessions and Restitutions, and this according to the Inventories which have been made, or which shall be delivered *bona fida* on all Sides, extending so far, that in Regard to the Pieces of Artillery which have been sent elsewhere to be new cast, or for other Uses, they are to be replaced by the same Number, of the same *Calibre*, in Weight and Metal; but the Towns of *Mons, Athe, Ourdenarde*, and *Monin*, the Fortifications whereof have been demolished, are to be given up without the Artillery. Nothing is to be demanded for the Money expended on the Fortifications of all the others, nor for other publick or private Works which have been made in the Countries thus to be restored.

Article VII

In Consideration of the Restitutions which their most Christian and Catholick Majesties make by the present Treaty, be it to her Majesty the Queen of Hungary and Bohemia, or be it to his Majesty the King of Sardinia, the Dutchies of Parma, Placentia, and Gaustella shall for the future belong to the serene Infant Don Philip, to be possessed by him and his Male Descendants, born in legitimate Marriage, in the same Manner and Extent as they have been enjoy'd by the present Possessors; and the said serene Infant, or his Male Descendants, shall enjoy the said three Dutchies conformable to and on the Conditions expressed in the Acts of Cessions of the Empress Queen of Hungary and the King of Sardinia. These Acts of Cessions of the Empress Queen of *Hungary* and the King of *Sardinia* to be remitted with their Ratifications of the present Treaty to the Ambassador extraordinary and Plenipotentiary of the Catholick King, in the same Manner as the Ambassadors extraordinary and Plenipotentiaries of their most Christian and Catholick Majesties shall remit, with the Ratifications of their Majesties, to that of the King of Sardinia the Orders to the Generals of the French and Spanish Troops for restoring Savoy and the County of Nice to the Persons commissioned by that Prince to receive them; so that the Restitution of the said States and the taking Possession of Parma, Placentia, and Gustalla, by, or in the Name of, the serene Infant Don Philip, may be effected a the same Time, conformable to the Articles of Cession, the Tenor whereof is as follows.

[Acts of Cession of the Empress Queen and the King of Sardinia]

Article VIII

To assure and effect the said Restitutions, it is agreed that they shall be entirely executed and accomplished on all Sides, in Europe, within the Space of Six Weeks, or sooner if possible, from the Day of the Exchange of the Ratifications of all the Eight Powers; and in order thereto, in fifteen Days after the Signature of the present Treaty the Generals or other Persons which the High Contractors on each Side shall think proper to commission, shall assemble at *Brussels* and *Nice*, to concert and agree on the Means of proceeding to the Restitutions, in a Manner equally convenient for the Troops, the Inhabitants, and the respective Countries, but so that all and each of the High Contracting Parties may be, conformable to their Intentions and Engagements contracted by the present Treaty, in entire and peaceable Possession, without excepting any Thing that may acrue, be it by Cession or otherwise, within the Term of six Weeks, or sooner, after the Exchange of the Ratifications of the present Treaty of all the said eight Powers.

Article IX

In Consideration that, nonwithstanding the mutual Engagement taken by the Eighteenth Article of the Preliminaries, importing that all the Restitutions should proceed on an equal Pace, and be executed at the same Time, his Most Christian Majesty engages by the sixth Article of the present Treaty to restore in six Weeks, or sooner if possible, from the Day of Exchange of the Ratifications of the present Treaty, all the Conquests he has made in the Low Countries; while it is impossible, from the Distance of the Country, that what concerns America can be effected at the same Time, or the Term fixed for its perfect Execution; his Britannick Majesty likewise engages on his Side to send to the Most Christian King, immediately after the Exchange of the Ratifications of the present Treaty, two Persons of Rank and Condition, to continue in France as Hostages 'till such Time as they have certain and authentick Advice of the Restitution of the Royal Isle called Cape-Breton, and of all the conquests that the Arms or Subjects of his Britannick Majesty may have made before or after the Signature of the Preliminaries, in the East and West Indies. Their Britannick and Most Christian Majesties oblige themselves likewise to remit, on the Exchange of the Ratifications of the present Treaty, the Duplicates of the Orders addressed to the Commissaries respectively appointed to restore and receive all which may have been conquered on each Side in the East and West Indies, conformable to the second Article of the Preliminaries, and to the Declaration of the 21st and 31st of May, and the 8th of July last, in what concerns the said Conquests in the East and West Indies.

Be it well understood, nevertheless, that the Royal Isle, called *Cape-Breton*, shall be restored with all the Artillery and Ammunition found therein on the Day of its Surrender; and as to the other Restitutions, they shall have their Effect conformable to the Tenor of the 11th Article of the Preliminaries, and the Declarations and Conventions of the 21st and 31st of May, and the 8th of July, in the State wherein Things were found on the 11th of June, N.S. in the West Indies, and the 31st of October, likewise N. S. in the East Indies. All other Things to be restored on the Footing they were before the present War.

The said respective Commissaries, as well those for the *West* as those for the *East Indies*, must be ready to set out on the first Advice that their Britannick and Most Christian Majesties receive of the Exchange of the Ratifications, furnished with all the necessary Instructions, Commissions, Powers, and Orders, for the most speedy Accomplishment of the Intentions of their said Majesties, and the Engagements which they have contracted by the present Treaty.

 $[\ldots]$

Article XXIII

All the Powers contracting and interested in the present Treaty reciprocally and respectively guaranty its Execution.

Article XXIV

The Solemn Ratifications of the present Treaty, drawn up in good and due Form, shall be exchanged in this City of *Aix-la-Chapelle* between all the Eight Parties, within the Space of a Month, or sooner if possible, from the Day of Signing.

In Witness whereof, We their Ambassadors Extraordinary and Ministers Plenipotentiary, in Virtue of our full Powers, have signed the present Treaty with our own Hands, and have set our Seals with our Coats of Arms thereunto.

Source: The Definitive Treaty of Christian, Universal and Perpetual Peace, Friendship and Union, Concluded at Aix-la-Chapelle, on the 7/18th of October, 1748. Boston: Re-printed by J. Bushell and J. Green for D. Gookin in Marlborough-Street, 1749.

122. Royal Instructions Regarding the Acadians, 1749

Introduction

Acadia (or Acadie in French) was the name given to the Canadian maritime territory possessed by the French, including modern-day Nova Scotia. The French founded Port Royal in 1605, and an English expedition from Virginia destroyed it in 1613. Acadia changed hands between England and France four more times before the British retained it permanently in 1748. The European war called the War of the Austrian Succession (1740-1748) spilled over into North America when France entered the war against Great Britain in 1744. This became King George's War, fought in America between France and Great Britain until 1748. When France entered the war, it attacked the British-held town of Annapolis Royal, formerly the French Port Royal. The British retained Nova Scotia at war's end, while the French retained some adjacent territory. The following year, the British governor of Nova Scotia received these orders to take a census of the French Acadians and to require them to take an oath of allegiance to Britain. In return, the Acadians would be permitted to retain their land and practice Catholicism. This relative permissiveness came to an abrupt end when the French and Indian War began. In 1755, the British expelled some 3,000 Acadian families from the province and confiscated their property. Some of them made their way to Louisiana.

Primary Source

TAKE CENSUS OF ACADIANS

And it is our further will and pleasure that you do within a convenient time or as soon as you shall find the same to be expedient, cause an exact account to be taken of the number of French Inhabitants within our said province and how many thereof are able to bear arms, as also the number of arms and the quantity of ammunition to each French Inhabitant; where their settlements are; what quantity of land they have now under actual improvement; specifying the number of acres cultivated by each particular person; whether they live in townships or are scattered at distances from each other; what trade they carry on, either with the Indians or otherwise; and how they employ themselves for the subsistence of their families; what number of ships they have and how they are employed; to what market they carry the fish they catch, and what good or commodities they bring back in return; which said account you shall forthwith transmit unto us by one of our principal secretaries of state and to our Commissioners for Trade and Plantations for our direction therein, as also the like account from time to time with respect to such other of our subjects as are settled or may hereafter settle in our said province.

ACADIANS TO TAKE OATH OF ALLEGIANCE

And whereas we have been informed that the inhabitants of Nova Scotia (except those of the garrison of Annapolis ROYAL) are most if not all of them French, in order therefore to induce them to become good subjects to us and to assist the new settlers with provisions and other necessaries, which their circumstances at the first settling may require; you are as soon as you shall judge proper after your arrival to issue a declaration in our name, setting forth that though we are fully sensible that the many indulgencies which have been shown by our royal predecessors and by us to the said inhabitants in allowing them the entirely free exercise of their religion, and the quiet and peaceable possession of their lands, have not met with a dutiful return, but on the contrary divers of the said inhabitants have openly abetted or privately assisted our enemies in their attempts by furnishing them with quarters, provisions, and intelligence, and concealing their designs from our commander in chief of our said province, in so much that the enemy more than once appeared under the walls of Annapolis Royal before the garrison thereof had any notice of their being within the province; yet we being desirous of showing further marks of our royal grace to the said inhabitants, in hopes thereby to induce them to become for the future, true and loyal subjects, are pleased to declare that the said

inhabitants shall continue in the free exercise of their religion as far as the laws of Great Britain shall admit of the same, as also to the peaceable possession of such lands as are under their cultivation; provided that the said inhabitants do within three months from the date of such declaration or such longer time as you shall think proper take the oaths of allegiance appointed to be taken by the laws of this our kingdom, and likewise behave themselves as becomes good subjects, submitting to such rules and orders as may hereafter be thought proper to be made by us or any person acting under our authority for the maintaining and supporting our government, and provided also they do give all possible countenance and assistance to such persons as we shall think proper to settle in our province.

123. *Memoirs of the English Aggression*, 1750

Introduction

The European war called the War of the Austrian Succession (1740-1748) spilled over into North America when France entered the war against Great Britain in 1744. This became King George's War, fought in America between France and Great Britain until 1748. The British retained Nova Scotia at war's end, while the French retained some adjacent territory. After the war, British and French settlers in North America became even more wary of one another. Each believed that the other was plotting to expand at their expense. This anonymous French writer accuses the British of violating the boundaries of New France and of plotting to invade Louisiana and Spanish Florida. He suggests that the British are trying to drive a wedge between French and Spanish territory and suggests that France and Spain have a common cause against Great Britain. British documents, on the other hand, demonstrate the British belief that the French would resume hostilities at the first opportunity. Events proved them right in 1752 when French-led Indian warriors attacked a British trading post in the Ohio River Valley.

Primary Source

The restoration of peace has in no wise diverted the English from their constant design to get possession of all the commerce of America. It is only necessary to consider their actual conduct to be convinced of this truth.

No doubt Spain has good proof on its side. France's is but too certain, both from the publicly professed plans of the English and from the difficulties their commissaries are daily making in the settlement of the disputes of the two nations in America.

England, not content with having already encroached on the lands of France on the side of Hudson Bay, and with pushing its settlements in Acadia on the mainland of New France at the Bay of Fundy, despite the boundaries assigned that country by the Treaty of Utrecht, now plans the invasion of Florida and Louisiana.

It is true the English have already encroached on those provinces, but they have not hitherto pushed their claims to the extravagant extent revealed by the map just published at London, on which, under pretence of correcting one of our recent geographers, they extend their boundaries into Spanish Florida in such fashion as to seat themselves on waters flowing into the Gulf of Mexico.

As to Louisiana, they claim to extend their boundaries over all the lands of the Indians friendly to France as far as the Alabamas; they partially recompense Spain for what they took from Florida at the expense of Louisiana. Although this map is not made by express order of the government, it is well known to be by authority.

However there is no doubt that the English have no justification for such enterprises which have long been no secret. They wish to be in a position to invade Florida, and by that conquest, along with their possession of the Isle of Providence in the Bahamas, to make themselves masters of the outlet of the Bahama Channel, and as a result of the treasure of Europe.

To carry out this plan more easily they seek to put it out of the power of the French of Louisiana to give aid to the Spanish as formerly, and as they will never fail to do in all attempts of the English to work their hurt. In this they can best succeed by seeking to cut the communication of the French of Louisiana with New France and Florida; but is not the common danger resulting to France and Spain a warning to the two powers to concert measures as soon as possible that will insure the failure of this pernicious design? The king on his side is ready to enter into all the measures His Catholic Majesty may think most proper to protect himself from the ambitious projects of a nation with no other aim than to subjugate all the others by seizing on their colonies and their commerce, and which terms that the "balance of Europe."

124. Robert Dinwiddie, Instructions to George Washington Regarding the French in the Ohio Country, October 30, 1753

Introduction

During the 1740s, the French and the English vied openly for control of trade and territory in the interior of North America. Traders from Virginia and Pennsylvania crossed the Allegheny mountains into the Ohio River Valley to conduct trade with the western Indians. French traders entered the same territory from Canada and the Mississippi River Valley. In 1752, Frenchmen led a troop of Indians in a brutal attack on an English trading post in Ohio Country.

The following year the French began building forts in the western part of modern-day Pennsylvania. In these orders, Gov. Robert Dinwiddie of Virginia—who was speculating in Ohio land—instructs the 21-year-old militiaman, George Washington, to lead an expedition into the Ohio Country to confront the French. Washington was to inform them that they were trespassing on Virginia property and gather intelligence on the placement of French forts and the strength of their garrisons. Washington set out from Williamsburg in October 1753 and returned in January 1754 to report that the French had no intention of leaving Ohio voluntarily. Trained as a surveyor, Washington produced a good map of the Ohio Country. Dinwiddie continued to send Virginia militia into the Ohio River Valley, and in July 1754, Washington and his men fought the first American battle of the French and Indian War.

Primary Source

INSTRUCTION FROM ROBERT DINWIDDIE

[Williamsburg, 30 October 1753]

Instructions for George Washington Esqr.

Whereas I have receiv'd Information of a Body of French Forces being assembled in an hostile Manner on the River Ohio, intending by force of Arms to erect certain Forts on the said River, within this Territory & contrary to the Peace & Dignity of our Sovereign the King of Great Britain.

These are therefore to require & direct You the said George Washington Esqr. forthwith to repair to the Logstown on the said River Ohio; & having there inform'd YourSelf where the said French Forces have posted themselves, thereupon to proceed to such Place: & being there arriv'd to present Your credentials, together with my Letter to the chief commanding Officer, &, in the Name of His Britanic Majesty, to demand an Answer from him hereto.

On Your Arrival at the Logstown, You are to address Yourself to the Half King, to Monacatoocha & other the Sachems of the Six Nations; acquainting them with Your Orders to visit & deliver my Letter to the French commanding Officer; & desiring the said Chiefs to appoint You a sufficient Number of their Warriors to be Your Safeguard, as near the French as You may desire, & to wait Your further Direction.

You are diligently to enquire into the Numbers & Force of the French on the Ohio, & the adjacent Country; how they are like to be assisted from Canada; & what are the Difficulties & Conveniencies of that Communication, & the Time requir'd for it.

You are to take Care to be truly inform'd what Forts the French have erected, & where; How they are Garrison'd & appointed, & what is their Distance from each other, & from Logstown: And from

1106 125. Albany Plan of Union

the best Intelligence You can procure, You are to learn what gave Occasion to this Expedition of the French. How they are like to be supported, & what their Pretentions are.

When the French commandant has given You the requir'd & necessary Dispatches, you are to desire of him that, agreeable to the Law of nations, he wou'd grant You a proper Guard, to protect you as far on Your Return, as You may judge for Your Safety, against any stragling Indians or Hunters that may be ignorant of Yr Character & molest You.

Wishing You good Success in Yr Negotiations & a safe & speedy return I am Sr Yr hble Servt.

125. Albany Plan of Union, 1754

Introduction

As a new war with France loomed, the British Board of Trade ordered the governor of New York to call a congress of several colonies and the Iroquois. The British feared that lawless frontier traders would alienate Great Britain's Iroquois allies and drive them into the arms of the French. The participating colonies were to negotiate a joint treaty with the Iroquois. Representatives from seven colonies (Connecticut, Maryland, Massachusetts, New York, New Hampshire, Rhode Island, and Pennsylvania) attended the congress in Albany, New York, in June and July 1754. In addition to hammering out an agreement with the Iroquois, the participating colonies adopted a Plan of Union, believed to have been written by Thomas Hutchinson and Benjamin Franklin. The plan provided for a central council authorized to take action to protect the colonies in an emergency. If approved, the plan would allow the central authority to levy taxes for defense, including building forts and raising armies. The various colonial assemblies, concerned that they would sacrifice whatever autonomy they had, refused to ratify the plan, so it was never submitted to the British Parliament. However, both the Albany Congress and the Plan of Union hinted at a future in which the colonies would cooperate.

Primary Source

The PLAN of the Union was as follows, viz.

It is proposed that humble application be made for an act of parliament of Great Britain, by virtue of which one general government may be formed in America, including all the said colonies: [Massachusetts Bay, New Hampshire, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Virginia, North Car-

olina, and South Carolina] within and under which government, each colony may retain its present constitution, except in the particulars wherein a change may be directed by the said act, as hereafter follows:

PRESIDENT GENERAL AND GRAND COUNCIL.

That the said general government be administered by a president general, to be appointed and supported by the crown, and a grand council, to be chosen by the representatives of the people of the several colonies, met in their assemblies.

ELECTION OF MEMBERS.

That within months after passing such act, the houses of representatives that happen to be sitting within that time, or that shall be especially for that purpose convened, may and shall choose members for the grand council in the following proportion, that is to say:

Massachusetts Bay	7
New Hampshire	2
Connecticut	5
Rhode Island	2
New York	4
New Jersey	3
Pennsylvania	6
Maryland	4
Virginia	7
North Carolina	4
South Carolina	4

PLACE OF FIRST MEETING.

Who shall meet for the first time at the city of Philadelphia, in Pennsylvania, being called by the president general as soon as conveniently may be after his appointment.

NEW ELECTION.

That there shall be a new election of the members of the grand council every three years; and on the death or resignation of any member, his place shall be supplied by a new choice, at the next sitting of the assembly of the colony he represented.

PROPORTION OF THE MEMBERS AFTER THE FIRST THREE YEARS.

That after the first three years, when the proportion of money arising out of each colony to the general treasury can be known, the number of members to be chosen for each colony shall, from time to time, in all ensuing elections, be regulated by that proportion (yet so as that the number to be chosen by any one province be not more than seven, nor less than two).

MEETINGS OF THE GRAND COUNCIL AND CALL.

That the grand council shall meet once in every year, and oftener, if occasion require, at such time and place as they shall adjourn to at the last preceding meeting, or as they shall be called to meet at by the president general, on any emergency; he having first obtained in writing the consent of seven of the members to such call, and sent due and timely notice to the whole.

CONTINUANCE.

That the grand council have power to choose their speaker: and shall neither be dissolved, prorogued, nor continued sitting longer than six weeks at one time; without their own consent, or the special command of the crown.

MEMBERS ATTENDANCE.

That the members of the grand council shall be allowed for their services, ten shillings sterling per diem, during their session and journey to and from the place of meeting; twenty miles to be reckoned a day's journey.

ASSENT OF PRESIDENT GENERAL AND HIS DUTY.

That the assent of the president general be requisite to all acts of the grand council; and that it be his office and duty to cause them to be carried into execution.

POWER OF PRESIDENT GENERAL AND GRAND COUNCIL, TREATIES OF PEACE AND WAR.

That the president general, with the advice of the grand council, hold or direct all Indian treaties in which the general interest of the colonies may be concerned; and make peace or declare war with Indian nations.

INDIAN TRADE.

That they make such laws as they judge necessary for regulating all Indian trade.

INDIAN PURCHASES.

That they make all purchases from the Indians for the crown, of lands not now within the bounds of particular colonies, or that shall not be within their bounds, when some of them are reduced to more convenient dimensions.

NEW SETTLEMENTS.

That they make new settlements on such purchases by granting lands in the king's name, reserving a quit rent to the crown, for the use of the general treasury.

LAWS TO GOVERN THEM.

That they make laws for regulating and governing such new settlements, until the crown shall think fit to form them into particular governments.

RAISE SOLDIERS AND EQUIP VESSELS, ETC.

That they raise and pay soldiers, build forts for the defence of any of the colonies, and equip vessels of force to guard the coasts and protect the trade on the ocean, lakes, or great rivers; but they shall not impress men in any colony, without the consent of the legislature.

POWER TO MAKE LAWS, LAY DUTIES, ETC.

That for these purposes they have power to make laws, and lay and levy such general duties, imposts, or taxes, as to them shall appear most equal and just, (considering the ability and other circumstances of the inhabitants in the several colonies) and such may be collected with the least inconvenience to the people; rather discouraging luxury, than loading industry with unnecessary burdens.

GENERAL TREASURER AND PARTICULAR TREASURER.

That they may appoint a general treasurer and particular treasurer in each government, when necessary; and from time to time may order the sums in the treasuries of each government into the general treasury, or draw on them for special payments, as they find most convenient.

MONEY, HOW TO ISSUE.

Yet no money to issue but by joint orders of the president general and grand council, except where sums have been appropriated to particular purposes, and the president general has been previously empowered by an act to draw for such sums.

ACCOUNTS.

That the general accounts shall be yearly settled, and reported to the several assemblies.

QUORUM.

That a quorum of the grand council, empowered to act with the president general, do consist of twenty-five members; among whom there shall be one or more from the majority of the colonies.

LAWS TO BE TRANSMITTED.

That the laws made by them for the purposes aforesaid, shall not be repugnant, but, as near as may be, agreeable to the laws of England, and shall be transmitted to the king in council, for approbation, as soon as may be after their passing; and if not disapproved within three years after presentation, to remain in force.

DEATH OF THE PRESIDENT GENERAL.

That in case of the death of the president general, the speaker of the grand council for the time being shall succeed, and be vested with the same powers and authorities, to continue until the king's pleasure be known.

OFFICERS, HOW APPOINTED.

That all military commission officers, whether for land or sea service, to act under this general constitution, shall be nominated by the president general; but the approbation of the grand council is to be obtained, before they receive their commissions. And all civil officers are to be nominated by the grand council, and to receive the president general's approbation before they officiate.

VACANCIES, HOW SUPPLIED.

But in case of vacancy, by death, or removal of any officer, civil or military, under this constitution, the governor of the province in which such vacancy happens, may appoint until the pleasure of the president general and grand council can be known.

EACH COLONY MAY DEFEND ITSELF ON EMERGENCY, &C.

That the particular military as well as civil establishments in each colony remain in their present state, the general constitution notwithstanding; and that on sudden emergencies any colony may defend itself, and lay the accounts of expense thence arising before the president general and grand council, who may allow and order payment of the same as far as they judge such accounts reasonable.

lished the Independence of His Country, and First President of the United States. Project Gutenberg, 2006. http://www.gutenberg.org/etext/18591.

126. Benjamin Franklin, "Join or Die," May 9, 1754

Introduction

As a new war with France loomed, the governor of New York called a congress of several colonies and the Iroquois. Representatives from seven colonies attended the congress in Albany, New York, in June and July 1754. A few weeks before he attended the Albany Congress, Benjamin Franklin created this cartoon to illustrate his essay urging a union among the colonies. Franklin portrayed a snake cut into eight pieces, with the tail labeled South Carolina and the head labeled New England, bearing the caption, "Join, or Die." He carved it as a woodcut so it could be printed in his newspaper, the *Pennsylvania Gazette*, where it appeared on May 9, 1754. Franklin originally promoted the idea of a union to foster cooperation for the common defense and to ensure the colonies' survival in the face of hostility from Native Americans and the French. Nearly 20 years later, as the rebellion against Great Britain gathered momentum,

Join or Die, a woodcut created by Benjamin Franklin, which first appeared in May 1754 on the eve of the Albany Congress. (Library of Congress)

the cartoon was widely copied and publishers altered it to represent the idea of uniting against the British. The cartoon reappeared with an extra segment at the snake's tail to represent Georgia, and the caption, "Unite or Die." Later still, the snake became a national symbol and appeared—whole—on the flag of the U.S. Marines, with the motto, "Don't tread on me."

127. Henry Wordsworth Longfellow, *Evangeline*, 1847 [Excerpt]

Introduction

Acadia (or Acadie in French) was the name given to the Canadian maritime territory possessed by the French, including modern-day Nova Scotia. The French founded Port Royal in 1605, and an English expedition from Virginia destroyed it in 1613. Acadia changed hands between England and France four more times before the British retained it permanently in 1748. The European war called the War of the Austrian Succession (1740-1748) spilled over into North America when France entered the war against Great Britain in 1744. This became King George's War, fought in America between France and Great Britain until 1748. When France entered the war, it attacked the British-held town of Annapolis Royal, formerly the French Port Royal. The British retained Nova Scotia at war's end. The British governor required the resident French Acadians to take an oath of allegiance to Britain. In return, the Acadians were permitted to retain their land and practice Catholicism. This relative permissiveness came to an abrupt end when the French and Indian War began. In 1755, the British expelled some 3,000 Acadian families from the province and confiscated their property. Some of them made their way to Louisiana. The cruelty of the deportation captured the American imagination a century later, when Longfellow wrote an epic poem about Acadian lovers torn apart forever.

Primary Source

 $[\ldots]$

MANY a weary year had passed since the burning of Grand-Pré, When on the falling tide the freighted vessels departed, Bearing a nation, with all its household gods, into exile, Exile without an end, and without an example in story. Far asunder, on separate coasts, the Acadians landed; Scattered were they, like flakes of snow, when the wind from the northeast

Strikes aslant through the fogs that darken the Banks of Newfoundland.

Friendless, homeless, hopeless, they wandered from city to city, From the cold lakes of the North to sultry Southern savannas,—From the bleak shores of the sea to the lands where the Father of Waters

Seizes the hills in his hands, and drags them down to the ocean, Deep in their sands to bury the scattered bones of the mammoth. Friends they sought and homes; and many, despairing, heart-broken,

Asked of the earth but a grave, and no longer a friend nor a fireside.

Written their history stands on tablets of stone in the churchyards.

[...]

Still stands the forest primeval; but under the shade of its branches

Dwells another race, with other customs and language.
Only along the shore of the mournful and misty Atlantic
Linger a few Acadian peasants, whose fathers from exile
Wandered back to their native land to die in its bosom.
In the fisherman's cot the wheel and the loom are still busy;
Maidens still wear their Norman caps and their kirtles
of homespun,

And by the evening fire repeat Evangeline's story.

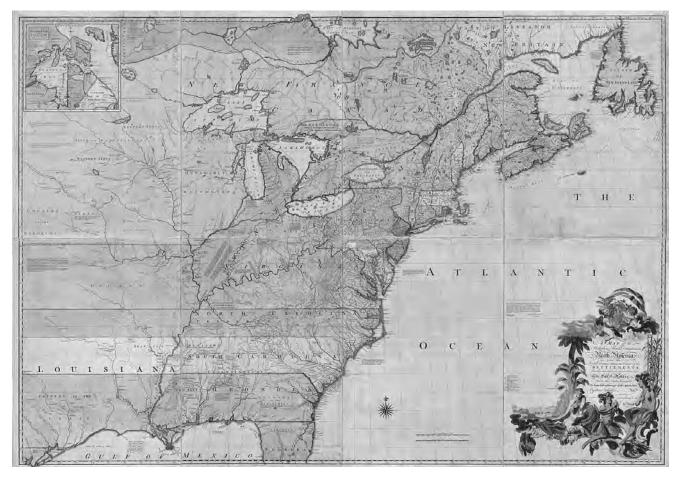

While from its rocky caverns the deep-voiced, neighboring ocean

Speaks, and in accents disconsolate answers the wail of the forest.

128. John Mitchell, Map of British and French Dominions in North America, 1755

Introduction

The French and the English had long competed for control of trade and territory in North America. The French had explored and claimed the vast territory of Louisiana, and Great Britain had won part of Canada from the French. During the extended to the Ohio River Valley. Traders from Virginia and Pennsylvania crossed the Allegheny mountains into the Ohio River Valley to conduct trade with the western Indians. French traders entered the same territory from Canada and the Mississippi River Valley. During the colonial era, an important purpose of mapmaking was to position boundary lines to expand one's own territory. The 1754 outbreak of the French and Indian War in Ohio Country provided an opportunity to redraw the map of North America to one's advantage. This 1755 map by Englishman John Mitchell admirably serves this purpose by portraying the boundaries of several British colonies as extending straight across the North American continent. The map ignores the existence of French claims to Louisiana, sharply curtails Spanish Florida, and extends Virginia so that it engulfs the Ohio River Valley and beyond.

Map of North America showing British and French territory in 1755. (Library of Congress)

129. George Washington, Report to Robert Dinwiddie of Battle in Ohio Country, July 18, 1755

Introduction

During the 1740s, the French and the English vied openly for control of trade and territory in the interior of North America. Traders from Virginia and Pennsylvania crossed the Allegheny Mountains into the Ohio River Valley to conduct trade with the western Indians. French traders entered the same territory from Canada and the Mississippi River Valley. In 1752, Frenchmen led a troop of Indians in a brutal attack on an English trading post in Ohio Country. The following year the French began building forts in the western part of modernday Pennsylvania. Gov. Robert Dinwiddie of Virginia first sent 21year-old militiaman George Washington at the head of an expedition into the Ohio Country in 1753. Washington led another expedition into the Ohio River Valley in 1754, and was defeated by a large French force at Fort Necessity in the first American battle of the French and Indian War. In response to the battle, Great Britain sent General Edward Braddock and some 1,000 troops to Virginia. Joined by George Washington and colonial militiamen, the army marched toward the Ohio River Valley. On July 9, 1755, French and Indian troops ambushed the British and colonial troops, inflicting an overwhelming defeat. Washington was instrumental in saving the survivors by taking command of the retreat. In this letter, Washington reports details of the engagement to Governor Dinwiddie.

Fort Cumberland, July 18, 1755.

Honbl. Sir: As I am favour'd with an oppertunity, I shou'd think myself inexcusable was I to omit giv'g you some acct. of our late Engagem't with the French on the Monongahela the 9th. Inst.

We continued our March from Fort Cumberland to Frazier's (which is within 7 Miles of Duquisne) with't meet'g with any extraordinary event, hav'g only a stragler or two picked up by the French Indians. When we came to this place, we were attack'd (very unexpectedly I must own) by abt. 300 French and Ind'ns; Our numbers consisted of abt. 1300 well arm'd Men, chiefly Regular's, who were immediately struck with such a deadly Panick, that nothing but confusion and disobedience of order's prevail'd amongst them: The Officer's in gen'l behav'd with incomparable bravery, for which they greatly

suffer'd, there being near 60 kill'd and wound'd. A large proportion, out of the number we had! The Virginian Companies behav'd like Men and died like Soldiers; for I believe out of the 3 Companys that were there that day, scarce 30 were left alive: Captn. Peyrouny and all his Officer's, down to a Corporal, were kill'd; Captn. Polson shar'd almost as hard a Fate, for only one of his Escap'd: In short the dastardly behaviour of the English Soldier's expos'd all those who were inclin'd to do their duty to almost certain Death; and at length, in despight of every effort to the contrary, broke and run as Sheep before the Hounds, leav'g the Artillery, Ammunition, Provisions, and, every individual thing we had with us a prey to the Enemy; and when we endeavour'd to rally them in hopes of regaining our invaluable loss, it was with as much success as if we had attempted to have stop'd the wild Bears of the Mountains.

The Genl. was wounded behind in the shoulder, and into the Breast, of w'ch he died three days after; his two Aids de Camp were both wounded, but are in a fair way of Recovery; Colo. Burton and Sir Jno. St. Clair are also wounded, and I hope will get over it; Sir Peter Halket, with many other brave Officers were kill'd in the Field. I luckily escap'd with't a wound tho' I had four Bullets through my Coat and two Horses shot under me. It is suppose that we left 300 or more dead in the Field; about that number we brought of wounded; and it is imagin'd (I believe with great justice too) that two thirds of both received their shott from our own cowardly English Soldier's who gather'd themselves into a body contrary to orders 10 or 12 deep, wou'd then level, Fire and shoot down the Men before them.

I tremble at the consequences that this defeat may have upon our back settlers, who I suppose will all leave their habitations unless there are proper measures taken for their security.

Colo. Dunbar, who commands at present, intends so soon as his Men are recruited at this place, to continue his March to Phila. into Winter Quarters: so that there will be no Men left here unless it is the poor remains of the Virginia Troops, who survive and will be too small to guard our Frontiers. As Captn. Orme is writg. to your honour I doubt not but he will give you a circumstantial acct. of all things, which will make it needless for me to add more than that I am, etc.

130. Jean-Jacques Rousseau, *Discourse on the Origin of Inequality*, 1755 [Excerpt]

Introduction

The writings of the French philosopher, Jean-Jacques Rousseau (1712–1778) were part of the recognized body of knowledge that

made up an 18th-century education. Rousseau was one of several prominent European philosophers during the Enlightenment the 17th and 18th century European movement that advocated the power of reason and rational thought as the primary means of understanding the world. Rousseau's writings addressed the relationship between the individual and the state. Rousseau described man's natural state and proposed that nature unequally distributes peoples' individual endowments. However, he stated that at one time everyone was equal. Inequality came about when people formed societies and began to compete with one another. His ideas, which he articulated here in an early presentation, were fully developed in his book, The Social Contract, published in Amsterdam in 1762. The French government, based on a noble class determined by birth rather than merit, condemned Rousseau and forced him into exile. Among Rousseau's many important theories was the notion that government must be based on the consent of the governed. The leaders of the American Revolution included this concept in the Declaration of Independence.

[...

A DISSERTATION ON THE ORIGIN AND FOUNDATION OF THE INEOUALITY OF MANKIND

It is of man that I have to speak; and the question I am investigating shows me that it is to men that I must address myself: for questions of this sort are not asked by those who are afraid to honour truth. I shall then confidently uphold the cause of humanity before the wise men who invite me to do so, and shall not be dissatisfied if I acquit myself in a manner worthy of my subject and of my judges.

I conceive that there are two kinds of inequality among the human species; one, which I call natural or physical, because it is established by nature, and consists in a difference of age, health, bodily strength, and the qualities of the mind or of the soul: and another, which may be called moral or political inequality, because it depends on a kind of convention, and is established, or at least authorised by the consent of men. This latter consists of the different privileges, which some men enjoy to the prejudice of others; such as that of being more rich, more honoured, more powerful or even in a position to exact obedience.

[...]

I see nothing in any animal but an ingenious machine, to which nature hath given senses to wind itself up, and to guard itself, to a certain degree, against anything that might tend to disorder or destroy it. I perceive exactly the same things in the human machine, with this difference, that in the operations of the brute, nature is the sole agent, whereas man has some share in his own operations, in his character as a free agent. The one chooses and refuses by instinct, the other from an act of free-will: hence the brute cannot

deviate from the rule prescribed to it, even when it would be advantageous for it to do so; and, on the contrary, man frequently deviates from such rules to his own prejudice. Thus a pigeon would be starved to death by the side of a dish of the choicest meats, and a cat on a heap of fruit or grain; though it is certain that either might find nourishment in the foods which it thus rejects with disdain,did it think of trying them. Hence it is that dissolute men run into excesses which bring on fevers and death; because the mind depraves the senses, and the will continues to speak when nature is silent.

Every animal has ideas, since it has senses; it even combines those ideas in a certain degree; and it is only in degree that man differs, in this respect, from the brute. Some philosophers have even maintained that there is a greater difference between one man and another than between some men and some beasts. It is not, therefore, so much the understanding that constitutes the specific difference between the man and the brute, as the human quality of free-agency. Nature lays her commands on every animal, and the brute obeys her voice. Man receives the same impulsion, but at the same time knows himself at liberty to acquiesce or resist: and it is particularly in his consciousness of this liberty that the spirituality of his soul is displayed. For physics may explain, in some measure, the mechanism of the senses and the formation of ideas; but in the power of willing or rather of choosing, and in the feeling of this power, nothing is to be found but acts which are purely spiritual and wholly inexplicable by the laws of mechanism.

However, even if the difficulties attending all these questions should still leave room for difference in this respect between men and brutes, there is another very specific quality which distinguishes them, and which will admit of no dispute. This is the faculty of self-improvement, which, by the help of circumstances, gradually develops all the rest of our faculties, and is inherent in the species as in the individual: whereas a brute is, at the end of a few months, all he will ever be during his whole life, and his species, at the end of a thousand years, exactly what it was the first year of that thousand. Why is man alone liable to grow into a dotard? Is it not because he returns, in this, to his primitive state; and that, while the brute, which has acquired nothing and has therefore nothing to lose, still retains the force of instinct, man, who loses, by age or accident, all that his perfectibility had enabled him to gain, falls by this means lower than the brutes themselves? It would be melancholy, were we forced to admit that this distinctive and almost unlimited faculty is the source of all human misfortunes; that it is this which, in time, draws man out of his original state, in which he would have spent his days insensibly in peace and innocence; that it is this faculty, which, successively producing in different ages his discoveries and his errors, his vices and his virtues, makes him at length a tyrant both over himself and over nature. It would be shocking to be obliged to regard as a benefactor the man who first suggested to the Oroonoko Indians the use of the boards they apply to the temples of their children, which secure to them some part at least of their imbecility and original happiness.

Savage man, left by nature solely to the direction of instinct, or rather indemnified for what he may lack by faculties capable at first of supplying its place, and afterwards of raising him much above it, must accordingly begin with purely animal functions: thus seeing and feeling must be his first condition, which would be common to him and all other animals. To will, and not to will, to desire and to fear, must be the first, and almost the only operations of his soul, till new circumstances occasion new developments of his faculties. Whatever moralists may hold, the human understanding is greatly indebted to the passions, which, it is universally allowed, are also much indebted to the understanding. It is by the activity of the passions that our reason is improved; for we desire knowledge only because we wish to enjoy; and it is impossible to conceive any reason why a person who has neither fears nor desires should give himself the trouble of reasoning. The passions, again, originate in our wants, and their progress depends on that of our knowledge; for we cannot desire or fear anything, except from the idea we have of it, or from the simple impulse of nature. Now savage man, being destitute of every species of intelligence, can have no passions save those of the latter kind: his desires never go beyond his physical wants. The only goods he recognises in the universe are food, a female, and sleep: the only evils he fears are pain and hunger. I say pain, and not death: for no animal can know what it is to die; the knowledge of death and its terrors being one of the first acquisitions made by man in departing from an animal state.

$[\ldots]$

It appears, at first view, that men in a state of nature, having no moral relations or determinate obligations one with another, could not be either good or bad, virtuous or vicious; unless we take these terms in a physical sense, and call, in an individual, those qualities vices which may be injurious to his preservation, and those virtues which contribute to it; in which case, he would have to be accounted most virtuous, who put least check on the pure impulses of nature. But without deviating from the ordinary sense of the words, it will be proper to suspend the judgment we might be led to form on such a state, and be on our guard against our prejudices, till we have weighed the matter in the scales of impartiality, and seen whether virtues or vices preponderate among civilised men; and whether their virtues do them more good than their vices do harm; till we have discovered, whether the progress of the sciences sufficiently indemnifies them for the mischiefs they do one another, in proportion as they are better informed of the good they ought to do; or whether they would not be, on the whole, in a much happier condition if they had nothing to fear or to hope from any one, than as they are, subjected to universal dependence, and obliged to take everything from those who engage to give them nothing in return. Above all, let us not conclude, with Hobbes, that because man has no idea of goodness, he must be naturally wicked; that he is vicious because he does not know virtue; that he always refuses to do his fellowcreatures services which he does not think they have a right to demand; or that by virtue of the right he truly claims to everything he needs, he foolishly imagines himself the sole proprietor of the whole universe. Hobbes had seen clearly the defects of all the modern definitions of natural right: but the consequences which he deduces from his own show that he understands it in an equally false sense. In reasoning on the principles he lays down, he ought to have said that the state of nature, being that in which the care for our own preservation is the least prejudicial to that of others, was consequently the best calculated to promote peace, and the most suitable for mankind. He does say the exact opposite, in consequence of having improperly admitted, as a part of savage man's care for self-preservation, the gratification of a multitude of passions which are the work of society, and have made laws necessary. A bad man, he says, is a robust child. But it remains to be proved whether man in a state of nature is this robust child: and, should we grant that he is, what would he infer? Why truly, that if this man, when robust and strong, were dependent on others as he is when feeble, there is no extravagance he would not be guilty of; that he would beat his mother when she was too slow in giving him her breast; that he would strangle one of his younger brothers, if he should be troublesome to him, or bite the arm of another, if he put him to any inconvenience. But that man in the state of nature is both strong and dependent involves two contrary suppositions. Man is weak when he is dependent, and is his own master before he comes to be strong. Hobbes did not reflect that the same cause, which prevents a savage from making use of his reason, as our jurists hold, prevents him also from abusing his faculties, as Hobbes himself allows: so that it may be justly said that savages are not bad merely because they do not know what it is to be good: for it is neither the development of the understanding nor the restraint of law that hinders them from doing ill; but the peacefulness of their passions, and their ignorance of vice: tanto plus in illis proficit vitiorum ignoratio, quam in his cognitio virtutis.

There is another principle which has escaped Hobbes; which, having been bestowed on mankind, to moderate, on certain occasions, the impetuosity of egoism, or, before its birth, the desire of self-preservation, tempers the ardour with which he pursues his own welfare, by an innate repugnance at seeing a fellow-creature suffer. I think I need not fear contradiction in holding man to be possessed of the only natural virtue, which could not be denied him by the most violent detractor of human virtue. I am speaking of compassion, which is a disposition suitable to creatures so weak and subject to so many evils as we certainly are: by so much the more universal and useful to mankind, as it comes before any kind of reflection; and at the same time so natural, that the very brutes themselves sometimes give evident proofs of it. Not to mention the

tenderness of mothers for their offspring and the perils they encounter to save them from danger, it is well known that horses show a reluctance to trample on living bodies. One animal never passes by the dead body of another of its species: there are even some which give their fellows a sort of burial; while the mournful lowings of the cattle when they enter the slaughter-house show the impressions made on them by the horrible spectacle which meets them. We find, with pleasure, the author of the Fable of the Bees obliged to own that man is a compassionate and sensible being, and laying aside his cold subtlety of style, in the example he gives, to present us with the pathetic description of a man who, from a place of confinement, is compelled to behold a wild beast tear a child from the arms of its mother, grinding its tender limbs with its murderous teeth, and tearing its palpitating entrails with its claws. What horrid agitation must not the eyewitness of such a scene experience, although he would not be personally concerned! What anxiety would he not suffer at not being able to give any assistance to the fainting mother and the dying infant! Such is the pure emotion of nature, prior to all kinds of reflection! Such is the force of natural compassion, which the greatest depravity of morals has as yet hardly been able to destroy! for we daily find at our theatres men affected, nay shedding tears at the sufferings of a wretch who, were he in the tyrant's place, would probably even add to the torments of his enemies; like the bloodthirsty Sulla, who was so sensitive to ills he had not caused, or that Alexander of Pheros who did not dare to go and see any tragedy acted, for fear of being seen weeping with Andromache and Priam, though he could listen without emotion to the cries of all the citizens who were daily strangled at his command.

Mollissima corda Humano generi dare se natura fatetur, Quoe lacrimas dedit. Juvenal, *Satires*, xv. 1514

Mandeville well knew that, in spite of all their morality, men would have never been better than monsters, had not nature bestowed on them a sense of compassion, to aid their reason: but he did not see that from this quality alone flow all those social virtues, of which he denied man the possession. But what is generosity, clemency or humanity but compassion applied to the weak, to the guilty, or to mankind in general? Even benevolence and friendship are, if we judge rightly, only the effects of compassion, constantly set upon a particular object: for how is it different to wish that another person may not suffer pain and uneasiness and to wish him happy? Were it even true that pity is no more than a feeling, which puts us in the place of the sufferer, a feeling, obscure yet lively in a savage, developed yet feeble in civilised man; this truth would have no other consequence than to confirm my argument. Compassion must, in be the stronger, the more the animal beholding any kind of distress identifies himself with the animal that suffers. Now, it is plain that such identification must have been much more perfect in a state of nature than it is in a state of reason. It is reason that engenders selfrespect, and reflection that confirms it: it is reason which turns

man's mind back upon itself, and divides him from everything that could disturb or afflict him. It is philosophy that isolates him, and bids him say, at sight of the misfortunes of others: "Perish if you will, I am secure." Nothing but such general evils as threaten the whole community can disturb the tranquil sleep of the philosopher, or tear him from his bed. A murder may with impunity be committed under his window; he has only to put his hands to his ears and argue a little with himself, to prevent nature, which is shocked within him, from identifying itself with the unfortunate sufferer. Uncivilised man has not this admirable talent; and for want of reason and wisdom, is always foolishly ready to obey the first promptings of humanity. It is the populace that flocks together at riots and streetbrawls, while the wise man prudently makes off. It is the mob and the market-women, who part the combatants, and hinder gentlefolks from cutting one another's throats. It is then certain that compassion is a natural feeling, which, by moderating the violence of love of self in each individual, contributes to the preservation of the whole species. It is this compassion that hurries us without reflection to the relief of those who are in distress: it is this which in a state of nature supplies the place of laws, morals and virtues, with the advantage that none are tempted to disobey its gentle voice: it is this which will always prevent a sturdy savage from robbing a weak child or a feeble old man of the sustenance they may have with pain and difficulty acquired, if he sees a possibility of providing for himself by other means: it is this which, instead of inculcating that sublime maxim of rational justice. Do to others as you would have them do unto you, inspires all men with that other maxim of natural goodness, much less perfect indeed, but perhaps more useful; Do good to yourself with as little evil as possible to others. In a word, it is rather in this natural feeling than in any subtle arguments that we must look for the cause of that repugnance, which every man would experience in doing evil, even independently of the maxims of education. Although it might belong to Socrates and other minds of the like craft to acquire virtue by reason, the human race would long since have ceased to be, had its preservation depended only on the reasonings of the individuals composing it.

With passions so little active, and so good a curb, men, being rather wild than wicked, and more intent to guard themselves against the mischief that might be done them, than to do mischief to others, were by no means subject to very perilous dissensions. They maintained no kind of intercourse with one another, and were consequently strangers to vanity, deference, esteem and contempt; they had not the least idea of meum and tuum, and no true conception of justice; they looked upon every violence to which they were subjected, rather as an injury that might easily be repaired than as a crime that ought to be punished; and they never thought of taking revenge, unless perhaps mechanically and on the spot, as a dog will sometimes bite the stone which is thrown at him. Their quarrels therefore would seldom have very bloody consequences; for the subject of them would be merely the question of subsistence. But I am aware of one greater danger, which remains to be noticed.

Of the passions that stir the heart of man, there is one which makes the sexes necessary to each other, and is extremely ardent and impetuous; a terrible passion that braves danger, surmounts all obstacles, and in its transports seems calculated to bring destruction on the human race which it is really destined to preserve. What must become of men who are left to this brutal and boundless rage, without modesty, without shame, and daily upholding their amours at the price of their blood?

It must, in the first place, be allowed that, the more violent the passions are, the more are laws necessary to keep them under restraint. But, setting aside the inadequacy of laws to effect this purpose, which is evident from the crimes and disorders to which these passions daily give rise among us, we should do well to inquire if these evils did not spring up with the laws themselves; for in this case, even if the laws were capable of repressing such evils, it is the least that could be expected from them, that they should check a mischief which would not have arisen without them.

Let us begin by distinguishing between the physical and moral ingredients in the feeling of love. The physical part of love is that general desire which urges the sexes to union with each other. The moral part is that which determines and fixes this desire exclusively upon one particular object; or at least gives it a greater degree of energy toward the object thus preferred. It is easy to see that the moral part of love is a factitious feeling, born of social usage, and enhanced by the women with much care and cleverness, to establish their empire, and put in power the sex which ought to obey. This feeling, being founded on certain ideas of beauty and merit which a savage is not in a position to acquire, and on comparisons which he is incapable of making, must be for him almost non-existent; for, as his mind cannot form abstract ideas of proportion and regularity, so his heart is not susceptible of the feelings of love and admiration, which are even insensibly produced by the application of these ideas. He follows solely the character nature has implanted in him, and not tastes which he could never have acquired; so that every woman equally answers his purpose.

Men in a state of nature being confined merely to what is physical in love, and fortunate enough to be ignorant of those excellences, which whet the appetite while they increase the difficulty of gratifying it, must be subject to fewer and less violent fits of passion, and consequently fall into fewer and less violent disputes. The imagination, which causes such ravages among us, never speaks to the heart of savages, who quietly await the impulses of nature, yield to them involuntarily, with more pleasure than ardour, and, their wants once satisfied, lose the desire. It is therefore incontestable that love, as well as all other passions, must have acquired in society that glowing impetuosity, which makes it so often fatal to mankind. And it is the more absurd to represent savages as continually cutting one another's throats to indulge their brutality, because this opinion is directly contrary to experience; the Caribbeans, who have as yet

least of all deviated from the state of nature, being in fact the most peaceable of people in their amours, and the least subject to jealousy, though they live in a hot climate which seems always to inflame the passions. With regard to the inferences that might be drawn, in the case of several species of animals, the males of which fill our poultry-yards with blood and slaughter, or in spring make the forests resound with their quarrels over their females; we must begin by excluding all those species, in which nature has plainly established, in the comparative power of the sexes, relations different from those which exist among us: thus we can base no conclusion about men on the habits of fighting cocks. In those species where the proportion is better observed, these battles must be entirely due to the scarcity of females in comparison with males; or, what amounts to the same thing, to the intervals during which the female constantly refuses the advances of the male: for if each female admits the male but during two months in the year, it is the same as if the number of females were five-sixths less. Now, neither of these two cases is applicable to the human species, in which the number of females usually exceeds that of males, and among whom it has never been observed, even among savages, that the females have, like those of other animals, their stated times of passion and indifference. Moreover, in several of these species, the individuals all take fire at once, and there comes a fearful moment of universal passion, tumult and disorder among them; a scene which is never beheld in the human species, whose love is not thus seasonal. We must not then conclude from the combats of such animals for the enjoyment of the females, that the case would be the same with mankind in a state of nature: and, even if we drew such a conclusion, we see that such contests do not exterminate other kinds of animals, and we have no reason to think they would be more fatal to ours. It is indeed clear that they would do still less mischief than is the case in a state of society; especially in those countries in which, morals being still held in some repute, the jealousy of lovers and the vengeance of husbands are the daily cause of duels, murders, and even worse crimes; where the obligation of eternal fidelity only occasions adultery, and the very laws of honour and continence necessarily increase debauchery and lead to the multiplication of abortions. Let us conclude then that man in a state of nature, wandering up and down the forests, without industry, without speech, and without home, an equal stranger to war and to all ties, neither standing in need of his fellow-creatures nor having any desire to hurt them, and perhaps even not distinguishing them one from another; let us conclude that, being self-sufficient and subject to so few passions, he could have no feelings or knowledge but such as befitted his situation; that he felt only his actual necessities, and disregarded everything he did not think himself immediately concerned to notice, and that his understanding made no greater progress than his vanity. If by accident he made any discovery, he was the less able to communicate it to others, as he did not know even his own children. Every art would necessarily perish with its inventor, where there was no kind of education among men, and generations succeeded generations without the least advance;

when, all setting out from the same point, centuries must have elapsed in the barbarism of the first ages; when the race was already old, and man remained a child.

If I have expatiated at such length on this supposed primitive state, it is because I had so many ancient errors and inveterate prejudices to eradicate, and therefore thought it incumbent on me to dig down to their very root, and show, by means of a true picture of the state of nature, how far even the natural inequalities of mankind are from having that reality and influence which modern writers suppose.

It is in fact easy to see that many of the differences which distinguish men are merely the effect of habit and the different methods of life men adopt in society. Thus a robust or delicate constitution, and the strength or weakness attaching to it, are more frequently the effects of a hardy or effeminate method of education than of the original endowment of the body. It is the same with the powers of the mind; for education not only makes a difference between such as are cultured and such as are not, but even increases the differences which exist among the former, in proportion to their respective degrees of culture: as the distance between a giant and a dwarf on the same road increases with every step they take. If we compare the prodigious diversity, which obtains in the education and manner of life of the various orders of men in the state of society, with the uniformity and simplicity of animal and savage life, in which every one lives on the same kind of food and in exactly the same manner, and does exactly the same things, it is easy to conceive how much less the difference between man and man must be in a state of nature than in a state of society, and how greatly the natural inequality of mankind must be increased by the inequalities of social institutions.

But even if nature really affected, in the distribution of her gifts, that partiality which is imputed to her, what advantage would the greatest of her favourites derive from it, to the detriment of others, in a state that admits of hardly any kind of relation between them? Where there is no love, of what advantage is beauty? Of what use is wit to those who do not converse, or cunning to those who have no business with others? I hear it constantly repeated in such a state, the strong would oppress the weak; but what is here meant by oppression? Some, it is said, would violently domineer over others, who would groan under a servile submission to their caprices. This indeed is exactly what I observe to be the case among us; but I do not see how it can be inferred of men in a state of nature, who could not easily be brought to conceive what we mean by dominion and servitude. One man, it is true, might seize the fruits which another had gathered, the game he had killed, or the cave he had chosen for shelter; but how would he ever be able to exact obedience, and what ties of dependence could there be among men without possessions? If, for instance, I am driven from one tree, I can go to the next; if I am disturbed in one place, what hinders me from going to another? Again, should I happen to meet with a man so much stronger than myself, and at the same time so depraved, so indolent, and so barbarous, as to compel me to provide for his sustenance while he himself remains idle; he must take care not to have his eyes off me for a single moment; he must bind me fast before he goes to sleep, or I shall certainly either knock him on the head or make my escape. That is to say, he must in such a case voluntarily expose himself to much greater trouble than he seeks to avoid, or can give me. After all this, let him be off his guard ever so little; let him but turn his head aside at any sudden noise, and I shall be instantly twenty paces off, lost in the forest, and, my fetters burst asunder, he would never see me again.

Without my expatiating thus uselessly on these details, every one must see that as the bonds of servitude are formed merely by the mutual dependence of men on one another and the reciprocal needs that unite them, it is impossible to make any man a slave, unless he be first reduced to a situation in which he cannot do without the help of others: and, since such a situation does not exist in a state of nature, every one is there his own master, and the law of the strongest is of no effect.

Having proved that the inequality of mankind is hardly felt, and that its influence is next to nothing in a state of nature, I must next show its origin and trace its progress in the successive developments of the human mind. Having shown that human perfectibility, the social virtues, and the other faculties which natural man potentially possessed, could never develop of themselves, but must require the fortuitous concurrence of many foreign causes that might never arise, and without which he would have remained for ever in his primitive condition, I must now collect and consider the different accidents which may have improved the human understanding while depraving the species, and made man wicked while making him sociable; so as to bring him and the world from that distant period to the point at which we now behold them.

$[\ldots]$

The first man who, having enclosed a piece of ground, bethought himself of saying This is mine, and found people simple enough to believe him, was the real founder of civil society. From how many crimes, wars and murders, from how many horrors and misfortunes might not any one have saved mankind, by pulling up the stakes, or filling up the ditch, and crying to his fellows, "Beware of listening to this impostor; you are undone if you once forget that the fruits of the earth belong to us all, and the earth itself to nobody." But there is great probability that things had then already come to such a pitch, that they could no longer continue as they were; for the idea of property depends on many prior ideas, which could only be acquired successively, and cannot have been formed all at once in the human mind. Mankind must have made very considerable progress, and acquired considerable knowledge and industry which they must also have transmitted and increased from age to

age, before they arrived at this last point of the state of nature. Let us then go farther back, and endeavour to unify under a single point of view that slow succession of events and discoveries in the most natural order.

Man's first feeling was that of his own existence, and his first care that of self-preservation. The produce of the earth furnished him with all he needed, and instinct told him how to use it. Hunger and other appetites made him at various times experience various modes of existence; and among these was one which urged him to propagate his species—a blind propensity that, having nothing to do with the heart, produced a merely animal act. The want once gratified, the two sexes knew each other no more; and even the offspring was nothing to its mother, as soon as it could do without her.

Such was the condition of infant man; the life of an animal limited at first to mere sensations, and hardly profiting by the gifts nature bestowed on him, much less capable of entertaining a thought of forcing anything from her. But difficulties soon presented themselves, and it became necessary to learn how to surmount them: the height of the trees, which prevented him from gathering their fruits, the competition of other animals desirous of the same fruits, and the ferocity of those who needed them for their own preservation, all obliged him to apply himself to bodily exercises. He had to be active, swift of foot, and vigorous in fight. Natural weapons, stones and sticks, were easily found: he learnt to surmount the obstacles of nature, to contend in case of necessity with other animals, and to dispute for the means of subsistence even with other men, \or to indemnify himself for what he was forced to give up to a stronger.

In proportion as the human race grew more numerous, men's cares increased. The difference of soils, climates and seasons, must have introduced some differences into their manner of living. Barren years, long and sharp winters, scorching summers which parched the fruits of the earth, must have demanded a new industry. On the seashore and the banks of rivers, they invented the hook and line, and became fishermen and eaters of fish. In the forests they made bows and arrows, and became huntsmen and warriors. In cold countries they clothed themselves with the skins of the beasts they had slain. The lightning, a volcano, or some lucky chance acquainted them with fire, a new resource against the rigours of winter: they next learned how to preserve this element, then how to reproduce it, and finally how to prepare with it the flesh of animals which before they had eaten raw.

This repeated relevance of various beings to himself, and one to another, would naturally give rise in the human mind to the perceptions of certain relations between them. Thus the relations which we denote by the terms, great, small, strong, weak, swift, slow, fearful, bold, and the like, almost insensibly compared at need, must have at length produced in him a kind of reflection, or rather a mechanical prudence, which would indicate to him the precautions most necessary to his security.

The new intelligence which resulted from this development increased his superiority over other animals, by making him sensible of it. He would now endeavour, therefore, to ensnare them, would play them a thousand tricks, and though many of them might surpass him in swiftness or in strength, would in time become the master of some and the scourge of others. Thus, the first time he looked into himself, he felt the first emotion of pride; and, at a time when he scarce knew how to distinguish the different orders of beings, by looking upon his species as of the highest order, he prepared the way for assuming pre-eminence as an individual.

Other men, it is true, were not then to him what they now are to us, and he had no greater intercourse with them than with other animals; yet they were not neglected in his observations. The conformities, which he would in time discover between them, and between himself and his female, led him to judge of others which were not then perceptible; and finding that they all behaved as he himself would have done in like circumstances, he naturally inferred that their manner of thinking and acting was altogether in conformity with his own. This important truth, once deeply impressed on his mind, must have induced him, from an intuitive feeling more certain and much more rapid than any kind of reasoning, to pursue the rules of conduct, which he had best observe towards them, for his own security and advantage.

Taught by experience that the love of well-being is the sole motive of human actions, he found himself in a position to distinguish the few cases, in which mutual interest might justify him in relying upon the assistance of his fellows; and also the still fewer cases in which a conflict of interests might give cause to suspect them. In the former case, he joined in the same herd with them, or at most in some kind of loose association, that laid no restraint on its members, and lasted no longer than the transitory occasion that formed it. In the latter case, every one sought his own private advantage, either by open force, if he thought himself strong enough, or by address and cunning, if he felt himself the weaker.

In this manner, men may have insensibly acquired some gross ideas of mutual undertakings, and of the advantages of fulfilling them: that is, just so far as their present and apparent interest was concerned: for they were perfect strangers to foresight, and were so far from troubling themselves about the distant future, that they hardly thought of the morrow. If a deer was to be taken, every one saw that, in order to succeed, he must abide faithfully by his post: but if a hare happened to come within the reach of any one of them, it is not to be doubted that he pursued it without scruple, and, having seized his prey, cared very little, if by so doing he caused his companions to miss theirs.

$[\ldots]$

The first expansions of the human heart were the effects of a novel situation, which united husbands and wives, fathers and children,

under one roof. The habit of living together soon gave rise to the finest feelings known to humanity, conjugal love and paternal affection. Every family became a little society, the more united because liberty and reciprocal attachment were the only bonds of its union. The sexes, whose manner of life had been hitherto the same, began now to adopt different ways of living. The women became more sedentary, and accustomed themselves to mind the hut and their children, while the men went abroad in search of their common subsistence. From living a softer life, both sexes also began to lose something of their strength and ferocity: but, if individuals became to some extent less able to encounter wild beasts separately, they found it, on the other hand, easier to assemble and resist in common.

The simplicity and solitude of man's life in this new condition, the paucity of his wants, and the implements he had invented to satisfy them, left him a great deal of leisure, which he employed to furnish himself with many conveniences unknown to his fathers: and this was the first yoke he inadvertently imposed on himself, and the first source of the evils he prepared for his descendants. For, besides continuing thus to enervate both body and mind, these conveniences lost with use almost all their power to please, and even degenerated into real needs, till the want of them became far more disagreeable than the possession of them had been pleasant. Men would have been unhappy at the loss of them, though the possession did not make them happy.

We can here see a little better how the use of speech became established, and insensibly improved in each family, and we may form a conjecture also concerning the manner in which various causes may have extended and accelerated the progress of language, by making it more and more necessary. Floods or earthquakes surrounded inhabited districts with precipices or waters: revolutions of the globe tore off portions from the continent, and made them islands. It is readily seen that among men thus collected and compelled to live together, a common idiom must have arisen much more easily than among those who still wandered through the forests of the continent. Thus it is very possible that after their first essays in navigation the islanders brought over the use of speech to the continent: and it is at least very probable that communities and languages were first established in islands, and even came to perfection there before they were known on the mainland.

Everything now begins to change its aspect. Men, who have up to now been roving in the woods, by taking to a more settled manner of life, come gradually together, form separate bodies, and at length in every country arises a distinct nation, united in character and manners, not by regulations or laws, but by uniformity of life and food, and the common influence of climate. Permanent neighbourhood could not fail to produce, in time, some connection between different families. Among young people of opposite sexes, living in neighbouring huts, the transient commerce required by nature soon led, through mutual intercourse, to another kind not less

agreeable, and more permanent. Men began now to take the difference between objects into account, and to make comparisons; they acquired imperceptibly the ideas of beauty and merit, which soon gave rise to feelings of preference. In consequence of seeing each other often, they could not do without seeing each other constantly. A tender and pleasant feeling insinuated itself into their souls, and the least opposition turned it into an impetuous fury: with love arose jealousy; discord triumphed, and human blood was sacrificed to the gentlest of all passions.

As ideas and feelings succeeded one another, and heart and head were brought into play, men continued to lay aside their original wildness; their private connections became every day more intimate as their limits extended. They accustomed themselves to assemble before their huts round a large tree; singing and dancing, the true offspring of love and leisure, became the amusement, or rather the occupation, of men and women thus assembled together with nothing else to do. Each one began to consider the rest, and to wish to be considered in turn; and thus a value came to be attached to public $esteem. \ Whoever sang \ or \ danced \ best, whoever \ was \ the \ hand some st,$ the strongest, the most dexterous, or the most eloquent, came to be of most consideration; and this was the first step towards inequality, and at the same time towards vice. From these first distinctions arose on the one side vanity and contempt and on the other shame and envy: and the fermentation caused by these new leavens ended by producing combinations fatal to innocence and happiness.

As soon as men began to value one another, and the idea of consideration had got a footing in the mind, every one put in his claim to it, and it became impossible to refuse it to any with impunity. Hence arose the first obligations of civility even among savages; and every intended injury became an affront; because, besides the hurt which might result from it, the party injured was certain to find in it a contempt for his person, which was often more insupportable than the hurt itself.

Thus, as every man punished the contempt shown him by others, in proportion to his opinion of himself, revenge became terrible, and men bloody and cruel. This is precisely the state reached by most of the savage nations known to us: and it is for want of having made a proper distinction in our ideas, and see how very far they already are from the state of nature, that so many writers have hastily concluded that man is naturally cruel, and requires civil institutions to make him more mild; whereas nothing is more gentle than man in his primitive state, as he is placed by nature at an equal distance from the stupidity of brutes, and the fatal ingenuity of civilised man. Equally confined by instinct and reason to the sole care of guarding himself against the mischiefs which threaten him, he is restrained by natural compassion from doing any injury to others, and is not led to do such a thing even in return for injuries received. For, according to the axiom of the wise Locke, There can be no injury, where there is no property.

But it must be remarked that the society thus formed, and the relations thus established among men, required of them qualities different from those which they possessed from their primitive constitution. Morality began to appear in human actions, and every one, before the institution of law, was the only judge and avenger of the injuries done him, so that the goodness which was suitable in the pure state of nature was no longer proper in the new-born state of society. Punishments had to be made more severe, as opportunities of offending became more frequent, and the dread of vengeance had to take the place of the rigour of the law. Thus, though men had become less patient, and their natural compassion had already suffered some diminution, this period of expansion of the human faculties, keeping a just mean between the indolence of the primitive state and the petulant activity of our egoism, must have been the happiest and most stable of epochs. The more we reflect on it, the more we shall find that this state was the least subject to revolutions, and altogether the very best man could experience; so that he can have departed from it only through some fatal accident, which, for the public good, should never have happened. The example of savages, most of whom have been found in this state, seems to prove that men were meant to remain in it, that it is the real youth of the world, and that all subsequent advances have been apparently so many steps towards the perfection of the individual, but in reality towards the decrepitude of the species. So long as men remained content with their rustic huts, so long as they were satisfied with clothes made of the skins of animals and sewn together with thorns and fish-bones, adorned themselves only with feathers and shells, and continued to paint their bodies different colours, to improve and beautify their bows and arrows and to make with sharp-edged stones fishing boats or clumsy musical instruments; in a word, so long as they undertook only what a single person could accomplish, and confined themselves to such arts as did not require the joint labour of several hands, they lived free, healthy, honest and happy lives, so long as their nature allowed, and as they continued to enjoy the pleasures of mutual and independent intercourse. But from the moment one man began to stand in need of the help of another; from the moment it appeared advantageous to any one man to have enough provisions for two, equality disappeared, property was introduced, work became indispensable, and vast forests became smiling fields, which man had to water with the sweat of his brow, and where slavery and misery were soon seen to germinate and grow up with the crops.

Metallurgy and agriculture were the two arts which produced this great revolution. The poets tell us it was gold and silver, but, for the philosophers, it was iron and corn, which first civilised men, and ruined humanity. Thus both were unknown to the savages of America, who for that reason are still savage: the other nations also seem to have continued in a state of barbarism while they practised only one of these arts. One of the best reasons, perhaps, why Europe has been, if not longer, at least more constantly and highly civilised than the rest of the world, is that it is at once the most abundant in iron and the most fertile in corn.

It is difficult to conjecture how men first came to know and use iron; for it is impossible to suppose they would of themselves think of digging the ore out of the mine, and preparing it for smelting, before they knew what would be the result. On the other hand, we have the less reason to suppose this discovery the effect of any accidental fire, as mines are only formed in barren places, bare of trees and plants; so that it looks as if nature had taken pains to keep that fatal secret from us. There remains, therefore, only the extraordinary accident of some volcano which, by ejecting metallic substances already in fusion, suggested to the spectators the idea of imitating the natural operation. And we must further conceive them as possessed of uncommon courage and foresight, to undertake so laborious a work, with so distant a prospect of drawing advantage from it; yet these qualities are united only in minds more advanced than we can suppose those of these first discoverers to have been.

With regard to agriculture, the principles of it were known long before they were put in practice; and it is indeed hardly possible that men, constantly employed in drawing their subsistence from plants and trees, should not readily acquire a knowledge of the means made use of by nature for the propagation of vegetables. It was in all probability very long, however, before their industry took that turn, either because trees, which together with hunting and fishing afforded them food, did not require their attention; or because they were ignorant of the use of corn, or without instruments to cultivate it; or because they lacked foresight to future needs; or lastily, because they were without means of preventing others from robbing them of the fruit of their labour. When they grew more industrious, it is natural to believe that they began, with the help of sharp stones and pointed sticks, to cultivate a few vegetables or roots around their huts; though it was long before they knew how to prepare corn, or were provided with the implements necessary for raising it in any large quantity; not to mention how essential it is, for husbandry, to consent to immediate loss, in order to reap a future gain—a precaution very foreign to the turn of a savage's mind; for, as I have said, he hardly foresees in the morning what he will need at night.

The invention of the other arts must therefore have been necessary to compel mankind to apply themselves to agriculture. No sooner were artificers wanted to smelt and forge iron, than others were required to maintain them; the more hands that were employed in manufactures, the fewer were left to provide for the common subsistence, though the number of mouths to be furnished with food remained the same: and as some required commodities in exchange for their iron, the rest at length discovered the method of making iron serve for the multiplication of commodities. By this means the arts of husbandry and agriculture were established on the one hand, and the art of working metals and multiplying their uses on the other.

The cultivation of the earth necessarily brought about its distribution; and property, once recognised, gave rise to the first rules of justice; for, to secure each man his own, it had to be possible for each to have something. Besides, as men began to look forward to the future, and all had something to lose, every one had reason to apprehend that reprisals would follow any injury he might do to another. This origin is so much the more natural, as it is impossible to conceive how property can come from anything but manual labour: for what else can a man add to things which he does not originally create, so as to make them his own property? It is the husbandman's labour alone that, giving him a title to the produce of the ground he has tilled, gives him a claim also to the land itself, at least till harvest, and so, from year to year, a constant possession which is easily transformed into property. When the ancients, says Grotius, gave to Ceres the title of Legislatrix, and to a festival celebrated in her honour the name of Thesmophoria, they meant by that that the distribution of lands had produced a new kind of right: that is to say, the right of property, which is different from the right deducible from the law of nature.

In this state of affairs, equality might have been sustained, had the talents of individuals been equal, and had, for example, the use of iron and the consumption of commodities always exactly balanced each other; but, as there was nothing to preserve this balance, it was soon disturbed; the strongest did most work; the most skilful turned his labour to best account; the most ingenious devised methods of diminishing his labour: the husbandman wanted more iron, or the smith more corn, and, while both laboured equally, the one gained a great deal by his work, while the other could hardly support himself. Thus natural inequality unfolds itself insensibly with that of combination, and the difference between men, developed by their different circumstances, becomes more sensible and permanent in its effects, and begins to have an influence, in the same proportion, over the lot of individuals.

Matters once at this pitch, it is easy to imagine the rest. I shall not detain the reader with a description of the successive invention of other arts, the development of language, the trial and utilisation of talents, the inequality of fortunes, the use and abuse of riches, and all the details connected with them which the reader can easily supply for himself. I shall confine myself to a glance at mankind in this new situation.

Behold then all human faculties developed, memory and imagination in full play, egoism interested, reason active, and the mind almost at the highest point of its perfection. Behold all the natural qualities in action, the rank and condition of every man assigned him; not merely his share of property and his power to serve or injure others, but also his wit, beauty, strength or skill, merit or talents: and these being the only qualities capable of commanding respect, it soon became necessary to possess or to affect them.

It now became the interest of men to appear what they really were not. To be and to seem became two totally different things; and from this distinction sprang insolent pomp and cheating trickery, with all the numerous vices that go in their train. On the other hand, free and independent as men were before, they were now, in consequence of a multiplicity of new wants, brought into subjection, as it were, to all nature, and particularly to one another; and each became in some degree a slave even in becoming the master of other men: if rich, they stood in need of the services of others; if poor, of their assistance; and even a middle condition did not enable them to do without one another. Man must now, therefore, have been perpetually employed in getting others to interest themselves in his lot, and in making them, apparently at least, if not really, find their advantage in promoting his own. Thus he must have been sly and artful in his behaviour to some, and imperious and cruel to others; being under a kind of necessity to ill-use all the persons of whom he stood in need, when he could not frighten them into compliance, and did not judge it his interest to be useful to them. Insatiable ambition, the thirst of raising their respective fortunes, not so much from real want as from the desire to surpass others, inspired all men with a vile propensity to injure one another, and with a secret jealousy, which is the more dangerous, as it puts on the mask of benevolence, to carry its point with greater security. In a word, there arose rivalry and competition on the one hand, and conflicting interests on the other, together with a secret desire on both of profiting at the expense of others. All these evils were the first effects of property, and the inseparable attendants of growing inequality.

Before the invention of signs to represent riches, wealth could hardly consist in anything but lands and cattle, the only real possessions men can have. But, when inheritances so increased in number and extent as to occupy the whole of the land, and to border on one another, one man could aggrandise himself only at the expense of another; at the same time the supernumeraries, who had been too weak or too indolent to make such acquisitions, and had grown poor without sustaining any loss, because, while they saw everything change around them, they remained still the same, were obliged to receive their subsistence, or steal it, from the rich; and this soon bred, according to their different characters, dominion and slavery, or violence and rapine. The wealthy, on their part, had no sooner begun to taste the pleasure of command, than they disdained all others, and, using their old slaves to acquire new, thought of nothing but subduing and enslaving their neighbours; like ravenous wolves, which, having once tasted human flesh, despise every other food and thenceforth seek only men to devour. Thus, as the most powerful or the most miserable considered their might or misery as a kind of right to the possessions of others, equivalent, in their opinion, to that of property, the destruction of equality was attended by the most terrible disorders. Usurpations by the rich, robbery by the poor, and the unbridled passions of both, suppressed the cries of natural compassion and the still feeble voice of justice, and filled men with avarice, ambition and vice. Between the title of the strongest and that of the first occupier, there arose perpetual conflicts, which never ended but in battles and bloodshed. The new-born state of society thus gave rise to a horrible state of war; men thus harassed and depraved were no longer capable of retracing their steps or renouncing the fatal acquisitions they had made, but, labouring by the abuse of the faculties which do them honour, merely to their own confusion, brought themselves to the brink of ruin.

Attonitus novitate mali, divesque miserque, Effugere optat opes; et quë modo voverat odit. It is impossible that men should not at length have reflected on so wretched a situation, and on the calamities that overwhelmed them. The rich, in particular, must have felt how much they suffered by a constant state of war, of which they bore all the expense; and in which, though all risked their lives, they alone risked their property. Besides, however speciously they might disguise their usurpations, they knew that they were founded on precarious and false titles; so that, if others took from them by force what they themselves had gained by force, they would have no reason to complain. Even those who had been enriched by their own industry, could hardly base their proprietorship on better claims. It was in vain to repeat, "I built this well; I gained this spot by my industry." Who gave you your standing, it might be answered, and what right have you to demand payment of us for doing what we never asked you to do? Do you not know that numbers of your fellow-creatures are starving, for want of what you have too much of? You ought to have had the express and universal consent of mankind, before appropriating more of the common subsistence than you needed for your own maintenance. Destitute of valid reasons to justify and sufficient strength to defend himself, able to crush individuals with ease, but easily crushed himself by a troop of bandits, one against all, and incapable, on account of mutual jealousy, of joining with his equals against numerous enemies united by the common hope of plunder, the rich man, thus urged by necessity, conceived at length the profoundest plan that ever entered the mind of man: this was to employ in his favour the forces of those who attacked him, to make allies of his adversaries, to inspire them with different maxims, and to give them other institutions as favourable to himself as the law of nature was unfavourable.

With this view, after having represented to his neighbours the horror of a situation which armed every man against the rest, and made their possessions as burdensome to them as their wants, and in which no safety could be expected either in riches or in poverty, he readily devised plausible arguments to make them close with his design. "Let us join," said he, "to guard the weak from oppression, to restrain the ambitious, and secure to every man the possession of what belongs to him: let us institute rules of justice and peace, to which all without exception may be obliged to conform; rules that may in some measure make amends for the caprices of fortune, by subjecting equally the powerful and the weak to the observance of reciprocal obligations. Let us, in a word, instead of turning our forces against ourselves, collect them in a supreme power which may govern us by wise laws, protect and defend all the members of the association, repulse their common enemies, and maintain eter-

nal harmony among us." Far fewer words to this purpose would have been enough to impose on men so barbarous and easily seduced; especially as they had too many disputes among themselves to do without arbitrators, and too much ambition and avarice to go long without masters. All ran headlong to their chains, in hopes of securing their liberty; for they had just wit enough to perceive the advantages of political institutions, without experience enough to enable them to foresee the dangers. The most capable of foreseeing the dangers were the very persons who expected to benefit by them; and even the most prudent judged it not inexpedient to sacrifice one part of their freedom to ensure the rest; as a wounded man has his arm cut off to save the rest of his body.

Such was, or may well have been, the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals, subjected all mankind to perpetual labour, slavery and wretchedness. It is easy to see how the establishment of one community made that of all the rest necessary, and how, in order to make head against united forces, the rest of mankind had to unite in turn. Societies soon multiplied and spread over the face of the earth, till hardly a corner of the world was left in which a man could escape the yoke, and withdraw his head from beneath the sword which he saw perpetually hanging over him by a thread. Civil right having thus become the common rule among the members of each community, the law of nature maintained its place only between different communities, where, under the name of the right of nations, it was qualified by certain tacit conventions, in order to make commerce practicable, and serve as a substitute for natural compassion, which lost, when applied to societies, almost all the influence it had over individuals, and survived no longer except in some great cosmopolitan spirits, who, breaking down the imaginary barriers that separate different peoples, follow the example of our Sovereign Creator, and include the whole human race in their benevolence.

But bodies politic, remaining thus in a state of nature among themselves, presently experienced the inconveniences which had obliged individuals to forsake it; for this state became still more fatal to these great bodies than it had been to the individuals of whom they were composed. Hence arose national wars, battles, murders, and reprisals, which shock nature and outrage reason; together with all those horrible prejudices which class among the virtues the honour of shedding human blood. The most distinguished men hence learned to consider cutting each other's throats a duty; at length men massacred their fellow-creatures by thousands without so much as knowing why, and committed more murders in a single day's fighting, and more violent outrages in the sack of a single town, than were committed in the state of nature during whole ages over the whole earth. Such were the first effects which we can see to

have followed the division of mankind into different communities. But let us return to their institutions.

 $[\ldots]$

Government had, in its infancy, no regular and constant form. The want of experience and philosophy prevented men from seeing any but present inconveniences, and they thought of providing against others only as they presented themselves. In spite of the endeavours of the wisest legislators, the political state remained imperfect, because it was little more than the work of chance; and, as it had begun ill, though time revealed its defects and suggested remedies, the original faults were never repaired. It was continually being patched up, when the first task should have been to get the site cleared and all the old materials removed, as was done by Lycurgus at Sparta, if a stable and lasting edifice was to be erected. Society consisted at first merely of a few general conventions, which every member bound himself to observe; and for the performance of covenants the whole body went security to each individual. Experience only could show the weakness of such a constitution, and how easily it might be infringed with impunity, from the difficulty of convicting men of faults, where the public alone was to be witness and judge: the laws could not but be eluded in many ways; disorders and inconveniences could not but multiply continually, till it became necessary to commit the dangerous trust of public authority to private persons, and the care of enforcing obedience to the deliberations of the people to the magistrate. For to say that chiefs were chosen before the confederacy was formed, and that the administrators of the laws were there before the laws themselves, is too absurd a supposition to consider seriously.

It would be as unreasonable to suppose that men at first threw themselves irretrievably and unconditionally into the arms of an absolute master, and that the first expedient which proud and unsubdued men hit upon for their common security was to run headlong into slavery. For what reason, in fact, did they take to themselves superiors, if it was not in order that they might be defended from oppression, and have protection for their lives, liberties and properties, which are, so to speak, the constituent elements of their being? Now, in the relations between man and man, the worst that can happen is for one to find himself at the mercy of another, and it would have been inconsistent with common-sense to begin by bestowing on a chief the only things they wanted his help to preserve. What equivalent could he offer them for so great a right? And if he had presumed to exact it under pretext of defending them, would he not have received the answer recorded in the fable: "What more can the enemy do to us?" It is therefore beyond dispute, and indeed the fundamental maxim of all political right, that people have set up chiefs to protect their liberty, and not to enslave them. If we have a prince, said Pliny to Trajan, it is to save ourselves from having a master.

Politicians indulge in the same sophistry about the love of liberty as philosophers about the state of nature. They judge, by what they see, of very different things, which they have not seen; and attribute to

man a natural propensity to servitude, because the slaves within their observation are seen to bear the yoke with patience; they fail to reflect that it is with liberty as with innocence and virtue; the value is known only to those who possess them, and the taste for them is forfeited when they are forfeited themselves. "I know the charms of your country," said Brasidas to a satrap, who was comparing the life at Sparta with that at Persepolis, "but you cannot know the pleasures of mine."

$[\ldots]$

The different forms of government owe their origin to the differing degrees of inequality which existed between individuals at the time of their institution. If there happened to be any one man among them pre-eminent in power, virtue, riches or personal influence, he became sole magistrate, and the State assumed the form of monarchy. If several, nearly equal in point of eminence, stood above the rest, they were elected jointly, and formed an aristocracy. Again, among a people who had deviated less from a state of nature, and between whose fortune or talents there was less disproportion, the supreme administration was retained in common, and a democracy was formed. It was discovered in process of time which of these forms suited men the best. Some peoples remained altogether subject to the laws; others soon came to obey their magistrates. The citizens laboured to preserve their liberty; the subjects, irritated at seeing others enjoying a blessing they had lost, thought only of making slaves of their neighbours. In a word, on the one side arose riches and conquests, and on the other happiness and virtue.

In these different governments, all the offices were at first elective; and when the influence of wealth was out of the question, the preference was given to merit, which gives a natural ascendancy, and to age, which is experienced in business and deliberate in council. The Elders of the Hebrews, the Gerontes at Sparta, the Senate at Rome, and the very etymology of our word Seigneur, show how old age was once held in veneration. But the more often the choice fell upon old men, the more often elections had to be repeated, and the more they became a nuisance; intrigues set in, factions were formed, party feeling grew bitter, civil wars broke out; the lives of individuals were sacrificed to the pretended happiness of the State; and at length men were on the point of relapsing into their primitive anarchy. Ambitious chiefs profited by these circumstances to perpetuate their offices in their own families: at the same time the people, already used to dependence, ease, and the conveniences of life, and already incapable of breaking its fetters, agreed to an increase of its slavery, in order to secure its tranquillity. Thus magistrates, having become hereditary, contracted the habit of considering their offices as a family estate, and themselves as proprietors of the communities of which they were at first only the officers, of regarding their fellowcitizens as their slaves, and numbering them, like cattle, among their belongings, and of calling themselves the equals of the gods and kings of kings.

If we follow the progress of inequality in these various revolutions, we shall find that the establishment of laws and of the right of property was its first term, the institution of magistracy the second, and the conversion of legitimate into arbitrary power the third and last; so that the condition of rich and poor was authorised by the first period; that of powerful and weak by the second; and only by the third that of master and slave, which is the last degree of inequality, and the term at which all the rest remain, when they have got so far, till the government is either entirely dissolved by new revolutions, or brought back again to legitimacy.

To understand this progress as necessary we must consider not so much the motives for the establishment of the body politic, as the forms it assumes in actuality, and the faults that necessarily attend it: for the flaws which make social institutions necessary are the same as make the abuse of them unavoidable. If we except Sparta, where the laws were mainly concerned with the education of children, and where Lycurgus established such morality as practically made laws needles—for laws as a rule, being weaker than the passions, restrain men without altering them—it would not be difficult to prove that every government, which scrupulously complied with the ends for which it was instituted, and guarded carefully against change and corruption, was set up unnecessarily. For a country, in which no one either evaded the laws or made a bad use of magisterial power, could require neither laws nor magistrates. Political distinctions necessarily produce civil distinctions. The growing equality between the chiefs and the people is soon felt by individuals, and modified in a thousand ways according to passions, talents and circumstances. The magistrate could not usurp any illegitimate power, without giving distinction to the creatures with whom he must share it. Besides, individuals only allow themselves to be oppressed so far as they are hurried on by blind ambition, and, looking rather below than above them, come to love authority more than independence, and submit to slavery, that they may in turn enslave others. It is no easy matter to reduce to obedience a man who has no ambition to command; nor would the most adroit politician find it possible to enslave a people whose only desire was to be independent. But inequality easily makes its way among cowardly and ambitious minds, which are ever ready to run the risks of fortune, and almost indifferent whether they command or obey, as it is favourable or adverse. Thus, there must have been a time, when the eyes of the people were so fascinated, that their rules had only to say to the least of men, "Be great, you and all your posterity," to make him immediately appear great in the eyes of every one as well as in his own. His descendants took still more upon them, in proportion to their distance from him; the more obscure and uncertain the cause, the greater the effect: the greater the number of idlers one could count in a family, the more illustrious it was held to be.

[...]

Pectore si fratris gladium juguloque parentis Condere me jubeas, gravidoeque in viscera partu Conjugis, invita peragam tamen

omnia dextrâ. Lucan, i. 376 From great inequality of fortunes and conditions, from the vast variety of passions and of talents, of useless and pernicious arts, of vain sciences, would arise a multitude of prejudices equally contrary to reason, happiness and virtue. We should see the magistrates fomenting everything that might weaken men united in society, by promoting dissension among them; everything that might sow in it the seeds of actual division, while it gave society the air of harmony; everything that might inspire the different ranks of people with mutual hatred and distrust, by setting the rights and interests of one against those of another, and so strengthen the power which comprehended them all. It is from the midst of this disorder and these revolutions, that despotism, gradually raising up its hideous head and devouring everything that remained sound and untainted in any part of the State, would at length trample on both the laws and the people, and establish itself on the ruins of the republic. The times which immediately preceded this last change would be times of trouble and calamity; but at length the monster would swallow up everything, and the people would no longer have either chiefs or laws, but only tyrants. From this moment there would be no question of virtue or morality; for despotism cui ex honesto nulla est spes, wherever it prevails, admits no other master; it no sooner speaks than probity and duty lose their weight and blind obedience is the only virtue which slaves can still practise.

This is the last term of inequality, the extreme point that closes the circle, and meets that from which we set out. Here all private persons return to their first equality, because they are nothing; and, subjects having no law but the will of their master, and their master no restraint but his passions, all notions of good and all principles of equity again vanish. There is here a complete return to the law of the strongest, and so to a new state of nature, differing from that we set out from; for the one was a state of nature in its first purity, while this is the consequence of excessive corruption. There is so little difference between the two states in other respects, and the contract of government is so completely dissolved by despotism, that the despot is master only so long as he remains the strongest; as soon as he can be expelled, he has no right to complain of violence. The popular insurrection that ends in the death or deposition of a Sultan is as lawful an act as those by which he disposed, the day before, of the lives and fortunes of his subjects. As he was maintained by force alone, it is force alone that overthrows him. Thus everything takes place according to the natural order; and, whatever may be the result of such frequent and precipitate revolutions, no one man has reason to complain of the injustice of another, but only of his own illfortune or indiscretion.

131. James Smith, *An Account*of the Remarkable Occurrences in the Life and Travels of Col. James Smith, 1799 [Excerpt]

Introduction

Virginia militiaman George Washington, leading an expedition into the Ohio Country, was defeated by a large French force at Fort Necessity in the first American battle of the French and Indian War. In response to the battle, Great Britain sent General Edward Braddock and some 1,000 troops to Virginia. Joined by George Washington and colonial militiamen, the army marched toward the Ohio River Valley. On July 9, 1755, French and Indian troops ambushed the British and colonial troops, inflicting an overwhelming defeat. New of this defeat reached a Pennsylvania militiaman held captive at Fort Duquesne, ten miles distant from the battle, on the Ohio River in western Pennsylvania. Colonel James Smith, 18 years old, had been captured by Indians in May 1755 while building a road for the expected arrival of Braddock's army. Held for a time at the French fort, he saw the Indians assemble to attack Braddock's army on the morning of July 9, 1755. Later he saw them return in triumph brandishing bloody scalps and plunder. The Indians also returned with a few prisoners, whom they burned to death within view of the fort. Smith was later taken to an Indian town. He escaped and returned home in 1759. He fought on the American side during the Revolutionary War. This account is from Smith's autobiography, published in 1799.

Primary Source

[…]

Shortly after this, on the 9th day of July, 1755, in the morning, I heard a great stir in the fort. As I could then walk with a staff in my hand, I went our of the door, which was just by the wall of the fort, and stood upon the wall and viewed the Indians in a huddle before the gate, where were barrels of powder, bullets, flints &c. and every one taking what suited; I saw the Indians also march off in rank, intire—likewise the French Canadians, and some regulars, after viewing the Indians and French in different positions, I computed them to be about four hundred, and wondered that they attempted to go out against Braddock with so small a party. I was then in high hopes that I would soon see them flying before the British troops, and that general Braddock would take the fort and rescue me.

I remained anxious to know the event of this day; and in the afternoon, I again observed a great noise and commotion in the fort, and though at that time I could not understand French, yet I found that it was the voice of Joy and triumph, and feared that they had received what I called bad news.

I had observed some of the old country soldiers speak Dutch, as I spoke Dutch I went to one of them, and asked him what was the news? He told me that a runner had just arrived, who said that Braddock would certainly be defeated; that the Indians and French had surrounded him, and were concealed behind trees and in gullies, and kept a constant fire upon the English, and that they saw the English falling in heaps, and if they did not take the river which was the only gap, and make their escape, there would not be one man left alive before sundown. Some time after this I heard a number of scalp halloos, and saw a company of Indians and French coming in. I observed they had a great many bloody scalps, grenadiers' caps, British canteens, bayonets, &c. with them. They brought the news that Braddock was defeated. After that, another company came in which appeared to be about one hundred, and chiefly Indians, and it seemed to me that almost every one of this company was carrying scalps; after this came another company with a number of wagon-horses, and also a great many scalps. Those that were coming in, and those that had arrived, kept a constant firing of small arms, and also the great guns in the fort, which were accompanied with the most hideous shouts and yells from all quarters; so that it appeared to me as if the infernal regions had broke loose.

About sundown I beheld a small party coming in with about a dozen prisoners, stripped naked, with their hands tied behind their backs, and their faces and part of their bodies blacked—these prisoners they burned to death on the bank of Allegheny river opposite to the fort. I stood on the fort wall until I beheld them begin to burn one of these men; they had him tied to a stake, and kept touching him with firebrands, red-hot irons, &c. and he screaming in a most doleful manner,—the Indians in the mean time yelling like infernal spirits. As this scene appeared too shocking for me to behold, I retired to my lodging both sore and sorry.

[…]

The morning after the battle I saw Braddock's artillery brought into the fort, the same day I also saw several Indians in British officer's dress, with sash, half moon, laced hats, &c. which the British then wore.

132. King George II, War Speech to Parliament, November 13, 1755 [Excerpt]

Introduction

War broke out between France and Great Britain in 1754, sparked by a battle between colonial militia and a French force in western

Pennsylvania, then known as the Ohio Country. Great Britain responded to the battle by sending troops to America under the command of General Edward Braddock. In this speech, given several months after Braddock's defeat, the king asks Parliament to approve funding for his military buildup. He asserts that his aim is strictly to defend British interests in America and prevent the spread of war through Europe, and he announces the signing of treaties with Russia and Germany. Nevertheless, France and Great Britain did come to blows in Europe, the Caribbean, and West Africa. Spain joined the war on the French side in 1762. The conflict was known as the Seven Years' War in Europe and the French and Indian War in America. Battles in the North American theater took place from Pennsylvania to Canada. Fighting ended in North America in 1760, but the war continued in other theaters through 1762. Many of the colonial militia and British regular army officers who fought on the same side during the French and Indian War fought on opposing sides two decades later in the Revolutionary War.

Primary Source

His Majesty spake as follows:

My Lords, and Gentlemen, The present critical Conjecture of Affairs, and My constant Inclination to have the Advice and Assistance of My Parliament on all important Occasions, have made Me desirous to meet you here as early as possible.

Since your last Session, I have taken such Measures as might be most conducive to the Protection of our Possessions in America, and to the re-gaining of such Parts thereof as had been encroached upon or invaded, in Violation of the Peace, and contrary to the Faith of the most solemn Treaties.

For this Purpose, the Maritime Force of this Kingdom has been got ready with the utmost Application and Expedition, and been principally employed: Some Land Forces have been sent from hence to North America; and all proper Encouragement has been given to the several Colonies there, to exert themselves in their own Defence, and in the Maintenance of the Rights and Possessions of Great Britain.

With a sincere Desire to preserve My People from the Calamities of War, as well as to prevent, in the Midst of these Troubles, a general War from being lighted up in Europe, I have been always ready to accept reasonable and honourable Terms of Accommodation; but none such have hitherto been proposed on the Part of France. I have also confined My Views and Operations to hinder France from making new Encroachments, or supporting those already made; to exert our Right to a Satisfaction for Hostilities committed in a Time of profound Peace; and to disappoint such Designs as, from various Appearances and Preparations, there is Reason to think, have been formed against My Kingdoms and Dominions.

By these Methods, I have pursued the Plan which I formerly pointed out to you, and for which I had the Satisfaction to receive the strongest Assurances of your vigorous Support.

What other Power can object to Proceedings so absolutely necessary to our own Defence and Security? My good Brother the King of Spain sees with Concern these Differences; and the Part which He generously takes in the common Welfare of Europe makes Him earnestly wish the Preservation of the publick Tranquillity: He has also given Assurances that He will continue in the same pacifick Sentiments.

In pursuing these great Ends, I make no Doubt of the vigorous and chearful Support of My Parliament; and that, whilst I am engaged in this just and National Cause, the affectionate Assurances which they gave Me the last Session will be effectually made good. In Consequence thereof, I have greatly increased My Naval Armaments, augmented My Land Forces in such a Manner as might be the least burthensome, and have concluded a Treaty with the Empress of Russia, and another with the Landgrave of Hesse Cassell, which shall be laid before you.

Gentlemen of the House of Commons, I have ordered the proper Officers to lay before you Estimates for the Services of the ensuing Year; and likewise Accompts of the extraordinary Expenses which have been made this Year, in Pursuance of the Power given Me by Parliament. I see with great Concern, that the necessary Services before mentioned will require large Supplies: I ask only such as shall be requisite for the effectual carrying on of those Measures which shall be necessary to support what has been begun, according to your Inclination, for the Security of My Kingdoms and Dominions, and for the Purposes which have been already mentioned to you. Whatever you grant shall, with the strictest Economy, be applied to those Uses only for which it shall be given.

My Lords, and Gentlemen, I rely upon your Duty and good Affections, which I have so often experienced. There never was a Situation in which My Honour, and the essential Interests of Great Britain, called more strongly for your Zeal, Unanimity, and Dispatch.

133. Mary Jemison as told to JamesSeaver, *The Life of Mary Jemison*,1755 [Excerpt]

Introduction

As the British colonies expanded westward, they pushed the native peoples before them. White settlers on the western frontier bore the brunt of the Indians' anger at the loss of their land. In deadly raids, Indians burned cabins, killed settlers, and plundered their household goods. Such raids grew more frequent after the outbreak of the French and Indian War. In 1755, six Seneca Indians and four Frenchmen attacked the home of Mary Jemison in western Pennsylvania and took her family captive. The Senecas were members of the Iroquois Confederacy, but unlike most Iroquois, some of them supported the French in the war. The Indians selected Mary, then 12 years old, and another child for adoption into the tribe, and murdered the others: It was their custom to adopt selected captives as a way of restoring their population. They trekked with the children to the French-held Fort Duquesne (at modern-day Pittsburgh, Pennsylvania), where Mary was given to two Seneca women, taken to their village, and formally adopted. She eventually adjusted to her new life, married a Delaware Indian, and bore a number of children. She lived to the age of 90, and in her old age told her story to an American, who published the book which contained this account of her capture. The book captured the public imagination and went through may editions.

Primary Source

[...]

As I before observed, I got home with the horse very early in the morning, where I found a man that lived in our neighborhood, and his sister-in-law who had three children, one son and two daughters. I soon learned that they had come there to live a short time; but for what purpose I cannot say. The woman's husband, however, was at that time in Washington's army, fighting for his country; and as her brother-in-law had a house she had lived with him in his absence. Their names I have forgotten.

Immediately after I got home, the man took the horse to go to his house after a bag of grain, and took his gun in his hand for the purpose of killing game, if he should chance to see any.—Our family, as usual, was busily employed about their common business. Father was shaving an axe-helve at the side of the house; mother was making preparations for breakfast;—my two oldest brothers were at work near the barn; and the little ones, with myself, and the woman and her three children, were in the house.

Breakfast was not yet ready, when we were alarmed by the discharge of a number of guns, that seemed to be near. Mother and the women before mentioned, almost fainted at the report, and every one trembled with fear. On opening the door, the man and horse lay dead near the house, having jus been shot by the Indians.

I was afterwards informed, that the Indians discovered him at his own house with his gun, and pursued him to father's, where they shot him as I have related. They first secured my father, and then rushed into the house, and without the least resistance made prisoners of my mother, Robert, Matthew, Betsey, the woman and her three children, and myself, and then commenced plundering.

My two brothers, Thomas and John, being at the barn, escaped and went to Virginia, where my grandfather Erwin then lived, as I was informed by a Mr. Fields, who was at my house about the close of the revolutionary war.

The party that took us consisted of six Indians and four Frenchmen, who immediately commenced plundering, as I just observed, and took what they considered most valuable; consisting principally of bread, meal and meat. Having taken as much provision as they could carry, they set out with their prisoners in great haste, for fear of detection, and soon entered the woods. On our march that day, an Indian went behind us with a whip, with which he frequently lashed the children to make them keep up. In this manner we travelled till dark without a mouthful of food or a drop of water; although we had not eaten since the night before. Whenever the little children cried for water, the Indians would make them drink urine or go thirsty. At night they encamped in the woods without fire and without shelter, where we were watched with the greatest vigilance. Extremely fatigued, and very hungry, we were compelled to lie upon the ground supperless and without a drop of water to satisfy the cravings of our appetites. As in the day time, so the little ones were made to drink urine in the night if they cried for water. Fatigue alone brought us a little sleep for the refreshment of our weary limbs; and at the dawn of the day we were again started on our march in the same order that we had proceeded on the day before. About sunrise we were halted, and the Indians gave us a full breakfast of provision that they had brought from my father's house. Each of us being very hungry, partook of this bounty of the Indians, except father, who was so much overcome with his situation—so much exhausted by anxiety and grief, that silent despair seemed fastened upon his countenance, and he could not be prevailed upon to refresh his sinking nature by the use of a morsel of food. Our repast being finished, we again resumed our march, and before noon passed a small fort that I heard my father say was called Fort Canagojigge.

That was the only time that I heard him speak from the time we were taken till we were finally separated the following night.

Toward evening we arrived at the border of a dark and dismal swamp, which was covered with small hemlocks, or some other evergreen, and other bushes, into which we were conducted; and having gone a short distance we stopped to encamp for the night.

Here we had some bread and meat for supper: but the dreariness of our situation, together with the uncertainty under which we all labored, as to our future destiny, almost deprived us of the sense of hunger, and destroyed our relish for food.

Mother, from the time we were taken, had manifest a great degree of fortitude, and encouraged us to support our troubles without complaining; and by her conversation seemed to make the distance and time shorter, and the way more smooth. But father lost all his ambition in the beginning of our trouble, and continued apparently lost to every care—absorbed in melancholy. Here, as before, she insisted on the necessity of our eating; and we obeyed her, but it was done with heavy hearts.

As soon as I had finished my supper, an Indian took off my shoes and stocking and put a pair of moccasins on my feet, which my mother observed; and believing that they would spare my life, even if they should destroy the other captives, addressed me as near as I can remember in the following words:—

"My dear little Mary, I fear that the time has arrived when we must be parted forever. Your life, my child, I think will be spared; but we shall probably be tomahawked here in this lonesome play by the Indians. O! how can I part with you my darling? What will become of my sweet little Mary? Oh! How can I think of your being continued in captivity without a hope of your being rescued? O that death had snatched you from my embraces in your infancy; the pain of parting then would have been pleasing to what it now is; and I should have seen the end of your troubles!—Alas, my dear! My heart bleeds at the thoughts of what awaits you; but, if you leave us, remember my child your own name, and the name of your father and mother. Be careful and not forget your English tongue. If you shall have an opportunity to get away from the Indians, don't try to escape; for if you do they will find and destroy you. Don't forget, my little daughter, the prayers that I have learned you—say them often; be a good child, and God will bless you. May God bless you my child, and make you comfortable and happy."

During this time, the Indians stripped the shoes and stocking from the little boy that belonged to the woman who was taken with us, and put moccasins on his feet, as they had done before on mine. I was crying. An Indian took the little boy and myself by the hand, to lead us off from the company, when my mother exclaimed, "Don't cry Mary—don't cry my child. God will bless you! Farewell—farewell!"

134. Edmond Atkin, Report to the Lords Commissioners for Trade and Plantation, 1755 [Excerpt]

Introduction

The French traders of Louisiana and the British traders of South Carolina competed with one another for the loyalty of the Indians who lived between the two colonies. Edmond Atkin, a South Carolina trader and politician, offered the British Board of Trade his advice—in the form of a report, excerpted here—on how to manage relations with the major Indian tribes of the Southern colonies. As war broke out with France, British authorities saw the wisdom of appointing Atkin superintendent of Indian Affairs. Like a number of South Carolina colonists of earlier generations, he believed that the best defense against French or Spanish incursions was a strong community of Indians, loyal to the British, living in a buffer zone between the British and the other powers. Atkin argued that the Indians were honorable and that fair treatment would secure their friendship. He offered examples from previous wars, demonstrating, correctly, that only the most oppressive and unethical treatment caused Indians to attack European colonists. At the outbreak of the French and Indian War, the Creeks and the Chickasaws were staunch allies of the British. However, Braddock's defeat left the western frontier open to deadly raids by enemy tribes. In 1757, South Carolina asked for help defending the frontier against French and Indian attacks.

Primary Source

[...]

The Importance of Indians is now generally known and understood, a Doubt remains not, that the prosperity of our Colonies on the Continent, will stand or fall with our Interest and favour among them. While they are our Friends, they are the Cheapest and strongest Barrier for the Protection of our Settlements; when Enemies, they are capable by ravaging in their method of War, in spite of all we can do, to render those Possessions almost useless. Of this the French are so sensible, as well as of our Natural Advantages beyond their own, that they have employed all their Art, not only to embroil us with our Indians, and to Set at work clandestinely some of their own to scalp our People even in times of Peace, but to destroy and utterly extirpate those Nations whose Affections they coud not gain, by setting one against another, and themselves assisting to do it. The same Reason should certainly make it our Policy, to support and preserve them.

[...]

No people in the World understand and pursue their true National Interest, better than the Indians. How sanguinary soever they are towards their Enemies, from a misguided Passion of Heroism, and a love of their country; yet they are otherways truly humane, hospitable, and equitable And how fraudulent soever they have been reputed, from the Appearance of their military Actions, in which according to their method of War, Glory cannot be acquired without Cunning & Stratagem; Yet in their publick Treaties no People on earth are more open, explicit, and Direct. Nor are they excelled by any in the observance of them. Witness in particular the Treaties of the five Nations with the Government of New York; in which there hath been no Breach yet on their Part, since 1609 at first under the

Dutch, and since 1664 under the English. And so patient are the Indians in general under the abuses of our Traders, that so numerous as the occasions have been for Complaint, I have never known an Instance in my time of a Complaint made, from either of the Nations in alliance with So. Carolina, against any particular Trader by name, with a view of punishing him by Removal. When they intended it, they have been easily pacified & prevented. It were easy to make appear, with respect to (I believe I may say) all Ruptures of Consequence between the Indians & the white People, and the Massacres that ensued, which have created such a Horror of the former, That the latter were first the Aggressors; the Indians being driven thereto under Oppressions and Abuses, and to vindicate their Natural Rights. The early and long Series of Calamities and Distreses which Virginia Struggled under with them in its Infancy, was owing, (tho' no Historian hath made the Observation) to Sr. Richd Grenville's burning an Indian Town and Destroying their Corn in 1585, after a very hospitable Reception, in revenge for a Silver Cup stolen by an Indian, who did not know the difference of Value between that and a horn Spoon; which could not but shock their natural Ideas of Equity-The great Massacre committed by the Yamasee Indians in So Carolina in 1715 was owing to the continued Oppressions and ill Usage they received from a publick Agent; of which they often Complained in vain; being such that their King told a Person from whom I had it, they could bear them no longer. But they were so unwilling to come to that Extremity, and there was so little Treachery in the Execution of it, that they declared beforehand not only their Intention, but named the very day, which was treated with Slight, till it was too late—The great Massacre committed by the Natchez Indians upon the French on the Mississippi River in 1729 was certainly owing to the Obstruction which the French gave to their Trading with the English. Le Pere Charlevoix owns, that M. de Chepar, who commanded the Post in that Nation was a little embroiled with them, without telling the Reason. But he could not conceal, that they were hurried into striking the Blow sooner than the day appointed, upon hearing that 120 Horses loaded with English Goods were enter'd into their Country—The Blow also which was struck upon the French by the Chactaw Indians in 1746 was owing to the French not permitting them to have a free Trade with the English, when that Nation was almost Naked, and the French themselves were unable to supply them with Necessaries. The policy of the Indians is Simple and Plain. Tis confined to the Securing their personal Safety, a Supply of Wants, and fair Usage. As we are the best able to supply all their wants, and on the easiest terms, they know it to be their true Interest to stick close to us, provided we shew an equal Regard also with the French, to their Safety and good usage. We have nothing therefore left to do, the Ballance being in our own hands, but, with the continuance of the same Trade as we now carry on with them, to Build Forts (not by Surprize, and against their will, as the French do but) for their sakes as well as our own, in such Nations as are or shall be desirous of it; To practice therein the same little ingratiating Arts as the French do; and above all, to begin with building Forts in their hearts, that is, to

put the Trade and Traders first under a good Regulation; after which we may build Forts wherever we please.

[…]

As to the Character and Disposition of the Creeks; They are the most refined and Political Indians, being very Speculative, Sensible, Discreet, Sober, well Governed by their Head Men; and withal by no means wanting Bravery. The Lower Creeks indeed fall short of the upper in some part of this Character; being far less Sober, and therefore not so orderly. Which is occasioned by the great Quantities of Spirituous Liquors, carried by the Augusta Rum Traders to them being the nearest—The Policy of the Creeks leads them to live in Peace with all their Neighbours; but above all to preserve a good Understanding with all white People, English, French, and Spaniards; with each of whom they have Intercourse. This last principle is frequently inculcated by some of the Chiefs in their Harrangues, from the motives of their National Safety and Interest, while they take part against neither, but are Courted by them Severally, and receive Presents from each. The same Principle was enforced by the dying charge of the Old Emperor Brim to his Son Malatchi, the Present Chief of the lower Nation, "never to suffer the Blood of any White Men to be spilt on his Ground." The Conduct of the Creeks comformable to those Principles (which was eminent during the last War) hath rendered them of Superior Weight among the Southern Nations, as holding the Ballance between their European Neighbours, and esteemed or feared by the rest of the red People—Not withstanding the general Disposition of the Creeks to live in Peace with the Neighbouring Nations, they are often at War with the Cherokees, tho' the upper do not always take part with the Lower therein; as on the other hand, the upper Cherokees do not always take part with the lower. These two being the most numerous (the Chactaws excepted), are the contending Nations of the South. The Creeks have an old Grudge against the Cherokees, for joining the Carolina Army in the Indian War in 1715, and falling on them unexpectedly. The repeated losses they have sustained on each side since, have so imbittered their Minds, that it hath been found a very difficult matter to reconcile them. So that the Peace made between them from time to time, hath been of [no] long Duration, but soon followed by a Rupture. This under the present state of our Affairs among the Indians, hath been attended with lucky Consequences to Carolina, as it hath been the means of Disconcerting the Intrigues of the French. But whenever those affairs shall assume such a Change, that we may be intirely secure of both these Nations, it will then become a Point of great Moment, by any means possible to reconcile them effectually. The Creeks do also sometimes go against the Floridans, against whom they were incited heretofore by the Carolina Government; who after the Conquest of Apalatchee having destroyed some whole Tribes (the Timooquas and Tacoboggas next to St. Augustine and St. Marks), encouraged the Creeks to War upon those Indians, for the sake of making Slaves of them. By which means until the breaking out of the Indian War, a Slave Trade only

was promoted in Florida; which drove those Indians to the extreme Parts of the Cape among the bays, leaving the finest part of their Country uninhabited; as it remains to this Day—The Creeks in general are well affected to the English, for the sake of our Goods, much better than to the Spaniards or the French. The Lower Creeks are not quite so well Affected to us, as the Upper. This hath been much admired at, considering that the latter have a French Fort among them. But the real Reason is, that the abuses, disorderly Practices, and Evil Example of the Rum Dealers & other unlicensed Traders that frequent the lower Creeks, have produced in them a Contemptible Opinion of us; as the same Reasons have done among the Lower Cherokees.

 $[\ldots]$

The Chicasaw Nation is situated further West, about Seven hundred and Eighty Miles from Charles Town; about 80 or 90 Miles to the Eastward of the Missippi, & less South of the great Cherokee River, at the head of the River Chactawhatchee; which taking its Rise from the same Ridge of Mountains as the Rivers in the upper Creek Country do, discharges itself also into the Bay and harbour of Mobile. This therefore (with the Permission of the Chicasaws) may be another way of Communication from thence with the Ohio and Illinois. These Indians live in 7 Towns, having each a Pallisade Fort with a Ditch, in an open rich Champain Plaine about ten Miles in Circumference, accessible only on one side, being almost surrounded by Swamps in a circular manner, about a Mile from any running Creek, and about 30 Miles from a place called the French Landing on the Chactawhatchee; which is as far as that River is Navigable with Boats.

 $[\ldots]$

The Chicasaws are of all Indians the most Manly in their Persons, Sentiments, and Actions; being of large gracefull figure, open Countenance and Manners, and generous Principles; Vigorous, Active, Intrepid, and Sharp in appearance even to Feirceness; expert Horsemen (having perhaps the finest breed of Horses in No. America); by much the best Hunters; and without Exception (by the acknowledgment of all Europeans as well as Indians that know them, who respect them as such) the best Warriours. Even their Women handle Arms, and face an Enemy like Men. They first put a stop formerly to the Spanish Conquests under Ferdinand de Soto. They are the only Indians that ever came voluntarily to a general Engagement with Europeans in open Ground; as they did with the French in 1736; when after repelling an Attack made upon one of their Towns by some chosen old regular Troops, under excellent Officers, Superior in Number, and assisted by three times as many Indians, they engaged them in an open Plain; and having totally defeated them, pursued them with great Slaughter a considerable Distance. In a Subsequent & more formidable Invasion in 1739 by three times their number of French Troops, and as many Indians also, the Chicasaws went to meet them; and having obliged them to entrench themselves they even ventured (a thing before unheard of) to attack them in their Trenches which they entered & after making great Havock, put the rest all to Flight In 1742 they defeated intirely a double Invasion made at the same time from different Quarters, to wit, by 2000 Chactaws, headed by only 10 French Men from N. Orleans or Mobile, and 500 Troops besides Indians from Canada, of which last, few ever returned. And In 1753 the last year they repelled another attempt made upon them. All those Invasions were undertaken by the French, professedly in order to extirpate the Chicasaw Nation Yet such is the magnanimity of those Indians, that under those Circumstances they never asked the Assistance of any of their Neighbours; being aided only by the Presents of ammunition which they have received occasionally from the South Carolina Government; and being advised, in regard to their future Safety, to remove and live nearer to their Friends, they resolved never to leave their Country, declaring in their way of Expression, that they would go again into the same Ground they came out of. But for their better Defence and Security against any Surprize, they built a Pallisade Fort in each of their Towns and made a Ditch round it; and did ask for some Swivel Guns from us, tho' indeed they did not obtain them.

135. Chickasaw Headmen's Speech to the Governor of South Carolina, April 5, 1756

Introduction

The French traders of Louisiana and the British traders of South Carolina competed with one another for the loyalty of the Indians who lived between the two colonies. British colonists of the Carolinas believed that the best defense against French or Spanish incursions was a strong community of Indians, loyal to the British, living in a buffer zone between the British and the other powers. At the outbreak of the French and Indian War, the Creeks and the Chickasaws were staunch allies of the British. The Chickasaws had been at war with the French and the French-allied Choctaws almost continuously since the mid-1600s. The French had tried in 1702 to reconcile the enemies and win them both over to the French side. Before twenty years had passed, the French changed course and encouraged the stronger Choctaws to exterminate the Chickasaws. As a result, the Chickasaw population had fallen to the point where they could field barely 400 fighting men. Nevertheless, they remained loyal to the British. This appeal by the headmen of the Chickasaws to the governor of South Carolina details their tenuous situation: they were suffering from poverty and hunger because they could not spare the men and ammunition to hunt for game. Therefore they begged the governor to send reinforcements and firearms.

Primary Source

From the Headmen and Warriours of the Chekesaws Nation to the King of Carolina and his Beloved Men, This is to let you know we are daily cut oft by our Enemies the French and their Indians who seems to be resolved to drive us from this Land. Therefore we beg of you, our best Friends, to send back our People that are living in other Nations in order to enable us to keep our Lands from the French and their Indians. We hope you will think on us in our Poverty as we have not had the Liberty of Hunting these 3 Years but have had enough to do to defend our Lands and prevent our Women and Children from being Slaves to the French. Our Traders that come here are not willing to trust us Gun Powder and Bulletts to hunt and defend ourselves from our Enemies, neither are we able to buy from them. Many of our Women are without Flaps and many of our young Men without Guns which renders them uncapable of making any Defence against such a powerful Enemy. We are very thankful to you for your last Presents without which it would not have been possible for us to keep Possession of this Land. We have not forgotten all your old good Talks, they are stil fresh in our Minds and we shall always look upon the English as our best Friends and will always endeavour to hinder the French from incroaching on our Lands either to build Forts or make any other Improvments. We will never give up this Land but with the Loss of our Lives. We look upon your Enemies as ours and your Friends as our Friends. The Day shall never come while Sun shines and Water runs that we will join any other Nation but the English. We hope you will stil take Pity on us and give us a Supply of Powder and Bullets and Guns &c. to enable us to outlive our Enemies and revive a dying Friend. We have had no less than four Armies against us this Winter and have lost 20 of our Warriours and many of our Wives and Children carried of alive, our Towns sett on Fire in the Night and burnt down, many of our Houses &c. destroyed our Blanketts &c. We were out a hunting at the Time where we was all attacked by the Back Enemy at our Hunting Camp where we lost several of our Warriours, Women and Children so that we were obliged to leave our Hunting Camps and return to our Nation. Our Traders can tell you all this is true, if you think we tell Lies. We have told you the greatest of our Wants and are in hopes you will not forget us and leave us to be cutt of by our Enemies. Pray send all our People that lives amongst you to our Nation for we think they must be troublesome to you and would be of great Service to us for we are now reduced to small a Number we can hardly spare Men to guard our Traders to and from our Nation. We have no more to say at Present but hope you will pity us for we are very poor.

136. Robert Rogers, Account of the Battle in New York,1756 [Excerpt]

Introduction

Rogers' Rangers was the name given to the many units of British rangers raised by Major Robert Rogers (1731-1795). A New Hampshire-born frontiersman, Rogers recruited and trained the ranger units that operated behind enemy lines during the French and Indian War. He commanded one of the units and served in New York, the Great Lakes region, and Canada. New York was a major battleground in this war. Because few roads existed at this time, the combatants maneuvered by canoes and bateaux along lakes and rivers. French and Indian invasion forces traveled from Canada into New York on Lake Champlain, Lake George, and the Hudson River. Between 1755 and 1760, battles took place along this corridor, as well as the Mohawk River and the shores of Lake Ontario. These excerpts from Rogers' journal include his 1756 orders, from Sir William Johnson, to conduct raids and harass the enemy around Lake George, as well as his account of the March 1758 incident known as the Battle on Snowshoes. In this engagement, Rogers led some 180 men on a snowshoe-clad march through 4-foot-deep snow near Lake George. The rangers unexpectedly encountered a force of more than 700 Frenchmen and Indians and sustained more than a hundred casualties before they retreated.

Primary Source

 $[\ldots]$

On the 23d, I waited on the General, and met with a very friendly reception; he soon intimated his design of giving me the command of an independent company of rangers, and the very next morning I received the commission, with a set of instructions.

According to the General's orders, my company was to consist of sixty privates, at 3s. New York currency *per* day, three serjeants at 4s. an Ensign at 5s. a Lieutenant at 7s. and my own pay was fixed at 10s. *per* day. Ten Spanish dollars were allowed to each man to wards providing cloaths, arms, and blankets. My orders were, to raise this company as quick as possible, to inlist none but such as were used to travelling and hunting, and in whose courage and fidelity I could confide; they were, moreover, to be subject to military discipline, and the articles of war.

Our rendezvous was appointed at Albany, from thence to proceed in four whale-boats to Lake George, and, "from time to time, to use my best endeavours to distress the French and their allies, by sacking, burning and destroying their houses, barns, barracks, canoes, battoes, &c. and by killing their cattle of every kind; and at all time to endeavour to way-lay, attack, and destroy their convoys of provision by land and water, in any part of the country, where I could find them."

With these instructions, I received letters to the commanding officers, at Fort William-Henry and Fort Edward, directing them to forward the service, with which I was now particularly charged.

[...]

We kept close to the mountain, that the advance guard might better observe the rivulet, on the ice of which I imagine they would travel if out, as the snow was four feet deep, and very bad travelling on snow-shoes. In this manner we marched a mile and an half, when our advanced guard informed me of the enemy being in their view; and soon after, that they had ascertained their number to be ninety-six, chiefly Indians. We immediately laid down our packs, and prepared for battle, supposing these to be the whole number or main body of the enemy, who were marching on our left up the rivulet, upon the ice. I ordered Ensign McDonald to the command of the advanced guard, which, as we faced to the left, made a flanking party to our right. We marched to within a few yards of the bank, which was higher than the ground we occupied; and observing the ground gradually to descend from the bank of the rivulet to the foot of the mountain, we extended our party along the bank, far enough to command the whole of the enemy's at once; we waited till their front was nearly opposite to our left wing, when I fired a gun, as a signal for a general discharge upon them; whereupon we gave them the first fire, which killed about forty Indians; the rest retreated, and were pursued by about one half of our people. I now imagined the enemy totally defeated, and ordered Ensign McDonald to head the flying remains of them, that none might escape; but we soon found our mistake, and that the party we had attacked were only their advanced guard, their main body coming up, consisting of 600 more, Canadians and Indians; upon which I ordered our people to retreat to their own ground, which we gained at the expence of fifty men killed; the remainder I rallied, and drew up in pretty good order, where they fought with such intrepidity and bravery as obliged the enemy (tho' seven to one in number) to retreat a second time; but we not being in a condition to pursue them, they rallied again, and recovered their ground, and warmly pushed us in front and both wings, while the mountain defended our rear; but they were so warmly received, that their flanking parties soon retreated to their main body with considerable loss. This threw the whole again into disorder, and they retreated a third time; but our number being now too far reduced to take advantage of their disorder, they rallied again, and made a fresh attack upon us. About this time we discovered 200 Indians going up the mountain on our right, as we supposed, to get possession of rising ground, and attack our rear; to prevent which I sent Lieutenant Philips, with eighteen men, to gain the first possession, and beat them back; which he did: and being suspicious that the enemy would go round on our left, and take possession of the other part of the hill, I sent Lieutenant Crafton, with fifteen men, to prevent them there; and soon after desired two Gentlemen, who were volunteers in the party, with a few men, to go and support him, which they did with great bravery.

The enemy pushed us so close in front, that the parties were not more than twenty yards asunder in general, and sometimes intermixed with each other. The fire continued almost constant for an hour and half from the beginning of the attack, in which time we lost eight officers, and more than 100 private men killed on the spot. We were a last obliged to break, and I with about twenty men ran up the hill to Philips and Crafton, where we stopped and fired on the Indians, who were eagerly pushing us, with numbers that we could not withstand. Lieutenant Philips being surrounded by 300 Indians, was at this time capitulating for himself and party, on the other part of the hill. He spoke to me, and said if the enemy would give them good quarters, he thought it best to surrender, otherwise that he could fight while he had one man left to fire a gun.

I now thought it most prudent to retreat, and bring off with me as many of my party as I possibly could, which I immediately did; the Indians closely pursuing us at the same time, took several prisoners. We came to Lake George in the evening, where we found several wounded men, whom we took with us to the place where we had left our sleds, from whence I sent an express to Fort Edward, desiring Mr. Haviland to send a party to meet us, and assist in bringing in the wounded; with the remainder I tarried there the whole night, without fire or blankets, and in the morning we proceeded up the lake, and met with Captain Start at Hoop Island, six miles north from Fort William-Henry, and encamped there that night; the next day being the 15th, in the evening, we arrived at Fort Edward.

The number of the enemy was about 700, 600 of which were Indians. By the best accounts we could get, we killed 150 of them, and wounded as many more. I will not pretend to determine what we should have done had we been 400 or more strong; but this I am obliged to say of those brave men who attended me (most of whom are now no more) both officers and soldiers in their respective stations behaved with uncommon resolution and courage; nor do I know an instance during the whole action in which I can justly impeach the prudence or good conduct of any one of them.

137. Journal of John Woolman, 1757–1758 [Excerpt]

Introduction

William Penn, a prominent Quaker, founded Pennsylvania in 1682 as a haven for Quakers and other dissident Christians seeking the freedom to live according to their beliefs. An ongoing conflict between Quaker pacifism and the involvement of the colonies in numerous wars arose within a decade. England's new monarchs, William and Mary, stripped Penn of his colony because its Quakercontrolled legislature refused to approve funding for the military while England was at war. Although Penn soon regained proprietorship over the colony, pacifist Quakers continued to control the legislature and obstruct military spending. Quakers and non-Quakers vied for control during King George's War, until Benjamin Franklin crafted a compromise allowing for a volunteer militia. By the time the French and Indian War began, immigration had reduced the Quakers to only a quarter of the Pennsylvania population. John Woolman (1720-1772) was a deeply principled Quaker preacher who made it his mission to convince Quaker slave owners to give up their slaves. During the French and Indian War, Woolman refused to pay taxes because he did not want any of his money to support war. He also refused to accept payment when the authorities prevailed upon him to house a soldier. This excerpt from his journal explains his reasoning.

Primary Source

A FEW years past, money being made current in our province for carrying on wars, and to be called in again by taxes laid on the inhabitants, my mind was often affected with the thoughts of paying such taxes; and I believe it right for me to preserve a memorandum concerning it: I was told, that Friends in England frequently paid taxes, when the money was applied to such purposes: I had conversation with several noted Friends on the subject, who all favoured the payment of such taxes; some of whom I preferred before myself, and this made me easier for a time; yet there was in the deeps of my mind, a scruple which I never could get over; and, at certain times, I was greatly distressed on that account.

I all along believed that there was some upright-hearted men, who paid such taxes, but could not see that their example was a sufficient reason for me to do so, while I believed that the spirit of truth required of me, as an individual, to suffer patiently the distress of goods, rather than pay actively.

 $[\ldots]$

True charity is an excellent virtue: and sincerely to labour for their good, whose belief, in all points, doth not agree with ours, is a happy state. To refuse the active payment of a tax which our society generally paid, was exceeding disagreeable; but to do a thing contrary to my conscience, appeared yet more dreadful. When this exercise came upon me, I knew of none under the like difficulty; and, in my distress, I besought the Lord to enable me to give up all, that so I might follow him wheresoever he was pleased to lead me: and under this exercise, I went to our yearly-meeting at Philadelphia, in the year 1755; at which a committee was appointed of some from each quarter, to correspond with the meeting for sufferings in London, and another to visit our monthly and quarterly-meetings; and after their appointment, before the last adjournment of the meeting, it was agreed in the meeting, that these two committees should meet together in Friends school-house in the city, at a time then concluded on, to consider some things in which the cause of truth was concerned; and these committees meeting together, had a weighty conference in the fear of the Lord; at which time I perceived, there were many Friends under a scruple like that before-mentioned.

As scrupling to pay a tax on account of the application, hath seldom been heard of heretofore, even amongst men of integrity, who have steadily borne their testimony against outward wars in their time; I may here not some things which have occurred to my mind, as I have been inwardly exercised on that account: from the steady opposition which faithful Friends, in early times, made to wrong things then approved of, they were hated and persecuted by men living in the spirit of this world; and suffering with firmness, they were made a blessing to the church, and the work prospered. It equally concerns men, in every age, to take heed to their own spirit: and in comparing their situation with ours, it looks to me there was less danger of their being infected with the spirit of this world, in paying such taxes, than there is of us now; they had little or no share in civil government; and many of them declared, they were, through the power of God, separated from the spirit in which wars were; and being afflicted by the rulers on account of their testimony, there was less likelihood of uniting in spirit with them in things inconsitent with the purity truth. We, from the first settlement of this land, have known little or no troubles of that fort: their profession, for a time, was accounted reproachful; but at length the uprightness of our predecessors being understood by the rulers, and their innocent suffering moving them, our way of worship was tolerated; and many of our members in these colonies became active in civil government. Being thus tried with favour and prosperity, this world hath appeared inviting; our minds have been turned to the improvement of our country, to merchandize and sciences, amongst which are many things useful, being following in pure wisdom; but, in our present condition, that a carnal mind is gaining upon us, I believe will not be denied. Some of our members, who are officers in civil government, are in one case or other, called upon in their respective stations to assist in things relative to the wars; such being in doubt whether to act, or crave to be excused from their office, seeing their brethren united in the payment of a tax to carry on the said wars, might think their case not much different, and so quench the tender movings of the Holy Spirit

in their minds; and thus, by small degrees, there might be an approach toward that of fighting, till we came so near it, as that the distinction would be little else, but the name of a peaceable people.

It requires great self-denial and resignation of ourselves to God, to attain that state wherein we can freely cease from fighting when wrongfully invaded; if, by our fighting, there were a probability of overcoming the invaders: whoever rightly attains to it, does, in some degree, feel that spirit in which our Redeemer gave his life for us; and through divine goodness, many of our predecessors, and many now living, have learned this blessed lesson; but many others, having their religion chiefly by education, and not being enough acquainted with the cross which crucifies to the world, do manifest a temper distinguishable from that of an entire trust in God. In calmly considering these things, it hath not appeared strange to me, that an exercise hath now fallen upon some, which, as to the outward means of it, is different from what was known to many of those who went before us.

Some time after the yearly-meeting, a day being appointed, and letters wrote to distant members, the said committees met a Philadelphia; and by adjournments, continued several days. The calamities of war were not increasing; the frontier inhabitants of Pennsylvania were frequently surprised, some slain, and many taken captive by the Indians; and while these committees sat, the corps of one so slain was brought in a wagon, and taken through the streets of the city, in his bloody garments, to alarm the people, and rouse them up to war.

Friends thus met were not all of one mind in relation to the tax; which to such who scrupled it made the way more difficult. To refuse and active payment at such a time, might be construed an act of disloyalty, and appeared likely to displease the rulers, not only here but in England; still there was a scruple so fastened upon the minds of many Friends, that nothing moved it: it was a conference the most weighty that ever I was at; and the hearts of many were bowed in reverence before the Most-high. Some Friends of the said committees who appeared easy to pay the tax, after several adjournments, withdrew; others of them continued till the last: at length, an epistle of tender love and caution, to Friends in Pennsylvania, was drawn by some Friends concerned, on that subject; and being read several times and corrected, was then signed by such of them as were free to sign it, and afterward sent to the monthly and quarterly-meetings.

On the ninth day of the eighth month, in the year 1757, at night, orders came to the military officers in our county, (Burlington) directing them to draft the militia, and prepare a number of men to go off as soldiers, to the relief of the English at Fort William Henry, in New-York government: a few days after which, there was a general review of the militia at Mount-Holly, and a number of men chosen and sent off under some officers. Shortly after, there came

orders to draught three times as many, to hold themselves in readiness to march when fresh orders came: and on the seventeenth day of the eight month, there was a meeting of the military officers at Mount-Holly; amongst whom were a considerable number of our society. My mind being affected herewith, I had fresh opportunity to see and consider the advantage of living in the real substance of religion, where practice doth harmonize with principle. Amongst the officers are men of understanding, who have some regard to sincerity where they see it; and in the execution of their office, when they have men to deal with whom they believe to be uprighthearted, to put them to trouble on account of scruples of conscience, is a painful task, and likely to be avoided as much as easily may be; but where men profess to be of meek and heavenly-minded, and to have their trust so firmly settled in God, that they cannot join in wars; and yet, by their spirit and conduct in common life, manifest a contrary disposition, their difficulties are great at such a time.

Officers in great anxiety endeavouring to get troops to answer the demands of their superiors, seeing men, who are insincere, pretend scruple of conscience, in hopes of being excused from a dangerous employment, they are likely to be roughly handled. In this time of commotion some of our young men left the parts, and tarried abroad till it was over; some came and proposed to go as soldiers; others appeared to have a real tender scruple in their minds against joining in wars, and were much humbled under the apprehension of a trial so near: I had conversation with several of them to my satisfaction. At the set time when the captain came to town, some of those last-mentioned went and told him in substance as follows:— That they could not bear arms for conscience-sake; nor could they hire any to go in their places, being resigned as to the event of it: at length the captain acquainted them all, that they might return home for the present, and required them to provide themselves as soldiers, and to be in readiness to march when called upon. This was such a time as I had not seen before; and yet I may say, with thankfulness to the Lord, that I believed the trial was intended for our good; and as I was favoured with resignation to him. The French army taking the fort they were besieging, destroyed it and went away; the company of then first draughted, after some days march, had orders to return home; and those on the second draught were no more called upon on that occasion.

On the fourth day of the fourth month, in the year 1758, orders came to some officers, in Mount-Holly, to prepare quarters, a short time, for about one hundred soldiers: and an officer and two other men, all inhabitants of our town, came to my house: and the officer told me, that he came to speak with me, to provide lodging and entertainment for two soldiers, there being six shillings a week per man allowed as pay for it. The case being new and unexpected, I made no answer suddenly; but sat a time silent, my mind being inward; I was fully convinced, that the proceedings in wars are inconsistent with the purity of the Christian religion; and to be hired to entertain men who were then under pay as soldiers, was a difficulty with me. I

expected they had legal authority for what they did; and after a short time, I said to the officer, if the men are sent here for entertainment, I believe I shall not refuse to admit them into my house; but the nature of the case is such, that I expect I cannot keep them on hire: one of the men intimated that he thought I might do it consistent with my religious principles; to which I made no reply; as believing silence, at that time, best for me. Though they spake of two, there came only one, who tarried at my house about two weeks, and behaved himself civilly; and when the officer came to pay me, I told him I could not take pay for it, having admitted him into my house in a passive obedience to authority. I was on horseback when he spake to me: and as I turned from him, he said, he was obliged to me: to which I said nothing; but thinking on the expression, I grew uneasy; and afterwards being near where he lived, I went and told him on what grounds I refused taking pay for keeping the soldier.

138. Louis Antoine de Bougainville, Memoir of the French and Indian War, 1758 [Excerpt]

Introduction

New York was a major battleground in the French and Indian War. Battles took place along the lakes and rivers—Lake Champlain, Lake George, the Hudson River, the Mohawk River, and Lake Ontario. In 1755 the French built a fort, which they called Carillon, on the shore of Lake Champlain at Ticonderoga. In July 1758, British forces attacked Fort Ticonderoga and suffered a humiliating defeat, losing nearly 2,000 killed and wounded. The excerpt below from French officer Louis Antoine de Bougainville's (1729–1811) journal describes the battle from the defenders' perspective. Bougainville went to Canada in 1756 as aide-de-camp to General Louis-Joseph, Marquis de Montcalm. After the war Bougainville joined the French Navy, sailed around the world, and eventually had a tropical flower, bougainvillea, named after him. He was part of the French fleet that supported the Americans in their revolution against the British. Bougainville's journal describes the difficulties inherent in having Indian allies and demonstrates how European armies frequently lost control of Indian warriors during the heat of battle and its aftermath.

Primary Source

SEPTEMBER 19: An hour before daybreak we left through the woods to make an attack, leaving a few with the canoes with orders to put out into the lake and to come to us when they heard the first shots. We marched through the woods in several files, the Indians

almost naked, all in black and red war paint. We surrounded the suspected point, but found nothing except old fires smoldering in the roots of trees and a few abandoned huts. We at once returned, suspecting that the Iroquois had deceived us, more especially since in order to cut off the retreat of the enemy, if there had been any, it would have been necessary to go ashore beyond the point and not this side of it.

Because of the grumbling of the other nations the Iroquois were deprived of command, and with a common accord 110 Indians, the most nimble of all the detachment, were chosen, who left with a score and a half of the most active Canadians with the intention of going as far as the fort and not returning until they had made a coup.

The canoes were put in the woods with the rest of the detachment to guard them. It was agreed that if the warriors had not returned in two days, it would be proof that they had been hotly pursued and had taken the course of going back to Carillon through the mountains and hence that the canoes could return. They left at eleven o'clock.

Around two o'clock, at about a league and a half from the fort, they suddenly ran into a detachment of thirteen English, whom they immediately attacked. All except one, whom [by now] will have carried the news to the enemy, were killed or captured. The Iroquois had two killed or wounded. The Indians on the field of battle performed cruelties even the recital of which is horrible.

At noon MM. Mercier, Desandrouins, and I left in a canoe. We reached Carillon at seven.

Lake St. Sacrement runs almost in a straight line from northeast to southwest. Since it is incased within two mountain chains, there are neither waves nor ground swells. Sailing is pleasant there, the shore safe almost everywhere. The mountain chain on the south side continues to the end of the lake. That on the north is interrupted about three leagues from the fort. The country then becomes flat, the woods open, and the English have made a very good trail which continues on behind the mountains.

SEPTEMBER 20: The Indians returned tonight to M. de Contrecoeur's camp, making a continuous fusillade on the lake. Opposite the camp they lay to and uttered cries of mourning. A canoe going out to them asked the reason for their grief. "Marin is dead (for when they have several dead the head of the party is deemed dead), we are dead." Some words of consolation. Then they made death cries and came ashore shooting off their guns.

At seven M. de Montcalm held a troop review and inspected the camp of M. de la Corne and that of de Contrecoeur.

The Indians have seventeen prisoners; they have already knocked several of them on the head. A detachment of a lieutenant and thirty men

ordered to bury the two dead. The cruelties and the insolence of these barbarians is horrible, their souls are as black as pitch. It is an abominable way to make war; the retaliation is frightening, and the air one breathes here is contagious of making one accustomed to callousness.

[...]

Just the same, this talent they have of finding tracks in the woods and of following them without losing them, a talent one cannot dismiss in doubt without refusing to accept the evidence, can be regarded as a perfection of the instinct. They see in the tracks the number that have passed, whether they are Indians or Europeans, if the tracks are fresh or old, if they are of healthy or of sick people, dragging feet or hurrying ones, marks of sticks used as supports. It is rarely that they are deceived or mistaken. They follow their prey for one hundred, two hundred, six hundred leagues with a constancy and sureness which never loses courage or leads them astray. As regards their sense of direction in the woods, it is of a complete sureness. If they have left a place where they put their canoes, whatever distance they may have gone, whatever turns they may have made, crossing rivers, mountains, they come directly back to the place where their canoes were left. Observation of the sun, the inclination of trees and of leaves that they look at, a long practice, and finally an instinct superior to all reasons, these are their guides, and these guides never lead them astray.

OCTOBER 14: Indian council indicated for tomorrow to decide about a score who came here to go and make a strike.

The soldiers have too much money. A soldier of Languedoc yesterday lost one hundred louis. This country is dangerous for discipline. Pray God that it alone suffers from it.

OCTOBER 15: The number of workmen increased. If the skill in using them increased in proportion to the number of workmen, the fort would soon be in good shape. Our general's plan is not to withdraw the army until the fort is completely free from any risk, that to effect this they will have palisaded that part of the ramparts which are not yet as high as they should be, and that they have built inside the fort sufficient barracks to lodge the garrison. . . .

The troops work with ardor. There is at the Falls a sawmill which under the direction of M. de L[otbiniére] never was got in shape to make planks, they had even decided to abandon it. M. de la P[ause] was put in charge of the mill, and he got it in shape to get out 150 planks in twenty-four hours. It cost the King crowns and yet could not run; five hundred francs and one of our officers had accomplished what this great sum and the Vauban of Canada could not achieve. Unfortunately it is to the interest of this Vauban that the work should drag out. The canteen must have its business. Wine here is six livres a quart; I note this difference in price, it is the thermometer of peculation in this country.

$[\ldots]$

Between the resolution made and the action taken there passes considerable time, sometimes one nation stops the march, sometimes another. Everybody must have time to get drunk, and their food consumption is enormous. At last they get started, and once they have struck, have they taken only a single scalp or one prisoner, back they come and are off again for their villages. Then for a considerable time the army is without Indians. Each one does well for himself, but the operation of the war suffers, for in the end they are a necessary evil. It would be better to have on hand only a specified number of these mosquitoes, who would be relieved by others, so that we would always have some on hand. In general it does not seem to me, that we are getting all the use we can out of these Indians. With less servile compliance for their caprices, less respect for the silly things they do, less outward indifference toward the service expected of them, one would accustom them to consideration toward the French to obedience, I would say even to a kind of subordination. Finally, if they believe that they can be dispensed with, they should seek to make themselves of value through real services. Some companies of volunteers who through living in the woods would know them and serve as guides would be a marvelous spur to prick the honor of these barbarians, for self-love is everything, and pride is the only wealth of every Indian.

OCTOBER 21: The party of Iroquois who left the evening of the sixteenth returned this morning. They reported that they had taken the road to the south, that on the seventeenth two English vessels and two bateaux had passed the heights of Sugar Loaf, that at three leagues from Fort George they had dropped off an Indian and a Canadian on the road from Fort George to Fort Edward, and that several other Indians with Pertuis had been on top of the mountain nearest Fort George, that the first two had heard on the road the noise of a great many men and wagons which seemed to be returning to Fort Edward, that the scouts on top of the mountain had seen the fort, which appeared to them to be finished, the entrenched camp in which they had counted about fifty tents across and twelve deep with little movement in either place and the anchorage, where they saw two vessels and about one hundred bateaux. On their way, both going and returning, they found many tracks, mostly of Indians and all of little parties of eight or ten men, except for one track of a party of about sixty, all Englishmen.

[...]

This morning Colonel [Sir William] Johnson arrived at the enemy army with 300 Choctaws, Delawares, and Iroquois, and Captain Jacob with 150 more.

Around ten o'clock we saw them as well as a few light troops on the mountain which is opposite Carillon, the other side of the River of the Falls. They let off a great fusillade which did not interrupt our work at all; we amused ourselves by not replying.

Half an hour after noon the English army advanced on us. The grenadier companies, the volunteers, and the advanced guards fired, fell back in good order, and re-entered the lines without losing a single man. At the same moment, at an agreed upon signal, all the troops were under arms at their posts.

The left was first attacked by two columns, one of which tried to outflank the defenses and found itself under fire of la Sarre, the other directed its efforts on a salient between Languedoc and Berry.

The center, where Royal Roussillon was, was attacked at almost the same time by a third column, and a fourth carried its attack toward the right between Bearn and La Reine. These different columns were intermingled with their light troops and better marksmen, who, protected by the trees, delivered a most murderous fire on us.

At the start of the affair a few of the enemy's barges and pontoons advance down the River of the Falls. Bernard's and Duprat's volunteers, posted in this area, received them in fine style; Sieur de Poulhariez, at the head of the company of grenadiers and of a light company of Royal Roussillon also appeared there and, the cannon of the fort having smashed two of these barges, they withdrew and did not appear again during the action.

The different attacks, almost all afternoon and almost everywhere, were made with the greatest of vigor.

As the Canadians and colony troops were not attacked at all, they, from the defenses which sheltered them, directed their fire against the column which attacked our right and which a few times came within range. Chevalier de Lévis in succession sent Sieur d'Hert, captain adjutant, and D'Hainaut, also captain in La Reine, to order the more active of them to make two sorties and to take this column in the flank.

This column, composed of English grenadiers and Scottish Highlanders, returned unceasingly to the attack, without becoming discouraged or broken, and several got themselves killed within fifteen paces of our abatis. Chevalier de Lévis twice ordered the Canadians and the troops of La Marine to make sorties and take them in the flank.

Around five o'clock the column which had spiritedly attacked Royal Roussillon, threw itself against the salient defended by the Guyenne regiment and by the left of Béarn.

The column which had attacked La Reine and Béarn with the greatest fury threw itself there again with the result that this attack threatened danger. Chevalier de Lévis went there with a few troops from the right, at which the enemy was only shooting [and not really attacking]. The marquis de Montcalm also ran there with a few serve troops and the enemy met a resistance which finally cooled their ardor.

The left continually withstood the fire of the two columns which tried to penetrate in this area, in which their supply depot was. M de Bourlamaque had been dangerously wounded there around four o'clock and Sieurs de Senezergues and de Privat, lieutenant colonels of La Sarre and Languedoc, made up for his absence and continued to give the best of orders. The Marquis de Montcalm went there several times and was attentive to getting reinforcements there at all moments of crisis. For, throughout the entire affair, the grenadier and light companies of the reserve always ran to the most threatened places. Around six o'clock the two columns on the right gave up the attack on Guyenne and came to make another attempt at the center against Royal Roussillon and Berry and finally a last effort on the left.

At seven o'clock the enemy thought only of retreat, covered by the fire of the light troops, which was kept up until dark.

During the action our abatis caught fire outside several times, but it was put out at once, the soldiers courageously passing over the back of it to stop the progress.

Besides munitions of powder and ball they constantly sent up casks full of water and Sieur de Trécesson on this occasion has, both himself and his battalion, rendered the greatest service by their activity in getting munitions up to us as well as refreshments so necessary in such a long fight.

The darkness of the night, the exhaustion, and the small number of our troops, the forces of the enemy which, despite his defeat, were still infinitely superior to us; the nature of these woods in which one could not without Indians involve oneself against an army which had four or five hundred of them; several defensive works the enemy had raised one behind the other from the battlefield to their camp; here were the obstacles which prevented us from following them in their retreat. We even thought that they would try next day to take their revenge, and consequently we worked all night to secure defilade against the neighboring heights by traverses, to perfect the abatis of the Canadians and to finish the batteries on the right and left [which were] commenced in the morning.

JULY 9: The day was devoted to the same work and to burying our dead and those the enemy had left on the field of battle.

Our companies of volunteers went out, advanced up to the Falls, and reported that the enemy had abandoned the posts at the Falls and even at the Portage.

JULY 10: At break of day the Marquis de Montcalm detached the Chevalier de Lévis with the eight grenadier companies, the volunteers, and some fifty Canadian to find out what had become of the enemy army.

The Chevalier de Lévis advanced to beyond the Portage. He everywhere found signs of a hurried flight. The English have since told me that the affair got under way before the dispositions were entirely completed, that hurry had occasioned a sort of disorder, augmented subsequently by the death of a great number of officers; when they withdrew in the evening, the expected that it would only be to take better measures and to return with cannon and better disposition [of troops]; that the order to re-embark had greatly surprised all the regular troops; that the militia alone had rejoiced at it. He moreover said to me that they were only a body without a head since the death of Milord Howe.

Wounded, provision, abandoned equipment, shoes left in miry places, remains of barges and burned pontoons; incontestable proof of the great loss our enemy had suffered. We estimate it, from what we have seen and their prisoners, at five thousand men killed or wounded. If one should believe some of them and of the speed of their retreat, their loss would be considerably more. They lost several principal officers, Milord Howe, chief staff officer and colonel of a regiment, the commander of the new York troops, and several others.

The greatest part of their Indians, especially those of the Five nations, remained as spectators at the tail of the columns. They doubtless awaited the outcome of a combat which the English believed could not be doubtful.

The Act of March 24 announces the general invasion of Canada, and these same terms are expressed in all the commissions of their militia officers. Justice is due them that they attacked us with the greatest of determination. It is not common that defenses are attacked for seven hours and almost without any respite.

This victory which, for the moment, has saved Canada, is due to the sagacity of the dispositions, to the good maneuvers of our generals before and during the action and to the unbelievable valor of our troops. All the officers of the army have so conducted themselves that each of them deserves a personal eulogy.

We had forty-four officers and nearly four hundred men killed or wounded.

[...]

Bayle says somewhere, "It is unfortunate that men are such that when writing history one has the appearance of making a satire."

1. In this occasion we must recall what Caesar said: "Up to the present I have fought for glory, but today for my life." For us there is no retreat, no quarter; either conquer or perish. Moreover and above all, never [was] the situation more critical for the commander. If the enemy took measures to cut us off, by portaging barges, from

communication with St. Frederic, what could we do? We should have only five days supplies. It would be necessary to abandon Carillon and to retire to Fort St. Frederic. Soon afterwards one would still be forced to abandon this [latter] position; a road half a league lone would take barges behind St. Frederic into Lake Champlain. One would then have said that by this retreat, necessary in the eyes of every soldier, the victory and the country had been handed over to the English. Another precipice open at our General's feet, if he was stubborn at Carillon.

Today [now] that the enemy are on the run, everybody wishes to associate himself with the success. Every man who aspires to the command of armies ought, upon entering on that career, deeply engrave in his mind this truth perfectly expressed by Tacitus: Inquissima haec bellorum condition est; prospere, omnes sibi vindicant; adversa, uni imputantur.

2. Our defeat would bring on the loss of the colony. The French troops destroyed, Carillon taken, what troops, what place could stop a victorious army, almost as large in numbers as all the inhabitants of Canada together?

139. John Hawks, Journal of the Ticonderoga Campaign, August 1–2, 1759 [Excerpt]

Introduction

New York was a major battleground in this war. Because few roads existed at this time, the combatants maneuvered by canoes and bateaux along lakes and rivers. French and Indian invasion forces traveled from Canada into New York on Lake Champlain, Lake George, and the Hudson River. Between 1755 and 1760, a number of battles took place along this corridor, as well as along the Mohawk River and the shores of Lake Ontario. The French built a fort at Ticonderoga, on the shore of Lake Champlain, in 1755. The French captured Fort Oswego in 1756, and Fort William Henry on Lake George the following year. In July 1758, British forces attacked Fort Ticonderoga and suffered a humiliating defeat, losing nearly 2,000 killed and wounded. However, the British soon won a major victory in Canada, and authorities planned a new campaign to capture Ticonderoga and other French posts in 1759. In late July of 1759, the French destroyed the fort before it could fall into British hands. This August 1759 excerpt from a British officer's journal

focuses on the day-to-day concerns of life in the army encampment at Ticonderoga, ranging from a delivery of shoes for the men to a death sentence meted out by a court martial.

Camp att Tyconderogue, August 1st, 1759 Parole, Carolina

Collo for the day tomorrow, Reg. Collo. Foster; Provential Collo Lyman; Field officer for the piquit this night, Regular not asserted; Provential Lt Collo Pearson; tomorrow night Lt Collo Smedly; Adjt for the day tomorrow Preadeux....

As a number of shoes are come up intended for the use of the troops and will be delivered to them att prime cost in England which is 3s 6d a pair, The Regts may receive in the following proportion or as many of that proportion as they like to take by applying to Mr. Tucker agent to Mr. Kelby att the landing place; Royals 284; Forbs 276; Eneskellon Do; Royal Highlanders 376; Preadeux 276; Grenadeers 288; Light Infentry Do; Gages 276; Royal Artillary 56. The Quarter Masters must pay for them att the above mentioned rate.

After Orders for the 1st of August 1759.

The General Court Marshel of which Collo Grant was president is disolved, the General approved of the following sentences of the sd General C Marshel: that Capt Russel of Late Forbs Regt is to make the following submission to Lieut Collo Darby on the perade before the officers of the Regt: "Sr I am sorry I have been guilty of disrespectful behaviour to you as my superior officer & therefore I ask your pardon."

Capt Howard is found not guilty of the crime laid to his charge & is honourably acquitted. . . .

Thos. Bayly a soldier in the 17th Regt accused of theft is found guilty and is to receive 1500 laishes with a cat of nine tails.

William Ray of Gage's Light Infentry accused of insolence & threatning language is found guilty & is sentenced to receive 500 laishes with a cat of nine tails. Samll Whittoe, Corpral in Gage's Light Infentry accused of insolent behaviour is found guilty and sentenced to be reduced to the ranks. Saml. Merrum, of Collo Ruggle's Regt, accused of shooting a man of the Royal is adjudged to have done but his duty & is therefore acquited. Thos. Reed & John Reese of Late Brigade Forbes Regt accused of mutany. Thos. Reed is found guilty of the crime laid to his charge & is, therefore, sentenced to suffer death but in consideration of Serjt Hartford striking John Reese three or four times without any provocation. John Reese is to receive 500 laishes.

The regular Corps to receive provisions tomorrow beginning by break of day with Forbs following Montgomery, Royal Highlanders, Eneskellon, Preadeux, Royals, Gage's Light Infentry. They will receive for 4 days & these men will receive 2 pints of pease apice, the provisions to be immediately dresd as the men will carry it with them. This compleats the Regulars to the 5th inclusive. Babcock & Willard to be ready to march when ordered. They will immediately receive of provisions & 2 pints of pease a man which they will dress & this compleats them to the 6th inclusive. Captain Reed is appointed Major of the Highland Regiment.

Camp att Tyconderogue, Thursday August 2nd, 1759. Parole, Shenactady.

Collo for the day tomorrow, Regular Collo, Montgomery; Provential Collo, Worster; Field officer for the piquit this night, Regular Major Hambleton; Provential Lt. Collo, Smedly; tomorrow night Major Gorden, Lt Collo Putnam; Adjt for the day tomorrow Montgomery.

The Rangers Light Infentry & Grenadeers & Gages will take whale boats to the saw mill river & put them immediately to the nearest place to their encampments provided they do not obstruct the passage of any boats going down & that the boats will be safe. These Corps are desired to take no more whale boats than what are absolutely necessary to carry their number; The Royal & Forbs will load the battoes with the provisions that are on the beach. The Major of Brigade will send the proportion that each is to take. The Corps to have the same number of battoes viz: 2 pr Regt. as allowed in coming from Fort George. If the battoes are over as expected the Regts will embark this night so that everything must be ready but none of the guards relieved till ordered; The Regiments to send a return immediately to the Major of Brigade of what number of battoes they want to compleat them & must have partys waiting att the saw mill to receive them as soon as they come. Mr. Naper director of the Hospatel will fend for a battoe; And the Commesarys are to have one battoe.

140. Customs Commissioners' Report on Trading with the Enemy, May 10, 1759

Introduction

Smuggling among Great Britain's American colonies had grown more commonplace with each protectionist trade law enacted by Parliament. Parliament had passed a series of laws called navigation acts to control the movement of trade goods by sea. The intended effect of these acts was to reserve to English shipping interests and businesses the ability to make money from trade with

England and its colonies. The 1660, 1663, and 1696 navigation acts, as well as the Molasses Act of 1733, had restricted shipping of trade goods, set customs duties on a range of commodities, and established penalties for noncompliance. The 1733 Molasses Act placed a high duty on all foreign molasses, rum, and sugar imported into the North American colonies. Parliament intended this law to protect British West Indian sugar planters from French competition. During the Seven Years' War, called the French and Indian War by Americans, colonial traders who lived and worked on the coast did not concern themselves about events on the western frontier where most of the fighting occurred. Not only did they continue ignoring the law, but they persisted in trading with the French during the war, both in the West Indies and off the coast of Canada. This letter cites the long history of flouting the law and the difficulty of enforcing it in North America and the West Indies.

Primary Source

May it Please Your Lordships

Mr. Pownall, Secretary to the Lords commissioners for Trade and Plantations, having, in his Letter of the 24th February last, transmitted Copies of several Letter, and Representation, which have been made to their Lordships, as far back as the year 1739, relating to great Difficulties, and doubts, which are therein mentioned to have occurred, in the execution of the Acts of Trade, and to evade their force, and effect, to the great prejudice of the Commerce of This Country, and of his Majesty's Revenue of Customs and Duties: We have considered all the said Letters and Representations, and compared them with all the Papers in Our Office relative to these points, which Papers, though they have retrospect of near twenty years, are not found adequate to the Information the Board of Trade are not desirous of receiving on this subject; nevertheless, We beg leave to lay before your Lordships such general Observations, as have occurred to us, on this Occasion, Your Lordships having been already apprized of this Matter by Our Secretary's Letter of the 6T march last, inclosing Copy of the abovementioned Letter from the Board of Trade.

As We humbly presume, it cannot be intended, that We should enter into a Minute detail of the conduct of the Officers of the Customs, in the Plantations, for twenty Years past, or that We should trouble your Lordships with an Account of the repeated Directions, which have been given them, from time to time, for the due execution of their Duty, We beg leave to consider the Papers before mentioned as principally confined, to the three following points Vizt:

1st. The illicit Importation of Rum and Molasses from the French islands into the British Northern Colonies.

2dly. The Importation of Goods from different parts of Europe (particularly Holland, and Hamburgh) into North America, and the carrying Enumerated Goods from thence to the said places, and others

in Europe, contrary to Law, where by all such Imports and Exports are restrained to Great Britain only.

3dly. The pernicious practice of supplying the French Colonies and plantations with provisions from his Majesty's Colonies, or from Ireland.

With respect to the first of these three points, it must occur to your Lordships that so long as the high Duty on Foreign Rum, Sugar, and Molasses, imposed by the Act of 6th of his present Majesty, (and then intended, We apprehend, As a Prohibition) continues, the running of those goods into his Majesty's Northern colonies will be unavoidable, notwithstanding all the Orders that have been given, or may be given, to prevent it; and yet it is extremely difficult to foresee, how far it may be expedient to attempt to remedy this Evil by an alteration of this Law, which was passed, at the request of the British Planters, as an Encouragement to their Trade.

As to the second point, so far as the same relates to the Importation of European Goods into North America, We are to observe, that the great extent of the Coast very much favours the running thereof, before the Masters make their Reports at the Custom house; upon their arrival there a strict Examination of their Clearances is the only cheque upon this practice, and no endeavours have been wanting in this Board to oblige the Officers of the Customs to attend thereto. With respect to Enumerated goods exported from the Northern colonies, in case the Ships that clear out, from thence for Great Britain, will be guilty of Frauds and deviation, by carrying their Goods to other Places in Europe than Great Britain; it is impossible, for the Officers of the Customs, in the Plantations, to prevent it; The Bonds given for the legal discharge of the Cargoes may indeed be put in Suit, if proper Certificates of such discharge be not produced within Eighteen Months, but these prosecutions must be carried on in the ordinary course of proceedings in the Colonies, where, it is apprehended, that Verdicts, upon points of this nature, are not so impartial, as in England.

With respect to the third point, We must confess to our Lordships, that, as in North America opportunities are so easy of supplying the French with provisions, and the distance from hence is so great, We despair, by the means of the officers of the Revenue, of putting any effectual stop thereto, especially, as We find, that the same practice is carried on directly, or indirectly, at so much hazard and expence, even from Ireland, where the Laws are so much less liable to abuse, than under proprietary Governments in North America. . . .

141. Henry Timberlake, *Memoirsof Lieutenant Henry Timberlake*,1765 [Excerpts]

Introduction

Decades of British-Cherokee trade and friendship came to an end as British settlers moved westward and encroached on Cherokee land. In 1758, the Cherokees switched to the French side in the French and Indian War and began raiding frontier settlers. British troops fought a series of battles with the Cherokees. Both sides committed atrocities and slaughtered prisoners. After the French and Indian War ended, the Cherokees could no longer obtain ammunition from the French. In 1761, a force of Scottish Highlanders destroyed some 15 Cherokee towns and their food supplies. The Cherokees, facing starvation, came to a British fort and sued for peace. Colonel Adam Stephen forged an agreement with them on November 19, 1761. Henry Timberlake, a soldier serving under Stephen, volunteered to conduct the Cherokee delegation home to finalize the articles of peace. In 1762, at their request, Timberlake then accompanied three Cherokee chiefs to London to meet the king. In his memoirs, excerpted here, Timberlake describes the peace-making ceremony and provides translations of Chief Ostenaco's speech and a Cherokee war song. The treaty gave the Cherokees land in the mountains of the western Carolinas and eastern Tennessee. White settlers disregarded the treaty and soon began occupying the Cherokees' remaining territory.

Primary Source

After smoaking and talking some time, I delivered a letter from Colonel Stephen, and another from Captain M'Neil, with some presents from each, which were gratefully accepted by Ostenaco and his consort. He gave me a general invitation to his house, while I resided in the country; and my companions found no difficulty in getting the same entertainment, among an hospitable, tho' savage people, who always pay a great regard to any one taken notice of by their chiefs.

Some days after, the headmen of each town were assembled in the town-house of Chote, the metropolis of the country, to hear the articles of peace read, whither the interpreter and I accompanied Ostenaco.

The town-house, in which are transacted all public business and diversions, is raised with wood, and covered over with earth, and has all the appearance of a small mountain at a little distance. It is built in the form of a sugar loaf, and large enough to contain 500 persons, but extremely dark, having, besides the door, which is so narrow that

Cherokee chiefs who travelled to London in 1762. Engraving by George Bickham, ca. 1765. (The Colonial Williamsburg Foundation)

but one at a time can pass, and that after much winding and turning, but one small aperture to let the smoak out, which is so ill contrived, that most of it settles in the roof of the house. Within it has the appearance of an ancient amphitheatre, the seats being raised one above another, leaving an area in the middle, in the center of which stands the fire; the seats of the head warriors are nearest it.

They all seemed highly satisfied with the articles. The peace-pipe was smoaked, and Ostenaco made an harangue to the following effect:

"The bloody tommahawke, so long lifted against our brethren the English, must now be buried deep, deep in the ground, never to be raised again; and whoever shall act contrary to any of these articles, must expect a punishment equal to his offence. Should a strict observance of them be neglected, a war must necessarily follow, and a second peace may not be so easily obtained. I therefore once more recommend to you, to take particular care of your behaviour towards the English, whom we must now look upon as ourselves;

they have the French and Spaniards to fight, and we enough of our own colour, without medling with either nation. I desire likewise, that the white warrior, who has ventured himself here with us, may be well used and respected by all, wherever he goes amongst us."

[...]

A TRANSLATION OF THE WAR-SONG.

HERE'ER the earth's enlighten'd by the sun, Moon shines by night, grass grows, or waters run, Be't known that we are going, like men, afar, In hostile fields to wage destructive war; Like men we go, to meet our country's foes, Who, woman-like, shall fly our dreaded blows; Yes, as a woman, who beholds a snake, In gaudy horror, glisten thro' the brake, Starts trembling back, and stares with wild surprize, Or pale thro' fear, unconscious, panting, flies.

Just so these foes, more tim'rous than the hind, Shall leave their arms and only cloaths behind; Pinch'd by each blast, by ev'ry thicket torn, Run back to their own nation, now its scorn: Or in the winter, when the barren wood Denies their gnawing entrails nature's food, Let them sit down, from friends and country far, And wish, with tears, they ne'er had come to war.

We'll leave our clubs, dew'd with their country show'rs, And, if they dare to bring them back to our's, Their painted scalps shall be a step to fame, And grace our won and glorious country's name. Or if we warriors spare the yielding foe, Torments at home the wretch must undergo. But when we go, who knows which shall return, When growing dangers rise with each new morn? Farewel, ye little ones, yet tender wives, For you alone we would conserve our lives! But cease to mourn, 'tis unavailing pain,

If not fore-doom'd, we soon shall meet again.
But, O ye friends! In case your comrades fall,
Think that on you our deaths for vengeance call;
With uprais'd tommahawkes pursue our blood,
And stain, with hostile streams, the conscious wood,
That pointing enemies may never tell
The boasted place where we, their victims, fell.

142. William Johnson, Report on the Iroquois Confederacy, November 13, 1763 [Excerpt]

Introduction

Superintendent of Indian Affairs in British North America from 1756 to 1774, Sir William Johnson (1715–1774) possessed a keen awareness of the importance of Native Americans to the British as they fought the French for control of North America. The Iroquois trusted Johnson, who treated them fairly and respectfully. In fact, Johnson lived among the Mohawks, was considered a sachem (chief), and had taken as wife a member of the Mohawk elite. Johnson secured Iroquois allegiance during King George's War. Later, with Indian assistance, he led a successful campaign against the French in New York in 1755, and was knighted for his victory. Johnson's ability to gain Iroquois loyalty for the British had far-reaching effects in the conflict with the French, because few Indians were willing to go against the Iroquois Confederacy. He sent this report, an excerpt of which

appears below, to the Board of Trade in London in the fall of 1763, stressing the strength of the Iroquois Confederacy, which controlled a vast territory throughout the middle Atlantic and the Midwest. Johnson believed that if the British would befriend the Iroquois and supply them with weapons, the Iroquois would stymie French aggression in North America. In 1763, Johnson also obtained Iroquois assistance in putting down Pontiac's Rebellion.

Primary Source

Sir William Johnson to the Lords of Trade November 13, 1763

 $[\ldots]$

As Original proprietors, this Confederacy claim the Country of their residence, South of Lake Ontario to the great Ridge of the Blew Mountains, with all the Western part of the province of New York towards Hudsons River, west of the Caats Kill, thence to Lake Champlain, and from Regioghne a Rock at the East side of said lake to Osswegatche or La Gattell on the River St. Lawrence (having long ceded their claim North of said line in favour of the Canada Indians as Hunting ground) thence up the River St. Lawrence and along the South side of Lake Ontario to Niagara.

In right of conquest, they claim all the Country (comprehending the Ohio) along the great Ridge of Blew Mountains at the back of Virginia, thence to the head of the Kentucke River, and down the same to the Ohio above the Rifts, thence Northerly to the South end of Lake Michigan, then along the eastern shore of said lake to Missillimackinac, thence easterly across the North end of Lake Huron to the great Ottwawa River, (including the Chippawea or Mississagey Country) and down the said River to the Island of Montreal.— However, these more distant claims being possessed by many powerful Nations, the Inhabitants have long began to render themselves independent by the assistance of the French, and the great decrease of the Six Nations; but their claim to the Ohio, and thence to the Lakes is not in the least disputed by the Shawanese Delawares ettc., who never transacted any Sales of Land or other matters without their consent, and who sent Deputys to the grand Council at Onondaga on all important occasions.

On my coming to the management of Indian Affairs in 1746, when the Indians refused to meet or treat with our Governours, the Indian interest was from our former neglect in so visible a State of decline, that it was conjectured by many, they would entirely abandon us; in this scituation, it was with the utmost difficulty that I was enabled to prevent their falling off, but by proper measures and personal interest, I was happy enough, not only to keep them in our interest but also to employ many parties of them against the Enemy, who greatly harassed them. On my further appointment by General Braddock (for which I never received any salary) I then acquainted them that I feared, the utmost I could do would be to preserve a neu-

trality, which alone would be of great consequence, and for this my opinion, I had sufficient reason, as the Indians had from the year 1749 to 1754, been continually complaining of neglect, and remonstrating against the growing power of the French, and repeatedly requesting our assistance, on which they would disposess them notwithstanding their Interest with the western Indians whom they had at an immense expence, and by the artful insinuations of Jesuits and other proper Emissaries brought over to them, and which in the declining state of the Six Nations, were too formidable Enemies alone to cope with.

143. Royal Proclamation Concerning America, 1763 [Excerpt]

Introduction

The end of the French and Indian War in North America led to the replacement of French traders with British on the western frontier. The French traders had treated the Indians with a measure of respect, while the British offended the Indians with their arrogant behavior. In addition, British colonists defied their government's treaties by crossing the mountains to settle on the Indian lands of the Ohio River Valley. Pontiac's Rebellion broke out in 1763, as western Indians tried to drive the British traders and settlers back east. In an attempt to address the causes of the rebellion, the Board of Trade in London issued this October 1763 proclamation, which forbade colonists from settling on land west of a line running along the crest of the Appalachian Mountains and ordered existing settlers to return east. The proclamation angered both land-hungry settlers and influential land speculators (including George Washington) who had bought large tracts of Ohio River Valley land. The governments of several colonies had claimed jurisdiction all the way to the Pacific Ocean and now faced the loss of a huge territory. Settlers and speculators alike ignored the proclamation line. Over the course of several years, British authorities negotiated new Indian treaties and shifted the line of settlement inexorably westward.

Primary Source

WHEREAS we have taken into our royal consideration the extensive and valuable acquisitions in America, secured to our crown by the late definitive treaty of peace concluded at Paris the 10th day of February last; . . . we have thought fit . . . hereby to publish and declare to all our loving subjects, that we have, with the advice of our said privy council, granted our letters patent under out great seal of Great Britain, to erect within the countries and islands, ceded and con-

firmed to us by the said treaty, four distinct and separate governments, stiled and called by the names of Quebec, East Florida, West Florida, and Grenada, and limited and bounded as follows, viz.

First, the government of Quebec, bounded on the Labrador coast by the river St. John, and from thence by a line drawn from the head of that river, through the lake St. John, to the South end of the lake Nipissim; from whence the said line, crossing the river St. Lawrence and the lake Champlain in 45 degrees of North latitude, passes along the High Lands, which divide the rivers that empty themselves into the said river St. Lawrence, from those which fall into the sea; and also along the North coast of the Bayes des Chaleurs, and the coast of the Gulph of St. Lawrence to Cape Rosieres, and from thence crossing the mouth of the river St. Lawrence by the West end of the island of Anticosti, terminates at the aforesaid river St. John.

Secondly, The government of East Florida, bounded to the Westward by the Gulph of Mexico and the Apalachicola river; to the Northward, by a line drawn from that part of the said river where the Catahoochee and Flint rivers meet, to the source of St. Mary's river, and by the course of the said river to the Atlantic Ocean; and to the East and South by the Atlantic Ocean, and the Gulph of Florida, including all islands within six leagues of the sea coast.

Thirdly, The government of West Florida, bounded to the Southward by the Gulph of Mexico, including all islands within six leagues of the coast from the river Apalachicola to lake Pontchartrain; to the Westward by the said lake, the lake Maurepas, and the river Mississippi; to the Northward, by a line drawn due East from that part of the river Mississippi which lies in thirty-one degrees North latitude, to the river Apalachicola, or Catahoochee; and to the Eastward by the said river.

Fourthly, The government of Grenada, comprehending the island of that name, together with the Grenadines, and the islands of Dominico, St. Vincent, and Tobago.

And to the end that the open and free fishery of our subjects may be extended to, and carried on upon the coast of Labrador and the adjacent islands, we have thought fit . . . to put all that coast, from the river St. John's to Hudson's Streights, together with the islands of Anticosti and Madelane, and all other smaller islands lying upon the said coast, under the care and inspection of our governor of Newfoundland.

We have also . . . thought-fit to annex the islands of St. John and Cape Breton, or Isle Royale, with the lesser islands adjacent thereto, to our government of Nova Scotia. We have also . . . annexed to our province of Georgia, all the lands lying between the rivers Attamaha and St. Mary's.

And \dots we have \dots given express power and direction to our governors of our said colonies respectively, that so soon as the state and

circumstances of the said colonies will admit thereof, they shall, with the advice and consent of the members of our council, summon and call general assemblies within the said governments respectively, in such manner and form as is used and directed in those colonies and provinces in America, which are under our immediate government; and we have also given power to the said governors, with the consent of our said councils, and the representatives of the people so to be summoned as aforesaid, to make, constitute, and ordain laws, statutes, and ordinances for the public peace, welfare, and good government of our said colonies, and of the people and inhabitants thereof, as near as may be, agreeable to the laws of England, and under such regulations and restrictions as are used in other colonies; and in the mean time, and until such assemblies can be called as aforesaid, all persons inhabiting in, or resorting to, our said colonies, may confide in our royal protection for the enjoyment of the benefit of the laws of our realm of England: for which purpose we have given power under our great seal to the governors of our said colonies respectively, to erect and constitute, with the advice of our said councils respectively, courts of judicature and public justice within our said colonies, for the hearing and determining all causes as well criminal as civil, according to law and equity, and as near as may be, agreeable to the laws of England, with liberty to all persons who may think themselves aggrieved by the sentence of such courts, in all civil cases, to appeal, under the usual limitations and restrictions, to us, in our privy council.

[Governors of the three new continental colonies may grant land therein.] And . . . we do hereby command and impower our governors of our said three new colonies, and other our governors of our several provinces on the continent of North America, to grant, without fee or reward, to such reduced officers as have served in North America during the late war, and are actually residing there, and shall personally apply for the same, the following quantities of land, subject, at the expiration of ten years, to the same quit rents as other lands are subject to in the province within which they are granted, as also subject to the same conditions of cultivation and improvement, viz.

To every person having the rank of a field officer, 5000 acres. To every captain, 3000 acres.
To every subaltern or staff officer, 2000 acres.
To every non-commission officer, 200 acres.
To every private man 50 acres.

We do likewise authorise and require the governors and commanders in chief of all our said colonies upon the continent of North America to grant the like quantities of land, and upon the same conditions, to such reduced officers of our navy of like rank, as served on board our ships of war in North America at the times of the reduction of Louisbourg and Quebec in the late war, and who shall personally apply to our respective governors for such grants.

And whereas it is just and reasonable, and essential to our interest, and the security of our colonies, that the several nations or tribes of Indians, with whom we are connected, and who live under our protection, should not be molested or disturbed in the possession of such parts of our dominions and territories as, not having been ceded to, or purchased by us, are reserved to them, or any of them, as their hunting grounds; we do . . . declare it to be our royal will and pleasure, that no governor, or commander in chief, in any of our colonies of Quebec, East Florida, or West Florida, do presume, upon any pretence whatever, to grant warrants of survey, or pass any patents for lands beyond the bounds of their respective governments, as described in their commissions; as also that no governor or commander in chief of our other colonies or plantations in America, do presume for the present, and until our further pleasure be known, to grant warrant of survey, or pass patents for any lands beyond the heads or sources of any of the rivers which fall into the Atlantic Ocean from the west or north-west; or upon any lands whatever, which not having been ceded to, or purchased by us, as aforesaid, are reserved to the said Indians, or any of them.

And we do further declare it to be our royal will and pleasure, for the present, as aforesaid, to reserve under our sovereignty, protection, and dominion, for the use of the said Indians, all the land and territories not included within the limits of our said three new governments, or within the limits of the territory granted to the Hudson's Bay company; as also all the land and territories lying to the westward of the sources of the rivers which fall into the sea from the west and north-west as aforesaid.

[Persons who have inadvertently settled upon such reserved lands to remove. No sale of Indian lands to be allowed, except to the Crown. The Indian trade to be free to English subjects, under licence from the governor or commander in chief of some colony. Fugitives from justice, taking refuge in this reserved territory, to be apprehended and returned.]

144. Treaty of Paris, February 10, 1763 [Excerpt]

Introduction

The French and Indian War (known as the Seven Years' War in Europe) began in America in 1754. Active combat in North America ended with the French surrender of Canada in 1760. However, war between Britain and France continued until 1763. Signed on February 10, 1763, by representatives from Great Britain, France, and Spain, the Treaty of Paris formally ended the conflict. The British emerged from the war victorious and, with substantial help

from their American colonists, swept the French from the North American continent. Spain lost Cuba and Florida to Britain but, in a secret treaty with France in 1762, received the territory of Louisiana west of the Mississippi River. Britain also gained colonial possessions in Africa and the West Indies, establishing it as the world's leading imperial power. The territorial claims established by this treaty endured less than twenty years. France was destined to return to North America as an American ally during the Revolutionary War. Great Britain, in losing the Revolutionary War, ultimately lost control of the vast territory west of the Allegheny Mountains. In 1800, France reacquired the Louisiana territory from Spain, and sold it to the United States three years later.

Primary Source

The definitive Treaty of Peace and Friendship between his Britannick Majesty, the Most Christian King, and the King of Spain. Concluded at Paris the 10th day of February, 1763. To which the King of Portugal acceded on the same day. (Printed from the Copy.)

[...]

Article I. There shall be a Christian, universal, and perpetual peace, as well by sea as by land, and a sincere and constant friendship shall be re-established between their Britannick, Most Christian, Catholick, and Most Faithful Majesties, and between their heirs and successors, kingdoms, dominions, provinces, countries, subjects, and vassals, of what quality or condition soever they be, without exception of places or of persons: So that the high contracting parties shall give the greatest attention to maintain between themselves and their said dominions and subjects this reciprocal friendship and correspondence, without permitting, on either side, any kind of hostilities, by sea or by land, to be committed from henceforth, for any cause, or under any pretence whatsoever, and every thing shall be carefully avoided which might hereafter prejudice the union happily reestablished, applying themselves, on the contrary, on every occasion, to procure for each other whatever may contribute to their mutual glory, interests, and advantages, without giving any assistance or protection, directly or indirectly, to those who would cause any prejudice to either of the high contracting parties: there shall be a general oblivion of every thing that may have been done or committed before or since the commencement of the war which is just ended.

 $[\ldots]$

IV. His Most Christian Majesty renounces all pretensions which he has heretofore formed or might have formed to Nova Scotia or Acadia in all its parts, and guaranties the whole of it, and with all its dependencies, to the King of Great Britain: Moreover, his Most Christian Majesty cedes and guaranties to his said Britannick Majesty, in full right, Canada, with all its dependencies, as well as the island of Cape Breton, and all the other islands and coasts in the

gulph and river of St. Lawrence, and in general, every thing that depends on the said countries, lands, islands, and coasts, with the sovereignty, property, possession, and all rights acquired by treaty, or otherwise, which the Most Christian King and the Crown of France have had till now over the said countries, lands, islands, places, coasts, and their inhabitants, so that the Most Christian King cedes and makes over the whole to the said King, and to the Crown of Great Britain, and that in the most ample manner and form, without restriction, and without any liberty to depart from the said cession and guaranty under any pretence, or to disturb Great Britain in the possessions above mentioned. His Britannick Majesty, on his side, agrees to grant the liberty of the Catholick religion to the inhabitants of Canada: he will, in consequence, give the most precise and most effectual orders, that his new Roman Catholic subjects may profess the worship of their religion according to the rites of the Romish church, as far as the laws of Great Britain permit. His Britannick Majesty farther agrees, that the French inhabitants, or others who had been subjects of the Most Christian King in Canada, may retire with all safety and freedom wherever they shall think proper, and may sell their estates, provided it be to the subjects of his Britannick Majesty, and bring away their effects as well as their persons, without being restrained in their emigration, under any pretence whatsoever, except that of debts or of criminal prosecutions: The term limited for this emigration shall be fixed to the space of eighteen months, to be computed from the day of the exchange of the ratification of the present treaty.

[...]

VII. In order to reestablish peace on solid and durable foundations, and to remove for ever all subject of dispute with regard to the limits of the British and French territories on the continent of America; it is agreed, that, for the future, the confines between the dominions of his Britannick Majesty and those of his Most Christian Majesty, in that part of the world, shall be fixed irrevocably by a line drawn along the middle of the River Mississippi, from its source to the river Iberville, and from thence, by a line drawn along the middle of this river, and the lakes Maurepas and Pontchartrain to the sea; and for this purpose, the Most Christian King cedes in full right, and guaranties to his Britannick Majesty the river and port of the Mobile, and every thing which he possesses, or ought to possess, on the left side of the river Mississippi, except the town of New Orleans and the island in which it is situated, which shall remain to France, provided that the navigation of the river Mississippi shall be equally free, as well to the subjects of Great Britain as to those of France, in its whole breadth and length, from its source to the sea, and expressly that part which is between the said island of New Orleans and the right bank of that river, as well as the passage both in and out of its mouth: It is farther stipulated, that the vessels belonging to the subjects of either nation shall not be stopped, visited, or subjected to the payment of any duty whatsoever. The stipulations inserted in the IVth article, in favour of the inhabitants of Canada shall also take place with regard to the inhabitants of the countries ceded by this article.

[...]

XI. In the East Indies Great Britain shall restore to France, in the condition they are now in, the different factories which that Crown possessed, as well as on the coast of Coromandel and Orixa as on that of Malabar, as also in Bengal, at the beginning of the year 1749. And his Most Christian Majesty renounces all pretension to the acquisitions which he has made on the coast of Coromandel and Orixa since the said beginning of the year 1749. His Most Christian Majesty shall restore, on his side, all that he may have conquered from Great Britain in the East Indies during the present war; and will expressly cause Nattal and Tapanoully, in the island of Sumatra, to be restored; he engages farther, not to erect fortifications, or to keep troops in any part of the dominions of the Subah of Bengal. And in order to preserve future peace on the coast of Coromandel and Orixa, the English and French shall acknowledge Mahomet Ally Khan for lawful Nabob of the Carnatick, and Salabat Jing for lawful Subah of the Decan; and both parties shall renounce all demands and pretensions of satisfaction with which they might charge each other, or their Indian allies, for the depredations or pillage committed on the one side or on the other during the war.

XII. The island of Minorca shall be restored to his Britannick Majesty, as well as Fort St. Philip, in the same condition they were in when conquered by the arms of the Most Christian King; and with the artillery which was there when the said island and the said fort were taken.

[…]

XIV. France shall restore all the countries belonging to the Electorate of Hanover, to the Landgrave of Hesse, to the Duke of Brunswick, and to the Count of La Lippe Buckebourg, which are or shall be occupied by his Most Christian Majesty's arms: the fortresses of these different countries shall be restored in the same condition they were in when conquered by the French arms; and the pieces of artillery, which shall have been carried elsewhere, shall be replaced by the same number, of the same bore, weight and metal.

 $[\ldots]$

XX. In consequence of the restitution stipulated in the preceding article, his Catholick Majesty cedes and guaranties, in full right, to his Britannick Majesty, Florida, with Fort St. Augustin, and the Bay of Pensacola, as well as all that Spain possesses on the continent of North America, to the East or to the South East of the river Mississippi. And, in general, every thing that depends on the said countries and lands, with the sovereignty, property, possession, and all

rights, acquired by treaties or otherwise, which the Catholick King and the Crown of Spain have had till now over the said countries, lands, places, and their inhabitants; so that the Catholick King cedes and makes over the whole to the said King and to the Crown of Great Britain, and that in the most ample manner and form. His Britannick Majesty agrees, on his side, to grant to the inhabitants of the countries above ceded, the liberty of the Catholick religion; he will, consequently, give the most express and the most effectual orders that his new Roman Catholic subjects may profess the worship of their religion according to the rites of the Romish church, as far as the laws of Great Britain permit. His Britannick Majesty farther agrees, that the Spanish inhabitants, or others who had been subjects of the Catholick King in the said countries, may retire, with all safety and freedom, wherever they think proper; and may sell their estates, provided it be to his Britannick Majesty's subjects, and bring away their effects, as well as their persons.

Without being restrained in their emigration, under any pretence whatsoever, except that of debts, or of criminal prosecutions: the term limited for this emigration being fixed to the space of eighteen months, to be computed from the day of the exchange of the ratifications of the present treaty. It is moreover stipulated, that his Catholick Majesty shall have power to cause all the effects that may belong to him, to be brought away, whether it be artillery or other things.

XXI. The French and Spanish troops shall evacuate all the territories, lands, towns, places, and castles, of his Most faithful Majesty in Europe, without any reserve, which shall have been conquered by the armies of France and Spain, and shall restore them in the same condition they were in when conquered, with the same artillery and ammunition, which were found there: And with regard to the Portuguese Colonies in America, Africa, or in the East Indies, if any change shall have happened there, all things shall be restored on the same footing they were in, and conformably to the preceding treaties which subsisted between the Courts of France, Spain, and Portugal, before the present war.

145. William Trent, Account of the Siege of Fort Pitt, June 1763 [Excerpt]

Introduction

The end of the French and Indian War in North America led to British traders replacing French traders on the western frontier. In addition, the British built a number of permanent frontier forts and British colonists defied their government's treaties by crossing the mountains to settle on the Indian lands of the Ohio River Valley. Pontiac's Rebellion—named after a chief of the Ottawas—broke

out in the spring of 1763, as western Indians tried to drive the British traders and settlers back east. The tribes of the Northwest Territory killed or captured some 2,000 frontier settlers, and attacked the major frontier forts, among them Fort Pitt (at the site of Pittsburgh, Pennsylvania). Fort Pitt remained under siege during the summer months of 1763 until relief came in August. To meet the crisis, the fort's commander placed Indian trader and former soldier William Trent in command of a newly-raised company of militia. Trent kept a journal throughout the siege. Most notable in this excerpt is evidence of early biological warfare. Confronted with a delegation of Indians pretending friendship, Trent reports that he gave them a special gift for their chief—blankets and a handkerchief that had belonged to smallpox patients.

Primary Source

June 16th Four Shawnesse appeared on the opposite side of the Ohio and desired that Mr. McKee would go over and speak to them. . .

June 17th The same Indians came and called again and desired Mr. McKee would come over, he refused; they then recommend it to him to set off for the Inhabitants in the Night, or to come over to them and they would take care of him at their Towns till the War was over, they acquainted him all Nations had taken up the Hatchett against us, and that they intended to attack this Post with a great Body in a few days; that Venango and all the other Posts that way were already cut off, that they were afraid to refuse taking up the Hatchet against us as so many Nations had done it before it came to them. . . .

18th The Enemy set fire to another House up the Ohio....

19th Two Indians crep along the Bank of the Mono [ngahela towards the] Centinel who was posted on the Bank of the River and [FIRED AT HIM.] Soon after a number of Indians were seen at the Head of the [FIELDS] taking of some Horses, and the Garrison was turning out one Stuart a Soldiers Gun went of by accident and mortaly wounded him of which he dyed the next day. . . .

22nd Between 9 and 10 o'Clock in the Morning a smoke was seen rising on the Back of Grants Hill where the Indians had made a fire and about 2 o'Clock several of them appeared in the Spelts field moving of the Horses and Cattle. About 5 o'Clock one James Thompson who it was supposed was gone after a Horse was killed and scalped in sight of the Fort on this a great number of Inds appeared on each River and on Grants Hill shooting down the Cattle and Horses. A Shell was thron amongst a number of them from a Hauwitz [howitzer] which burst just as it fell among them. About an Hour after they fired on the Fort from Grant's Hill and the other side of the Ohio, a shot from the opposite side of the Ohio wounded a Man in the Mongehele Bastion. About 7 o'Clock three Indians were seen about 150 yards from the Fort on the Monongehela Bank. Mr. McKee and two others fired on them and killed one of them.

24th The Turtles Heart a principal Warrior of the Delawares and Mamaltee a Chief came within a small distance of the Fort Mr. McKee went out to them and they made a Speech letting us know that all our [POSTS] as Ligonier was destroyed, that great numbers of Indians [were'coming and] that out of regard to us, they had prevailed on 6 Nations [not to] attack us but give us time to go down the Country and they desired we would set of immediately. The Commanding Officer thanked them, let them know that we had everything we wanted, that we could defend it against all the Indians in the Woods, that we had three large Armys marching to Chastise those Indians that had struck us, told them to take care of their Women and Children, but not to tell any other Natives, they said they would go and speak to their Chiefs and come and tell us what they said, they returned and said they would hold fast of the Chain of friendship. Out of our regard to them we gave them two Blankets and an Handkerchief out of the Small Pox Hospital. I hope it will have the desired effect. They then told us that Ligonier had been attacked, but that the Enemy were beat off.

The 25th A Shawnese Indian came across the River and Spoke to Mr McKee and told him that two days ago Sixty Miles off, he left a large Body of Indians on their march for this place to attack it and the Delawares that were here were going to join them...

The 26th Six o'Clock in the Morning Ensn Price with five men came in from Le Beauff [Fort Le Boef, now Waterford] and gave the following Account of his miraculous escape from that place and while they were Bringing him across the River seven Ind[ians showed them] selves on Grants Hill.

Early in the morning of the 18th instant five Indians [came to] his Post and asked for some Tobacco and provisions, which he gave to them. Soon after they went off about 30 men came down the Road leading to Prisque Isle, laid their Arms down a small distance off, came and asked liberty to come in and said they were going to War against the Cherokees, wou'd stay with him that night and that they purposed to pass by Fort Pitt in order to speak with Mr. Croghan; Mr Price suspecting their design had all his people under Arms and wou'd not suffer them to go in, upon this the Indians took up their Arms and got to the back of an Out store where they picked out the Stones it was underpinn'd with and got into it, then they began to roll out the Barrels of Provisions and shoot fired Arrows into the top of the Blockhouse which was put out several times, this continued till sometime in the night when Mr. Price finding it impossible to defend the place any longer or prevent its being consumed took the advantage of the Night, got all his people out of a window and made off without being observed, but unfortunately lost six of his men and a woman who he supposes fell into the hands of the Enemy, sometime after he left the Blockhouse the Indians began to fire it, when he came to Venangoe found it in Ashes, kept the Road all the way here and saw the bones of several people who had been killed going Exp[ress.] they were Six Nation Indians who attacked him....6 o'Clock in the Mternoon a S[oldier arrived] who made his escape from Presqu' Isle and says that on the 19th inst. that Post was attacked by 250 Indians which continued for two days, and that the Indians had made holes in the Bank and fired through, that the Officer (Mr. Christy) Capitulated, that the Indians were to give them 6 days Provisions and escort them safe to this Post. It was the Ottawas, Chipawas, Wyandotts and Senecas that took the Post, that after they had delivered the Indians their Arms, while the Indians were engaged in carrying out the Provisions and other Stores, he being at some distance hearing a Woman scream he imagined they were beginning to Tomhawk the Garrison he made his escape, that another Soldier likewise attempted to make his escape but fears he did not get off, that the Indians had fired the Roof of the Block House a great many times before they Capitulated and that they as often put it out, he further says that the Schooner was in sight and kep there sounding with their Boat to try if they could get in to their Assistance but that there was not Water enough, that the Indians told them they had destroyed 800 Barrels of Provisions at the Store House where the Schooner was to load and that he believes the Schooner had no Provisions on board. Nine o'Clock at Night two Expresses were sent of to the General by way of Fort Cumberland on the other side of Monongehela with these Accounts

Introduction

The end of the French and Indian War in North America led to the replacement of French traders with British on the western frontier. In addition, the British built a number of permanent frontier forts, and British colonists defied their government's treaties by crossing the mountains to settle on the Indian lands of the Ohio River Valley. Pontiac's Rebellion—named after a chief of the Ottawas broke out in the spring of 1763, as western Indians tried to drive the British traders and settlers back east. The tribes of the Northwest Territory killed or captured some 2,000 frontier settlers, and attacked the major frontier forts, among them Fort Pitt (at the site of Pittsburgh, Pennsylvania). Fort Pitt remained under siege during the summer months of 1763 until relief came in August. At least 400 Delawares, Shawnees, Wyandots, and Mingos surrounded the fort. Colonel Henry Bouquet reports here that he led some 460 men on a march that departed Carlisle, Pennsylvania, on July 28 and arrived at Fort Pitt on August 5. A 12-hour battle ensued outside the fort. Fifty of Bouquet's men were killed and 60 wounded by the time they routed the Indians. Bouquet and his troops continued to move westward and stayed on campaign until the rebellion was subdued.

Col. Henry Bouquet to Major Henry Gladwin August 28, 1763

Dear Sir

I had Last Night the very great Pleasure to receive Your Letter of the 28th July, by Your Express Andrew, who Says he was detan'd by Sicknes at Sandusky Your Letters for the General are forwarded.

A Mohawk having reported to Sir Wm Johnson that De Troite was taken, I could not help being uneasy tho' Long acquainted with Indian Lies.

It was a great Sattisfaction to me to Know from Your Self that You have been able to defend that post, with so few Men, against that Multitude, what was Known below of Your firm and prudent Conduct from the beginning of the Insurrection, had obtain'd the Generals approbation, and does You the greatest honor.

The Loss of all our Detain'd posts, is no more than could be expected from their Defenseless State; But Capt. Cambells Death affects me Sensibly.

I pity the unfortunate who remain Yet in the Power of the Barbarians, as every Step we take to rescue them, may and will probably hasten their Death.

Your Express says that after he left the De Troite, two Wiandots told him that the Detachment of 300 Men from Niagara had Joyn'd You with provisions. This will give You some ease till more Effectual reinforcements can be sent.

You Know that You are to have the Command of all the Troops destin'd for De Troite and to retake possession of the Country now fallen into the hands of the Enemy: To that Effect the General collects all the Troops that can be spar'd at Niagara and Presque Isle. The remains of the 42d. and 77th Were order'd to Joyn You this way when we had Intelligence that Venang had been Surpris'd Lt. Gordon and all his unfortunate Garrison Masacred; Le Beuf abandonn'd, and Presque Isle Surrender'd to my unspeakable astonishment, as I Knew the Strengt of that Block house, which would have been reliev'd from Niagara.

Fort Pitt was attack'd and invested by all the Delawar's and part of the Shavanese, Wiandots, and Mingoes, to the Number of 400 by their Account, but much more Considerable as we found afterwards, besides their Women and Children which they had brought here to Carry the plunder to their Towns, not doubting to take the Peace. Fort Burd on the Mononghehela, Bushy Run, and Stony Creek, were abandon'd for want of Men.

Ligoneer a post of great consequence to us was defended with a handful of Men by Lieut. Blane, and Capt. Ecuyer baffled all their Efforts here. [There] The fort was open on three Sides; The

1148 146. Henry Bouquet, Reports on the Relief of Fort Pitt

Floods having undermin'd the Sodwork, the rampart had tumbled in ye Ditch.

He Pallessadoed, and Frais'd the whole, rais'd a parapet all round, and in a short time with a small Garrison, he has made it impregnable for Savages. Besides their attacks on the Forts, they Kept parties on the Communication and interrupted all Expresses, while others falling upon the Fronteer Settlements Spread terror and desolation through the whole Country.

Things being in that Situation I receiv'd Orders to March with the above Troops, the only force the General could collect at that time for the relief of this Fort which was in great want of provisions, The Little Flouer they had being damag'd: In that pressing danger the provinces refus'd to give us the Least assistance; having form'd a Convoy. I march'd from Carlisle the 18th of July with about 460 Rank & File, being the remains of the 42d. & 77th Regts. Many of them convalesants. I Left 30 Men at Bedford and as many at Ligoneer, where I arriv'd on the 2d. Instant, Having no Intelligence of the enemy I determin'd to Leave the Waggons at that post, and to proceed with 400 Horses Loaded with Flour, to be Less incumber'd in case of an action.

I Left Ligoneer the 4th. And on the 5th. Instant at One O'Clock P.M. after marching 117 Miles we were Suddenly attack'd by all the Savages collected about Fort Pitt: I shall not enter into the Detail of that obstinate Action which Lasted till Night, and beginning Early on the 6th Continued till One O'Clock when at Last we routed them. They were pursued about two Miles and so well dispersed that we have not seen one since, as we were excessively distress'd by the total want of Water, we March'd immideately to the Nearest Spring without inquiring into the Loss of the enemy, who must have Suffer'd greatly by their repeated and bold Attacks in which they were constantly repuls'd; Our Loss is very Considerable.

After delivering our Convoy here Part of the Troops were embark'd and sent down the River to Cutt off the Shavanese the rest went back to Ligoneer, and brought our Waggons on the 22d. The great fatigues of Long Marches, and of being always under Arms has Occasion'd great Sickness, which with the Loss in the Action, puts it out of my power to Send You the remains of the two Regiments ordered to joyn You by Presque Isle, till I receive a reinforcement; This gives me great uneasiness, as I Know that they are much Wanted. But You may be assur'd that we shall do every thing in the Power of Men, to assist You. I am to remain here my self ready to go down the River with a Strong Body, which is to be ordered up for that Service.

As I have no means to procure Intelligence from Presque Isle, I am oblig'd to Send Your Express that Way, and at his return I will dis-

patch him by Sandusky, with what News I may then have receiv'd: and a Duplicate of this.

It is very agreeable to me to hear that our Officers with You, have been so happy as to obtain Your Approbation of their Services, and I am much obliged to You for the honor You have done them.

I inclose the Latest papers we have: Two of our Battalions are reduc'd. I know nothing Certain of the number of Corps remaining.

I am
Dear Sir
Your most obedient & Humble Servant

Col Henry Bouquet to Lieut. James MacDonald August 28, 1763

Sir

I had Last Night by the Indian Andrew Your Letter of the 29^{th.} July with it's Enclosur's, for which I am much oblig'd to You. The other Letter of the 14th is not yet come to hand.

The Loss of our good and worthy Friend Captain Campbell affects me Extremely. He had treated those infamous Barbarians with so much Generosity and Benevolence, that I flatter'd myself they would have Spar'd his Life: but they must be rank'd with the Panthers of their Forests, and treated in the same Way.

I am much Concern'd of such of our Officers and Men who have had the Misfortune to fall in their hands, If we cannot rescue them, we shall at Least revenge their Death, upon the perfidious Wretches in whose power they now are.

We have on our March to the relief of this Fort, which was closely beset, defeated in the Woods a Large Body of Savages Compos'd of part of the Wiandots, Shavanese, Mingos and all the Delawar's, who are recon'd and thinck them selfs the best Warriors in the Woods; Indeed they fought with the greatest bravery and resolution for two days, that the Action Lasted, on the 5th and 6th Instant; They are now all dispers'd, and we have not Seen any since; The Highlands. Are the bravest men I ever Saw, and their behaviour in that obstinate affair does them the highest honor.

In all 50 Kill'd, and 60 Wounded

I wish the same Success, with a Less considerable Loss, may attend the other bodies of Troops employ'd against those Villains. They may fight this way but never with the same Spirit and confidence. We expect a Reinforcement to push this Luky plow and forward some Troops to Your assistance.

Major Gladwin expresses his Sattisfaction of the Services of the Officers with him in a manner very honorable to them, and which gives me very great pleasure.

I'll write You a duplicate by Sandusky. I beg my Compliments to our Friends, all is well here.

I am very Sincer'ly Sir Your most Obedient humble Servt.

Gov. James Hamilton to Col. Henry Bouquet August 29, 1763

Sir

I received with the greatest pleasure your letter of the 11 instant, and most sincerely congratulate you, as well on your Victory and triumph over the Indians, as on your having fully accomplish'd the purpose of your expedition, by the relief of Fort Pitt.—very important services both, and of the utmost consequence to these Colonies! And which, I am in hopes, will appear so considerable in the eyes of Our Superiors, as to entitle the Conductor to some valuable work of their approbation.

147. Pontiac, Letter addressed to the Commander of Detroit, October 30, 1763

Introduction

The end of the French and Indian War in North America led to British traders replacing French traders on the western frontier. In addition, the British built a number of permanent frontier forts, and British colonists defied their government's treaties by crossing the mountains to settle on the Indian lands of the Ohio River Valley. Pontiac's Rebellion—named after a chief of the Ottawas—broke out in the spring of 1763, as western Indians tried to drive the British traders and settlers back east. The tribes of the Northwest Territory killed or captured some 2,000 frontier settlers, and attacked the major frontier forts. The Indians succeeded in taking all but Fort Pitt, Fort Niagara, and Fort Detroit. The British held out at Detroit for five months against the siege mounted by Pontiac himself and the Ottawas. Running low on ammunition, Pontiac made a peace overture in this letter (the original was in French) to the British commander of the fort. Despite the name given to the uprising by the British, Pontiac did not command the other tribes and villages.

The rebellion died down gradually over the course of the next two years, finally ending in 1766 after the many native combatants made peace one village at a time.

Detroit, Nov. 1, 1763

Copy of the Letter addressed to the Commander of Detroit by Pontiac, the 30th of October, 1763.

My Brother:

The word which my Father sent me to make peace, I have accepted; all my young men have buried their hatchets: I think that you will forget all the evil things which have occurred for some time past. Likewise, I shall forget what you may have done to me, in order to think nothing but good. I, the Saulteurs, the Hurons, we will come to speak when you ask us. Give us a reply. I am sending this council to you in order that you may see it. If you are as good as I, you will send me a reply. I wish you good day.

Signed,

Pontiac

148. Parliament, Debate on Army Strength in America, March 1763 [Excerpt]

Introduction

The end of the Seven Years' War, called the French and Indian War by Americans, marked the end of France's last serious challenge to British control of North America. However, British security in the colonies was far from complete. The French planned to keep a large garrison and naval force at the islands they still controlled in the Caribbean. Less than a month after the signing of the Treaty of Paris, Parliament discussed the fact that their troops were spread too thinly over their colonial empire. The Secretary of War argued that the continued French military presence in the western hemisphere demanded a major British military force in America. British authorities generally agreed that the American colonists should be paying the cost of any troops stationed among them. However, they disagreed as to the number of troops required, with some advocating a sharp reduction of troops in America. The Lord Mayor of London, for example, suggested that money should be collected from Americans and used in England. They eventually settled on a plan to keep 10,000 regulars in North America. The laws enacted in the postwar period regarding the deployment of troops in America and the taxation of colonists stirred widespread protests that eventually led to the American Revolution.

Primary Source

Sir Roger Newdigate's Report

Mr. Ellis Secretary at War... American army 10,000 in 20 battalions. All the Islands and continent of old and new dominions to be garrisoned from hence. Difference, now 500, before 529, the establishment of the regiment. This plan to be considered as an experiment. You cannot yet judge. Authorised to say it is the intention of government that another year, this country shall not be loaded with this corps but that the country who have immediate benefit shall pay them.

Battalions. Jamaica 2. Antigua [?] 1. Grenada 1. Senegal 1. St. Vincent, Dominica and Tobago 1. St., Augustine and Florida 2. Mobile and Louisiana and Mississippi 2. Lake Michigan and Huron. Huron and Lake Erie, called [....]. Lake Erie and Ontario. Niagara. Oswego. Frontenac. Montreal. Quebec. Trois Rivieres. [...] Bay. St. Johns. Newfoundland. Louisbourg. Nova Scotia. New York. Boston. Carolinas. Internal Forts. Ohio etc.: some may be slighted.

Independent companies will be reduced.

Argued in Canada upwards of 90,000 subjects not including the Indians. Canadians to be under a new government.

The Royal Edict of France in a Gazette. They are to have 23,000 men, half in their islands, half on board their fleet, to serve alternately. From this a greater number of officers are clearly necessary. No post can be without a commissioned officer, nor with one only. You will have a bottom of an army easily to be augmented. . . . Next year America to pay itself.

Deduct 10,000	American	£114,340
	Army	£717,853
	Saving	£105,133

Then you had only 4 battalions in America. Now you will have the foundations of a great army there.

Mr. Pitt. . . . 10,000 men hardly enough to speak to one another if a communication is needed. In Canada 15 or 16,000 men [. . .] as much as any the King of France's.

Charles Jenkinson's Report

Mr. Secretary at War opened the estimate of the army stating at length the plan of reduction, the establishment of peace in Great

Britain, Minorca, Gibraltar and the colonies; the number of men and officers. The expense and distribution of these over the several countries to which they are allotted. Gave notice that the garrisons of Gibraltar and Minorca would be strengthened from Ireland and that the American force was intended to be paid for a future year by America. That the French propose keeping a great force in their islands, this a sufficient reason for our keeping a great force in America; the great number of posts in this country a reason for small corps with a great many officers.

Lord Mayor of London. Why not reduce the army as low as after the peace of Ryswick.... France is greatly reducing her army lower than ever before. We should follow her example. America can pay an army but that no inducement to keep one there. The money may be transmitted to England and applied to uses here....

Mr. Pitt. This peace an armed truce only. Therefore for a greater number of men.... Thinks that the American force is hardly sufficient for so large an extent of country. The Crown can acquire no influence by means of that force. Strong in praise of the Highlanders who served during the course of the present war, would have them encouraged to settle in North America....

General Townshend. Unequal to answer Pitt. Strong in defence of the peace.... Strong in favour of the plan of reduction. The force in America sufficient. Would not have been for so great a force if it was not for the preservation of our new conquests. Admires the plan of making the American army to be paid by the Americans.

149. Benjamin Franklin, Narrative of the Paxton Boys Massacre, 1764 [Excerpt]

Introduction

At the end of the French and Indian War in North America, the British built a number of permanent frontier forts, and British colonists defied their government's treaties by crossing the mountains to settle on the Indian lands of the Ohio River Valley. Pontiac's Rebellion—named after a chief of the Ottawas—broke out in the spring of 1763, as western Indians tried to drive the British traders and settlers back east. The settlers on the western frontier bore the brunt of the uprising, as Indians killed or captured some 2,000 of them. Many of Pennsylvania's frontier dwellers believed that the pacifist-controlled colonial legislature, governing from the safety and comfort of Philadelphia, was not doing enough to protect them. In December 1763, some 50 Pennsylvania frontiersmen, members

of a gang called the Paxton Boys, set upon the village of Conestoga, where lived 22 peaceable, friendly Indians. The gang murdered 20 inhabitants, including children, then moved on to Lancaster and killed another 14 Indians who had taken refuge there. In 1764, about 600 Paxton Boys marched to Philadelphia to present their grievances and demand legislative action to protect the frontier. The killings aroused widespread disgust, as expressed in this essay by Benjamin Franklin.

Primary Source

Narrative of the Paxton Boys Massacre

These Indians were the remains of a tribe of the Six Nations, settled at Conestogo, and thence called Conestogo Indians. On the first arrival of the English in Pennsylvania, messengers from this tribe came to welcome them, with presents of venison, corn, and skins; and the whole tribe entered into a treaty of friendship with the first proprietor, William Penn, which was to last "as long as the sun should shine, or the waters run in the rivers."

This treaty has been since frequently renewed, and the chain brightened, as they express it, from time to time. It has never been violated, on their part or ours, till now. As their lands by degrees were mostly purchased, and the settlements of the white people began to surround them, the proprietor assigned them lands on the manor of Conestogo, which they might not part with; there they have lived many years in friendship with their white neighbours, who loved them for their peaceable inoffensive behaviour.

It has always been observed that Indians settled in the neighbourhood of white people do not increase, but diminish continually. This tribe accordingly went on diminishing, till there remained in their town on the manor but twenty persons, viz.: seven men, five women, and eight children, boys and girls.

Of these, Shehaes was a very old man, having assisted at the second treaty held with them, by Mr. Penn, in 1701, and ever since continued a faithful and affectionate friend to the English. He is said to have been an exceeding good man, considering his education, being naturally of a most kind, benevolent temper.

Peggy was Shehaes's daughter; she worked for her aged father, continuing to live with him, though married, and attended him with filial duty and tenderness.

John was another good old man; his son Harry helped to support him.

George and Will Soc were two brothers, both young men.

John Smith, a valuable young man of the Cayuga nation, who became acquainted with Peggy, Shehaes's daughter, some few years

since, married, and settled in that family. They had one child, about three years old.

Betty, a harmless old woman; and her son Peter, a likely young lad.

Sally, whose Indian name was Wyanjoy, a woman much esteemed by all that knew her, for her prudent and good behaviour in some very trying situations of life. She was a truly good and amiable woman, had no children of her own; but, a distant relation dying, she had taken a child of that relation's, to bring up as her own, and performed towards it all the duties of an affectionate parent.

The reader will observe that many of the names are English. It is common with the Indians, that have an affection for the English, to give themselves and their children the names of such English persons as they particularly esteem.

This little society continued the custom they had begun, when more numerous, of addressing every new governor, and every descendant of the first proprietor, welcoming him to the province, assuring him of their fidelity, and praying a continuance of that favor and protection they had hitherto experienced. They had accordingly sent up an address of this kind to our present governor, on his arrival; but the same was scarce delivered when the unfortunate catastrophe happened, which we are about to relate.

On Wednesday, the 14th of December, 1763, fifty-seven men from some of our frontier townships, who had projected the destruction of this little commonwealth, came, all well mounted, and armed with fire-locks, hangers, and hatchets, having travelled through the country in the night, to Conestogo manor. There they surrounded the small village of Indian huts, and just at break of day broke into them all at once. Only three men, two women, and a young boy were found at home, the rest being out among the neighbouring white people, some to sell the baskets, brooms, and bowls they manufactured, and others on other occasions. These poor defenceless creatures were immediately fired upon, stabbed, and hatcheted to death! The good Shehaes, among the rest, cut to pieces in his bed. All of them were scalped and otherwise horribly mangled. Then their huts were set on fire, and most of them burnt down. Then the troop, pleased with their own conduct and bravery, but enraged that any of the poor Indians had escaped the massacre, rode off, and in small parties, by different roads, went home.

The universal concern of the neighbouring white people, on hearing of this event, and the lamentations of the younger Indians, when they returned and saw the desolation, and the butchered, half-burnt bodies of their murdered parents and other relations, cannot well be expressed.

The magistrates of Lancaster sent out to collect the remaining Indians, brought them into the town for their better security against any

farther attempt; and, it is said, condoled with them on the misfortune that had happened, took them by the hand, comforted, and promised them protection. They were all put into the workhouse, a strong building, as the place of greatest safety.

When the shocking news arrived in town, a proclamation was issued by the governor, in the following terms, viz.:

Whereas I have received information that on Wednesday, the fourteenth day of this month, a number of people, armed and mounted on horseback, unlawfully assembled together, and went to the Indian town in the Conestogo manor, in Lancaster county, and without the least reason or provocation, in cool blood, barbarously killed six of the Indians settled there, and burnt and destroyed all their houses and effects; and whereas so cruel and inhuman an act, committed in the heart of this province on the said Indians, who have lived peaceably and inoffensively among us during all our late troubles, and for many years before, and were justly considered as under the protection of this government and its laws, calls loudly for the vigorous exertion of the civil authority, to detect the offenders, and bring them to condign punishment; I have, therefore, by and with the advice and consent of the council, thought fit to issue this proclamation, and do hereby strictly charge and enjoin all judges, justices, sheriffs, constables, officers, civil and military, and all other his Majesty's liege subjects within this province, to make diligent search and inquiry after the authors and perpetrators of the said crime, their abettors and accomplices, and to use all possible means to apprehend and secure them in some of the public gaols of this province, that they may be brought to their trials, and be proceeded against according to law.

And whereas a number of other Indians, who lately lived on or near the frontiers of this province, being willing and desirous to preserve and continue the ancient friendship, which heretofore subsisted between them and the good people of this province, have, at their own earnest request, been removed from their habitations, and brought into the county of Philadelphia, and seated for the present, for their better security, on the Province Island, and in other places in the neighborhood of the city of Philadelphia, where provision is made for them at the public expense; I do, therefore, hereby strictly forbid all persons whatsoever, to molest or injure any of the said Indians, as they will answer the contrary at their peril.

Given under my hand, and the great seal of the said province, at Philadelphia, the twenty-second day of December, *anno Domini*, one thousand seven hundred and sixty-three, and in the fourth year of his Majesty's reign.

John Penn By his Honor's command, Joseph Shippen, Jr., Secretary. God save the King Notwithstanding this proclamation, those cruel men again assembled themselves, and, hearing that the remaining fourteen Indians were in the workhouse at Lancaster, they suddenly appeared in that town, on the 27th of December. Fifty of them, armed as before, dismounting, went directly to the workhouse, and by violence broke open the door, and entered with the utmost fury in their countenances. When the poor wretches saw they had no protection nigh, nor could possibly escape, and being without the least weapon for defence, they divided into their little families, the children clinging to the parents; they fell on their knees, protested their innocence, declared their love to the English; and that in their whole lives they had never done them injury; and in this posture they all received the hatchet! Men, women, and little children were every one inhumanly murdered in cold blood!

The barbarous men who committed the atrocious fact, in defiance of government, of all laws human and divine, and to the eternal disgrace of their country and color, then mounted their horses, huzzaed in triumph, as if they had gained a victory, and rode off *unmolested!*

The bodies of the murdered were then brought out and exposed in the street, till a hole could be made in the earth to receive and cover them.

But the wickedness cannot be covered; the guilt will lie on the whole land, till justice is done on the murderers. The blood of the innocent will cry to Heaven for vengeance. It is said that Shehaes being before told, that it was to be feared some English might come from the frontier into the country, and murder him and his people, he replied: "It is impossible; there are Indians, indeed, in the woods, who would kill me and mine, if they could get at us, for my friendship to the English; but the English will wrap me in their matchcoat, and secure me from all danger." How unfortunately was he mistaken!

Another proclamation has been issued, offering a great reward for apprehending the murderers, in the following terms, viz.:

Whereas on the twenty-second day of December last, I issued a proclamation for the apprehending and bringing to justice a number of persons, who, in violation of the public faith, and in defiance of all law, had inhumanly killed six of the Indians, who had lived in Conestogo manor, for the course of many years, peaceably and inoffensively, under the protection of this government, on lands assigned to them for their habitation; notwithstanding which, I have received information, that on the twenty-seventh of the same month, a large party of armed men again assembled and met together in a riotous and tumultuous manner, in the county of Lancaster, and proceeded to the town of Lancaster, where they violently broke open the workhouse, and butchered and put to death fourteen of the said Conestogo Indians, men, women, and children, who had been taken under the immediate care and protection of

the magistrates of the said county, and lodged for their better security in the said workhouse, till they should be more effectually provided for by order of the government; and whereas common justice loudly demands, and the laws of the land (upon the preservation of which not only the liberty and security of every individual, but the being of the government itself depends) require, that the above offenders should be brought to condign punishment: I have, therefore, by and with the advice of the council, published this proclamation, and do hereby strictly charge and command all judges, justices, sheriffs, constables, officers, civil and military, and all other his Majesty's faithful and liege subjects within this province, to make diligent search and inquiries after the authors and perpetrators of the said last-mentioned offence, their abettors and accomplices, and that they use all possible means to apprehend and secure them in some of the public gaols of this province, to be dealt with according to law.

And I do hereby further promise and engage, that any person or persons who shall apprehend and secure, or cause to be apprehended and secured, any three of the ringleaders of the said party, and prosecute them to conviction, shall have and receive for each the public reward of two hundred pounds; and any accomplice, not concerned in the immediate shedding the blood of the said Indians, who shall make discovery of any or either of the said ringleaders, and apprehend and prosecute them to conviction, shall, over and above the said reward, have all the weight and influence of the government, for obtaining his Majesty's pardon for his offence.

Given under my hand, and the great seal of the said province, at Philadelphia, the second day of January, in the fourth year of his Majesty's reign, and in the year of our Lord one thousand seven hundred and sixty,-four.

John Penn By his Honor's command, Joseph Shippen, Jr., Secretary. God save the King

These proclamations have as yet produced no discovery, the murderers having given out such threatenings against those that disapprove their proceedings, that the whole country seems to be in terror, and no one dare speak what he knows; even the letters from thence are unsigned in which any dislike is expressed of the rioters.

There are some (I am ashamed to hear it) who would extenuate the enormous wickedness of these actions by saying: "The inhabitants of the frontiers are exasperated with the murder of their relations by the enemy Indians in the present war." It is possible; but though this might justify their going out into the woods to seek for those enemies and avenge upon them those murders, it can never justify their turning into the heart of the country to murder their friends.

If an Indian injures me, does it follow that I may revenge that injury on all Indians? It is well known that Indians are of different tribes, nations, and languages as well as the white people. In Europe, if the French, who are white people, should injure the Dutch, are they to revenge it on the English, because they too are white people? The only crime of these poor wretches seems to have been that they had a reddish-brown skin and black hair, and some people of that sort, it seems, had murdered some of our relations. If it be right to kill men for such a reason, then should any man with a freckled face and red hair kill a wife or child of mine, it would be right for me to revenge it by killing all the freckled, red-haired men, women, and children I could afterwards anywhere meet with.

But it seems these people think they have a better justification; nothing less than the Word of God. With the Scriptures in their hand and mouths they can set at nought that express demand, *Thou shalt do no murder*, and justify their wickedness by the command given Joshua to destroy the heathen. Horrid perversion of Scripture and of religion! To father the worst of crimes on the God of peace and love! Even the Jews, to whom that particular commission was directed, spared the Gibeonites on account of their faith once given. The faith of this government has been frequently given to those Indians; but that did not avail them with people who despise government.

150. Paxton Boys Declaration,1764 [Excerpt]

Introduction

Pontiac's Rebellion—named for a chief of the Ottawas—broke out in the spring of 1763, as western Indians tried to eject the British traders and settlers who had flooded into their territory at the close of the French and Indian War. The settlers on the western frontier bore the brunt of the uprising, as Indians killed or captured some 2,000 of them. Many of Pennsylvania's frontier dwellers believed that the pacifist-controlled colonial legislature, governing from the safety and comfort of Philadelphia, was not doing enough to protect them. In December 1763, some 50 Pennsylvania frontiersmen, members of a gang called the Paxton Boys, set upon the village of Conestoga, where lived 22 peaceable, friendly Indians. The gang murdered 20 inhabitants, including children, then moved on to Lancaster and killed another 14 Indians who had taken refuge there. The murder of these innocents aroused widespread disgust. In 1764, about 600 Paxton Boys marched to Philadelphia to present their grievances, excerpted here, and demand legislative action to protect the frontier. Like the frontier dwellers of several other colonies, Pennsylvania's westerners believed that eastern politicians ignored their interests. The assembly eventually approved some expenditures for frontier defense.

Primary Source

 $[\ldots]$

1st. We apprehend, that as Free-Men and English subjects, we have an indisputable Title to the same Privileges and Immunities with his Majesty's other Subjects, who reside in the interior counties of Philadelphia, Chester and Bucks, and therefore ought not to be excluded from an equal Share with them in the very important privilege of Legislation. Nevertheless, contrary to the Proprietors Charter, and the acknowledged principles of common Justice and Equity, our five Counties are restrained from electing more than ten Representative, viz. four for Lancaster, Two for York, Two for Cumberland, and One for Berks, and One for Northampton; while the Three Counties (and City) of *Philadelphia*, *Chester*, and *Bucks*, elect Twenty-six; this we humbly conceive is oppressive, unequal and unjust, the Cause of many of our Grievances, and an infringement of our natural Privileges of Freedom and Equality, wherefore we humbly pray, that we may be no longer deprived of an equal Number with the Three aforesaid Counties, to represent us in Assembly.

2dly. We understand that a Bill is now before the House of Assembly, wherein it is Provided, that such Persons as shall be charged with killing any Indians in Lancaster County, shall not be tried in the county where the Fact was committed, but in the Counties of Philadelphia, Chester, or Bucks. This is manifestly to deprive British Subjects of their known Privileges, to cast an eternal Reproach upon whole Counties, as if they were unfit to serve their Country in the Quality of Jury-Men, and to contradict the well known Laws of the British Nation; in a point whereon Life, Liberty, and Security essentially depend: Namely, that of being tried by their Equals in the Neighbourhood where their own, their Accusers, and the Witnesses Character and Credit, with the Circumstances of the Fact are best known, and instead thereof, putting their Lives in the Hands of Strangers, who may as justly be suspected of Partiality to, as the Frontier Counties can be of Prejudices against Indians; and this too in favour of Indians only, against his Majesty's faithful and loyal Subjects. Besides it is well known that the Design of it is to comprehend a Fact committed before such a Law was thought of. And if such Practices were tolerated, no man could be secure in his most invaluable Interests. We are also informed to our great Surprize, that this Bill has actually received the Assent of a Majority of the House, which we are perswaded could not have been the Case, had our Frontier Counties been equally represented in Assembly: However, we hope, that the Legislator of this Province will never enact a Law of so dangerous a tendency, or take away from his Majesty's good Subjects, a Privilege to long esteemed scared by English Men.

3dly. During the late and present Indian Wars, the Frontiers of this province have been repeatedly attacked and ravaged by Skulking parties of the Indians, who have with the most savage Cruelty, murdered Men, Women and Children, without distinction; and have reduced near a Thousand Families to the most extream Distress. It grieves us to the very Heart, to see such of our Frontier Inhabitants as have escaped from savage Fury, with the loss of their Parents, their Children, their Husbands, Wives, or Relatives, left destitute by the Public, and exposed to the most cruel Poverty and Wretchedness; while upward of One Hundred and Twenty of the Savages, who are with great Reason suspected of being guilty of these horrid Barbarities, under the Mask of Friendship, have procured themselves to be taken under the Protection of the Government, with a view to elude the Fury of the brave Relatives of the Murdered; and are now maintained at the public Expence: Some of these Indians now in the Barracks of *Philadelphia*, are confessedly a part of the *Wyalusing* Indians, which Tribe is now at War with us; and the others are the Moravian Indians, who living amongst us under the Cloak of Friendship, carried on a Correspondence with our known Enemies on the Great-Island. We cannot but observe with Sorrow and Indignation, that some Persons in this Province are at pains to extenuate the barbarous Cruelties practiced by these savages on our Murdered Brethren and Relatives, which are shocking to human Nature, and must pierce every Heart but those of the hardened Perpetrators of their Abettors. Nor is it less Distressing to hear others pleading, that altho' the Wyalusing Tribe is at War with us; yet that part of it which is under the Protection of the Government may be friendly to the English, and Innocent. In what Nation under the Sun was it every the Custom, that when a neighbouring Nation took up Arms, not an individual of the nation should be touched, but only the Persons that offered Hostilities? Who ever proclaimed War with a part of a nation, and not with the Whole? Had these Indians disapproved of the Perfidy of their Tribe, and been willing to cultivate and preserve Friendship with us, why did they not give Notice of the Ware before it happened, as it is known to be the Result of long Deliberations, and a preconcerted Combination amongst them? Why did they not leave their Tribe immediately, and come amongst us before there was ground to suspect them, or War as actually waged with the Tribe? No, they stayed amongst them, were privy to their Murders and Ravages, until we had destroyed their Provisions, and when they could no longer subsist at Home, they came, not as Deserters, but as Friends, to be maintained thro' the Winter, that they may be able to scalp and butcher us in the Spring.

AND as to the *Moravian Indians*, there are strong grounds, at least to suspect their Friendship, as it is known that they carried on a Correspondence with our Enemies, on the *Great Island*. We killed three *Indians* going from *Bethelem* to the *Great-Island*, with Blankets, Ammunition and Provision; which is an undeniable proof, that, the *Moravian Indians* were in confederacy with our open Enemies. And we cannot but be filled with Indignation, to hear this Action of ours, painted in the most odious and detestable colours, as if we had

inhumanly murdered our Guides, who preserved us from perishing in the Woods; when we only killed three of our known enemies, who attempted to shoot us when we surprised them. And besides all this, we understand that one of these very *Indians* is proved by the Oath of Stenton's Widow to be the very Person that murdered her Husband. How then comes it to pass, that he alone of all the Moravian Indians should join with the Enemy to murder that Family? Or can it be supposed that any Enemy Indians contrary to their known custom of making War, should penetrate into the Heart of a settled Country, to burn, plunder and murder the Inhabitants, and not molest any Houses on their Return, or ever be seen or heard of? Or how can we account for it that no Ravages have been committed in Northampton County since the Removal of the Moravian Indians, when the Great Cove has been struck since? These things put it beyond doubt with us, that the Indians now at Philadelphia, are His Majesty's perfidious Enemies, and therefore to protect and maintain them at the public Expence, while our suffering Brethren on the Frontiers are almost destitute of the Necessaries of Life and are neglected by the Public, is sufficient to make us mad with Rage, and tempt us to do what nothing but the most violent Necessity can vindicate. We humbly and earnestly pray therefore that these Enemies of his Majesty may be removed as soon as possible out of the Province.

4thly. We humbly conceive that it is contrary to the maxims of good policy and extreamly dangerous to our Frontiers, to suffer any *Indians* of what Tribe soever, to live within the inhabited Parts of this Province, while we are engaged in an Indian War; as Experience has taught us that they are all Perfidious, and their claim to Freedom and Independency puts it in their Power to act as spies, to entertain and give Intelligence to our Enemies, and to furnish them with Provisions and warlike Stores. To this fatal Intercourse between our pretended Friends and open Enemies we must ascribe the greatest Part of the Ravages and Murders that have been committed in the Course of this and the last Indian War. We therefore pray that this Greivance be taken under consideration and remedied.

5th. We cannot help lamenting that no Provision has been hitherto made, that such of our Frontier Inhabitants as have been wounded in defence of the Province, their Lives and Liberties, may be taken care of and cured of their Wounds at the public Expence. We therefore pray that this Grievance may be redressed.

6thly. In the late Indian War this Province, with others of his Majesty's Colonies gave rewards for Indian Scalps, to encourage the seeking them in their own country, as the most likely Means of destroying or reducing them to reason. But no such Encouragement has been given in this War, which has damped the Spirits of many brave Men, who are willing to venture their Lives in Parties against the Enemy. We therefore pray that public Rewards may be proposed for Indian Scalps, which may be adequate to the Dangers attending Enterprises of this Nature.

7th. We daily lament that Numbers of our nearest and dearest Relatives are still in captivity amongst the savage Heathen, to be trained up in al their Ignorance and Barbarity, or be tortured to death with all the Contrivances of Indian cruelty, for attempting to make their Escape from Bondage. We see they pay no regard to the many solemn Promises which they have made to restore our Friends, who are in Bondage amongst them; we therefore earnestly pray that no Trade may hereafter be permitted to be carried on with them, until our Brethren and Relatives are brought home to us.

8th. WE complain that a certain Society of People in this Province in the late *Indian* War and at several Treaties held by the Kings Representatives, openly loaded the *Indians* with Presents and that.... a Leader of the said Society, in defiance of all Government not only abetted our Indian Enemies, but kept up a private Intelligence with them, and publickly received from them a Belt of Wampum, as if he had been our Governor or authorized by the King to treat with his Enemies. By this Means the *Indians* have been taught to dispise us as a weak and disunited People and from this fatal Source have arose many of our Calamities under which we groan. We humbly pray therefore this Grievance may be redressed and that no private subject be hereafter permitted to treat with or carry on a correspondence with our Enemies.

9thly. We cannot but observe with sorrow that Fort Augusta which has been very expensive to this Province, has afforded us but little assistance, during this or the last War. The Men that were stationed at that Place neither helped our distressed Inhabitants to save their Crops, nor did they attack our enemies in their Towns, or patrole on our Frontiers. We humbly request, that proper Measures may be taken to make that Garrison more serviceable to us in our Distress, if it can be done.

151. Thomas Hutchinson, *The History* of the Colony of Massachuset's Bay, 1764 [Excerpt]

Introduction

Thomas Hutchinson (1711–1780) was a prominent Harvard-educated Massachusetts politician, businessman, and scholar in the decades leading up to the American Revolution. A direct descendant of the New England religious dissident Anne Hutchinson, he became Chief Justice of Massachusetts, then royal governor. Many colonists abhorred Hutchinson's policies and his devotion to British rule. Hutchinson opposed the Stamp Act but dutifully tried

to enforce it. Rioters wrecked his home during the Stamp Act protests in 1765. However, he was universally praised as a noteworthy historian and author. Below is an excerpt of the first volume of his *History of the Massachusetts Bay Colony*. Published in 1764, it covered the period from the colony's founding to 1688, the year English Protestants overthrew the Catholic king James II. Two more volumes followed, one published posthumously, which described the colony's history through 1774, the year Hutchinson was replaced as governor by General Thomas Gage and left Massachusetts for England. In the final volume, Hutchinson lamented that the ouster of France from Canada had destroyed the sense of common purpose that had once united the British and the colonists.

Primary Source

Preface

The repeated destruction of ancient records and papers, by fire in the town of Boston, first inclined me to endeavour the preservation of such materials as remained proper for an history of the Massachusets colony. Many such came to me from my ancestors, who, for four successive generations, had been principal actors in public affairs. . . . I made what collection I could of the private papers of others of our first settlers, but in this I have not had the success I desired. The descendants of some of them are possessed of many valuable letters and other manuscripts, but have not leisure or inclination to look into them themselves, and yet will not suffer it to be done by others. . . .

I am sensible that whoever appears in print should be able to dispose his matter in such order, and cloath it with such stile and language, as shall not only inform but delight the reader; therefore I would willingly have delivered over every thing I have collected to a person of genius for such a work. But seeing no prospect of its being done by any other, I engaged in it myself; being very loth, that what had cost me some pains to bring together, should be again scattered and utterly lost.

I am sensible of many defects in this performance, and that it stands in need of all the apologies I am capable of making for it. It cannot be expected that the affairs of a colony should afford much matter, interesting or entertaining to the world in general. I write for the sake of my own countrymen, and even to many of them I expect some facts will be thought of too little importance; and yet I have omitted many such as have been judged proper for the press by former historians. In general, we are fond of knowing the minutiae which relate to our own ancestors. There are other facts, which, from the nature of them, will afford but a dull and heavy narration. My chief design is to save them from oblivion.

All historians profess a sacred regard to truth. I have found some difficulty in guarding against every degree of prejudice, in writing the history of my own country. I hope, by shunning one extreme, I have not run upon the other.

The Massachusets colony may be considered as the parent of all the other colonies of New-England. There was no importation of planters from England to any part of the continent, northward of Maryland, except to the Massachusets, for more than fifty years after the colony began. In the first ten years, about twenty thousand souls had arrived in the Massachusets. Since then, it is supposed more have gone from hence to England than have come from thence hither. Massachusets-Bay, New-Hampshire, Connecticut, and Rhode-Island, at this day, probably contain five hundred thousand souls. A surprising increase of subjects of the British crown!

Barbados and the leeward islands owed very much of their growth to the supplies of lumber, horses and provisions, with which they were furnished, at the beginning of their settlements, from this colony, in as great plenty as they desired.

The addition of wealth and power to Great Britain, in consequence of this first emigration of our ancestors, exceeds all expectation. They left their native country with the strongest assurances that they and their posterity should enjoy the privileges of free natural born English subjects. May the wealth and power of Britain still increase, in proportion to the increase of her colonies; may those privileges never be abused; may they be preserved inviolate to the latest posterity.

152. Currency Act, 1764

Introduction

Having decided that the American colonies should pay for the British troops deployed to protect them, Parliament began enacting laws to raise revenue soon after the end of the French and Indian War. The Currency Act, passed in 1764, prohibited colonies from printing paper money, which they had freely issued during the recent war. Paper money-initially taking the form of bills of credit—had been printed in the colonies to make up for the lack of so called hard money, namely coins made of precious metals. It had long been illegal to export coin from Great Britain or to coin money in the colonies, and most of the circulating coins were illegallyobtained Spanish coins. An effort to curb rampant inflation and protect creditors, the Currency Act attempted to prevent debtors from using paper currency to pay debts owed to people in England. In combination with the strictly-enforced Sugar Act, the Currency Act led to a shortage of money—both hard and paper—and imposed hardship on debtors in the colonies. The effect of this act, along with that of new taxes and tighter enforcement of customs regulations, pushed the colonial economy into a downward spiral.

Primary Source

WHEREAS great quantities of paper bills of credit have been created and issued in his Majesty's colonies or plantations in America, by virtue of acts, orders, resolutions, or votes of assembly, making and declaring such bills of credit to be legal tender in payment of money:

and whereas such bills of credit have greatly depreciated in their value, by means whereof debts have been discharged with a much less value than was contracted for, to the great discouragement and prejudice of the trade and commerce of his Majesty's subjects, by occasioning confusion in dealings, and lessening credit in the said colonies or plantations: for remedy whereof, may it please your most excellent Majesty, that it may be enacted; and be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the first day of September, one thousand seven hundred and sixty four, no act, order, resolution, or vote of assembly, in any of his Majesty's colonies or plantations in America, shall be made, for creating or issuing any paper bills, or bills of credit of any kind or denomination whatsoever, declaring such paper bills, or bills of credit, to be legal tender in payment of any bargains, contracts, debts, dues, or demands whatsoever; and every clause or provision which shall hereafter be inserted in any act, order, resolution, or vote of assembly, contrary to this act, shall be null and void.

II. And whereas the great quantities of paper bills, or bills of credit, which are now actually in circulation and currency in several colonies or plantations in America, emitted in pursuance of acts of assembly declaring such bills a legal tender, make it highly expedient that the conditions and terms, upon which such bills have been emitted, should not be varied or prolonged, so as to continue the legal tender thereof beyond the terms respectively fixed by such acts for calling in and discharging such bills; be it therefore enacted by the authority aforesaid, That every act, order, resolution, or vote of assembly, in any of the said colonies or plantations, which shall be made to prolong the legal tender of any paper bills, or bills of credit, which are now subsisting and current in any of the said colonies or plantations in America, beyond the times fixed for the calling in, sinking, and discharging of such paper bills, or bills of credit, shall be null and void.

III. And be it further enacted by the authority aforesaid, That if any governor or commander in chief for the time being, in all or any of the said colonies or plantations, shall, from and after the said first day of September, one thousand seven hundred and sixty four, give his assent to any act or order of assembly contrary to the true intent and meaning of this act, every such governor or commander in chief shall, for every such offence, forfeit and pay the sum of one thousand pounds, and shall be immediately dismissed from his government, and for ever after rendered incapable of any public office or place of trust.

IV. Provided always, That nothing in this act shall extend to alter or repeal an act passed in the twenty fourth year of the reign of his late majesty King George the Second, intituled, An act to regulate and restrain paper bills of credit in his Majesty's colonies or plantations of Rhode Island and Providence plantations, Connecticut, the Massachuset's Bay, and New Hampshire, in America, and to prevent the same being legal tenders in payments of money.

V. Provided also, That nothing herein contained shall extend, or be construed to extend, to make any of the bills now subsisting in any of the said colonies a legal tender.

153. Sugar Act, 1764 [Excerpt]

Introduction

The French and Indian War with France had left Great Britain saddled with heavy debts. Since the North American colonies had reaped the benefits of the British victory, it seemed only fair to expect the colonists to help pay for the recently ended war and the ongoing expense of maintaining defenses in the colonies. British authorities also saw that the colonists appeared to be much more prosperous than the heavily taxed British. Instead of asking the colonies to contribute voluntarily to future military actions, Great Britain decided to tax the colonies in order to support colonial governors, judges, and army regiments. Parliament passed the Sugar Act (as the Revenue Act of 1764 was called), a reconfiguration of the tax on sugar and molasses that had initially been imposed by the Molasses Act of 1733. Although the law actually lowered the tax on sugar by half, it also called for a crackdown on colonial smuggling, which was a widespread practice at the time, particularly among New England merchants. The effort to curb smuggling led to many of the early colonial protests against British interference in colonial affairs. In addition, the combination of new taxes, tighter enforcement, and the new Currency Act plunged the colonies into an economic downturn and further fueled discontent.

Primary Source

An act for granting certain duties in the British colonies and plantations in America; for continuing, amending, and making perpetual, an act passed in the sixth year of the reign of his late majesty King George the Second, (initituled, An act for the better securing and encouraging the trade of his Majesty's sugar colonies in America;) for applying the produce of such duties, and of the duties to arise by virtue of the said act, towards defraying the expences of defending, protecting, and securing the said colonies and plantations; for explaining an act made in the twenty fifth year of the reign of King Charles the Second, (intitled, An act for the encouragement of the Greenland and Eastland trades, and for the better securing the plantation trade;) and for altering and disallowing several drawbacks on exports from this kingdom, and more effectually preventing the clandestine conveyance of goods to and from the said colonies and plantation, and improving and securing the trade between the same and Great Britain.

Whereas it is expedient that new provisions and regulations should be established for improving the revenue of this kingdom, and for extending and securing the navigation and commerce between Great Britain and your Majesty's dominions in America, which, by the peace, have been so happily enlarged: and whereas it is just and necessary, that a revenue be raised, in your Majesty's said dominions in America, for defraying the expences of defending, protecting, and securing the same; we, your Majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, being desirous to make some provision, in this present session of parliament, towards raising the said revenue in America, have resolved to give and grant unto your Majesty the several rates and duties herein after-mentioned; and do most humbly beseech your Majesty that it may be enacted; and be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, there shall be raised, levied, collected, and paid, unto his Majesty, his heirs and successors, for and upon all white or clayed sugars of the produce or manufacture of any colony or plantation in America, not under the dominion of his Majesty, his heirs and successors; for and upon indigo, and coffee of foreign produce or manufacture; for and upon wines (except French wine;) for and upon all wrought silks, bengals, and stuffs, mixed with silk or herbs of the manufacture of Persia, China, or East India, and all callico painted, dyed, printed, or stained there; and for and upon all foreign linen cloth called Cambrick and French Lawns, which shall be imported or brought into any colony or plantation in America, which now is, or hereafter may be, under the dominion of his Majesty, his heirs and successors, the several rates and duties following; that is to say,

For every hundred weight avoirdupois of such foreign white or clayed sugars, one pound two shillings, over and above all other duties imposed by any former act of parliament.

For every pound weight avoirdupois of such foreign indigo, six pence.

For every hundred weight avoirdupois of such foreign coffee, which shall be imported from any place, except Great Britain, two pounds, nineteen shillings, and nine pence.

For every ton of wine of the growth of the Madeiras, or of any other island or place from whence such wine may be lawfully imported, and which shall be so imported from such islands or place, the sum of seven pounds.

For every ton of Portugal, Spanish, or any other wine (except French wine) imported from Great Britain, the sum of ten shillings.

For every pound weight avoirdupois of wrought silks, bengals, and stuffs, mixed silk or herbs, of the manufacture of Persia, China, or East India, imported from Great Britain, two shillings.

For every piece of callico painted, dyed, printed, or stained, in Persia, China, or East India, imported from Great Britain, two shillings and six pence.

For every piece of foreign linen cloth, called Cambrick, imported from Great Britain, three shillings.

For every piece of French lawn imported from Great Britain, three shillings.

And after those rates for any greater or lesser quantity of such goods respectively.

II. And it is hereby further enacted by the authority aforesaid, That from and after the said twenty ninth day of September, one thousand seven hundred and sixty four, there shall also be raised, levied, collected, and paid, unto his Majesty, his heirs and successors, for and upon all coffee and pimento of the growth and produce of any British colony or plantation in America, which shall be there laden on board any British ship or vessel, to be carried out from thence to any other place whatsoever, except Great Britain, the several rates and duties following; that is to say, III. For every hundred weight avoirdupois of such British coffee, seven shillings. For every pound weight avoirdupois of such British pimento, one halfpenny. And after those rates for any greater or lesser quantity of such goods respectively.

[…]

VI. And it be further enacted by the authority aforesaid, That in lieu and instead of the rate and duty imposed by the said act upon molasses and syrups, there shall, from and after the said twenty ninth day of September, one thousand seven hundred and sixty four, be raised, levied, collected, and paid, unto his Majesty, his heirs and successors, for and upon every gallon of molasses or syrups, being the growth, product, or manufacture, of any colony or plantation in America, not under the dominion of his Majesty, his heir or successors, which shall be imported or brought into any colony or plantation in America, which now is, or hereafter may be, under the dominion of his Majesty, his heirs or successors, the sum of three pence.

VII. And it be hereby further enacted by the authority aforesaid, That the said rates and duties hereby charged upon such foreign white or clayed sugars, foreign indigo, foreign coffee, wines, wrought silks, bengals, and stuffs, mixed with silk or herbs, callico, cambricks, French lawns, and foreign molasses or syrups, imported into any British American colony or plantation shall be raised, levied, collected, and paid, in the same manner and form, and by such rules, ways and means, and under such penalties and forfeitures (not otherwise altered by this act) as are mentioned and expressed in the said act of parliament, made in the sixth year of the reign of his late

majesty King George the Second, with respect to the raising, levying, collecting, and payment, of the rates and duties thereby granted; and that the aforesaid duties hereby charged upon British coffee and pimento, exported from any British colony or plantation, shall be raised, levied, collected, and paid, in the same manner and form, and forfeitures, as are mentioned and referred unto in an act of parliament, made in the twenty fifth year of the reign of King Charles the Second, intituled, An act for the encouragement of the Greenland and Eastland trades, and for the better securing of the plantation trade, with respect to the raising, levying, collecting, and payment of the rates and duties thereby granted upon the several goods therein particularly enumerated: and that all powers, penalties, provisions, articles, and clauses, in those acts respectively contained and referred unto (except in such cases where any alteration is made by this act) shall be observed, applied, practised, and put in execution, for the raising, levying, collecting, and answering, the respective rates and duties granted by this act, as fully and effectually, as if the same were particularly and at large re-enacted in the body of this present act, and applied to the rates and duties hereby imposed; and as fully and effectually, to all intents and purposes, as the same could have been at any time put in execution, for the like purposes, with respect to the rates and duties granted by the said former acts.

VIII. Provided always, and it is hereby further enacted by the authority aforesaid, That if the importer of any wines shall refuse to pay the duties hereby imposed thereon, it shall and may be lawful for the collector, or other proper officer of the customs where such wines shall be imported, and he is hereby respectively required to take and secure the same, with the casks or other package thereof, and to cause the same to be publickly sold, within the space of twenty days at the most after such refusal made, and at such time and place as such officer, shall, by four or more days publick notice, appoint for that purpose; which wine shall be sold to the best bidder, and the money arising by the said duties, together with the charges that shall have been occasioned by the said sale; and the overplus, if any, shall be paid to such importer, or any other person authorized to receive the same.

IX. Provided also, That if the money offered for the purchase of such wine shall not be sufficient to discharge the duty and charges aforesaid, then, and in every such case, the collector, or other proper officer, shall cause the wine to be staved, split, or otherwise destroyed, and shall return the casks or other package wherein the same was contained to such importer.

X. And it is hereby declared and enacted, That every piece of callico intended to be charged with the duty herein beforementioned, if of the breadth of one yard and a quarter or under, shall not exceed in length ten yards; and if above that breadth, shall not exceed six yards in length, and that every piece of cambrick and French lawn shall contain thirteen ells each, and shall pay duty for the same in those proportions for any greater or lesser quantity, according to

the sum herein before charged upon each piece of such goods respectively.

[...]

XVIII. And be it further enacted by the authority aforesaid, That from and after the twenty ninth day of September, on thousand seven hundred and sixty four, no rum or spirits of the produce or manufacture of any of the colonies or plantations in America, not in the possession or under the dominion off his Majesty, his heirs or successors, shall be imported or brought into any of the colonies or plantations in America which now are, or hereafter may be, in the possession or under the dominion of his Majesty, his heirs or successors, upon forfeiture of all such rum or spirits, together with the ship or vessel in which the same shall be imported, with the tackle, apparel, and furniture thereof; to be seized by any officer or officers of his Majesty's customs, and prosecuted in such manner and form as herein after is expressed; any law, custom, or usage, to the contrary notwithstanding.

XIX. And it is hereby further enacted and declare by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, nothing in the before-recited act made in the fifth year of the reign of his late majesty King George the Second, or any other act of parliament, shall extend, or be construed to extend, to give liberty to any person or persons whatsoever to import into the kingdom of Ireland any sort of sugars, but such only as shall be fairly and bona fide loaden and shipped in Great Britain, and carried directly from thence in ships navigated according to law.

XX. And, for the better preventing frauds in the importation of foreign sugars and paneles, rum and spirits, molasses and syrups, into any of his Majesty's dominions, under pretence that the same are the growth, produce, or manufacture, of the British colonies or plantations, it is further enacted by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, every person or persons loading on board any ship or vessel, in any of the British colonies or plantations in America, any rum or spirits, sugars or paneles, molasses or syrups, as of the growth, product, or manufacture, of any British colony or plantation, shall, before the clearing out of the said ship or vessel, produce and deliver to the collector or other principal officer of the customs at the loading port, an affidavit signed and sword to before some justice of the peace in the said British colonies or plantation, either by the grower, maker, or shipper, of such goods, or his or their known agent or factor, expressing, in words at length and not in figure, the quality of the goods so shipped, with the number and denomination of the packages, and describing the name or names of the plantation or plantations, and the name of the colony where the same grew or were produced and manufactured; which affidavit shall be attested, under the hand of the said justice of the peace, to have been sworn to in his presence; who is hereby required to do the same without fee or reward: and the collector or other principal officer of the customs to whom such affidavit shall be delivered, shall thereupon grant to the master, or other person having the charge of the ship or vessel, a certificate under his hand and seal of office (without fee or reward) of his having received such affidavit pursuant to the directions of this act; which certificate shall express the quality of the goods shipped on board such ship or vessel, with the number and denomination of the packages: and such collector or other principal officer of the customs shall also (without fee or reward) within thirty days after the sailing of the ship or vessel, transmit an exact copy of the said affidavit to the secretary's office for the respective colony or plantation where the goods were shipped, on forfeiture of five pounds.

XXI. And it is further enacted, That upon the arrival of such ship or vessel into the port of her discharge, either in Great Britain or any other port of his Majesty's dominions, where such goods may be lawfully imported, the master or other person taking the charge of the ship or vessel shall, at the time he makes his report of his cargo, deliver the said certificate to the collector or other principal officer of the customs, and make oath before him, that the goods so reported are the same that are mentioned in the said certificate, on forfeiture of one hundred pounds; and if any rum or spirits, sugars or paneles, molasses or syrups, shall be imported or found on board any such ship or vessel, for which no such certificate shall be produced, or which shall not agree therewith, the same shall be deemed and taken to be foreign rum and spirits, sugar and paneles, molasses and syrups, and shall be liable to the same duties, restrictions, regulations, penalties, and forfeitures, in all respects, as rum, spirits, sugar, paneles, molasses, and syrups, of the growth, produce, or manufacture, of any foreign colony or plantation, would respectively be liable to by law.

XXII. Provided always, That if any rum of spirits, sugar or paneles, molasses or syrups, shall be imported into Great Britain from any British colony or plantation in America, without being included in such certificate as is herein before directed, and it shall be made to appear, to the satisfaction of the commissioners of his Majesty's customs at London or Edinburgh respectively, that the goods are really and truly the produce of such British plantation or colony, and that no fraud was intended, it shall and may in such case be lawful for the said respective commissioners to permit the said goods to be entered, upon the payment of the like duties as such goods would be liable to if this law had not been made.

 $[\ldots]$

XXVII. And it is hereby enacted by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, all coffee, pimento, cocoa nuts, whale fins, raw silks, hides and skins, pot and pearl ashes, of the growth, produc-

tion, or manufacture, of any British colony or plantation in America, shall be imported directly from thence into this kingdom, or some other British colony or plantation, under the like securities, penalties, and forfeitures, as are particularly mentioned in two acts of parliament made in the twelfth and twenty fifth years of the reign of King Charles the Second, the former intituled, An act for the encouraging and increasing of shipping and navigation, and the latter intituled, An act for the encouragement of the Greenland and eastland trades and for the better securing the plantation trade, or either of them, with respect to the goods in those acts particularly enumerated; any law, custom, or usage, to the contrary notwithstanding.

XXVIII. And it is hereby further enacted by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, no iron, nor any sort of wood, commonly called Lumber, as specified in an act passed in the eighth year of the reign of King George the First, intituled, An act for giving further encouragement of the importation of naval stores, and for other purposes therein mentioned, of the growth, production, or manufacture, of any British colony or plantation in America, shall be there loaden on board any ship of vessel to be carried from thence, until sufficient bond shall be given, with one surety besides the master of the vessel, to the collector or other principal officer of the customs at the loading port in a penalty of double the value of the goods, which condition, that the said goods shall not be landed in any part of Europe except Great Britain; which bonds shall be discharged in the manner hereafter mentioned; that is to say, for such of the said goods as shall be entered for, or landed in, Great Britain, the condition of the bonds shall be, to bring a certificate in discharge thereof within eighteen months from the date of the bond; and within eighteen months from the date of the bond; and within six months for such of the said goods as shall be entered for, or landed in, any of the British colonies or plantations in America; which respective certificates shall be under the hands and seals of the collector or other principal officer of the customs resident at the port or place where such goods shall be landed, testifying the landing thereof; and for such of the said goods as shall be entered for, or landed at, any other place in America, Africa, or Asia, to bring the like certificate within twelve months, under the common seal of the chief magistrate, or under the hands and seals of two known British merchants residing there; or such bond or bonds shall be discharged, in either of the said cases, by proof upon oath made by credible persons, that the said goods were taken by enemies, or perished in the seas.

 $[\ldots]$

XXXI. Provided always, That this act shall not extend, nor be construed to extend, to forfeit, for want of such cocket or clearance, any salt laden in Europe for the fisheries in New England, Newfoundland, Pennsylvania, New York, and Nova Scotia, or any other place to which salt is or shall be allowed by law to be carried; wines laden

in the Madeiras, of the growth thereof; and wines of the growth of the Western Islands, or Azores, and laden there; nor any horses, victuals, or linen cloth, of and from Ireland, which may be laden on board such ships or vessels.

XXXII. And it is hereby further enacted, That if any person or persons shall counterfeit, raise, alter, or falsify, any affidavit, certificate, sufferance, cocket, or clearance, required or directed by this act, or shall knowingly or willingly make use of any affidavit, certificate, sufferance, cocket, or clearance, so counterfeited, raised, altered, or falsified, such person or persons shall knowingly or willingly, or every such offence, forfeit the sum of five hundred pounds; and such affidavit, certificate, sufferance, cocket, or clearance, shall be invalid and of no effect.

 $[\ldots]$

XXXIV. Provided always, that nothing herein contained shall extend, or be construed to extend, to any ship or vessel belonging to the subjects of the French king, which shall be found fishing, and not carrying on any illicit trade, on that part of the island of Newfoundland, which stretches from the place called Cape Bonavista to the northern part of the said island, and from thence running down to the western side, reaches as far as the place called Point Riche.

XXXV. And, in order to prevent an illicit trade or commerce between his Majesty's subjects in America, and the subjects of the crown of France in the islands of Saint Pierre and Miquelon, it is hereby further enacted by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, if any British ship or vessel shall be found standing into, or coming out from, either of those islands, or hovering or at anchor within two leagues of the coasts thereof, or shall be discovered to have taken any goods or merchandizes on board at either of them, or to have been there for the purpose; such ship or vessel, and all the goods so taken on board there, shall be forfeited and lost, and shall and may be seized and prosecuted by any officer of his Majesty's customs; and the master or other person having the charge of such ship or vessel, and every person concerned in taking any such goods on board, shall forfeit treble the value thereof.

XXXVI. And, to prevent the concealing of any goods in false packages, or private places, on board any ship or vessel arriving at any of the British colonies or plantations in America, with intent to their being clandestinely landed there, be it further enacted by the authority aforesaid, That from and after the twenty ninth day of September, one thousand seven hundred and sixty four, all goods which shall be found concealed in any place whatsoever on board any such ship or vessel, at any time after the master thereof shall have made his report to the collector or other proper officer of the customs, and which shall not be comprized or mentioned in the said report, shall be forfeited and lost, and shall and may be seized and prosecuted by

any officer of the customs; and the master or other person having the charge or command of such ship or vessel (in case it can be made appear, that he was any wise consenting or privy to such fraud or concealment) shall forfeit treble the value of the goods so found.

 $[\ldots]$

154. Committee of Ways and Means, Resolutions for Colonial Stamp Duties, February 1765 [Excerpt]

Introduction

The Stamp Act was part of the post-war British plan to tax the North American colonies to provide for the support of the colonial military and government. While the Sugar Act of 1764 taxed import commodities, the Stamp Act, passed by Parliament on March 22, 1765, was the first tax that Great Britain ever levied directly on its North American colonists. However, in February, Parliament had seen a sharp debate, summarized here, on the wisdom of passing such an act. The majority believed that the American colonists owed Great Britain a debt of gratitude for providing defense, and that the colonies could well afford to pay taxes. Opponents argued that Parliament did not have the authority to tax the colonists, and that the colonists had prospered by their own labor and thus owed Great Britain nothing. The resulting Stamp Act required the purchase of a stamped paper for every publication or legal document. The Stamp Act sparked tremendous protest among the colonists when word of it reached them in April, six months before the act was to take effect on November 1, 1765. After November 1, many colonial businesses and government offices shut down rather than comply with the law. The British government repealed the act on March 18, 1766, but passed the Declaratory Act at the same time, affirming its right to tax the colonies.

Primary Source

[...

Grenville. Proposed taxing America from public motive. Private considerations of his own choice would have prevented him if they had been consulted. Wishes those who had gone before him had marked out a path to him which he might more easily follow. His conduct would then have been less liable to misconstruction.

The reason of the delaying' the proposal to this year was to gain all possible information and to give Americans an opportunity of conveying information to this House, whose ears are always open to receive knowledge and to act to it. The officers of the revenue have done their duty in gaining all possible knowledge of the subject.

Objection, he said last year, that if the right of taxing was disputed he would not delay the question a moment. Wished now to

avoid that question if possible, because he thinks no person can doubt it.

The objection of the colonies is from the general right of mankind not to be taxed but by their representatives. This goes to all laws in general. The Parliament of Great Britain virtually represents the whole Kingdom, not actually great trading towns. The merchants of London and the East India Company are not represented. Not a twentieth part of the people are actually represented.

All colonies are subject to the dominion of the mother country, whether they are a colony of the freest or the most absolute government. As to their charter, the Crown cannot exempt them by charter from paying taxes which are imposed by the whole legislature, but in fact the Crown has not done it.

Maryland charter 1633 gives an exemption of duty, but this meant only the exemption from those duties which the Crown then thought it had the right to impose. All subsequent duties upon tobacco have been so many taxes imposed upon Maryland. They may enact laws agreeable to equity and the law of England.

Pennsylvania charter 1680, no taxes to be imposed by the Crown, but the right of Parliament is saved in express words.

Charter government both of Connecticut and Rhode Island, there are these words: according to the course of other corporations within our Kingdom of England. Corporations are not exempted from tax in England, so they ought not to have any exemption.

Royal Governments. In these power is given to make general laws according to the custom of England, but this goes no further.

Usage. 25th of Charles 2, imposes duty upon the plantations to be levied and collected within the plantation; and were then for the customs duties which were then payable by a subject of Great Britain within this Kingdom. And these customs have been collected and paid and brought to account and made a part of the aggregate fund. 9 Queen Anne, Post Office, which imposes an internal tax upon North America. 6th of George 2, imposes a duty on molasses. Act passed the last session of Parliament which imposed a tax upon many articles.

The declaration 7. 8th King William Sect. 9. All laws, by-laws, usage and custom in the plantations repugnant to this Act or to any other law in this Kingdom are illegal and void. Case of Ireland in King William's time: the Parliament here attacked that pamphlet's doctrine and its account; it was however revived and met with the same reception in 1720.

He has made this deduction to show the right, in consequence of the strange language he has met with in conversation and public writings upon this subject.

The propriety and expedience of laying this tax. 1st with respect to the state of this country. 2nd with respect to the state of America.

What exemptions will go too. The western country desires an exemption from cider, the northern from a duty on beer. The mischief from the 4s. land tax. The true way to relieve all is to make all contribute their proper share.

The different supplies we have voted.

The Navy used to cost about £7 or 8 hundred thousand, now it costs about £1,400,000. The money for these expenses must be raised somewhere; however, contributors will be displeased. That this great increase of the Navy is incurred in a great measure for the service of North America. That the military force in North America is said by many military men to be not sufficient. He never heard anybody say there was more than necessary.

Second, whether it is proper with regard to America. It can only be improper from the injustice of the demand, or from the inability of the persons on whom it is imposed. We have expended so much on the support and defence of North America; we have given them so great degree of security after they were before in continual wars; the French are now removed, but they still have some enemies against whom, however, Great Britain is employing her troops.

The ability of the plantations. The state of the several payments for their establishment. The whole of North America consists perhaps of 16 or 1700000 inhabitants, pay only about £64,000 a year for its establishment, except North Carolina and Maryland, which he has not been able to get at.

West Indies establishments amount to about £77,000.

The debts of North America, except Pennsylvania of which he has not an account amounted to £848,000; it did amount to about £2,000,000.

He speaks this only from the best information he has been able to receive. The great part of their debts will be discharged in a few years.

The particular propriety of this mode of raising the tax. Objection, that this tax will produce disturbance and discontent and prevent improvement among the colonies. He has no motive, he can have no motive, for taxing a colony, but that of doing his duty. But as to this objection, when will the time come when enforcing a tax will not give discontent, if this tax does produce it after what we have done and suffered for America? And therefore if we reject this proposition now, we shall declare that we ought not to tax the colonies. And we need not declare after a year's time that we ought not, for then we cannot.

As to taxing themselves, how can so many colonies fix the proportion which they shall pay themselves? Supposing each county was to do this in England; supposing we were to assess the sum and let them tax themselves. What danger arises from this. While they remain dependent, they must be subject to our legislature. They have increased under former taxes and they will flourish under this. They have in many instances encroached and claimed powers and privileges inconsistent with their situation as colonies. If they are not subject to this burden of tax; they are not entitled to the privilege of Englishmen.

As to the propriety of this particular tax, the stamp tax takes in a great degree its proportion from the riches of the people. As in lawsuits and commercial contracts, it increases in proportion to the riches. No great number of officers, no unconstitutional authority in great Boards.

He has enquired from North America whether they objected to this particular species of tax and has not heard one gentleman propose any other. The tax in a great degree executes itself, as the instruments not stamped are null and void, and no person will trust that, especially as the case may be brought by appeal to this country.

Forgery is the only fright to be apprehended, but severe penalties may prevent it. The punishment is in this country death.

The tax will in general be laid upon such instruments as in Great Britain, with some differences and exceptions. Justices of the Peace and officers of the militia are to be exempted; their being included was an objection to the Stamp Law in Jamaica.

This law is founded on that great maxim, that protection is due from the Governor, and support and obedience on the part of the governed.

Beckford. Admits right of taxing the imports and exports of the colonies, and says the colonies all admit this principle. He approves of the tax laid last year. Pamphlet called. Thinks Grenville spoke out of a consideration upon the late regulation. That this pamphlet a very good one, but the writer is a North Briton and desirous of drawing everything to the Scotch constitution. They have no Grand Jury there. The Attorney General is called there Diabolus Regis.

The North Americans do not think an internal and external duty the same.

As to representation, all England is not represented, but it is a written part of our constitution that it is so. When the Cornish boroughs began to send representatives to Parliament, they were almost the only trading boroughs. They had the Stannaries, which furnished them with a flourishing trade while the rest of the country had scarce any trade.

No precedent found of foreign taxation but the Post Office, and that certainly for the convenience of the colonies themselves. If this principle was established, why not tax Ireland; the produce of this would be indeed considerable.

The clergy before they were represented used to tax themselves; since they have been represented, they are taxed in common, and now do little but settle forms of prayer.

The peace acquisition. No revenue arises from it, but on the contrary a great amount of expense. The North Americans would be glad to be rid of the troops from the Government and the expense of supporting them.

He does not believe the conquered and ceded islands can be settled by the sale of the land in the way the Government proposes.

He moves for the Chairman to leave the Chair.

 $[\ldots]$

Barré. Seconds Beckford for the Chairman leaving the Chair. Is afraid that too much will be done on the one side and too much said on the other. Wishes to admire Grenville's prevoyance more and [...] less. We are working in the dark, and the less we do the better. Power and right; caution to be exercised lest the power be abused, the right subverted, and 2 million of unrepresented people mistreated and in their own opinion slaves.

There are gentlemen in this House from the West Indies, but there are very few who know the circumstances of North America. We know not yet the effect of the Act passed last year. The tax intended is odious to all your colonies and they tremble at it. He will not go further upon this ground. He will not raise the feeling of the North American if he will yield to anything for the safety of this country.

He thinks part of the regulation passed last year very wise in preventing them from getting the commodities of foreign countries. We know not however the real effect of this. [Several illeg. words] Many of the colonies are deeply indebted to this country.

As to the right of laying internal taxes, the Post Office in Queen Anne's time. The colonies were then small in comparison of what they are now. Few agents know the real sentiment of the colonies. One indeed does very fully and is very able to give the best advice, and I wish his opinion had been hearkened to.

The North Americans will complain that they are suffering by impositions while Canada is emerging from slavery and poverty into liberty and riches.

Jackson. Not inclined to dispute whether the Americans ought to bear a share of the burden they occasion or to dispute the power of the Parliament. He does not believe the North Americans will dispute either.

34 and 35 Henry 8 c. 18 in which the county of Chester is empowered to send representatives.

That the Commons in Parliament assembled represent all the subjects of Great Britain whether represented or not, and that all are bound by the acts of the legislature. That however in the case of Chester merchants were found to advise for the imperfection of that representation, and right was given to Chester in consequence to be represented.

In almost all speeches at the end of Parliament it is recommended to the Members to enforce peace and good order.

[…]

Colonel Barré. He knows not what representation have come from the colonies. The words of the resolutions were rather doubtful and gave room for [...]. Does not approve the adjournment for a few days, but wishes it never may come on. He does not feel this as a measure of party, it is of too much consequence. He approves that kind of tax as being the most equal and producing.

He thinks Lord North's expressions of candour and calmness seem to intimate as if it was not always so. Has seen all people lose their temper, even the highest man in this House lose his temper. He was but sorry to see it.

Lord Clarendon says moderation and modesty of language is never to be expected in this House. A general warmth is not to be rejected; let it be tempered by modesty and good manners.

Lord North. Did not mean to allude to Barré.

Sir William Meredith. Wishes to adjourn this debate for further information.

The safety of this country consists in this with respect that we cannot lay a tax upon others without taxing ourselves. This is not the case in America. We shall tax them in order to ease ourselves. We ought therefore to be extremely delicate in imposing a burden upon others which we not only not share ourselves but which is to take it far from us.

If we tax America we shall supersede the necessity of their assembling. The Clergy Convocation ceased when we began to include them in the tax.

How will they pay their debts if the first fruits of their commerce are to be applied to the purposes of maintaining our army?

This proposition agreed to last year that we might have more information given to us; the government do not want it, but private gentlemen do want it, and till he received this information he shall wish to adjourn this question.

 $[\ldots]$

Fuller. Admits the right but doubts the propriety of laying this tax. Is afraid of the discord and confusion which it may produce. The Post Office is a very small instance of a tax forced by this country. This tax is intended to be laid upon very different principles.

The law passed last year will be of service not so much as a revenue as a means of inducing administration to tax them to prevent the illicit trade with Holland, etc.

[Charles] Townshend. State of the mother country. Planted with, so much tenderness, governed with so much affection, and established with so much care and attention. Emancipate in the civil and domestic, not a servile connexion. If America looks to Great Britain for protection, she must enable her to protect her. If she expects our fleets, she must assist our revenue.

Barré. The ability is not denied, but it is not proved. He believes they can pay it. His objection is that it creates disgust, I had almost said hatred.

We did not plant the colonies. Most of them fled from oppression. They met with great difficulty and hardship, but as they fled from tyranny here they could not dread danger there. They flourished not by our care but by our neglect. They have increased while we did not attend to them. They shrink under our hand.

He took some pains to examine the word principle, knowing how seldom that gentleman is inaccurate, at least in expression.

Civil law is the only law by which the Court of Admiralty is governed, and that is very oppressive. This law was never made by the representatives of the people of England. We are the mother country, let us be cautious not to get the name of stepmother: There have been persons set as judges who nearly escaped holding up their heads in courts of justice themselves.

[...]

Garth. Wishes for the adjournment. Kept his doubt of the propriety of making any representation from the colonies after this resolution is passed.

Grenville. Says that the passing this resolution will make no difference as to the receiving a petition in answer some expression of intimating thanks for not taxing all the colonies by authority of the Crown, as the ceded islands have been taxed. Grenville says that this tax was laid by a higher authority and supported by the best opinion of lawyers living and dead.

Sir William Baker. Did not mean to reflect upon the gentleman, but thinks he has the right to speak his thoughts as a Member of this House, and will continue to do it.

The old 4 ½ per cent had been granted by a different assembly, and this new one laid by the authority of the Crown. Jamaica never paid this because their assembly would not consent to it, and he concluded from hence that it was thought that the King had no right to lay it and the administration had been guilty of something irregular.

De Grey. The reason that Jamaica does not pay the 4 ½ per cent duty is that they pay the quit rent in lieu of it.

 $[\ldots]$

Grenville... Then, as Chancellor of Exchequer he opened the business of the day, the American Tax by stamps, which had been in the votes 7th of March last. He told us it was a new subject, of which we must judge.

He first spoke to our right of taxing them. No doubt (he said) of our right to bind as to laws and taxes. Objection: they have no representation here. Answer: Parliament represents all, as well nonelectors, as electors. If not, not a twentieth part of England represented, not the great body of merchants, not the East India Company, possessed of such territories. Objection: the exemption in Charter Governments such as Rhode Island, Connecticut. Answer: can the Crown by Charter exempt a body from the power of Parliament? Has it, or can it have such power? Objection: Proprietory Governments, such as Maryland and Pennsylvania. Answer: there the King may give taxes, as to himself, but not parliamentary ones. Tobacco is there taxed by parliamentary authority. As to government under royal instructions, there could then be no reserve. Taxes collected, and carried to the aggregate fund. Objection: tax commerce by customs, but no internal tax. Answer: the Post Office the 9 of Anne was internal, and surplus carried to Sinking Fund. 6 George II the Sugar Act, i.e. tax on molasses. Provision for seamen: great Act of Navigation, by which none of their laws to have force, if contrary to the laws of England.

As to expediency, no doubt of that; their aid was wanted, was wanted everywhere. Great and necessary increase of the peace establishment. If said, they do not like it, no more does the west like the cyder tax; Scotland the beer tax; the middle of England, the land-tax. The interest of all was mutual. The plan not unjust, nor above their ability, their present establishments in America and West Indies about £137,000 a year. In North America, a debt of about £800,000, and taxes appropriated to pay it off. Compare this to our debt and expences here. If the objection be repeated of the uneasiness of the colonies, answer when the time when taxes will give no offence? Besides, were they to tax themselves, they could never agree. The tax could never be settled.

As for danger to their liberties, what is it? They have always been restrained by government here. Privileges and burthens must go together.

Mode of Stamps duty, an easy one to execute. Enforced itself in most instances in bonds, conveyances, law-proceedings etc.

Concluded with remarking that protection and obedience were reciprocal. Governors owed the first to the governed; the governed owed obedience to their Governors; this, the great bond of all society. Himself on the present subject was ready to give all information.

[...]

Barré, expressed great tenderness for the Americans. Wished, we did not go too far. Did not dispute our sovereignty.

Jackson gave good instances of exerting sovereignty over our own subjects even in Cadiz and other places, subject to foreign Princes. Proved the same to be asserted over the county of Chester even previous to their sending any representatives, in the very act, which gave them the privilege. The same too in Durham. Lord North For. Meredith, Against. Gave one specious reason, but did not make the most of it. When we tax Great Britain, we tax our selves. When we tax America, it is in ease of our selves. Another reason was transiently given too by I know not whom, which might have been better dwelt on. You had no army in America, when there was an enemy at your backs. Why talk of money to support so large an army now, when your enemy is expelled?

Thomas Townshend, against. *Charles Townshend*, for, who was (as usual) lively and eloquent.

Gibbons, Sir John, against. Baker, against, and had less argument and less specious sophistry, than I ever heard from him. Rambled (like Beckford) to the 4 ½ per cent duty on the ceded islands, to trials by Courts of Admiralty, where no juries. Praises juries, and acts the patriot, this rather awkwardly. Jenkinson and Solicitor General explain, and answer some of his calumnies. Dempster, against, and so Hewitt.

We divided at eight on a motion of Beckford to adjourn the debate.

against adjourning 245 for it 49 majority 196

After this, we went through the rest of the resolutions very quietly, yet being 54 in number, they lasted till past ten a clock, when we adjourned.

J. Ingersoll to T. Fitch

I ought here to tell you that the debate upon the American Stamp Bill came on before the House for the first time last Wednesday, when the same was opened by Mr. Grenville the Chancellor of the Exchequer, in a pretty lengthy speech, and in a very able and I think in a very candid manner he opened the nature of the tax, urged the necessity of it, endeavoured to obviate all objections to it, and took occasion to desire the House to give the Bill a most serious and cool consideration and not suffer themselves to be influenced by any resentments which might have been kindled from any thing they might have heard out of doors, alluding I suppose to the New York and Boston Assemblys' speeches and votes—that this was a matter of revenue which was of all things the most interesting to the subject etc. The argument was taken up by several who opposed the Bill (viz.) by Alderman Beckford, who, and who only, seemed to deny the authority of Parliament, by Colonel Barré, Mr. Jackson, Sir William Meredith and some others. Mr. Barré, who by the way I think, and I find I am not alone in my opinion, is one of the finest speakers that the House can boast of, having been some time in America as an officer in the army, and having while there, as I had known before, contracted many friendships with American gentlemen, and I believe entertained much more favourable opinions of them than some of his profession have done, delivered a very handsome and moving speech upon the Bill and against the same, concluding by saying that he was very sure that most who should hold up their hands to the Bill must be under a necessity of acting very much in the dark, but added, perhaps as well in the dark as any way.

After him *Mr. Charles Townshend* spoke in favour of the Bill, took notice of several things Mr. *Barré* had said, and concluded with the following or like words:—And now will these Americans, children planted by our care, nourished up by our indulgence until they are grown to a degree of strength & opulence, and protected by our arms, will they grudge to contribute their mite to relieve us from the heavy weight of that burden which we lie under? When he had done, *Mr. Barré* rose and having explained something which he had before said and which Mr. Townshend had been remarking upon, he then took up the beforementioned concluding words of Mr. Townshend, and in a most spirited and I thought an almost inimitable manner, said—

"They planted by your care? No! your oppressions planted them in America. They fled from your tyranny to a then uncultivated and unhospitable country—where they exposed themselves to almost all the hardships to which human nature is liable, and among others to the cruelties of a savage foe, the most subtle and I take upon me to say the most formidable of any people upon the face of God's Earth. And yet, actuated by principles of true English liberty, they met all these hardships with pleasure, compared with those they suffered in their own country, from the hands of those who should have been their friends.

"They nourished up by your indulgence? They grew by your neglect of them: as soon as you began to care about them, that care was exercised in sending persons to rule over them, in one department and another, who were perhaps the deputies of deputies to some member of this House—sent to spy out their liberty, to misrepresent their actions and to prey upon them; men whose behaviour on many occasions has caused the blood of those Sons of Liberty to recoil within them; men promoted to the highest seats of justice, some, who to my knowledge were glad by going to a foreign country to escape being brought to the bar of a court of justice in their own.

"They protected by your arms? They have nobly taken up arms in your defence, have exerted a valour amidst their constant and laborious industry for the defence of a country, whose frontier, while drenched in blood, its interior parts have yielded all its little savings to your emolument. And believe me, remember I this day told you so, that same spirit of freedom which actuated that people at first, will accompany them still. But prudence forbids me to explain myself further. God knows I do not at this time speak from motives of party heat, what I deliver are the genuine sentiments of my heart; however superior to me in general knowledge and experience the reputable body of this House may be, yet I claim to know more of America than most of you, having seen and been conversant in that country. The people I believe are as truly loyal as any subjects the King has, but a people jealous of their liberties and who will vindicate them, if ever they should be violated, but the subject is too delicate and I will say no more."

These sentiments were thrown out so entirely without premeditation, so forceably and so firmly, and the breaking off so beautifully abrupt, that the whole House sat awhile as amazed, intently looking and without answering a word.

I own I felt emotions that I never felt before and went the next morning and thanked Colonel Barré in behalf of my country for his noble and spirited speech.

However, Sir after all that was said, upon a division of the House upon the question, there was about 250 to about 50 in favour of the Bill.

155. Stamp Act, March 22, 1765 [Excerpt]

Introduction

The Stamp Act was part of the post-war British plan to tax the North American colonies to provide for the support of the colonial military and government. While the Sugar Act of 1764 taxed import commodities, the Stamp Act, passed by Parliament on March 22, 1765, was the first tax that Great Britain ever levied directly on its North American colonists. The Act required the purchase of a stamped paper for every publication or legal document. The act also vested enforcement authority in courts of admiralty, which operated without juries. The Stamp Act sparked tremendous protest among the colonists when word of it reached them in April, six months before the act was to take effect on November 1, 1765. In October, many of the colonies sent delegates to the Stamp Act Congress in New York City to draft official protests and resolutions against the tax. Throughout North America, colonists began to examine more closely their relationship with Britain and their rights as Englishmen. After November 1, many colonial businesses and government offices shut down rather than comply with the law. In the face of such opposition, the British government repealed the act on March 18, 1766, but passed the Declaratory Act at the same time, affirming its right to tax the colonies.

Primary Source

An act for granting and applying certain stamp duties, and other duties, in the British colonies and plantations in America, towards further defraying the expences of defending, protecting, and securing the same; and for amending such parts of the several acts of parliament relating to the trade and revenues of the said colonies and plantations, as direct the manner of determining and recovering the penalties and forfeitures therein mentioned.

WHEREAS by an act made in the last session of parliament, several duties were granted, continued, and appropriated, towards defraying the expences of defending, protecting, and securing, the British colonies and plantations in America: and whereas it is just and necessary, that provision be made for raising a further revenue within your Majesty's dominions in America, towards defraying the said expences: we, your Majesty's most dutiful and loyal subjects, the commons of *Great Britain* in parliament assembled, have therefore resolved to give and grant unto your Majesty the several rates and duties herein after mentioned; and do most humbly beseech your Majesty that it may be enacted, and be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the first day of November, one thousand seven hundred and sixty five, there shall be raised, levied, collected, and paid unto his Majesty, his heirs, and successors, throughout the colonies and plantations in America which now are, or hereafter may be, under the dominion of his Majesty, his heirs and successors,

For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be ingrossed, written or printed, any declaration, plea, replication, rejoinder, demurrer, or other pleading, or any copy thereof, in any court of law within the British colonies and plantations in America, a stamp duty of three pence.

For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be ingrossed, written or printed, any special bail and appearance upon such bail in any such court, a stamp duty of two shillings.

For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be ingrossed, written, or printed, any petition, bill, answer, claim, plea, replication, rejoinder, demurrer, or other pleading in any court of chancery or equity within the said colonies and plantations, a stamp duty of one shilling and six pence.

For every skin or piece of vellum or parchment, or sheet or piece of paper, on which shall be ingrossed, written, or printed, any copy of any petition, bill, answer, claim, plea, replication, rejoinder, demurrer, or other pleading in any such court, a stamp duty of three pence.

 $[\ldots]$

And for and upon every paper, commonly called a *pamphlet*, and upon every news paper, containing publick news, intelligence, or occurrences, which shall be printed, dispersed, and made publick, within any of the said colonies and plantations, and for and upon such advertisements as are herein after mentioned, the respective duties following (that is to say)

 $[\ldots]$

For every almanack or calendar, for any one particular year, or for any time less than a year, which shall be written or printed on one side only of any one sheet, skin, or piece of paper parchment, or vellum, within the said colonies and plantations, a stamp duty of two pence.

 $[\ldots]$

And there shall be also paid in the said colonies and plantations, a duty of six pence for every twenty shillings, in any sum not exceeding fifty pounds sterling money, which shall be given, paid, contracted, or agreed for, with or in relation to any clerk or apprentice, which shall be put or placed to or with any master or mistress to learn any profession, trade, or employment.

II. And also a duty of one shilling for every twenty shillings, in any sum exceeding fifty pounds, which shall be given, paid, contracted, or agreed, for, with or in relation to any such clerk, or apprentice.

[...]

X. Provided always, That this act shall not extend to charge any proclamation, forms of prayer and thanksgiving, or any printed

votes of any house of assembly in any of the said colonies and plantations, with any of the said duties on pamphlets or news papers; or to charge any books commonly used in any of the schools within the said colonies and plantations, or any books containing only matters of devotion or piety; or to charge any single advertisement printed by itself, or the daily accounts or bills of goods imported and exported, so as such accounts or bills do contain no other matters than what have been usually comprized therein; any thing herein contained to the contrary notwithstanding.

XI. Provided always, That nothing in this act contained shall extend to charge with any of the said duties, any vellum, parchment, or paper, on which shall only be ingrossed, written, or printed, any certificate that shall be necessary to intitle any person to receive a bounty granted by act of parliament.

XII. And be it further enacted by the authority aforesaid, That the said several duties shall be under the management of the commissioners, for the time being, of the duties charged on stamped vellum, parchment, and paper, in *Great Britain:* and the same commissioners are hereby impowered and required to employ such officers under them, for that purpose, as they shall think proper; and to use such stamps and marks, to denote the stamp duties hereby charged, as they shall think fit; and to repair, renew, or alter the same, from time to time, as there shall be occasion; and to do all other acts, matters, and things, necessary to be done, for putting this act in execution with relation to the duties hereby charged.

 $[\ldots]$

XV. And be it further enacted by the authority aforesaid, That if any person or persons shall sign, ingross, write, print, or sell, or expose to sale, or cause to be signed, ingrossed, written, printed or sold, or expose to sale, in any of the said colonies or plantations, or in any other part of his Majesty's dominions, any matter or thing, for which the vellum, parchment, or paper, is hereby charged to pay any duty, before the same shall be marked or stamped with the marks or stamps to be provided as aforesaid, or upon which there shall not be some stamp or mark resembling the same; or shall sign, ingross, write, print, or sell, or expose to sale, or cause to be signed, ingrossed, written, printed, or sold, or exposed to sale, any matter or thing upon any vellum, parchment, or paper, that shall be marked or stamped for any lower duty than the duty by this act made payable in respect thereof; every such person so offending shall, for every such offence, forfeit the sum of ten pounds.

XVI. And be it further enacted by the authority aforesaid, That no matter or thing whatsoever, by this act charged with the payment of a duty, shall be pleaded or given in evidence, or admitted in any court within the said colonies or plantations, to be good, useful, or available in law or equity, unless the same shall be marked or

stamped, in pursuance of this act, with the respective duty hereby charged thereon, or with an higher duty.

[...]

XVIII. And be it further enacted by the authority aforesaid, That if any person shall forge, counterfeit, erase, or alter, any such certificate, ever such person so offending shall be guilty of felony, and shall suffer death as in cases of felony without the benefit of clergy.

[...]

XXII. And be it further enacted by the authority aforesaid, That from and after the said first day of November, one thousand seven hundred and sixty five, if any counsellor, clerk, officer, attorney, or other person, to whom this shall appertain, or who shall be employed or intrusted, in the said colonies or plantations, to enter or file any matter or thing in respect whereof a duty shall be payable by virtue of this act, shall neglect to enter, file, or record the same, as by law the same ought to be entered, filed, or recorded, within the space of four months after he shall have received any money for or in respect of the same, or shall have promised or undertaken so to do; or shall neglect to enter, file, or record, any such matter or thing, before any subsequent, further or other proceeding, matter, or thing, in the same suit, shall be had, entered, filed, or recorded; that then every such counsellor, clerk, officer, attorney, or other person so neglecting or offending, in each of the cases aforesaid, shall forfeit the sum of fifty pounds for every such offence.

 $[\ldots]$

XXXVI. And be it further enacted by the authority aforesaid, That all printed indentures, or contracts for binding clerks or apprentices, after the said first day of *November*, one thousand seven hundred and sixty five, within the said colonies and plantations, shall have the following notice or memorandum printed under the same, or added thereto, *videlicet*,

THE indenture must bear date the day it is executed, and the money or other thing, given or contracted for with the clerk or apprentice, must be inserted in words at length, and the duty paid, and a receipt given on the back of the indenture, by the distributor of stamps, or his substitute, within three months after the execution of such indenture, under the penalties inflicted by law.

And if any printer, stationer, or other person or persons, within any of the said colonies or plantations, or any other part of his Majesty's dominions, shall sell, or cause to be sold, any such indenture or contract, without such notice or memorandum being printed under the same, or added thereto; then, and in every such case, such printer, stationer, or other person or persons, shall for every such offence, forfeit the sum of ten pounds.

XXXVII. And, for the better securing the said duty on playing cards and dice; be it further enacted by the authority aforesaid, That from and after the said first day of *November*, one thousand seven hundred and sixty five, no playing cards or dice shall be sold, exposed to sale, or used in play, within the said colonies or plantations, unless the paper and thread inclosing, or which shall have inclosed, the same, shall be or shall be also marked or stamped on the spotted or painted side thereof with such mark or marks as shall have been provided in pursuance of this act, upon pain that every person who shall sell, or expose to sale, any such cards or dice which shall not have been so respectively sealed, marked, or stamped, as hereby is respectively required, shall forfeit for every pack or parcel of cards, and every one of such dice so sold or exposed to sale, the sum of ten pounds.

 $[\ldots]$

XLVIII. And be it further enacted by the authority aforesaid, That all publick clerks or officers within the said colonies or plantations, who shall from time to time have in their custody any publick books, or other matters or things hereby charged with a stamp duty, shall at any seasonable time or times, permit any officer or officers thereunto authorized by the said commissioners for managing the stamp duties, to inspect and view all such publick books, matters, and things, and to take thereout such notes and memorandums as shall be necessary for the purpose of ascertaining or securing the said duties, without fee or reward; upon pain that every such clerk or other officer who shall refuse or neglect so to do, upon reasonable request in that behalf made, shall, for every such refusal or neglect, forfeit the sum of twenty pounds.

XLIX. And be it further enacted by the authority aforesaid, That the high treasurer of *Great Britain*, or the commissioners of his Majesty's treasury, or any three or more of such commissioners, for the time being, shall once in every year at least, set the prices at which all sorts of stamped vellum, parchment, and paper, shall be sold by the said commissioners for managing the stamp duties, and their officers; and that the said commissioners for the said duties shall cause such prices to be marked upon every such skin and piece of vellum and parchment, and sheet and piece paper: and if any officer or distributor to be appointed by virtue of this act, shall sell, or cause to be sold, any vellum, parchment, or paper, for a greater or higher price or sum, than the price or sum so set or affixed thereon; every such officer or distributor shall, for every such offence, forfeit the sum of twenty pounds.

[…]

LIV. And be it further enacted by the authority aforesaid, That all the monies which shall arise by the several rates and duties hereby granted (except the necessary charges of raising, collecting, recovering, answering, paying, and accounting for the same, and the necessary charges of the same of the

essary charges from time to time incurred in relation to this act, and the execution thereof) shall be paid into the receipt of his Majesty's exchequer, and shall be entered separate and apart from all other monies, and shall be there reserved to be from time to time disposed of by parliament, towards further defraying the necessary expences of defending, protecting, and securing, the said colonies and plantations.

LV. And whereas, it is proper that some provision should be made for payment of the necessary expences which have been, and shall be incurred in relation to this act, and the execution thereof; and of the orders and rules to be established under the authority of the same, before the said duties shall take effect, or the monies arising thereby shall be sufficient to discharge such expences; be it therefore enacted by the authority aforesaid, That his Majesty may, and he is hereby impowered by any warrant or warrants under his royal sign manual, at any time or times before the twentieth day of April, one thousand seven hundred and sixty six, to cause to be issued and paid out of any of the surplusses, excesses, overplus monies, and other revenues composing the fund commonly called *The sinking* fund (except such monies of the said sinking fund as are appropriated to any particular use or uses, by any former act or acts of parliament in that behalf) such sum and sums of money as shall be necessary to defray the said expences; and the monies so issued, shall be reimbursed, by payment into the exchequer of the like sum or sums out of the first monies which shall arise by virtue of this act; which monies, upon the payment thereof into the exchequer, shall be carried to the account, and made part of the said fund.

156. Quartering Act, 1765 [Excerpt]

Introduction

Parliament passed the Quartering Act of 1765 to address the problems created by its Mutiny Act passed earlier the same year. The Mutiny Act applied to British troops throughout the world. It included a clause calling for more British troops to be sent to America and providing for them to be billeted in private homes. When American colonists objected to the Mutiny Act, General Gage asked Parliament to pass a quartering act that applied specifically to America. One of two quartering acts enacted by the British government in the years leading up to the American Revolution—the second and more infamous one was enacted in 1774 in response to the Boston Tea Party—the Quartering Act of 1765 compelled colonial governments to provide for the housing, feeding, and supplying of British troops in America. Although this Quartering Act dropped the requirement that Americans maintain British troops in their own houses, the colonists viewed the act as an infringement of their

right to decide how their money should be spent. When New York legislators refused to comply with the act and provide for the British troops stationed there, the royal governor dismissed the assembly. This action turned both radical and conservative patriots against British authority.

Primary Source

One of two quartering acts enacted by the British government in the years leading up to the American Revolution, the Quartering Act of 1765, compelled colonial governments to provide for the housing, feeding, and supplying of British troops in North America. Such mandates became a major colonial grievance, although the laws never called for Americans to maintain British troops in their own houses as the colonists feared.

An act to amend and render more effectual, in his Majesty's dominions in America, an act passed in this present session of parliament, intituled, An act for punishing mutiny and desertion, and for the better payment of the army and their quarters.

WHEREAS in and by an act made in the present session of parliament, intituled, An act for punishing mutiny and desertion, and for the better payment of the army and their quarters; several regulations are made and enacted for the better government of the army, and their observing strict discipline, and for providing quarters for the army, and carriages on marches and other necessary occasions, and inflicting penalties on offenders against the same act, and for many other good purposes therein mentioned; but the same may not be sufficient for the forces that may be employed in his Majesty's dominions in America: and whereas, during the continuance of the said act, there may be occasion for marching and quartering of regiments and companies of his Majesty's forces in several parts of his Majesty's dominions in America: and whereas the publick houses and barracks, in his Majesty's dominions in America, may not be sufficient to supply quarters for such forces: and whereas it is expedient and necessary that carriages and other conveniences, upon the march of troops in his Majesty's dominions in America, should be supplied for that purpose: be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That for and during the continuance of this act, and no longer, it shall and may be lawful to and for the constables, tithingmen, magistrates, and other civil officers of villages, towns, townships, cities, districts, and other places, within his Majesty's dominions in America, and in their default or absence, for any one justice of the peace inhabiting in or near any such village, township, city, district or other place, and for no others; and such constables, tithingmen, magistrates, and other civil officers as aforesaid, are hereby required to quarter and billet the officers and soldiers, in his Majesty's service, in the barracks provided by the colonies; and if there shall not be sufficient room in the said barracks for the officers and soldiers, then and in such case only, to quarter and billet the residue of such officers and soldiers, for whom there shall not be room in such barracks, in inns, livery stables, ale-houses, victualling-houses, and the houses of sellers of wine by retail to be drank in their own houses or places thereunto belonging, and all houses of persons selling of rum, brandy, strong water, cyder or metheglin, by retail, to be drank in houses; and in case there shall not be sufficient room for the officers and soldiers in such barracks, inns, victualling and other publick alehouses, that in such and no other case, and upon no other account, it shall and may be lawful for the governor and council of each respective province in his Majesty's dominions in America, to authorize and appoint, and they are hereby directed and impowered to authorize and appoint, such proper person or persons as they shall think fit, to take, hire and make fit, and, in default of the said governor and council appointing and authorizing such person or persons, or in default of such person or persons so appointed neglecting or refusing to do their duty, in that case it shall and may be lawful for any two or more of his Majesty's justices of the peace in or near the said villages, town, townships, cities, districts, and other places, and they are hereby required to take, hire, and make fit for the reception of his Majesty's forces, such and so many uninhabited houses, outhouses, barns or other buildings, as shall be necessary, to quarter therein the residue of such officers and soldiers for whom there should not be rooms in such barracks and publick houses as aforesaid, and to put and quarter the residue of such officer and soldiers therein.

[…]

V. Provided nevertheless, and it is hereby enacted, That the officers and soldiers so quartered and billeted as aforesaid (except such as shall be quartered in the barracks, and hired uninhabited houses, or other buildings as aforesaid) shall be received and furnished with diet, and small beer, cyder, or rum mixed with water, by the owners of the inns, livery stables, alehouses, victualling-houses, and other houses in which they are allowed to be quartered and billeted by this act; paying and allowing for the same the several rates herein after mentioned to be payable out of the subsistence-money, for diet and small beer, cyder, or rum mixed with water.

[...]

X. And whereas some doubts may arise, whether commanding officers of any regiment or company, within his Majesty's said dominions in America, may exchange any men quartered in any village, town, township, city, district, or place, in his Majesty's said dominions in America, with another man quartered in the same place, for the benefit of the service; be it declared and enacted by the authority aforesaid, That such exchange as above mentioned may be made by such commanding officers respectively, provided the number of men do not exceed the number at that time billeted on such house or houses; and the constables, tithingmen, magistrates, and other chief officers of the villages, towns, townships, cities, districts, or other places where any regiment or company shall be quartered, are hereby required to billet such men so exchanged accordingly.

XI. And be it further enacted by the authority aforesaid, That if any constable, tithingman, magistrate, or other chief officer or person whatsoever, who, by virtue or colour of this act, shall quarter or billet, or be employed in quartering or billeting, any officers or soldiers, within his Majesty's said dominions in America, shall neglect or refuse, for the space of two hours, to quarter or billet such officers of soldiers, when thereunto required, in such manner as is by this act directed, provided sufficient notice be given before the arrival of such forces; or shall receive, demand, contract, or agree for, any sum or sums of money, or any reward whatsoever, for or on account of excusing, or in order to excuse, any person or persons whatsoever from quartering, or receiving into his, her, or their house or houses, any officer or soldier, or in case any victualler, or any other person within his Majesty's dominions in America, liable by this act to have any officer or soldier billeted or quartered on him or her, shall refuse to receive or victual any such officer or soldier so quartered or billeted upon him or her as aforesaid; or in case any person or persons shall refuse to furnish or allow, according to the directions of this act, the several things herein before directed to be furnished or allowed to officers and soldiers, so quartered or billeted on him or her, or in the barracks, and hired uninhabited houses, out-houses, barns or other buildings, as aforesaid, at the rate herein after mentioned; and shall be thereof convicted before one of the magistrates of any one of the supreme chief or principal common law courts of the colony where such offence shall be committed, either by his own confession, or by the oath of one or more credible witness or witnesses (which oath such magistrate of such court is hereby impowered to administrate) every such constable, tithingman, magistrate, or other chief officer or person so offending shall forfeit, for every such offence, the sum of five pounds sterling, or any sum of money not exceeding five pounds, nor less than forty shillings, as the said magistrate (before whom the matter shall be heard) shall in his discretion think fit; to be levied by distress and sale of the goods of the person offending, by warrant under the hand and seal of such magistrate before whom such offender shall be convicted, to be directed to a constable or other officer within the village, town, township, city, district, or other place, where the offender shall dwell; and shall direct the said sum of five pounds, or such other sum as shall be ordered to be levied in pursuance of this act as aforesaid, when levied, to be paid into the treasury of the province or colony where the offence shall be committed, to be applied towards the general charges of the said province or colony.

 $[\ldots]$

XXIII. Provided always, That if any person shall harbour, conceal, or assist, any deserter for his Majesty's service within his Majesty's said dominions in America, knowing him to be such, the person so offending, shall forfeit for every such offence, the sum of five pounds; or if any person shall knowingly detain, buy or exchange, or otherwise receive, any arms, clothes, caps, or other furniture belonging to the King, from any soldier or deserter, or any other

person, upon any account or pretence whatsoever, within his Majesty's dominions in America, or cause the colour of such clothes to be changed; the person so offending shall forfeit, for every such offence, the sum of five pounds; and upon conviction upon the oath of one or more credible witness or witnesses, before any of his Majesty's justices of the peace, the said respective penalties of five pounds, and five pounds, shall be levied by warrant under the hands of the said justice or justices of the peace, by distress and sale of the goods and chattels of the offenders; one moiety of the said firstmentioned penalty of five pounds to be paid to the informer, by whose means such deserter shall be apprehended; and one moiety of the said last mentioned penalty of five pounds to be paid to the informer; and the residue of the said respective penalties to be paid to the officer to whom any such deserter or soldier did belong: and in case any such offenders, who shall be convicted as aforesaid, of harbouring or assisting any such deserter or deserters, or having knowingly received any arms, clothes, caps, or other furniture belonging to the King; or having caused the colour of such clothes to be changed, contrary to the intent of this act, shall not have sufficient goods and chattels, whereon distress may be made, to the value of the penalties recovered against him for such offence, or shall not pay such penalties within four days after such conviction; then, and in such case, such justice of the peace shall and may, by warrant under his hand and seal, commit such offender to the common gaol, there to remain, without bail or main prize, for the space of three months, or cause such offender to be publickly whipt, at the discretion of such justice.

157. Declaratory Act, 1766

Introduction

The Stamp Act was part of the British plan to tax the North American colonies to provide for the support of the colonial military and government. Passed by Parliament on March 22, 1765, the Stamp Act imposed the first tax that Britain ever levied directly on its North American colonists. The Stamp Act sparked tremendous protest among the colonists, and riots erupted in several cities. In October, many of the colonies sent delegates to the Stamp Act Congress in New York City to draft official protests and resolutions against the tax. Throughout North America, colonists began to examine more closely their relationship with Britain and their rights as Englishmen. After November 1, the date the act was to take effect, many colonial businesses and government offices shut down rather than comply with the law. Parliament came to realize that the Stamp Act was impossible to enforce, and repealed the act on March 18, 1766. Not wishing to appear to have caved in to colonial pressure, Parliament quickly passed the Declaratory Act,

affirming its right to tax the colonies. The Declaratory Act stated unequivocally that Parliament had the right to pass whatever laws it wished in regard to Britain's North American colonies. In their triumph over the repeal of the Stamp Act, many colonists overlooked the Declaratory Act.

Primary Source

An act for the better securing of the dependency of his majesty's dominions in America upon the crown and parliament of Great Britain.

Whereas several of the houses of representatives in his Majesty's colonies and plantations in America, have of late against law, claimed to themselves, or to the general assemblies of the same, the sole and exclusive right of imposing duties and taxes upon his majesty's subjects in the said colonies and plantations; and have in pursuance of such claim, passed certain votes, resolutions, and orders derogatory to the legislative authority of parliament, and inconsistent with the dependency Of the said colonies and plantations upon the crown of Great Britain: may it therefore please your most excellent Majesty, that it may be declared; and be it declared by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That the said colonies and plantations in America have been, are, and of right ought to be, subordinate unto, and dependent upon the imperial crown and parliament of Great Britain; and that the King's majesty, by and with the advice and consent of the lords spiritual and temporal, and commons of Great Britain, in parliament assembled, had, hath, and of right ought to have, full power and authority to make laws and statutes of sufficient force and validity to bind the colonies and people of America, subjects of the crown of Great Britain, in all cases whatsoever,

II. And be it further declared and enacted by the authority aforesaid, That all resolutions, votes, orders, and proceedings, in any of the said colonies or plantations, whereby the power and authority of the parliament of Great Britain, to make laws and statutes as aforesaid, is denied, or drawn into question, arc, and are hereby declared to be, utterly null and void to all in purposes whatsoever.

158. Townshend Acts, July 2, 1767 [Excerpt]

Introduction

Many in the British government were angry that colonial protests had forced them to repeal the Stamp Act and the Sugar Act. Charles Townshend, the powerful Chancellor of the Exchequer, continued to believe that the colonies should pay to support their own army

and government. Townshend proposed legislation to tax a number of goods imported to the American colonies. It represented an attempt by the British government to raise revenue from the colonists by a tax on external trade. Passed by Parliament on July 2, 1767, the Townshend Acts quickly sparked widespread colonial protests, particularly because the new laws established an American Board of Customs charged with cracking down on smuggling and provided for writs of assistance (sweeping search warrants). The colonies responded with letters of protest to the British government, nonimportation agreements, and the notorious Massachusetts Circular Letter, which called for the various colonies to unite against British authority. Townshend died a few months after the passage of the acts, leaving his successors to enforce them. Parliament gradually rescinded the taxes on all of the items enumerated in the laws except tea.

Primary Source

An act for granting certain duties in the British colonies and plantations in America; for allowing a drawback of the duties of customs upon the exportation, from this kingdom, of coffee and cocoa nuts of the produce of the said colonies or plantations; for discontinuing the drawbacks payable on china earthen ware exported to America; and for more effectually preventing the clandestine running of goods in the colonies and plantations.

WHEREAS it is expedient that a revenue should be raised in your Majesty's dominions in America, for making a more certain and adequate provision for defraying the charge of the administration of justice, and the support of civil government, in such provinces where it shall be found necessary; and towards further defraying the expenses of defending, protecting, and securing, the said dominions; we, your Majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, have therefore resolved to give and grant unto your Majesty the several rates and duties herein after mentioned; and do most humbly beseech your Majesty that it may be enacted, and be it enacted by the King's most excellent majesty, by and with the advice of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the twentieth day of November, one thousand seven hundred and sixty seven, there shall be raised, levied, collected, and paid, unto his Majesty, his heirs, and successors, for and upon the respective goods herein after mentioned, which shall be imported from Great Britain into any colony or plantation in America which now is, or hereafter may be, under the dominion of his Majesty, his heirs, or successors, the several rates and duties following; that is to say,

For every hundred weight avoirdupois of crown, plate, flint, and white glass, four shillings and eight pence.

For every hundred weight avoirdupois of green glass, one shilling and two pence.

For every hundred weight avoirdupois of red lead, two shillings.

For every hundred weight avoirdupois of white lead, two shillings.

For every hundred weight avoirdupois of painters colours, two shillings.

For every pound weight avoirdupois of tea, three pence.

For every ream of paper, usually called or known by the name of Atlas Fine, twelve shillings.

For every ream of paper called Atlas Ordinary, six shillings.

For every ream of paper called Bastard, or Double Copy, one shilling and six pence.

For every single ream of blue paper for sugar bakers, ten pence halfpenny

For every ream of paper called Blue Royal, one shilling and six pence.

For every bundle of brown paper containing forty quires, not made in Great Britain, six pence.

For every ream of paper called Brown Cap, not made in Great Britain, nine pence.

For every ream of paper called Brown Large Cap, made in Great Britain, four pence halfpenny.

For every ream of paper called Small Ordinary Brown, made in Great Britain, three pence.

For every bundle, containing forty quires, of paper called Whited Brown, made in Great Britain, four pence halfpenny.

For every ream of cartridge paper, one shilling and one penny halfpenny.

For every ream of paper called Chancery Double, one shilling and six pence.

For every ream of paper called Genoa Crown Fine, on shilling and one penny halfpenny.

For every ream of paper called Genoa Crown Second, nine pence.

For every ream of paper called German Crown, nine pence.

For every ream of paper called Fine Printing Crown, nine pence.

For every ream of paper called Second Ordinary Printing Crown, six pence three farthings.

For every ream of paper called Crown Fine, made in Great Britain, nine pence.

For every ream of paper called Crown Second, made in Great Britain, six pence three farthings.

For every ream of paper called Demy Fine, not made in Great Britain, three shillings.

For every ream of paper called Demy Second, not made in Great Britain, one shilling and four pence halfpenny.

For every ream of paper called Demy Fine, made in Great Britain, one shilling and one penny halfpenny.

For every ream of paper called Demy Second, made in Great Britain, nine pence.

For every ream of paper called Demy Printing, one shilling and three pence.

For every ream of paper called Genoa Demy Fine, one shilling and six pence.

For every ream of paper called Genoa Demy Second, one shilling and one penny halfpenny.

For every ream of paper called German Demy, one shilling and one penny halfpenny.

For every ream of paper called Elephant Fine, six shillings.

For every ream of paper called Elephant Ordinary, two shillings and five pence farthing.

For every ream of paper called Genoa Fools Cap Fine, one shilling and one penny halfpenny.

For every ream of paper called Genoa Fools Cap Second, nine pence.

For every ream of paper called German Fools Cap, nine pence.

For every ream of paper called Fine Printing Fools Cap, nine pence.

For every ream of paper called Second Ordinary Printing Fools Cap, six pence three farthings.

For every ream of any other paper called Fools Cap Fine, not made in Great Britain, one shilling and ten pence halfpenny.

For every ream of any other paper called Fools Cap Fine Second, not made in Great Britain, one shilling and six pence.

For every ream of paper Fools Cap Fine, made in Great Britain, nine pence.

For every ream of paper called Fools Cap Second, made in Great Britain, six pence three farthings.

For every ream of paper called Imperial Fine, twelve shillings.

For every ream of paper called Second Writing Imperial, eight shillings and three pence.

For every ream of paper called German Lombard, nine pence.

For every ream of paper called Medium Fine, four shillings and six pence.

For every ream of paper called Genoa Medium, one shilling and ten pence halfpenny.

For every ream of paper called Second Writing Medium, three shillings.

For every ream of painted paper, not made in Great Britain, six shillings.

For every ream of paper called Fine Large Post, one shilling and ten pence halfpenny.

For every ream of paper called Small Post, one shilling and one penny halfpenny.

For every ream of paper called Fine Genoa Pot, six pence three farthings.

For every ream of paper called Second Genoa Pot, six pence three farthings.

For every ream of other paper called Superfine Pot, not made in Great Britain, one shilling and six pence.

For every ream of other paper called Second Fine Pot, not made in Great Britain, one shilling and one penny halfpenny.

For every ream of paper called Ordinary Pot, not made in Great Britain, six pence three farthings.

For every ream of paper called Fine Pot, made in Great Britain, nine pence.

For every ream of paper called Second Pot, made in Great Britain, four pence halfpenny.

For every ream of paper called Super Royal Fine, nine shillings. For every ream of paper called Royal Fine, six shillings.

For every ream of paper called Fine Holland Royal, two shillings and five pence farthing.

For every ream of paper called Fine Holland Second, one shilling and six pence.

For every ream of paper called Second Fine Holland Royal, one shilling and six pence.

For every ream of paper called Ordinary Royal, nine pence.

For every ream of paper called Genoa Royal, two shillings and five pence farthing.

For every ream of paper called Second Writing Royal, four shillings and one penny halfpenny.

For every ream of paper called Second Writing Super Royal, six shillings.

For every hundred weight avoirdupois of paste-boards, millboards, and scale-boards, not made in Great Britain, three shillings and nine pence.

For every hundred weight avoirdupois of paste-boards, millboards, and scale-boards, made in Great Britain, two shillings and three pence.

And for and upon all paper which shall be printed, painted, or stained, in Great Britain, to serve for hangings or other uses, three farthings for every yard square, over and above the duties payable for such paper by this act, if the same had not been printed, painted, or stained; and after those rates respectively for any greater or less quantity.

II. And it is hereby further enacted by the authority aforesaid, That all other paper (not being particularly rated and charged in this act) shall pay the several and respective duties that are charged by this act, upon such paper as is nearest above in size and goodness to such unrated paper.

III. And be it declared and enacted by the authority aforesaid, That a ream of paper, chargeable by this act, shall be understood to consist of twenty quires, and each quire of twenty four sheets.

IV. And it is hereby further enacted by the authority aforesaid, That the said rates and duties, charged by this act upon goods imported into any British American colony or plantation, shall be deemed, and are hereby declared to be, sterling money of Great Britain; and shall be collected, recovered, and paid to the amount of the value which such nominal sums bear in Great Britain; and that such monies may be received and taken, according to the proportion and value of five shillings and six pence the ounce in silver; and shall be raised, levied, collected, paid, and recovered, in the same manner and form, and by such rules, ways, and means, and under such penalties and

forfeitures, as any other duties, now payable to his Majesty upon goods imported into the said colonies or plantations, may be raised, levied, collected, paid, and recovered, by any act or acts of parliament now in force, as fully and effectually, to all intents and purposes, as if the several clauses, powers, directions, penalties, and forfeitures, relating thereto, were particularly repeated, and again enacted, in the body of this present act: and that all the monies that shall arise by the said duties (except the necessary charges of raising, collecting, levying, recovering, answering, paying, and accounting for the same) shall be applied, in the first place, in such manner as is herein after mentioned, in making a more certain and adequate provision for the charge of the administration of justice, and the support of civil government, in such of the said colonies and plantations where it shall be found necessary; and that the residue of such duties shall be paid into the receipt of his Majesty's exchequer, and shall be entered separate and apart from all other monies paid or payable to his Majesty, his heirs, or successors; and shall be there reserved, to be from time to time disposed of by parliament towards defraying the necessary expences of defending, protecting, and securing, the British colonies and plantations in America.

V. And be it further enacted by the authority aforesaid, That his Majesty and his successors shall be, and are hereby, impowered, from time to time, by any warrant or warrants under his or their royal sign manual or sign manuals, countersigned by the high treasurer, or any three or more of the commissioners of the treasury for the time being, to cause such monies to be applied, out of the produce of the duties granted by this act, as his Majesty, or his successors, shall think proper or necessary, for defraying the charges of the administration of justice, and the support of the civil government, within all or any of the said colonies or plantations.

VI. And whereas the allowing a drawback of all the duties of customs upon the exportation, from this kingdom, of coffee and cocoa nuts, the growth of the British dominions in America, may be a means of encouraging the growth of coffee and cocoa in the said dominions; be it therefore enacted by the authority aforesaid, That from and after the said twentieth day of November, one thousand seven hundred and sixty seven, upon the exportation of any coffee or cocoa nuts, of the growth or produce of any British colony or plantation in America, from this kingdom as merchandize, the whole duties of customs, payable upon the importation of such coffee or cocoa nuts, shall be drawn back and repaid; in such manner, and under such rules, regulations, penalties, and forfeitures, as any drawback or allowance, payable out of the duties of customs upon the exportation of such coffee or cocoa nuts, was, could, or might be paid, before the passing of this act; any law, custom, or usage, to the contrary notwithstanding.

159. Phillis Wheatley, To the King's Most Excellent Majesty, 1768

Introduction

America's first African American poetess, Phillis Wheatley wrote dozens of poems over the course of her short life, focusing mainly on the themes of religion, death, and the growing struggle between the North American colonies and Great Britain. Born in West Africa around 1753, captured by slave traders as a young girl, and purchased by the Wheatleys, a prosperous Boston family, she showed an early aptitude for study. The Wheatleys educated Phillis alongside their own children, and by the age of 12 she was reading Latin and Greek classics. While she was still in her teens, Phillis Wheatley attracted widespread praise for her poems. This 1768 poem to King George III illustrates the colonists' continuing loyalty to the king, despite their objections to the British Parliament's recent laws regarding taxes and trade. However, by 1770, Wheatley's poems decried British "tyranny." In 1776, Wheatley wrote "To his Excellency General Washington," which contained the words "Proceed, great chief, with virtue on thy side." Wheatley's owner freed her at the age of 21, and she married another free black. Her husband abandoned her and their three children, and she died in poverty in 1784, barely 31 years old.

YOUR subjects hope, dread Sire—
The crown upon your brows may flourish long,
And that your arm may in your God be strong!
O may your sceptre num'rous nations sway,
And all with love and readiness obey!
But how shall we the British king reward!
Rule thou in peace, our father, and our lord!
Midst the remembrance of thy favours past,
The meanest peasants most admire the last*
May George, beloved by all the nations round,
Live with heav'ns choicest constant blessings crown'd!
Great God, direct, and guard him from on high,
And from his head let ev'ry evil fly!
And may each clime with equal gladness see
A monarch's smile can set his subjects free!

160. Treaty of Fort Stanwix, November 5, 1768 [Excerpt]

Introduction

After the French and Indian War, British colonists streamed into the Indian lands of the Ohio River Valley. Pontiac's Rebellion broke out

in 1763, as western Indians tried to drive the British back east. In an attempt to address the causes of the rebellion, the British Board of Trade issued the October 1763 proclamation forbidding colonists from settling west of a line running along the crest of the Appalachian Mountains. Settlers ignored the proclamation line, so the king ordered Sir William Johnson, superintendent of Indian Affairs, to negotiate with the Iroquois Confederacy and set a new boundary between British and Indian territory. Negotiations took place at Fort Stanwix, in the heart of Iroquois country. The Iroquois, who held Johnson in great esteem, agreed to cede their claims to land south of a line running from Fort Stanwix to Fort Pitt and then along the southern bank of the Ohio River to the mouth of the Tennessee River. However, the tribes who actually lived in this territory denied that the Iroquois had the authority to make the treaty. Colonists who moved into the territory soon fell victim to a new round of Indian raids. A second and more famous Treaty of Fort Stanwix, signed in 1784, formally ended hostilities between the United States and the Iroquois Confederacy, which had sided with the British during the Revolution.

Primary Source

Proceedings of Sir William Johnson with the Indians at Fort Stanwix to settle a Boundary Line.

[Plantations General, XXX., Bundle V. 7.]

Proceedings at a Treaty held by Sir William Johnson Baronet with the Six Nations, Shawanese, Delawares, Senecas of Ohio and other dependant Tribes, at Fort Stanwix in the months of October & November 1768, for the settlement of a Boundary Line between the Colonies and Indians, pursuant to His Majesty's orders

The Time appointed for the Indians to meet at Fort Stanwix being the 20th of Septr Sr Wm Johnson arrived there on the 19th accompanied by the Governor of New Jersey and several other Gentlemen, with 20 Boats loaded with the Goods intended for the Present to be made by the Cession of Lands to the King. The Commissioners from Virginia were already there, and on the 21st arrived Lieutt Govr Penn with Commrs from Pensilvania & several other gentlemen, The same day Messrs Wharton & Trent of Pensylvania delivered in an account of the Traders losses in 1763, together with their Powers of Attorney for obtaining a retribution in Lands, pursuant to an article of the Treaty of Peace in 1765

Several Indians came in & informed Sir Wm Johnson that those of Susquehanna were near at hand, and gave him sundry intelligences

On the 29th some Delawares arrived from Muskingham who left the Shawanees at Fort Pitt on their way to Fort Stanwix

30th The Bounds between the Mohawks and Stockbridge Indians were adjusted to mutual Satisfaction, and the latter returned home

At the beginning of October, there were 800 Indians assembled & continued coming in dayly till after the Treaty was opened. The upper Nations still remaining behind thro' evil Reports, and Belts sent amongst them. Sir William dispatched Messengers to hasten them and held several Congresses with those on the spot, antecedent to the Treaty, for adjusting differences and preparing them to enter heartily upon business on the arrival of the rest

On the 15th of Octr Govr Penn urged by the Affairs of his Province set off for Philadelphia leaving behind him as Commissioners Messrs Peters & Tilghman.

By the 22d there were 2200 Indians collected and several large Parties coming in the next day, amongst whom were all the cheifs of the upper Nations, Sir William prepared to open the Congress on the 24th

 $[\ldots]$

Then Sir William addressed the Govr of New Jersey & the Commissioners

Gentlemen

Agreeable to His Matys intentions signified to me by the secretary of State and for the satisfaction of the several Nations here assembled I take the liberty to recommend it strongly to your several Provinces to enact the most effectual Laws for the due observance of this Line & the preventing all future intrusions, as the expectations thereof and the reliance the Indians have on your Justice from the Assurances I gave them on that head have proved great inducements to the settlement of the Line now established between the Colonies and them

To this the Governors & Commissioners answered that nothing should be wanting on their parts to the obtaining such security for the Boundary as was deemed necessary on their return to their respective Colonies

Then Sir William at the desire of the Gentlemen Commissioners from Pensylvania acquainted the Indians, that they the Commissioners had a present ready to the amount of 500 Dollars to give in full satisfaction of the Conostoga Lands, which by the death of that People became vested in the Proprietaries—That they freely gave this sum as a farther Proof of the regard of that Province for them and of their concern for the unhappy fate of the Conostogas. Then Sir William told the Indians, that as the proprietaries did not know whether they would chuse money or Goods for the addition of Land to Pensylvania they were then unprovided, but that Sir William Johnson would be answerable for the speedy payment of the purchase, & would propose to them either to receive it in money to be sent on the Comrs return or in goods speedy as possible or to wait till the next spring by which time they could have goods better & more for the same money from England which was submitted to their determination

1176 160. Treaty of Fort Stanwix

As it grew late Sir William dismissed the Indians till the next day when they were to subscribe to the Deed of Cession & receive the consideration

At night the cheifs came to Sir William told him that they had considered the proposals made by the Commissioners of Pensylvania, & preferred the receiving the purchase in Cash, as the speediest payment which was agreed to & security given that the same should be paid in Six Weeks

Novr 5th

The Present being placed in public view around the Buildings within the Fort early this morning the whole assembled in the Area, to subscribe to the Deed & receive the consideration

At a Congress with the several Nations Saturday Nov 5

PRESENT—as before.

The Speaker after repeating what Sir had said to them on the first Belt at the last Congress said

Brother

We thank you for what you have said & we are hopeful that you will observe your engagements as we mean to do on our parts; but as this will in a great measure depend upon the Colonies, We now desire their Representatives here present to do every thing for preserving those engagemts and keeping their people in good order A Belt.

Then repeating what was said on the second Belt, said

Brother

We thank you for the advice you have given us not to listen to evil reports or lies.

Brother

We approve of your caution and shall observe it, and we shall from time to time give us the the earliest intelligence of any such Reports & from whence they come

A Belt.

Then in answer to Govr Francklin's Speech

Brother

We are glad to see that Governor Francklin is so well pleased with our having bestowed one of our own names upon him & are well pleased [to] hear you promise that he will always be ready to do us justice We hope that all future Governors will act the same part. We acknowledge that several of our Nations now present were witnesses to the transaction at Easton & therefore acquit that Province of any demand and we have only to desire of him to follow your example in his future Conduct towards us, which will sufficiently recommend him and his people to our esteem

A Belt

Brother

The advice you gave us yesterday to continue firm and united and to live together as formerly we think it very salutary and intended for our Good. We are therefore intended to follow your advice shall lodge your Belt at our Fire place at Onondaga to the end that all our confederacy may have recourse to it & act accordingly

The Deed to His Majesty, that to the Proprietors of Pensylvania, with that to the Traders being then laid on the Table were executed in the presence of the Govr Commissioners, & the rest of the Gentlemen

After which the Cheifs of each Nation received the Cash which was piled on a Table for that purpose and then proceeded to divide the Goods amongst their People which occupied the remainder of that day

P M The Governor & Commissioners took leave and returned to their respive Provinces and that night Sir William took leave of the Cheifs recommending it to them to remember what had been then transacted & cautioning them against committing any Disorders at their Departure but to pack up their Goods & return home in peace & Good Order

Sunday Nov 6th

The Indians began to decamp & Sir William sett off on his return for Johnston Hall where he arrived on the ninth of that Month

A True Copy examined by G JOHNSON Deputy Agent as Secretary.

Deed Determining the Boundary Line between the Whites and the Indians

[Plantations General, Vol., 30, V.S.]

To all to whom, These presents shall come or may concern. We the Sachems & Cheifs of the Six confederate Nations, and of the Shawanese, Delawares, Mingoes of Ohio and other Dependant Tribes on behalf of our selves and of the rest of our Several Nations the Cheifs & Warriors of whom are now here convened by Sir William Johnson Baronet His Majestys Superintendant of our affairs send GREETING.

WHEREAS His Majesty was graciously pleased to propose to us in the year one thousand seven hundred and sixty five that a Boundary Line should be fixed between the English & us to ascertain & establish our Limitts and prevent those intrusions & encroachments of which we had so long and loudly complained and to put a stop to the many fraudulent advantages which had been so often taken of us in Land affairs which Boundary appearing to us a wise and good measure we did then agree to a part of a Line and promised to settle the whole finally when soever Sir William Johnson should be fully empowered to treat with us for that purpose

AND WHEREAS His said Majesty has at length given Sir William Johnson orders to compleat the said Boundary Line between the Provinces and Indians in conformity to which orders Sir William Johnson has convened the Cheifs & Warriors of our respective Nations who are the true and absolute Proprietors of the Lands in question and who are here now to a very considerable Number.

AND WHEREAS many uneasinesses and doubts have arisen amongst us which have given rise to an apprehension that the Line may not be strictly observed on the part of the English in which case matters may be worse than before which apprehension together with the dependant state of some of our Tribes and other circumstances which retarded the Settlement and became the subject of some Debate Sir William Johnson has at length so far satisfied us upon as to induce us to come to an agreement concerning the Line which is now brought to a conclusion the whole being fully explained to us in a large Assembly of our People before Sir William Johnson and in the presence of His Excellency the Governor of New Jersey the Commissioners from the Provinces of Virginia and Pensilvania and sundry other Gentlemen by which Line so agreed upon a considerable Tract of Country along several Provinces is by us ceded to His said Majesty which we are induced to and do hereby ratify & confirm to His said Majesty from the expectation and confidence we place in His royal Goodness that he will graciously comply with our humble requests as the same are expressed in the speech of the several Nations addressed to His Majesty through Sir William Johnson on Tuesday the first of the Present Month of November wherein we have declared our expectation of the continuance of His Majestys Favour and our desire that our ancient Engagements be observed and our affairs attended to by the officer who has the management thereof enabling him to discharge all these matters properly for our Interest. That the Lands occupied by the Mohocks around their villages as well as by any other Nation affected by this our Cession may effectually remain to them and to their Posterity and that any engagements regarding Property which they may now be under may be prosecuted and our present Grants deemed valid on our parts with the several other humble requests contained in our said Speech

AND WHEREAS at the settling of the said Line it appeared that the Line described by His Majestys order was not extended to the Northward of Oswegy or to the Southward of Great Kanhawa river We have agreed to and continued the Line to the Northward on a supposition that it was omitted by reason of our not having come to any determination concerning its course at the Congress held in one thousand seven hundred and sixty five and in as much as the Line to the Northward became the most necessary of any for preventing encroachments at our very Towns & Residences We have given the Line more favorably to Pensylvania for the reasons & considerations mentioned in the Treaty, we have likewise continued it South to Cherokee River because the same is and we do declare it to be our true Bounds with the Southern Indians and that we have an undoubted right to the Country as far South as that River which makes our Cession to His Majesty much more advantageous than that proposed,

Now THEREFORE KNOW YE that we the Sachems and Cheifs aforementioned Native Indians and Proprietors of the Lands herein after described for and in behalf of ourselves and the whole of our Confederacy for the considerations herein before mentioned and also for and in consideration of a valuable Present of the several articles in use amongst Indians which together with a large sums of money amounts in the whole to the sum of Ten thousand four Hundred and Sixty pounds seven shillings and three pence sterling to us now delivered and paid by Sir William Johnson Baronet His Majestys sole Agent and superintendant of Indian affairs for the Northern department of America in the Name and on behalf of our Soverreign Lord George the third by the Grace of God of Great Britain France and Ireland King Defender of the Faith the receipt whereof we do hereby acknowledge WE the said Indians HAVE for us and our Heirs and Successors granted bargained sold released and confirmed and by these presents DO Grant bargain sell release and confirm unto our said Sovereign Lord King George the third, ALL that Tract of Land situate in North America at the Back of the British Settlements bounded by a Line which we have now agreed upon and do hereby establish as the Boundary between us and the British Colonies in America beginning at the Mouth of Cherokee or Hogohege River where it emptys into the River Ohio and running from thence upwards along the South side of said River to Kittaning which is above Fort Pitt from thence by a direct Line to the nearest Fork of the west branch of Susquehanna thence through the Allegany Mountains along the South side of the said West Branch untill it comes opposite to the mouth of a Creek callek Tiadaghton thence across the West Branch and along the South Side of that Creek and along the North Side of Burnetts Hills to a Creek called Awandae thence down the same to the East Branch of Susquehanna and across the same and up the East side of that River to Oswegy from thence East to Delawar River and up that River to opposite where Tianaderha falls into Susquehanna thence to Tianaderha and up the West side of its West Branch to the head thereof and thence by a direct Line to Canada Creek where it emptys into the wood Creek at the West of the Carrying Place beyond Fort Stanwix and extending Eastward from every part of the said Line as far as the Lands formerly purchased so as to comprehend the whole of the Lands between the said Line and the purchased Lands or settlements, except what is within the

Province of Pensilvania, together with all the Hereditaments and Appurtenances to the same belonging or appertaining in the fullest & most ample manner and all the Estate Right Title Interest Property Possession Benefit claim and Demand either in Law or Equity of each & every of us of in or to the same or any part thereof TO HAVE AND TO HOLD the whole Lands and Premises hereby granted bargained sold released and confirmed as aforesaid with the Hereditaments and appurtenances thereunto belonging under the reservations made in the Treaty unto our said Sovereign Lord King George the third his Heirs & Successors to and for his and their own proper use and behoof for ever

In WITNESS whereof We the Cheifs of the Confederacy have hereunto set our marks and Seals at FORT STANWIX the fifth day of November one Thousand seven hundred and sixty eight in the ninth year of His Majestys Reign

161. Regulators' Advertisements, 1768

Introduction

The frontier colonists struggling to make a living in the mountains of western North Carolina were underrepresented and overtaxed by the relatively wealthy politicians in the east. Corrupt political appointees came to the western settlements to prey on the frontierspeople by setting excessive fees and taxes and rushing to confiscate farms when tax payments were late. In 1767, legislators imposed a poll tax and a liquor tax to pay for construction of a lavish mansion for Gov. William Tryon. In response to this final straw, protestors formed an association to "regulate" against public corruption and abuses of power, and thus became known as the Regulators. These two "advertisements" describe the formation of the Regulators and list some of their grievances. Among their activities, the Regulators demanded to inspect court records for evidence of corruption, disrupted several controversial trials, and beat up lawyers and public officials. Eventually numbering in the thousands, Regulators elected several of their members to the colonial assembly. The Regulators disbanded after their defeat by Governor Tryon's militia at the 1771 Battle of the Alamance.

Primary Source

Regulators' Advertisement No.4 January, 1768

We the under written subscribers do voluntarily agree to form ourselves into an Association to assemble ourselves for conferences for regulating publick Grievances & abuses of Power in the following particulars with others of like nature that may occur.

- That we will pay no Taxes until we are satisfied they are agreeable to Law and Applied to the purposes therein mentioned unless we cannot help and are forced.
- 2. That we will pay no Officer any more fees than the Law allows unless we are obliged to it and then to shew a dislike to it & bear open testimony against it.
- 3. That we will attend out Meetings of Conference as often as we conveniently can or is necessary in order to consult our representatives on the amendment of such Laws as may be found grievous or unnecessary and to choose more suitable men than we have heretofore done for Burgesses and Vestry men and to Petition His Excellency our Governor the Honble the Council and the Worshipful House of representatives His Majesty in Parliament &c. for redress of such Grievances as in the course of this undertaking may occur and to inform one another & to learn, know and enjoy all the Priviledges & Liberties that are allowed us and were settled on us by our worthy Ancestors the founders of the present Constitution

in order to preserve it in its ancient Foundation that it may stand firm & unshaken.

- 4. That we will contribute to Collections for defraying necessary expences attending the work according to our abilities.
- 5. That in Cases of differences in Judgment we will submit to the Majority of our Body.

To all which We do solemnly swear or being a Quaker or otherwise scrupulous in Conscience of the common Oath do solemnly affirm that We will stand true and faithful to this cause until We bring them to a true regulation according to the true intent & meaning of it in the judgment of the Majority.

Regulator's Advertisement No. 5 March 22, 1768

The request of the Inhabitants of the West side of Haw river to the Assembly men and Vestry men of Orange County

Whereas the Taxes in the County are larger according to the number of Taxables than adjacent counties and continues so year after year, and as the jealousy still prevails amongst us that we are wronged & having the more reason to think so as we have been at the trouble of choosing men and sending them after the civilest manner that we could to know what we paid our Levy for but could receive no satisfaction for. James Watson was sent to Maddock Mills and said that Edmund Fanning looked upon it that the country called him by authority or like as if they had a right to call them to an Accompt. Not allowing the country the right that they have been entitled to as English subjects, for the King requires no money from His subjects but what they are made sensible what use it's for; we are obliged to seek redress by denying paying any more until we have a full settlement for what is past and have a true regulation with our Officers as our grievances are too many to notify in a small piece of writing. We desire that you our Assembly men and Vestry men may appoint a time before next Court at the Court House and let us know by the Bearer and we will chose men to act for us and settle our Grievances until such time as you will settle with us. We desire that the Sheriffs will not come this way to collect the Levy for We will pay none before there is a settlement to our satisfaction and as the nature of an Officer is a servant to the Publick we are determined to have the Officers of this county under a better and honester regulation than they have been for some time past. Think not to frighten us with rebellion in this case for if the Inhabitants of this Province have not as good a right to enquire into the nature of our Constitution and Disbursements of our funds as those of our Mother Country We think that it is by arbitrary proceedings that we are debarred of that right, therefore to be plain with you it is our intent to have a full settlement of you in every particular point that is matter of doubt with us, so fail not to send Answer by the Bearer; if no Answer we shall take it for Granted that we are disregarded in this our request again from the Publick.

162. "Account of Regulators," *Evening Post* of Boston, November 12, 1770

Introduction

The frontier colonists struggling to make a living in the mountains of western North Carolina were underrepresented and overtaxed by the relatively wealthy politicians in the east. Corrupt political appointees came to the western settlements to prey on the frontierspeople by setting excessive fees and taxes and rushing to confiscate farms when tax payments were late. In 1767, legislators imposed a poll tax and a liquor tax to pay for construction of a lavish mansion for Gov. William Tryon. In response to this final straw, protestors formed an association to "regulate" against public corruption and abuses of power, and thus became known as the Regulators. Among their activities, the Regulators demanded to inspect court records for evidence of corruption, disrupted several controversial trials, and beat up lawyers and public officials. Eventually numbering in the thousands, Regulators elected several of their members to the colonial assembly. This 1770 Boston newspaper article recounts a Regulator riot in which they attacked a courtroom, beat up several people, destroyed a public official's house, and ran him out of town. The Regulators disbanded after their defeat by Governor Tryon's militia at the 1771 Battle of the Alamance.

Primary Source

On Wednesday a special messenger arrived in town from Grenville [sic] county, with an account of a violent insurrection having broke out in Orange County, among a set of men who call themselves Regulators, and who for some years past have given infinite disturbance to the civil government of this province, but now have sapped its whole foundation, brought its courts of justice to their own controul, leaped the strong barrier of private property, and audaciously violated the laws of God and Man.

The people have for a long time opposed paying all manner of taxes, have entertained the vilest opinion of the gentlemen of the law, and often threatened them with their vengeance Accordingly, as the Hon. Judge Henderson, and sever gentlemen of the law, were returning from Salisbury circuit to Hillsborough, in order to hold the court there, they were waylayed by a number of them with their

rifles; but happily having notice of their hellish design, by taking a contrary rout, eluded their bloody plot. They still gave out their threats of meeting them at Hillsborough, and wreaking their vengeance on them there.

These menaces were treated with contempt, as rather the violent ravings of a factious and discontented mob, than any settled and fixed resolution of men of property to commit so daring an insult to the laws of the country, and accordingly the court was opened, and proceeded to business: But on Monday, the second day of the court, the tragical scene began; a very large number of those people, headed by men of considerable property, appeared in Hillsborough, with clubs, whips, loaded at the ends with lead or iron (a stroke from which would level the strongest man) and many other offensive weapons, and at once beset the court-house. The first object of their revenge was Mr. John Williams, a gentleman of the law, who they assaulted as he was entering the court; him they cruelly abused with many and violent blows with their loaded whips on the head and different parts of his body, until he by great good fortune made his escape, and took shelter in a neighbouring store. They then entered the court-house and immediately fixed their attention on Col. Fanning, as the next object of their merciless cruelty; he expected his fate, and had retired to the judges seat, as the highest part of the courthouse, from which he might make the greatest defence against these blood thirsty and cruel savages; but, poor gentleman, vain were all his efforts, for after behaving with the most heroic courage, he fell a sacrifice to numbers, and suffered a cruelty the richest language can but faintly paint: They seized him by the heels, dragged him down the steps, his head striking violently on every step, carried him to the door, and forcing him out, dragged him on the ground over stone & brickbats, struck him with their whips and clubs, kicked him, spit and spurned at him, and treated him with every possible mark of contempt and cruelty; till at length, by a violent effort of strength and activity, he rescued himself from the merciless claws, and took shelter in a house; the vultures pursued him there, and gave him a stroke that will probably destroy one of his eyes: In this piteous and grievously maimed condition they left him for a while, retreated to the courthouse, knocked down and very cruelly treated the deputy clerk of the Crown, ascended the bench, shook their whips over judge Henderson, told him his turn was next, ordered him to pursue Business, but in the manner they should prescribe, which was, that no lawyers should enter the courthouse, no juries but what they should pack, and order new trials in cases where some of them had been cast for their mal practices. They then seized Mr. Hooper, a gentleman of the law, dragged and paraded him through the streets, and treated him with every mark of contempt and insult. Thus closed the first day.

But the second day presented a scene still more tragic; immediately on their discovering that the Judge had made his escape, and refused to submit to the dictates of these lawless and desperate men,

they marched in a body to Col Fanning's house, entered the same, and destroyed every piece of furniture in it, ript open the beds and threw all his china and glass into the street, scattered all his papers and books in the winds, seized all his plate and cash, entered his cellar, and after satiating their savage stomachs with his liquors, stove the remainder; being now drunk with rage, liquor, and lawless fury, they took his wearing cloaths, stuck them on a pole, paraded them thro' the streets, and to clost the scene, pulled down and laid his house in ruins. They then went to a large churchbell that Col. Fanning, at the expence of 70 l. had made a present of to the church at Hillsborough, and split it to pieces, and were at the point of pulling down the church, but the leaders thinking it betrayed their religious principles restrained them, Their revenge not being yet satiated on this unhappy gentleman, they again pursued him, and again cruelly beat him, and at length with dogs hunted him out of town, and with savage cruelty stoned him as he fled.

When they had fully glutted their revenge on the lawyers, to shew their opinion of courts of justice, they took from his chains a Negro that had been executed some time, and placed him at the lawyer's bar, and filled the judge's seat with human excrement, in derision and contempt of the characters that filled those respectable places.

163. Accounts of the Battle of Alamance, 1771

Introduction

The struggling frontier colonists of western North Carolina were underrepresented and overtaxed by the relatively wealthy politicians in the east. Corrupt political appointees came to the western settlements to prey on the frontierspeople by setting excessive fees and taxes and rushing to confiscate farms when tax payments were late. In 1767, legislators imposed a poll tax and a liquor tax to pay for construction of a lavish mansion for Gov. William Tryon. In response to this final straw, protesters formed an association to "regulate" against public corruption and abuses of power, and thus became known as the Regulators. Among their activities, the Regulators demanded to inspect court records for evidence of corruption, disrupted trials, and beat up lawyers and public officials. On May 16, 1771, Governor Tryon and some 1,000 militiamen confronted about 2,000 Regulators at Alamance Creek, near presentday Greensboro. Tryon gave the Regulators a last chance to withdraw before ordering his men to open fire. The outnumbered but better-trained militia routed the Regulators. Six Regulator leaders were executed for treason. The Regulators disbanded, with some accepting a government pardon and others leaving North Carolina. Tryon left North Carolina in July 1771 to serve as royal governor of New York.

General Tryon to the Regulators

Great Alamance Camp May 16, 1771.

In answer to your Petition, I am to acquaint you that I have ever been attentive to the true Interest of this Country, and to that of every Individual residing within it. I lament the fatal Necessity to which you have not reduced me, by withdrawing yourselves from the Mercy of the Crown, and the Laws of your Country, to require you who are Assembled as Regulators, to lay down your Arms, Surrender up the outlawed Ringleaders, and Submit yourselves to the Laws of your Country, and then, rest on the lenity and Mercy of Government. By accepting these Terms in one Hour from the delivery of this Dispatch you will prevent an effusion of Blood, as you are at this time in a state of War and Rebellion against your King, your Country, and your Laws.

Wm Tryon

Governor Tryon's Proclamation

May 17, 1771

By His Excellency William Tryon Esquire His Majesty's Captain General and Governor in Chief in and over the said Province

A Proclamation

Whereas I have been informed that several ignorant Persons have been under false pretences induced to join in Arms to oppose Government and the Laws of this Country, Therefore out of Humanity and in Tender Compassion to the Distresses that must fall on them and Their Families should they through fear of Punishment persist in their Errors, I hereby give notice to every Person (except those who stand outlawed, and such as are now prisoner in the Camp) who will come into Camp, lay down their Arms, take the Oath of Allegiance and promise to pay all Taxes that are not due or may hereafter become due by them respectively, and submit from this Day to the Laws of this Country, shall have His Majesty's most Gracious and free Pardon for all Treasons Insurrections and Rebellions done or committed before this Day provided They make their Submission aforesaid on or before the 21 Instant.

Given under my hand and the Great Seal of the said Province this 17 Day of May a Dom 1771

Wm. Tryon

Governor Tryon's Declaration to the Troops May 17, 1771

The Governor impressed with the most affectionate Sense of Gratitude gives Thanks to both Officers and Soldiers of the Army for the Vigorous and Generous support they afforded Him Yesterday in the Battle near Alamance. It was to their Valour and steady Conduct that He owes under the providence of God the signal Victory obtained over obstinate and infatuated Rebels. His Excellency sympathises with the Loyalists for the brave men that fell and suffered in the Action, but when He reflects that the Fate of the Constitution depended on the Success of the Day, and the important Services thereby rendered their King and Country, He considers this loss (though at present the Cause of Affliction to their Relations and Friends) as a Monument of lasting Glory and Honor to Themselves and Families.

The Dead to be Interred at five O'clock this Evening in the Front of the Park of Artillery. Funeral Service to be performed with Military Honors to the deceased. After the Ceremony Prayers and Thanksgiving for the signal Victory it has pleased Providence Yesterday to grant the Army over the Insurgents. The above was given by the Governor in public Orders on the 17 May. The Day after the Battle of Alamance.

Virginia Gazette (Williamsburg), June 6, 1771

From the different Accounts we have been able to collect, since our last, of the Battle in North Carolina, we find that the Description we then gave of it varied but in few Particulars from the Reality. We shall now mention what farther has come to our knowledge of that Engagement: That Governor Tryon had under him a Thousand Men, and that the Regulators amounted to three and twenty Hundred; that his Excellency was much insulted by them, particularly one Fellow, whom he shot dead on the spot, as he was approaching him; that this happened but a very short Time before the Expiration of the two Hours allowed them by the Governor, upon which the Engagement began; that both Parties fought with great Animosity, for two Hours and upwards; that the Artillery was discharged six and thirty Times, and that one Shot struck a Tree, which in its Fall killed thirty odd of the Regulators, that the Governor had his horse killed under him, and the Breech of the Gun he had in his Hand shot away; that a hundred sixty of the Regulators were killed, and two Hundred wounded, forty of whom were taken prisoners; and the Regulators were badly conducted, and fought in the utmost Confusion, their Ranks being, in some Places, a Hundred Men deep, and that many of them were unarmed; that the Governor had only two Men killed, and sixty wounded. One Man, it is said, of the Governor's Party, was so much incensed against the Regulators, by whom

he had been threatened, that he was determined upon ample Revenge, or lossing his life; for it is thought he killed upwards of thirty with his own Hands, walking backwards and forward on the Flanks of his Party during the Engagement, and charging with as much Coolness as if hunting of Squirrels. The regulators have lost a Number of Horses, Guns, and Carriages; to the Amount, it is said, of more than luded People are much to be pitied, as they must be reduced a Thousand Pounds. ——— The Families of these poor de-to very great distress. The Province likewise, in general, is in the greatest disorder. And however faulty those who stile themselves Regulators may have been, as we learn that the cause of their Complaints has been removed (their leaders, it is probably, being bad Counsellors, and to have urged them on from one Step of Rebellion to another) it ought to be a lessons for all good Governments to suffer no Set of Men, under the Sanction of Authority, to fleece the People.

Governor Tyron's Proclamation June 11, 1771

By His Excellency William Tryon Esquire His Majesty's Captain General and Governor in Chief in and over the said Province

A Proclamation

Whereas I am informed that many Persons who have been concerned in the late Rebellion are desirous of submitting themselves to Government, I do therefore give notice that every Person who will come in either to mine or General Waddles Camp, Lay down their arms, Take the Oath of Allegiance and promise to pay all taxes that are now due or may here after become due by them respectively, and submit to the Laws of this country shall have His Majesty's Most Gracious and Free Pardon, for all Treasons Insurrections and Rebellions done or committed on or before the Sixteenth of May last Provided they make their Submission aforesaid on or before the Tenth of July next. The following Persons are however excepted from the Benefit of this Proclamation Viz. All the Out laws, The Prisoners, all Those concerned in blowing up General Waddells Ammunition in Mechenburg County, and the under named Persons, to wit, Samuel Jones Joshua Teague Samuel Waggoner Simon Dunn Jun. Abraham Cresson Benjamin Merrit James Wilkerson Sr. Edward Smith John Bumpass Joseph Boring William Rankin William Roberson John Winker John Wilcox Jacob Felker & Thomas Person.

Given under my Hand and the great Seal of the Province this Eleventh Day of June Anno Dom. 1771

164. Accounts of Lord Dunmore's War,1774 [Excerpts]

Introduction

John Murray, Lord Dunmore, was appointed royal governor of Virginia in 1771. Loyal to the British Crown, he punished the House of Burgesses for its rebellious activities by disbanding it in 1773, and again in 1774. During the same period, Indians had been attacking colonists living on the western frontier, and white frontiersmen retaliated. The Shawnees formally went to war and stepped up the pace and severity of their raids against settlers. Dunmore mustered the militia, and in September 1774 led 2,000 men into the Ohio River Valley. A major battle took place at Point Pleasant, at the mouth of the Kanawha River, on October 10, and Colonel Andrew Lewis and 1,000 militiamen defeated an equal number of Shawnees before Dunmore's force arrived. Dunmore then concluded a peace with the Shawnee chief, Cornstalk. In these excerpts, a militia officer describes the battle, and Dunmore recounts the peace negotiations. The parties agreed on the Ohio River as the dividing line between white and Indian territory. At the outbreak of the Revolutionary War, Dunmore raised Loyalist regiments and prepared to hold Virginia for the Crown. The rebels forced him to leave Virginia in July 1776.

FLEMING'S ACCOUNT OF THE BATTLE
OF POINT PLEASANT
[Col. Fleming to his wife.]

MY Dear Nancy—I take this Opportunity to write you that you may be convinced I am yet amongst the living on Munday last, we were Alarmed by some from Camp that had been pursued by Indians. On the News being confirmed 150 from Augusta line & as many from the Botetourt, were ordered out. We marched in two Colums Colo. Ch: Lewis led the Augusta, I was at the head of the Botetourt line we had not march[ed] above three quarters of a mile before the Right line or Augusta line was Attack'd & in a second of time the Botetourt line likewise. The fire became general & very heavy. Colo. C. Lewis Receivd a mortal wound. I receivd three balls two through my left Arm, & one in my left breast, but I praise the Almighty, I did not fall and had strength with Assistance to reach my tent where I heard C[ol.] C. Lewis was just come in after I was dresd I went to see him. Colo. Lewis who as we did not expect a general engagement was in Camp behaved with the greatest Conduct & prudence and by timely & opportunely supporting the lines secured under God both the Victory & prevented the Enemy Attempts to break into Camp it was a hard fought Battle, lasted from 7 in the Morning to an hour by sun. The Indians were computed at 1000. but for a perticular Acct I must referr you to another time. I Bless God my wounds are in a good way. If it please God to spare me I propose coming in to the Inhabitants the first Opportunity. I am my Dear Nancy Yours &

WM FLEMING

OCTOBER 13, 1774

RICHD Wilson & Smith are both well Attend me Closely & will Return with me God willing

[Col. William Fleming to William bowyer.]

DEAR WILL—Agreeable to my Last from Belmont, I set out on Monday Aug. 21st and without any thing Remarkable Reached this place. Ye 6th Inst. where we continued without Interruption till Monday the 10th. when about Sunrise we had intelligence of a Man being kild & several closely pursued, by a large party or parties of Indians. Colo A: Lewis ordered 300 Men from the two Lines of Augusta & Botetourt Forces to go in Quest of the Enemy, little Imagining as we afterwards found it to be the Case that we were to engage the whole United Force of the Enemy Ohio Indians. We Marched from Camp in two lines. Colo. Charles Lewis led the Right line. I led the left. About 3/4 of a mile from Camp, the Indians began the Attack on the right & in a Second of time the Left line was Attacked. I must refer you to particular Accounts of which no doubt you will see several, and only Observe generals, as I am ill at ease to write. Soon after or in the first Fire Colo. C. Lewis received a Mortal wound, and was brought to his tent with some Assistance. He died a few hours after, very much Regretted by the whole Army much about or soone after this hapned on the Right, I received three balls in the left Line two struck my left arm below the Elbow broke both the bones, & I find one of this is lodged in my arm. A third entered my breast about three Inches below my left Nipple and is lodged some where in the Chest. On finding my self effectually disabled I quitted the Field. When I came to be drest, I found my Lungs forced through the wound in my breast, as long as one of my fingars. Watkins Attempted to reduce them ineffectually. He got some part returned but not the whole. Being in considerable pain, some time afterwards, I got the whole Returned by the Assistance of one of my Own Attendants. Since which I thank the Almighty I have been in a surprising state of ease. Nor did I ever know such dangerous wounds, Attended with so little inconvenience, and yet the wounds in my arm are in a bad condition. They do not digest and run but very little. What will be the consequence as yet I know not, but I write you circumstantially that you may if it is not too much trouble, write particularly to my wife. We had 7 or 800 Warriors to deal with. Never did Indians stick closer to it, nor behave bolder. The Engagement lasted from half and hour after [sunrise], to the same time before Sunset. And let me add I believe the Indians never had such a Scourging from the English before. The Scalpd many of their own dead to prevent their falling into Our hands, buried numbers, threw many into the Ohio and no doubt carried off many wounded. We found 70 Rafts. We tooke 18 or 20 Scalps, the most of them principle Warriors amongst the Shawnese &c, as we were informed by One McCulloch who came to us from his Lordship two days after the Ingagement, who viewed the Scalps & bodies & personally Knew them he says there is not a Noted Warriour left amongst the Shaw-

nese. After the Ingagement Colo Lewis sent off some Scouts to his Lordship two of them are since Returned. His Lordship had Marchd from Hockhocking where he had been in Camp for some days. He was joined by White Eyes the Delaware who told his Lordship 700 Warriors were gon to the South, to speak with the Army there, & that they had been followed by another Nation, that they would begin with them, in the morning and their business would be over by Breakfast time. And then they would speak with his Lordship. That they came fully convince they would beat us I think is certain. The cros'd the River & encamped the same side with us the Evening before, brought over with them their goods Deer Skins &c: took no pains to conceal themselves, And were boldly Marching to Attack Our Camp when we met them. Our Camp is situated on the Junction of the Kanhaway & Ohio in the Upper fork the Enemy in expectation of forcing us into the Ohio had lind the Opposite bank with some & the lower forks like wise was not neglected. The Enemy had brought their boys and squaas to knock us in the head I suppose, but God disappointed their Savage presumption. And tho Many brave Men lost their lives, Yet I hope in its consequences, it will be a general Good to the Country, and this engagement will be long Remembered to the Memory & Honour of those who purchas'd the Victory by their deaths. I am &c:

WM FLEMING

Be sure to write my wife the Substance of this, or enclose it to her.

[...]

In the mean time the ravage of the Indians, where ever they could carry it, was dreadful:—one Shawanese returned to his Town with the Scalps of forty men and Women and Children who he had killed. On the other hand a Party went out, with my permission, and destroyed one of the Shawanese Town, and meeting a Small Party of Indians, they killed Six or Seven of them, but this produced no Change in the designs of these People.

The real concern, principally, which the Continuation of these Miseries gave me, and, partly the Accounts Sent by the Officers of the Militia, of the Mutinous and ungovernable Spirit of their men, whom they could by no means bring to any order or discipline or even to Submit to command, determined me to go up into that part of the Country, and to exert my own immediate endeavours on this important occasion. Accordingly, as Soon as the business of the Over and Terminer Court in June permitted me, I sett out for Pittsburg where I arrived as has been already related. No time was lost in assembling The Delawar, Six Nations, and all the other Tribes the could be got at, or diligence neglected in conferring with them on the subject of the desolating consequences of Such enterprises as were Carrying on between the Shawense and their abettors, and our people; (I transmit to your Lordship and Account of the conferences held on this occasion in a printed copy (No. 7)) I found all those nations not only disposed to peace, but attached to our Cause, and they promised me, as your Lordship will perceive, that they would go down to the Shawanese (who with one or two less considerable Tribes only were concerned in the depredations that had been Committed) and, if I would appoint a time and place, bring them to Speak with me, and use their influence to incline them to Peace. I determined therefore to go down the Ohio; but I thought it Prudent to take a Force which might effect our purpose if our Negotiation failed: And I collected from the Militia of the Neighbouring Counties about twelve hundred men, to take with me, Sending orders to a colonel Lewis to March with as many more, of the Militia of the Southern Counties, across the Country to Join me at the Mouth of the little Kanhaway, the Place I appointed to meet the Indians at.

I passed down the river with this body of Men, and arrived at the appointed place at the Stated time. The day after Some of our friends the Delawars arrived according to their promise; but they brought us the disagreeable information, that the Shawanese would listen to no terms, and were resolved to prosecute their designs against the people of Virginia.

The Delawars, Notwithstanding, remained Steady in their attachment; and their Chief, named Captain White Eyes, offered me the assistance of himself and whole tribe; but apprehending evil effects from the Jealousy of, and natural dislike in our People to, all Indians, I accepted only of him and two or three: And I received great Service from the faithfulness, the firmness and remarkable good understanding of White Eyes.

Colonel Lewis not Joining me, and being unwilling to encrease the expence of the Country by delay, and, from the accounts we had of the numbers of the Indians, Judging the Force I had with me Sufficient to defeat them and destroy their Towns, in case they Should refuse the offers of peace; and after Sending orders to Colonel Lewis, to follow me to a place I appointed near the Indian Settlements, I crossed the Ohio and proceeded to the Shawanese Towns; in which March, one of our detached parties encountered an other of Indians laying in Ambush, of whom they killed Six or eight and took Sixteen Prisoners.

When we came up to the Towns we found them deserted, and that the main body of the Indians, to the amount of near five hundred, had Some time before gone off towards the Ohio; and we Soon learnt that they had Crossed that river, near the Mouth of the great Kanhaway, with the design of attacking the Corps under Colonel Lewis. In effect this Body, in their route to Join me, was encamped within a Mile of the Conflux of these two rivers, and near the place where the Indians Crossed, who were discovered by two men, of which they killed, of Colonel Lewis's Corps at break of Day the 10th of October. Colonel Lewis, upon receiving intelligence of their being advanced to within half a Mile of his Camp, ordered out three hundred men in two divisions, who upon their approach were imme-

diately attacked by the Indians, and a very warm engagement ensued; Colonel Lewis found it Necessary to reinforce the divisions first Sent out, which (without the main Body of his Corps having engaged) obliged the Indians to retreat, after an Action which lasted till about one O'clock after noon, and little Skermishing till Night, under the favour of which the Indians repassed the river and escaped. Colonel Lewis lost on his side his Brother and two other Colonels of Militia, men of Character and Some Condition in their counties, and forty Six Men killed, and about eighty wounded. The loss of the Indians by their Accounts amounted to about thirty killed and some wounded.

The event of this Action, proving very different from what the Indians had promised themselves, they at once resolved to make no further efforts against a Power they saw so far Superior to theirs; but determined to throw themselves upon our Mercy: And, with the greatest expedition, they came in Search of the body with which they knew I marched, and found me near their own Towns the Day after I got there.

They presently made known their intentions, and I admitted them immediately to a conference, wherein all our differences were Settled. The terms of our reconciliation were, briefly, that the Indians should deliver up all prisoners without reserve; that they should restore all horses and other valuable effects which they had carried off; that they Should not hunt on our Side the Ohio, nor molest any Boats passing thereupon; That they Should promise to agree to such regulations, for their trade with our People, as Should be hereafter dictated by the Kings Instructions, and that they Should deliver into our hands certain Hostages, to be kept by us until we were convinced of their Sincere intention to adhere to all these Articles. The Indians, finding, contrary to their expectation, no punishment likely to follow, agreed to everything with the greatest alacrity, and gave the most solemn assurances of their quiet and peacable deportment for the future: and in return I have given them every promise of protection and good treatment on our Side.

Thus this affair, which undoubtedly was attended with circumstances of Shocking inhumanity, may be the means of producing happy effects; for it has impressed an idea of the power of the White people, upon the minds of the Indians, which they did not before entertain; and, there is reason to believe, it has extinguished the rancour which raged so violently in our People against the Indians: and I think there is a great probability that these Scenes of distress will never be renewed, than ever was before.

165. Quebec Act, May 20, 1774

Introduction

The Quebec Act, although it did not directly affect the 13 American colonies, disturbed the colonists. The law's intent was to reorganize the massive Canadian province that had been under British rule since 1763, when the French were forced to cede the territory following their defeat in the French and Indian War. The act extended the boundary of the province of Canada to encompass the territory west of the Allegheny Mountains, land formerly under control of Virginia and several other colonies. The act also established a form of government very different from that which existed in the rest of Britain's North American colonies, prohibiting representative government and recognizing the Roman Catholic Church, among other things. These efforts were intended to reconcile French Canadians to British rule and ultimately proved successful, as the Canadians did not join the American colonists in their rebellion against the British in the American Revolutionary War. Many American colonists feared that the act would have far-reaching implications for the rest of British North America. They considered the provisions of the law outrageous and further evidence of how the British Parliament was attempting to establish a tyrannical government in North America.

Primary Source

An Act for making more effectual Provision for the Government of the Province of Quebec in North America.

WHEREAS his Majesty, by his Royal Proclamation bearing Date the seventh Day of October, in the third Year of his Reign, thought fit to declare the Provisions which had been made in respect to certain Countries, Territories, and Islands in America, ceded to his Majesty by the definitive Treaty of Peace, concluded at Paris on the tenth day of February, one thousand seven hundred and sixty-three: And whereas, by the Arrangements made by the said Royal Proclamation a very large Extent of Country, within which there were several Colonies and Settlements of the Subjects of France, who claimed to remain therein under the Faith of the said Treaty, was left, without any Provision being made for the Administration of Civil Government therein; and certain Parts of the Territory of Canada, where sedentary Fisheries had been established and carried on by the Subjects of France, Inhabitants of the said Province of Canada under Grants and Concessions from the Government thereof, were annexed to the Government of Newfoundland, and thereby subjected to Regulations inconsistent with the Nature of such Fisheries: May it therefore please your most Excellent Majesty that it may be enacted; and be it enacted by the King's most Excellent Majesty, by and with the Advice and Consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the Authority of the same: That all the Territories, Islands, and Countries in North America belonging to the Crown of Great

Britain, bounded on the South by a Line from the Bay of Chaleurs, along the High Lands which divide the Rivers that empty themselves into the River Saint Lawrence from those which fall into the Sea, to a Point in forty-five Degrees of Northern Latitude, on the Eastern Bank of the River Connecticut, keeping the same Latitude directly West through the Lake Champlain, until, in the same Latitude it meets the River Saint Lawrence: from thence up the Eastern Bank of the said River to the Lake Ontario; thence through the Lake Ontario and the River commonly call Niagara and thence along by the Eastern and Southeastern Bank of Lake Erie following the said Bank, until the same shall be intersected by the Northern Boundary, granted by the Charter of the Province of Pensylvania, in case the same shall be so intersected: and from thence along the said Northern and Western Boundaries of the said Province, until the said Western Boundary strike the Ohio: But in case the said Bank of the said Lake shall not be found to be so intersected, then following the said Bank until it shall arrive at that Point of the said Bank which shall be nearest to the Northwestern Angle of the said Province of Pensylvania, and thence by a right Line, to the said Northwestern Angle of the said Province; and thence along the Western Boundary of the said Province, until it strike the River Ohio; and along the Bank of the said River, Westward, to the Banks of the Mississippi, and Northward to the Southern Boundary of the Territory granted to the Merchants Adventurers of England, trading to Hudson's Bay; and also all such Territories, Islands, and Countries, which have, since the tenth of February, one thousand seven hundred and sixtythree, been made Part of the Government of Newfoundland, and they are hereby, during his Majesty's Pleasure, annexed to, and made Part and Parcel of, the Province of Quebec, as created and established by the said Royal Proclamation of the seventh of October, one thousand seven hundred and sixty-three.

II. Provided always, That nothing herein contained, relative to the Boundary of the Province of Quebec, shall in anywise affect the Boundaries of any other Colony.

III. Provided always, and be it enacted, That nothing in this Act contained shall extend, or be construed to extend, to make void, or to vary or alter any Right, Title, or Possession, derived under any Grant, Conveyance, or otherwise howsoever, of or to any Lands within the said Province, or the Provinces thereto adjoining; but that the same shall remain and be in Force, and have Effect, as if this Act had never been made.

IV. And whereas the Provisions, made by the said Proclamation, in respect to the Civil Government of the said Province of Quebec, and the Powers and Authorities given to the Governor and other Civil Officers of the said Province, by the Grants and Commissions issued in consequence thereof, have been found, upon Experience, to be inapplicable to the State and Circumstances of the said Province, the Inhabitants whereof amounted, at the Conquest, to above sixty-five

thousand Persons professing the Religion of the Church of Rome, and enjoying an established Form of Constitution and System of Laws, by which their Persons and Property had been protected, governed, and ordered, for a long Series of Years, from the first Establishment of the said Province of Canada; be it therefore further enacted by the Authority aforesaid. That the said Proclamation, so far as the same relates to the said Province of Quebec, and the Commission under the Authority whereof the Government of the said Province is at present administered, and all and every the Ordinance and Ordinances made by the Governor and Council of Quebec for the Time being, relative to the Civil Government and Administration of Justice in the said Province, and all Commissions to Judges and other Officers thereof, be, and the same are hereby revoked, annulled, and made void, from and after the first Day of May, one thousand seven hundred and seventy-five.

V. And, for the more perfect Security and Ease of the Minds of the Inhabitants of the said Province, it is hereby declared, That his Majesty's Subjects, professing the Religion of the Church of Rome of and in the said Province of Quebec may have, hold, and enjoy, the free Exercise of the Religion of the Church of Rome, subject to the King's Supremacy, declared and established by an Act, made in the first Year of the Reign of Queen Elizabeth, over all the Dominions and Countries which then did, or thereafter should belong, to the Imperial Crown of this Realm; and that the Clergy of the said Church may hold, receive, and enjoy, their accustomed Dues and Rights, with respect to such Persons only as shall profess the said Religion.

VI. Provided nevertheless, That it shall be lawful for his Majesty, his Heirs or Successors, to make such Provision out of the rest of the said accustomed Dues and Rights, for the Encouragement of the Protestant Religion, and for the Maintenance and Support of a Protestant Clergy within the said Province, as he or they shall from Time to Time think necessary and expedient.

VII. Provided always and be it enacted, That no Person professing the Religion of the Church of Rome, and residing in the said Province shall be obliged to take the Oath required by the said Statute passed in the first Year of the Reign of Queen Elizabeth, or any other Oaths substituted by any other Act in the Place thereof; but that every such Person who, by the said Statute, is required to take the Oath therein mentioned, shall be obliged, and is hereby required, to take and subscribe the following Oath before the Governor, or such other Person in such Court of Record as his Majesty shall appoint, who are hereby authorized to administer the same; videlicet,

I A.B. do sincerely promise and swear, That I will be faithful, and bear true Allegiance to his Majesty King George, and him will defend to the utmost of my Power, against all traitorous Conspira-

cies, and Attempts whatsoever, which shall be made against his Person, Crown, and Dignity; and I will do my utmost Endeavor to disclose and make known to his Majesty, his Heirs and Successors, all Treasons, and traitorous Conspiracies, and Attempts, which I shall know to be against him, or any of them; and all this I do swear without any Equivocation, mental Evasion, or secret Reservation, and renouncing all Pardons and Dispensations from any Power or Person whomsoever to the contrary. So help me GOD.

And every such Person, who shall neglect or refuse to take the said Oath before mentioned, shall incur and be liable to the same Penalties, Forfeitures, Disabilities, and Incapacities, as he would have incurred and been liable to for neglecting or refusing to take the Oath required by the said Statute passed in the first Year of the Reign of Queen Elizabeth.

VIII. And be it further enacted by the Authority aforesaid, That all his Majesty's Canadian Subjects within the Province of Quebec, the religious orders and Communities only excepted, may also hold and enjoy their Property and Possessions, together with all Customs and Usages relative thereto, and all other their Civil Rights in as large, ample, and beneficial Manner as if the said Proclamation, Commissions, Ordinances, and other Acts and Instruments had not been made, and as may consist with their Allegiance to his Majesty, and Subjection to the Crown and Parliament of Great Britain; and that in all Matters of Controversy relative to Property and Civil Rights, Resort shall be had to the Laws of Canada, as the Rule for the Decision of the same; and all Causes that shall hereafter be instituted in any of the Courts of Justice, to be appointed within and for the said Province by his Majesty, his Heirs and Successors, shall, with respect to such Property and Rights, be determined agreeably to the said Laws and Customs of Canada, until they shall be varied or altered by any Ordinances that shall, from Time to Time, be passed in the said Province by the Governor, Lieutenant Governor, or Commander in Chief, for the Time being, by and with the Advice and Consent of the Legislative Council of the same, to be appointed in Manner herein-after mentioned.

IX. Provided always, That nothing in this Act contained shall extend, or be construed to extend, to any Lands that have been granted by his Majesty, or shall hereafter be granted by his Majesty, his Heirs and Successors, to be holden in free and common Soccage.

X. Provided also, That it shall and may be lawful to and for every Person that is Owner of any Lands, Goods, or Credits, in the said Province, and that has a Right to alienate the said Lands, Goods, or Credits, in his or her Lifetime, by Deed of Sale, Gift, or otherwise, to devise or bequeath the same at his or her Death, by his or her last Will and Testament; any Law, Usage, or Custom, heretofore or now prevailing in the Province, to the contrary hereof in any-wise notwithstanding; such Will being executed either according to the

Laws of Canada, or according to the Forms prescribed by the Laws of England.

Xl. And whereas the Certainty and Lenity of the Criminal Law of England, and the Benefits and Advantages resulting from the Use of it, have been sensibly felt by the Inhabitants, from an Experience of more than nine Years, during which it has been uniformly administered: be it therefore further enacted by the Authority aforesaid. That the same shall continue to be administered, and shall be observed as Law in the Province of Quebec, as well in the Description and Quality of the Offence as in the Method of Prosecution and Trial; and the Punishments and Forfeitures thereby inflicted to the Exclusion of every other Rule of Criminal Law, or Mode of Proceeding thereon, which did or might prevail in the said Province before the Year of our Lord one thousand seven hundred and seventy-four; any Thing in this Act to the contrary thereof in any respect notwithstanding; subject nevertheless to such Alterations and Amendments as the Governor, Lieutenant-governor, or Commander in Chief for the Time being, by and with the Advice and Consent of the legislative Council of the said Province, hereafter to be appointed, shall, from Time to Time, cause to be made therein, in Manner hereinafter directed.

XII. And whereas it may be necessary to ordain many Regulations for the future Welfare and good Government of the Province of Quebec, the Occasions of which cannot now be foreseen, nor, without much Delay and Inconvenience, be provided for, without intrusting that Authority, for a certain Time, and under proper Restrictions, to Persons resident there, and whereas it is at present inexpedient to call an Assembly; be it therefore enacted by the Authority aforesaid, That it shall and may be lawful for his Majesty, his Heirs and Successors, by Warrant under his or their Signet or Sign Manual, and with the Advice of the Privy Council, to constitute and appoint a Council for the Affairs of the Province of Quebec, to consist of such Persons resident there, not exceeding twenty-three, nor less than seventeen, as his Majesty, his Heirs and Successors, shall be pleased to appoint, and, upon the Death, Removal, or Absence of any of the Members of the said Council, in like Manner to constitute and appoint such and so many other Person or Persons as shall be necessary to supply the Vacancy or Vacancies; which Council, so appointed and nominated, or the major Part thereof; shall have Power and Authority to make Ordinances for the Peace, Welfare, and good Government, of the said Province, with the Consent of his Majesty's Governor, or, in his Absence, of the Lieutenant-governor, or Commander in Chief for the Time being.

XIII. Provided always, That nothing in this Act contained shall extend to authorize or impower the said legislative Council to lay any Taxes or Duties within the said Province, such Rates and Taxes only excepted as the Inhabitants of any Town or District within the said Province may be authorized by the said Council to assess, levy,

and apply, within the said Town or District, for the Purpose of making Roads, erecting and repairing publick Buildings, or for any other Purpose respecting the local Convenience and Economy of such Town or District.

XIV. Provided also, and be it enacted by the Authority aforesaid, That every Ordinance so to be made, shall, within six Months, be transmitted by the Governor, or, in his Absence, by the Lieutenant-governor, or Commander in Chief for the Time being, and laid before his Majesty for his Royal Approbation; and if his Majesty shall think fit to disallow thereof, the same shall cease and be void from the Time that his Majesty's Order in Council thereupon shall be promulgated at Quebec.

XV. Provided also, That no Ordinance touching Religion, or by which any Punishment may be inflicted greater than Fine or Imprisonment for three Months, shall be of any Force or Effect, until the same shall have received his Majesty's Approbation.

XVI. Provided also, That no Ordinance shall be passed at any Meeting of the Council where less than a Majority of the whole Council is present, or at any Time except between the first Day of January and the first Day of May, unless upon some urgent Occasion, in which Case every Member thereof resident at Quebec, or within fifty Miles thereof, shall be personally summoned by the Governor, or, in his absence, by the Lieutenant-governor, or Commander in Chief for the Time being, to attend the same.

XVII. And be it further enacted by the Authority aforesaid, That nothing herein contained shall extend, or be construed to extend, to prevent or hinder his Majesty, his Heirs and Successors, by his or their Letters Patent under the Great Seal of Great Britain, from erecting, constituting, and appointing, such Courts of Criminal, Civil, and Ecclesiastical Jurisdiction within and for the said Province of Quebec, and appointing, from Time to Time, the Judges and Officers thereof, as his Majesty, his Heirs and Successors, shall think necessary and proper for the Circumstances of the said Province.

XVIII. Provided always, and it is hereby enacted, That nothing in this Act contained shall extend, or be construed to extend, to repeal or make void, within the said Province of Quebec, any Act or Acts of the Parliament of Great Britain heretofore made, for prohibiting, restraining, or regulating, the Trade or Commerce of his Majesty's Colonies and Plantations in America; but that all and every the said Acts, and also all Acts of Parliament heretofore made concerning or respecting the said Colonies and Plantations, shall be, and are hereby declared to be, in Force, within the said Province of Quebec, and every Part thereof.

166. Yankee Doodle, 1778

Introduction

The origin of the song "Yankee Doodle" is unknown, but the tune most likely came from a children's game in England. Some say the words of the earliest verses originated with British soldiers during the French and Indian War, and others attribute them to a British surgeon during the 1775 occupation of Boston. The word "yankee' was used by the mid-1700s to refer to New England colonists, while "doodle" meant a fool or bumpkin. In either case, "Yankee Doodle" pointed out the contrast between British regulars and colonial militiamen. British troops marching to the Battle of Lexington played "Yankee Doodle" to ridicule the Americans, but by the end of the battle, the Americans were playing the song to mock the British. The song became popular among the Americans during the Revolutionary War, with new verses added as the war went on. "Yankee Doodle" was reportedly played as the British surrendered at Yorktown. Although printed versions of the tune and lyrics appeared in Britain as early as 1778, the song was not printed in the United States until 1794. The word "yankee," originally applied to New England colonists, came to mean Americans from the northern states during the American Civil War.

Primary Source

Father and I went down to camp, Along with Captain Gooding; And there we saw the men and boys, As thick as hasty-pudding.

And there we see a thousand men, As rich as Squire David; And what they wasted every day, I wish it could be saved.

The 'lasses they eat every day, Would keep a house a winter; They have as much that I'll be bound, They eat when they've a mind to

And there we see a swamping gun, Large as a log of maple, Upon a duced little cart, A load for father's cattle.

And every time they shoot it off, It takes a horn of powder: It makes a noise like father's gun, Only a nation louder.

CHORUS

Yankee doodle, keep it up, Yankee doodle dandy; Mind the music and the step, And with the girls be handy. I went as nigh to one myself, As'Siah's under-pinning; And father went as night again. I thought the dence was in him.

Cousin Simon grew so bold, I thought he would have cocked it; It scared me so I streaked it off, And hung by father's pocket.

But Captain Davis has a gun, He kind of clap'd his hand on't, And stuck a crooked stabing iron Upon the little end on't.

And there I saw a pumpkin shell, As big as mother's basin; And every time they touched it off, They scampered like the nation.

I see a little barrel too.
The heads were made of leather,
They knock'd upon it with little clubs,
And call'd the folds together.

There was Captain Washington And gentle folks about him; They say he's grown so tarnal proud, He will not ride without 'em.

He got him on his meeting clothes, Upon a slapping stallion; He set the world along in rows, In hundreds and in millions.

The flaming ribbons in their hats, They look'd so tearing fine, ah; I wanted plaguily to get, To give to my Jemima.

I see another snarl of men, A digging graves, they told me, So tarnal long, so tarnal deep, They 'tended they should hold me.

It scar'd me so, I hook'd it off, Nor stopp'd, as I remember; Nor turn'd about till I got home, Lock'd up in mother's chamber.
